Another ancient god of agriculture was Consus. His name, connected with *condere*, 'to store,' plainly shows that he had to do with the garnering of the fruits of the field. The underground location of his altar at Rome symbolized the practice of storing corn in pits. Intimately connected with Consus was Ops, who, as Consiva, was the embodiment of an abundant harvest rather than a divinity of the earth. As Opifera, she guarded the granaries against fire.

Scholars are divided as to the primitive nature of Mars (Mavors, Marspiter, Maspiter, Etr. Maris), a god common to all the Italic peoples. Some hold that he was always and only a god of war; others that he was originally a god of vegetation and of the border-lands between the fields and the wild. Certainly his association with the wolf, the woodpecker, and the ox points to this double relation. Quirinus was at first a local epithet of Mars peculiar to the Quirinal Hill.

With the possible exception of Juppiter, no god is so representative of Roman nature-worship as Fannus (cf. *fauere*, 'to regard with favour'). His attributes and the position of his priesthood are marks of his being a conception of the earliest period. He is the kindly spirit of the woods and fields who brings fertility to the crops and herds, and to the latter protection from the wolves. In the hamlets he was the *deus agrestis* par excellence. As a wood-god he exhibited a twofold nature. He was the speaker of the mysterious voices of the forest. Late legends said that he cast his oracular utterances into verse and thus became the inventor of poetry. He was also, in the popular conception, a mischievous sprite who brought the nightmare

¹ Cf. *CIL* vi. 15493; cf. *ib.* xli. 1932; A. Dieterich, *Mutter Erde*, Leipzig, 1913, *passim*.

(*incubus*), and who, as Inuus, copulated with the beasts in the field. Fanna, as his wife or daughter or sister, shared his power of bestowing fertility.

Silvanus, as the adjectival form of his name indicates, was a scion of an older god, probably either Fannus Silvicola¹ or Mars.² At all events he embodied characteristics of both of these gods. He was chiefly a god of the woods, propitious to the hunter and shepherd and to the farmstead reclaimed from the forest. By an extension of his functions he became patron of the house, of gardens, and of parks. His cult was wholly private and consisted of a very simple open-air ritual.

Diana was a goddess common to central Italy, but especially prominent in Latium and its vicinity. Her cult on the Aventine was simply a transference of that of Aricia. From her association here with the spring-nymph Egeria, who aided women in child-birth, and with Virbins, a male divinity of apparently like function, and from the connexion of women with her cult on the Aventine we judge that she too was primitively a goddess of child-birth. This function was later obscured through her identification with the Greek Artemis, when she became the 'huntress-goddess chaste and fair.'

By nativity Venus was purely Italian. Her name seems first to have signified charm in general, then the charm and bloom of nature, and finally the goddess presiding in this sphere. She fostered the growth of the vine and of plants in market-gardens. Her native career was cut short by her contact and subsequent identification with Aphrodite, the goddess of love.

Fortuna, or better, Fors Fortuna, was a nature-goddess so far as she represented a force beyond the control of man. Perhaps the earliest conception of her is as the incalculable element which adjusts the conditions of the harvest. Her union with Mater Matuta and her cult at Præneste reveal her as a *numen* which determined the destiny of women in child-birth. In her highest development she appeared as the incorporate will of the gods, and therefore as an ethical force.

With the spring festival of the Parilia (from Palilia, by dissimilation) was connected a divinity called Pales (designated variously as male or female), who granted fecundity to the herds.

The worship of the trees belongs more properly to the study of pre-animism or fetishism than to that of nature-gods. There were, however, two trees in Rome to which the Romans accorded honours that were almost divine: these were the oak of Juppiter Feretrius on the Capitoline and the Ficus Ruminalis on the slopes of the Palatine.

The plebeian host of the *Sondergötter* is too large for us to discuss at length (see *ARYAN RELIGION*, vol. ii. p. 31 f.). Those that spiritualize human acts, like Messor, Convector, Saritor, and so forth, can be dismissed *en bloc*. But there is still a large group which spiritualize purely natural processes. A few of these will serve as illustrations. Seia, Segesta, Nodutus, Volutina, Patelana, Lactans, and Matura were *numina* watching over the successive stages of the field-crops from sowing to maturity. Bubona, Epona, and Pomona fostered the growth of cattle, horses, and trees respectively. Each stage of development of the child was also placed under the guardianship of a special spirit. In short, no natural process of import for man's continued well-being was left without its cherishing divinity.

(c) *Gods of the water*.—The *numina* of springs received much more attention than those of rivers. The former were generally thought of as kindly young goddesses possessed of the gifts of alleviating pain, healing, prophecy, song, and magic. The most prominent in Rome was Juturna (earlier

Diuturna), a divinity of healing. Next to her in popularity stood the Camenæ (cf. *carmen*, *casmen*, 'song'), who granted easy child-birth and were called the Roman Muses. Their leader, Carmentis, was known as a prophetic spirit who sang to the new-born child its destiny. Affiliated with them was the nymph Egeria. The prophetic Feronia was probably a *numen* of springs. The large number of extant dedications to Fons refer to him as the divinity of local springs rather than of all.

The *numina* of rivers were conceived as benevolent old men; hence the epithets Padus Pater and Pater Tiberinus. The Umbrian Clitumnus and the Campanian Voltumnus were of considerable importance in Italian religious thought.

Neptunus is to be counted among the oldest gods of Rome. His proverbial association with the sea is not original, but is due to his identification with Poseidon. He is to be interpreted as the *numen* of the element of moisture. His logical development was curtailed in Rome by the apparent remoteness of urban life from agricultural interests, but among the rustics of Italy and the provinces his divinity was long the object of worship. The nymph Salacia, who seems to have represented the ebullient nature of springs, was frequently his cult companion.

(d) *Gods of the under world and of fire*.—Independent Roman attributions of divinity to the under world and its phenomena lack sharpness of definition. And this was quite natural, for the Roman's first care was for the living and to ensure himself a posterity; moreover, he was disinclined to speculate on so uncertain a matter as the lot of man after death.

Apparently the chief divinity of the under world was Vediovis (Vedius, Veiovis), who seems to have been not so much the physical as the logical opposite of Juppiter.

The fire-god Volcanus was far from being as conspicuous as we should have expected him to be in the lands of Vesuvius. The explanation is doubtless to be found in the fact that for many centuries prior to A.D. 79 the volcano had been quiescent. The later significance of Volcanus came with his assumption of the personality and functions of Hephaistos. Originally he was of the circle of old Roman gods, being the god of destructive rather than useful fire.

(e) *Gods of disease*.—The disease that most constantly menaced the Romans was, of course, the malaria, and several phases of its attacks were so uniform in character as to impress the Romans that they were the work of divine powers. Thus they erected a shrine to Febris on the Palatine. Among extant provincial inscriptions there are dedications to the Dea Tertiana (*CIL* vii. 999) and the Dea Quartana (*ib.* xii. 3129).

NATURE (Semitic).—All primitive races doubtless started with much the same spiritual capital. Environment modified and enlarged it as man developed. Natural forces and phenomena presented the same mysteries to all alike, and the imagination evolved strange, fantastic, mighty forms to account for them. In Babylonia and Asia Minor Semitic, Aryan, and other race-stocks met and mingled. They whispered their fears and their speculations to one another and left a heritage of myth and story out of which later generations framed religions, heresies, and philosophies. The Semite looked at things objectively. And yet he often spiritualized where the Greek materialized. Trees and rocks were to both connected with the unseen world, but, while the Greek might see a nymph or a maiden changing into a tree to escape the pursuit of the god, the Semite regarded the oak or the rock as the abode of deity, and the votary sleeping in its shadow would hear the divine voice through his dreams speaking from the object which was his dwelling.

The strange, mysterious power, working out through nature was, to the Semite, God in action—far different from the Greek, to whom the gods were apart from the world, laughing at mortals, fighting with or against them, toying with the thunderbolt, or leaping into life from the waves. Arabia, probably the Semite's home, with a landscape rugged and inhospitable, seemed little fitted to stimulate the imagination, but scanty springs and palm-trees, seen afar across the steppe, promising food and water, and the sterner phenomena of nature as well, aroused the elemental religious ideas—fear and hope and nascent faith.

The heavenly bodies must have profoundly affected primitive man, and the Semitic nomad would see in the moon a beneficent agency. Each new moon spoke of bright nights to come, so welcome to the shepherd and the desert wanderer. The moon-god, called Sin in Babylonia, became the father of the circling host of heaven. His influence was one of kindness, yet Ps 121⁶, 'The moon shall not smite thee by night,' reminds us that his beams were baleful as well. In Babylonia, Uru (Ur) and Harran were seats of his worship, while Sinai and perhaps Jericho in the west were among his shrines. Though his worship had been long extinct in Israel, the feast of trumpets, new moons, Sabbaths, and the lunar dating of the great feasts carry the memory of his cult down even to NT times.

Sun-worship may not have been so ancient; it is more easily associated with the agricultural stage of society, but it acquired a wide currency. Many aspects of the solar deity were undoubtedly derived

from the pre-Semitic inhabitants of Babylonia, but each division of the Semitic world developed its own conception of him according to its varying climatic and cultural environment.

It was Babylonia that developed the most varied forms of religion. The Semite coming from Arabia forced his way across the Euphrates, and, sword in hand, penetrated to the centres of the ancient Sumerian civilization. He must have stood amazed and awed at the temples and the religious system which had grown up through unknown ages, but, in various ways, this civilization possessed an attraction for him, which compelled him to search to their depths its innermost mysteries. We cannot determine when the conquerors from Arabia began their entry, but traces of undoubted Semitic worship existed early as far south as the shores of the Persian Gulf. In 2500 B.C. the Semites were in the ascendant, and under Hammurabi the conquest was nearly complete both in civil and in religious affairs, yet we must believe that the great triad of deities, Anu, En-lil, and Ea, was not originally Semitic in its origin, but an inheritance from the former lords of the land. The Semitic features of these deities were probably a later development. The nature element which pervades the triad comes out more strikingly in the second series of gods, where distinctively solar and lunar elements are personified.

In several of the old Babylonian centres of worship we find two gods standing in the relation of father and son. M. Jastrow (*Aspects of Religious Belief and Practice in Babylonia and Assyria*, New York, 1911) considers that the older deity was in some cases displaced by a later, and, while not removed from the pantheon, was regarded as the son of his successful rival. En-lil at Nippur was called the father of Ninib, who was the older deity, and Nabū (Nebo) of Borsippa was called the son of Marduk. The oldest gods, like Ea and Anu, remained as somewhat shadowy abstractions in the religion. As the Semitic power advanced, we hear the names of these old gods principally in spells and incantations. The younger Semitic deities were the ones invoked in the midst of the activities of life, and they were more definitely involved in the fortunes of the cities and the States. They were also directly associated with the active powers of nature—the sun, the moon, the vegetative processes and growing life. Here, as elsewhere, it is a little difficult to draw the line, and yet it seems quite clear that the powerful and violent elements of nature were deified by the Semite more definitely than by the Sumerian.

Tammūz was a deity of vegetation; although at times he is identified with the sun, the vegetation idea was probably the original one. He seems to be a connecting link between the mythologies of Babylonia and the rest of the Semitic world, and his relationship with Ishtar is a feature which shows the underlying thoughts and conceptions of the Semitic race.

The Babylonian priests reduced religion to a system and worked out a consistent and elaborate pantheon. Magic and divination were large elements in their scheme, and in the temple libraries was a vast mass of religious literature to be used for incantations, and for charms to avert evil. Above all, and in spite of this, there are surviving traces of the power of nature ideas; for the peculiarity of the Babylonian religion, by which it may be differentiated from that of other Semitic branches, was the idea of unfolding life in the vegetable, animal, and human world (see, further, Johannes Hehn, *Die biblische und die babylonische Gottesidee*, Leipzig, 1913, p. 72). Each of the great gods has associated with him a consort, who is, however, but a feeble reflexion of his own person-

ality and also of the social usages of the people, but along with the greater gods, in both the first and second triad, we find Ishtar, who is co-equal with them, sometimes represented as a consort, and sometimes as absolutely independent. In Assyria this deity is associated with the national god, Ashshur. As is well known, she is a prominent figure in the religion of the entire Semitic world outside of Babylonia, and with many of the same characteristics. We are justified in saying that the nature element in the Babylonian religion is associated pre-eminently with Ishtar. She is the mother-goddess, and her prominence throughout the entire Semitic world is an inheritance from a matriarchal state of society.

Among all the gods of the lands of the Tigris and Euphrates the most distinctly Semitic deity apart from Ishtar was Ashshur, who was the supreme god of the Assyrians, standing in a peculiar and unique relation to that people. He was on the nature side a solar deity, his symbol being the solar disk, and he possessed little or nothing of the material element that was so easily associated with other gods. No image of him seems to have been made. While the whole Babylonian pantheon was often associated with him in the royal inscriptions, he stood at the head, and every other god was a member of his court, whose presence and lower position but contributed to the glory of the supreme god. Ishtar is the outstanding exception, who, sometimes as the wife, and sometimes as an independent queen, appears by the side of Ashshur, the two united in the leadership of the people of Assyria, ensuring their victory and enhancing their glory. The nature element of Ashshur, however, is insignificant, because in him the Assyrians approached very close to monotheism. They fell short because he was so often the embodiment of the warlike spirit and of the overweening national pride.

When we leave the rich civilization of Mesopotamia, we find ourselves in more primitive and far cruder surroundings. The pantheons are smaller and simpler. Certain names are used for the deities which seem to be titles rather than proper names. There is in most systems a god who is called Ba'al, 'lord,' or Melech, 'king.' He often possesses a solar character, and the forces of growing life and fertility are closely associated with him. As stated above, the worship of the moon-god had its seat at several points in the west. Here, as in the lands farther east, the worship of Ishtar was a leading cult. In Phœnicia and in Syria, in Palestine, and even in Cyprus, we find this deity under the name of Astarte, of which the Biblical Ash-toreth is simply a form marked as abhorrent by the use of the vowels of *bōsheth*, 'shame.' In Arabia the equivalent of this name is 'Athtar, a male deity—a curious transformation of character, due probably to changing social conditions. From the OT we learn something of the domination of the Astarte worship. To the prophets it was abominable and to be rooted out. To the people it had a strong attraction, and with each succeeding generation one finds recurrent appearances of the cult and attempts at reform. Nevertheless, certain phases of her worship at first possessed remarkable features. It was inevitable that such a worship should have originated and persisted among the early peoples, and the fact that moon-worship was in some way connected with this deity is significant. Though this relation is obscure, it evidently existed: witness the place-name, Ash-taroath Karnaim. The perversions of the worship may have been inevitable, but they were recognized by the people themselves in their better moments as perversions. It is easy to identify this goddess with Mother Earth. The ceaseless circuit of the

seasons—life emerging as it does from the soil, bursting into bloom, drooping and perishing in the cold of winter, or parched by the drought of summer—must have impressed the primitive mind more powerfully than anything else, and we find these phenomena reflected in myths and epics, which come down to us from the earliest ages.

The descent of Ishtar into the lower world, 'the land whence none return,' in search of Tammūz, one of the most ancient of these epic fragments, is a striking illustration. As the goddess moves downward from one stage to another, change and decay take place in the upper world, vegetation languishes and dies, and all the gracious activities of life cease. With Ishtar's return—for she is a goddess—there is a revival of life and the emergence of the world from its death-like sleep. So varied and powerful were the aspects and representations of Ishtar that her cult permeated the religious thought of Syria and Asia Minor. In the Græco-Roman mythologies one goddess was not sufficient to represent all that Ishtar embodied. Demeter, the goddess of the grain fields, Aphrodite, the goddess of love, and Artemis, wearing so often the horned moon as an emblem and appearing in such remarkable form as the patron of Ephesus, are all reflexions of the Semitic Ishtar, and each one shows the intimate connexion with nature which her personality represented. This is one of the many features in which the Western world became a debtor to the Semite. The persistence of the idea of a mother-goddess is evident down to modern times.

Closely associated with Ishtar was Tammūz, who also represented the powers of nature, but whose personality is subsidiary to that of Ishtar. His cult, however, extended widely. We find it in S. Babylonia earlier than the Gilgamesh epic, and in Syria the myth of Ishtar and Tammūz has left indelible marks. The stream which to-day 'runs purple to the sea' was originally, according to the old myth, stained by the blood of the slain god, for whom, in times of religious decadence, women were seen weeping even in Jerusalem and in the Temple precincts (Ezk 8¹⁴). The name Adonis, 'lord,' through which the memory of his worship descends to us, is but the title of the god.

High-place worship belongs to the latest as well as to the oldest strata of the religion. Scattered over Syria and throughout Palestine are standing-stones and pillars. Some of these may be the survivals of stone circles, which probably were the work of an older and vanished race; but, if so, the seal of sacredness which they left has been respected by the Semite. But, in addition, jutting fragments of rock were often invested with sacredness, or a worshipper set up a pillar, anointed it with oil, and paid there his vows. The most sacred spot to-day in Mecca is the Ka'bah, a survival of heathenism, which Muhammad was unable or reluctant to supersede. The traveller in Palestine sees on many a hill-top the white dome of a *weli*, which under the name of a saint preserves the memory of an ancient god, or *jinn*. Image-worship probably finds its origin here, for the stone was conceived to be the habitation of deity; but, inert as the stone is, and materialistic as the form may be, some of the grandest conceptions of deity come to us from this source. 'Great mountain' the Assyrian sometimes called his god. 'My Rock and my salvation' (Ps 62) the Hebrew Psalmist sang, and 'as the mountains are round about Jerusalem, so Jahweh is round about his people' (Ps 125) became a watchword of faith. Indeed, in Syria and the Sinaitic peninsula the mountain itself was one of the most revered objects. Volcanic peaks seemed aflame with God; the loftiness of the mountain carried one's thoughts inevitably to the skies. The sacred-

ness of Mt. Sinai, Mt. Hor, and Mt. Hermon is attested by traditions and by shrines which surround their bases. Their tops could seldom be reached, but the worshipper could always offer his prayers and his sacrifices with the assurance that they ascended to the deity who dwelt within the mountain. On the top of Mt. Hermon were an altar and a temple. The peaks around Mt. Hermon are crowned with altars and temples, which were continued down even to the Greek period. Mt. Hor had its peculiar sacredness, attested by the tomb of Aaron on its summit, which is revered by the Arabs and guarded with the most superstitious care.

The cult of the sun-god was probably a feature of settled agricultural life. Several of the older gods have titular names which imply sun-worship. Perhaps these, however, were later additions to the original function of the god in question. But Ba'al Melkart of the Phoenicians was a sun-god. The Ba'als of Canaan were probably the same.

Moon-worship among the Hebrews seems to have died out before the entry into Canaan, although the prominence of lunar feasts is evidence that this deity occupied a high place at an earlier stage in the nation's history. The crude forms were eliminated and the survivals were re-consecrated and purified.

The three great agricultural feasts testify to the early dominance of vegetation-deities. The green tree, denounced by the prophets because associated so often with heathen worship, was a reminiscence of the desert, when the tree, a rare feature of the landscape, showed where the god chose to dwell. The streams and fountains so abundant in Palestine were revered there, much as they were upon the steppe, where they were often the gathering-places of the nomads for the decision of quarrels (cf. the name En Mishpat, 'fountain of judgment'), and where the truce of God stilled tribal antipathies.

We can see how strong the influence of climate was upon religion and religious expression. The theology became richer as it approached the lands of settled habitation, where there were not only pastures, hut gardens and forests. That which was occasional and remarkable in desert life became common and abundant.

A peculiar manifestation of nature-religion, common to many primitive peoples, was totemism (*q.v.*). The prevalence of this among the Semites has been disputed, but there are many evidences that totem tribes existed and that totem customs were observed. The number of animal-names found both among individuals and among clans testifies to the fact, and, while we must beware of assuming that every animal-name given to men was in some way an expression of totemism, yet there is a sufficient number of cases where we can be sure that a totem existed, and that the animal and the man were brothers in blood. The dog tribes and the leopard tribes considered their eponym as their kinsman, in some mysterious way connected with the clan or tribal deity. Sometimes this god was supposed to assume the form of a dog, panther, or other animal. The totem was seldom eaten—never as a common article of food, but only in rare cases as a sacrament, whereby the life of the clan was strengthened and renewed by partaking of this life of the beast from which it was named, and undoubtedly the god was a sharer in the feast, if he were not also conceived of as being consumed with the flesh of the victim. Vague and obscure as our knowledge of totemism is in its details and in its philosophy, through it we obtain a vision of the conception of life among the primitive Semites. The world around was palpitating with the life of deity, and in tree and

fountain, in the inert stone even, and in the animals familiar to their eyes God was seen. The conception was crude and materialistic, but it contained the germ and inner principle of that which was capable of unfolding into the highest spiritual expression.

When we consider the Hebrew people and their forms of religious life, we must look at them from two points of view: (1) the prophetic, which gives us an interpreted history together with profound ideals; (2) the historic, through which we are able to trace unfolding conceptions of God and the world. OT literature is full of beautiful and expressive poetical figures; underlying many of these are nature-myths, from which the base and crude elements have fallen away under the teachings of priests and prophets (cf. Ps 19 with its description of the sun). Many religions rites and customs retain traces of an older day. The combination of pastoral and agricultural feasts at Passover preserves the memory of the transition from nomadic to settled life. In the ritual are crystallized remainders of nature-worship. The calf-worship which was prevalent at times in the Northern Kingdom is evidence of the persistence of nature ideas. The fact that it was not always denounced shows what a hold it had upon the religion, but its final disappearance and the abhorrence which was felt for it as time went on show how drastic was the reformation and how completely it overmastered national life. We now know that the obscure allusions to Rahab in the poetry are the reminiscences of an ancient creation-myth, in which strange nature ideas are interwoven. This may have come down from the Sumerian religion through a Babylonian medium, but its presence in the OT shows how far the religion had travelled from the polytheistic forms and ideas once so prevalent. Psalms like the 29th, describing the sweeping of a storm across the land from Hermon to the wilderness, certain of the Psalms of the Ascents, where the mountains and the hills add glory to the description, the figures in the older poetry—all attest the power which nature had upon the Hebrew mind. Nature is not deified in the OT, but its power upon the imagination and its value in carrying most forcibly religious ideas are manifest on nearly every page. The description of God Himself in many of the poetic passages shows the dominance of early conceptions and early forms of speech. 'When he rode upon a cherub and did fly, when he flew upon the wings of the wind' (Ps 18¹⁰), when He manifested Himself in the lightning and the thunder, we are inevitably reminded of the materialistic representations of God by nations of different culture, and of different religious ideas among the Semites themselves.

To recapitulate: in the highly developed religion of the Babylonian the naturalistic element receded into the background, and, while interesting survivals are found in invocations, incantations, and epics, the old theology was conventionalized with the developing priesthood and ritual.

The Semite, who had reached an agricultural stage and had become interested in the phenomena of seed-time and harvest, worshipped the forces of nature, and these were gradually personalized. The sun-god was the lord, the Ba'al. It was he who bestowed the gifts of fruits and grain, and filled barns with abundant harvests. His worship was wide-spread over Syria and Palestine. The notions of leadership and fatherhood were associated with him, as the names 'king' and 'lord' testify, as well as the terms 'father,' 'brother,' 'kinsman.' We see here the growth towards the larger and more abstract notions of the theologies of Babylonia and Assyria, but it was nature and nature's luxuriant productiveness that seized upon

the imagination and the religious sense of the people.

As for the nomad, the mysterious power that dwelt behind the things that he saw was revered and feared. Nature in its unexpected manifestations awakened in him the vague notion of a deity. Yet, when we have reached this stage, we know that behind it lay an uncharted period when ideas were forming and personification had hardly reached the point of expression. Everything that we find in the Semitic religion points to animism as the basis and origin. Just where animism begins we perhaps may never know, but that it existed in primitive man and in the primitive Semite we may be sure. The strange things that happened without the intervention of man, the capricious actions of nature and of nature-forces, compelled the individual to believe that there was some mysterious agency with an intelligence or power superior to man's that wrought the changes and either blessed or cursed the helpless votary. Naïve expressions in the earlier portions of the OT itself show how prevalent such notions were and how difficult to eradicate.

The appreciation of natural beauty and the thirst for it were latent in the mind of the primitive Semite, and he possessed a remarkable ability to absorb and assimilate. At the outset the palm-tree, which satisfied so many of his needs, as a product of the great and abounding life of nature, might easily symbolize a god. The spring that flowed from some cavern or from beneath a rock in the midst of the desert, turning the sands into grass with reeds and rushes, was fed, not by human hands, nor by the clouds above, but by Deity Himself. Man might imitate the god and irrigate desert spots, but the human work was a feeble copy of the divine, and the fountain had a reverence all its own. But, when the Semite, wandering from his native deserts, came to lands where water-courses were numerous, vegetation varied, and trees, with many waving branches and fluttering leaves, abundant, he seemed to be in the very ante-chamber of Paradise. Like his own deserts when touched by fertilizing streams, his soul responded and its desert blossomed, whether in the arts of civilization or in the varied forms of religion. Taking colour from his surroundings, as he so often did, he was, nevertheless, not merely a reflector of that with which he came in contact, but a creator as well. Whatever he touched he enriched, and he left to posterity such new glories that the world outside has become his debtor for ever.

A. S. CARRIER.

NATURE (Slavic).—Our knowledge of Slavic religion is very limited, but we have a number of vague allusions to nature-worship. 'They reverence rivers and nymphs and other "daemons"' (Procopius, *de Bell. Goth.* iii. 14). Bohemian sermons in the 12th cent. abound in exhortations against nominal Christians of whom 'some worship the sun, some the moon and stars, some rivers and fires, some mountains and trees.' Similar references are found in Helmold (*Chron. Slav.* i. 52, 83 [*MGH* xxi.]), Cosmas of Prague (*Font. Rer. Bohem.* 52, 83 [*ib.* ix.]), and elsewhere.

1. Heavenly bodies.—For sun-worship there is little evidence. A god Dazbogu, mentioned in various texts, is usually identified with the sun-god, because his name glosses Helios in a Slavic translation of a Greek fragment of George Hamartolos (cf. Leger, *La Mythologie slave*, pp. 118-121). The marriage of sun or moon with the morning-star is a common theme of the folk-songs of the southern Slavs. At weddings it was customary among the people to nickname bride and bridegroom as morning-star, sun, or moon. Krauss, however, does not see in these customs any evidence for former sun- or moon-worship (*Volks Glaube und rel. Brauch der Südslaven*, p. 1 ff.).

2. Mountains.—Thietmar (*Chron.* viii. 59) mentions a mountain in Silesia which was worshipped on account of its great size.

3. Groves and trees.—There are numerous references to holy groves, forests, and trees. In 1008 Wigbert destroyed Zutibur (Sventibor, 'holy forest'), a grove which was worshipped in all respects as a god. The oak was particularly holy. Constantine Porphyrogenetus (912-959) gives an account of a Russian voyage on the Dnieper:

'When they arrived . . . they made sacrifices . . . because they found there a very large oak, and they offered up living birds' (*de Administ. Imper.* ix.).

The oak-tree was associated with the sacred spring and perpetual fire.

Herbord tells us that near Stettin there was 'a large and leafy oak, with a most excellent fountain beneath it, which the simple people thought the habitation of some god' (*Vita Otton.* [*MGH* xii. 794]).

4. Thunder, etc.—In texts of the 14th, 15th, and 18th centuries a god Svaroziczu is mentioned. 'They invoke fire, calling it Svaroziczu' (Leger, however, believes that this deity is a god, not of fire, but of war [p. 235 f.]). According to A. Guagnini, the monastery of Perunu was built on the site of an idol of Perunu, which had been worshipped by the people of Novgorod.

'It represented a man holding . . . a stone, in form like a thunderbolt. In honour of the idol burned by day and night a fire of oak-wood' (*Sarm. Europ. Descrip.*, Spira, 1581, p. 83).

It is hard to know how Guagnini could have obtained this information. 'An oak of Perun' is mentioned in a Galician charter, A.D. 1302. The god Perun is mentioned by Nestor in his account of the treaties made between Greeks and Russians (*Chron.* 21, 31, etc.). He is, in all probability, referred to by Procopius:

'They considered one god, the creator of the lightning, to be the only lord of all things' (*ib.* 14).

The word 'Perun' is identical with the Czech word for 'thunderbolt'; it does not occur in Serbian or Bulgarian texts. Perun survives in folklore. In a Galician tale Pieron appears to a nobleman to the accompaniment of thunder and lightning (cf. Leger, p. 67 ff.). He is mentioned in the Slovak ballads collected by J. Kollar:

'The god Perom behind the clouds . . .
suddenly launched the thunderbolt'
(quoted by Leger, p. 60).

When the treaty with the Greeks was concluded (A.D. 945), Igor went up to the hill where there was an idol of Perun, but the Christians took their oath in the chapel of St. Elias. Among all Slavic people Elias appears as the saint of thunder and lightning, the master of wind and rain.

5. Agriculture, etc.—In the government of Kursku and of Voroneczu it is customary at the end of the harvest to leave a handful of twisted corn in the fields. This is known as 'twisting the beard of Elias,' sometimes as 'twisting the beard of Perun or Volos.' Volos, god of flocks, is mentioned, together with Perun, by Nestor in his account of the treaty of A.D. 971. In Russian folklore his place has been taken by St. Blaise, patron saint of herds. It has been maintained,

indeed, that the so-called god is derived from the Christian saint (cf. Leger, pp. 111-117; and G. Krek, in *Arch. für slav. Phil.* i. [1876] 134 ff.).

LITERATURE.—F. S. Krauss, *Volks Glaube und religiöse Brauch der Südslaven*, Münster, 1890; L. Leger, *La mythologie slave*, Paris, 1901; further literature is given in Leger, ch. i. 'Les Sources de la mythologie slave,' and *Intro.* pp. i-xix.

END WELSFORD.

NATURE (Tentonic).—From Cæsar we have the following statement:

'The Germans . . . acknowledge no gods but those which are objects of sight and by whose power they are apparently benefited, the sun, moon, fire. Of others they know nothing, even by report' (*de Bell. Gall.* vi. 21).

This is so difficult to reconcile with the testimony of Tacitus and others that it has been thought (perhaps too hastily) that Cæsar entirely misunderstood the nature of Teutonic religion. Natural phenomena undoubtedly played some part in Teutonic cult.

'The inhabitants of Thule [i.e. Scandinavia] worship many gods and "daemons," in heaven and air, earth and sea, and other "daemons" who are said to be in the waters of wells and rivers' (Procopius, *de Bell. Goth.* ii. 15).

From Canute's Anglo-Saxon Laws we learn that 'heathenship is to honour heathen gods, and sun or moon, fire or floods, wells or stones or trees of any kind' (cf. B. Thorpe, *Ancient Laws and Institutes of England*, London, 1840, p. 162).

1. **Heavenly bodies.**—In Germany prohibitions of observance connected with the sun or moon are found in early Christian sermons or penitentiaries. The Decrees of Burchard of Worms († 1024) mention pagan traditions, 'id est nt elementa coleres, id est lunam aut solem aut stellarum cursum' (*PL* cxi. 960). In the Merseburg charm Sunna is mentioned along with Wodan and Frāa. Bede (*de Temporum Ratione*, 15) mentions two Anglo-Saxon goddesses, Hreda and Eostur, after whom the months of March and April were named. We know nothing further of these deities. The word Eostur is connected with Lat. Aurora, Gr. Ἡώς, Skr. Uṣās, Lith. Auszra, all of which denote personification of the dawn. Lith. Auszrine, morning-star, is derived from Auszra. Sun and moon, day and night, are personified in the O. Norse poems of the older Edda. Snorri counts Sol as one of the Asynjur (i.e. goddesses). See art. SUN, MOON, AND STARS (Teutonic).

2. **Fire.**—Our only evidence for actual fire-worship (besides the disputed passage from Cæsar) comes from the passage from Canute's Anglo-Saxon Laws which has already been given. Fire undoubtedly was of some importance in religious ritual. In Scandinavia there are some instances of a claim to property being established by carrying fire round it (cf. *Landnámabók*, v. 3; *Erbyggja Saga*, 1-7) or shooting the fire-arrow towards it (*Landn.* iii. 8). In the temple of the Iclander Thorgrim there 'was always to be fire, which should never go out; they called that consecrated fire' (*Islendinga Sögur*, i.). In *Gylfaginning* and the Edda poems a being called Surtr is spoken of as the watchman of MnsPELLHEIM, the world of fire. He has a flaming sword and will burn up everything at the end of the world. It has been suggested that Surtr is a volcano-god of Icelandic origin (cf. B. S. Phillpotts, in *Arkiv för nord. Filol.* xvii. [1905] 14 ff.).

3. **Thunder.**—Our knowledge of the cult and attributes of the Tentonic thunder-god is derived almost exclusively from Scandinavian sources. In England traces of his cult are probably preserved in place-names such as Thundersley, Thundersfield. 'Latona Jovis mater' is translated 'Thnnres moðr' in Anglo-Saxon (Grimm, *Teut. Mythology*, p. 189). In Germany there are a number of place-names compounded with 'Donner' (*ib.* p. 170). Thuner appears with Wodan and Saxnot in the O. Saxon renunciation formula. Latin 'Jovis

dies' is translated by O.E. Thunoresdaeg, O.H. Germ. Donarestag, O.N. Þórsdagr. The name of the Scandinavian god Thor is identical with the word for thunder employed by all Tentonic peoples, but in Iceland the word went out of use, and, consequently, in O. Norse and Icelandic literature Thor's connexion with the elements is almost forgotten—except perhaps in Snorri's account of the duel with Hrungnir:

'Afterwards he saw flashes of lightning and heard great thunder-claps; and then he saw Thor in his divine wrath' (*Skáldskaparmál*, p. 104).

In Denmark and Sweden, on the other hand, Thor was always remembered as a nature-god.

'Thor who is thunder and lightning presides in the air; he rules over winds and rain, fair weather, and fruitful seasons' (Adam of Bremen, *Gesta Hammaburg.* iv. 26).

He survives in Swedish folklore as the opponent of trolls and giants, waging war on them by means of thunder and lightning (cf. Craigie, *Scand. Folk-lore*, p. 17). In Gothland thunder is known as Thorsaka ('the driving of Thor'). Thor is represented as the son of Óðin. His mother is called sometimes Jorð (Earth) and sometimes Fjörgynn, which is probably a derivative from Idj *perkuns, 'an oak.' It is probable that the thunder-god of the Teutons, like that of other European peoples, was originally associated with the oak. St. Boniface cut down a large tree at Geismar in Hesse which the pagans called 'robnr Jovis.'

4. **Trees, groves, etc.**—We have numerous references to Teutonic 'groves grim with ancient rites, and oaks resembling a barbaric divinity' (Claudian, *de Laudib. Stilich.* i. 229-231). In most cases the grove was simply a sanctuary revered as the haunt of a deity, but sometimes it was in itself the object of devotion. The Iclander Thorir 'worshipped the grove.' Often the sacred spring is associated with the sacred tree.

Near the Swedish temple at Upsala there was 'a huge tree with wide-spreading branches, always green winter and summer . . . there was also a fountain, where the pagans were wont to make sacrifices and to throw in a living man' (Adam of Bremen, *lv.* 26, *schol.* 134).

This type of tree-sanctuary seems to have given rise to the conception of the universal, three-rooted tree, the Yggdrasil's ash, of Northern mythology. Under the root which belongs to the Æsir (i.e. the gods) is Urðarbrunnr. Every day the Norns sprinkle Yggdrasil's ash with water from this spring, so that the tree never withers or decays, but 'stands ever-green over the spring of fate' (*Völuspá*, 19). The link between the tree-sanctuary and the idea of the world-tree is perhaps to be found in the *Vördtröd*, the 'guardian-tree' which stands beside the homestead in many parts of Sweden, and was possibly regarded, at one time, as the abode of the guardian-spirit of the family. A marvellous tree called Lærnär stands beside Valhöll and may represent the guardian-tree of the divine community (cf. *Gylf.* p. 49; also Chadwick, in *JAI* xxx. 30).

5. **Water.**—Water-worship was very common among the Tentons. Procopius (ii. 25) states that the Franks who invaded Italy A.D. 539 threw the Gothic women and children into the Po as a sacrifice. The Anglo-Saxon penitentiary of Egbert imposes penance on those 'who bring alms to a fountain' (ii. 22, *ap.* Thorpe, p. 371). The canons of Edgar (16, *ap.* Thorpe, p. 396) also forbid well-worship. In *Landnámabók*, v. 5, we are told that Thorstein Redneb 'worshipped the waterfall.' Water was considered the abode of monstrous beings. Mimir inhabited the spring beneath one of the roots of Yggdrasil's ash. In Germany his memory survives in place-names (cf. Mogk, *Germanische Mythologie*, p. 305). In songs of Smaaland we hear of Mimesjö, and Mimesa, which flows from it, where a water-spirit has his

habitation. In *Völuspá* the waves are called 'sons of Mimir.' The waves are also called 'daughters of Ægir' (Mogk, p. 303). The latter appears to be a good-natured being associated with the sea. His name may be connected with Goth. *ahwa*, 'water.' His wife Ran, 'the unmannerly,' represents the sterner aspects of the ocean.

'Then the Æsir became aware that Ran possessed a net in which she caught all those men who came into the sea' (*Skaldsk.* p. 109). 'Then came a wave . . . and flung four men overboard . . . "Now is it likely," said Friðjof, "that some of our men will visit Ran . . . I think it right that every man should carry some gold with him . . . we will cut the red ring . . .

Before Ægir slays us
Gold shall he seen on the guests
In the middle of the hall of Ran
If we need night-quarters there'" (*Friðjof Saga*, vi.).

6. Mountains.—In the 6th cent. Agathias (*Hist.* i. 7) mentions 'hills' among various other objects of Alemannic worship. Thorolf Mostrarskegg, one of the first Icelandic settlers, had so great a reverence for the hill which he called Helgafell that 'he enjoined that no man should look upon it unwashed . . . and nothing was to be destroyed there' (*Landn.* ii. 12).

7. Earth.—For the Teutonic worship of the earth-deity our chief information comes from Tacitus (*Germ.* 40). From him we learn that certain maritime tribes had a common worship of Nerthus, 'id est, terra mater.' In Scandinavian mythology the name of the god Njörðr is identical with that of Nerthus, but there has been a change of sex and function. Njörðr rules over winds and calms the sea and fire (*Gylf.* p. 31 f.). The cult of Nerthus seems to have been inherited by Frey, the son of Njörðr, who was closely connected with Upsala, the famous Swedish sanctuary. We also hear of a goddess Freyja, who seems to be a female counterpart of Frey, who is represented as her brother, and of a corresponding Danish deity, Gefion, who created the island of Sjælland by her four-ox plough. In an Anglo-Saxon charm for fruitfulness invocation is made to 'Erce, erce, erce eorðan moðr.' For the phrase 'eorðan moðr' we have an exact parallel in Lettish 'Semmesmāte,' mother of earth (cf. Chadwick, *Orig. of Eng. Nation*, ch. x.). The Anglo-Saxon legend of Scyld Scefing is probably to be derived from agricultural ceremonies (*ib.* p. 274 ff.). The well-known Scandinavian story of the death of Balder probably originated from certain rites of the type made so familiar to us by J. G. Frazer in *The Golden Bough*.

The preamble to the Icelandic code of laws (A.D. 927) provided that seafarers were to take down the figure-heads from their ships before arriving in sight of Iceland, and not sail up to the land 'with gaping heads and yawning snouts lest the *land-vættir* should take fright thereat.' The belief in *land-vættir*, the spirits of the soil, seems to have been a development peculiar to Icelandic religion, and to have been a very real factor in the life of the people. The Icelandic Egil Skallagrímsson believed that Norway also had its *land-vættir*, and by means of threats he tried to turn them against his enemy King Eric Blood-axe.

'He turned the horse's head so that it pointed towards the land. "I turn this curse on the *land-vættir* who dwell in this country, so that they shall all go astray, and no one of them shall find his home'" (*Egilskallagrímsson Saga*, 60).

8. Animals.—According to Gregory of Tours (*Hist. Franc.* ii. 10), the Franks worshipped birds and beasts. In the Life of St. Barbatius († 683) there are references to the snake-worship of the Lombards. There are several allusions to animal-worship in the sagas.

'Freyfaxi [a horse] . . . was owned by a man named Brandr, who is said to have worshipped it' (Grimm, p. 656). 'Ográid was a king and a mighty warrior, who made great sacrifices to a certain cow, and had her with him wherever he went' (*Saga of Olaf Trygvason*, 71).

9. Winds and other natural phenomena.—'Whence comes wind?' asks Gangleri (*Gylf.* p. 26). Hárr replies,

'He is called Corpse-swallower
Who sits at the end of Heaven
A "Jotun" in eagle's form,
From his wings
Wind is said to come
Over all mankind.'

The storm-winds howling through the forest were often thought to be the souls of the dead riding out on the Wild Hunt. In parts of Scandinavia and Germany this host is attributed to the god Wodan-Oðin (cf. Mogk, p. 337 ff.). It is chiefly due to this fact that Oðin is so often described as a wind-god. We hear, however, of other leaders of the 'raging army,' Holda, Perchta, Dietrich von Bern, etc. Oðin's connexion with the Wild Hunt is probably quite secondary, and due to the fact that he was already worshipped as god of the dead.

Other mythological beings such as the god Heimdallr and his opponent Loki are sometimes (but with insufficient evidence) regarded as personifications of natural phenomena. In Scandinavian literature the earthquake is explained as the quivering of Loki when the poison drops fall on him (cf. *Gylf.* p. 80). The Jötunn (=A.S. *eotenas*) may be, in origin at least, nature-'daemons.' This is suggested by the occurrence in Scandinavian mythology of the great wolf Fenris, and Miðgarðsormr, the world-snake, and the *himpursar*, the frost-giants who had such good reason to fear Thor's hammer. The name of the Jötunn Thrymr (who was killed by Thor for stealing his hammer) is connected with *pruma*, the O. Norse word for 'thunder-clap.' In this case we seem to have rival personifications of the same element.

LITERATURE.—Cæsar, *de Bell. Gall.* vi. 21; Tacitus, *Germania*; Procopius, *de Bell. Goth.* ii. 15; Gregory of Tours, *Hist. Francorum* (MGH, 'Script. Meroving.' i. (1884)); Adam of Bremen, *Gesta Hammaburgensis Ecclesie pontificum* (MGH, 'Script.' vii. 267 ff.); Saxo Grammaticus, *Hist. Danica*, i.-ix., tr. O. Elton and F. Y. Powell, London, 1894; the poems of the older Edda, especially *Völuspá*, *Yafprudnismál*, *Grimnismál*, ed. K. Hildebrand and H. Gering, Paderborn, 1912; Snorri Sturluson, *Gylfaginning*, *Skáldskaparmál* (*Die prosaische Edda*, ed. E. Wilken, Paderborn, 1912); *Landnámabók* ('The Book of the Settlement of Iceland'), tr. T. Ellwood, Kendal, 1898; *Kyrbýggja Saga*; *Flateyjarbók*; J. Grimm, *Teutonic Mythology*, tr. J. B. Stallybrass, Oxford, 1882-88; E. Mogk, *Germanische Mythologie* 2 (Paul's *Grundriss der germ. Phil.* iii. x.), Strassburg, 1907; A. Orlík, *Nordisches Geistesleben*, Heidelberg, 1908; W. A. Craigie, *Scandinavian Folk-lore*, London, 1896; H. M. Chadwick, *Origin of the English Nation*, Cambridge, 1907, ch. x. i., and 'The Oak and the Thunder-god,' in *JAI* xxx. [1900] 22 ff. For further literature see Mogk, and P. D. Chantepie de la Saussaye, *The Religion of the Teutons*, tr. B. J. Vos, Boston, 1902, pp. 418-463.

ENID WELSFORD.

NATURISM.—See ANIMISM.

NAVAHO. — 1. Introduction. — The Navaho belong linguistically to the Athapaskan stock, one of the largest and most widely distributed of the linguistic families of N. America. The great interior of the northern portion of the continent is occupied by this stock, where they are to be found in the valleys of the Mackenzie and Yukon Rivers and in the interior of British Columbia. This northern division has been discussed under the name Déné (*q.v.*). A second division occupies the coast and western portions of southern Oregon and northern California. These in part have been treated under the name Hupa (*q.v.*), one of the best known Athapaskan tribes of this region.

In the south, besides the Navaho, there are several tribes, generally called Apache (*q.v.*), which are closely connected with the Navaho in language and, in large measure, in religion also. These Apache tribes are: the Mescalero, who live in the more elevated region between the Rio Grande and Rio Pecos in eastern New Mexico; the

Jicarilla, consisting of two bands formerly living on either side of the Rio Grande in northern New Mexico; and, in western New Mexico and eastern Arizona south of the high plateau, several Apache tribes, similar in culture, which will be referred to in this article as the Western Apache. The Navaho themselves live in a vast high plateau between the Little Colorado and San Juan Rivers in northern Arizona and north-western New Mexico. There are 30,000 or more of these pastoral semi-agricultural people in this district, who have for the most part been little influenced by the religion of the Europeans.

Between these Athapascan-speaking peoples of the south, the Navaho and Apache, and their linguistic relatives of the north, represented by the Déné and the Hupa, there seems to be no more connexion in religious observance and mythology than exists between other linguistically unrelated N. American tribes. In a general way the Navaho religion is similar to that practised by their neighbours occupying the Pueblo villages of the Rio Grande valley and the Hopi *mesas*. It is true, however, that the Navaho and Apache have a well-developed cycle of myths and a belief in a number of gods with personal names not shared, as far as is known, by any other people.

2. *Mythology.*—The creation-myth recognizes a series of worlds imposed one above the other. A pre-existing race was driven from the lower world by floods. According to the Navaho version, they escaped to this world by means of hollow reeds which grew miraculously until they reached the sky of the lower world, the surface of this one. With these animal-like men came the gods who have human form. As a result of sexual misbehaviour there were born a number of man-eating monsters, who preyed upon the people until only one woman was left, *Estsanatlehi*. Lying exposed, she conceived by the rays of the rising sun, and gave birth to a daughter. This daughter, after falling to secure conception in this manner, succeeded when she lay under a waterfall. Her child, sired by the water, was a boy, the culture hero *Naiyenesgani*. In some versions *Naiyenesgani* is the son, not the grandson, of the sun and *Estsanatlehi*, and has a 'brother,' according to the native terms, his mother's sister's son, born of water. The boys (or the boy, according to the version), coming to manhood in a few days' time, go on a long and difficult journey to the home of the sun in the east. They are given directions for this journey by Spider Woman, whom they encounter on the way. Arrived at the house of the sun, they are subjected to certain tests and are then given a sweat-bath, during which they are moulded into finished human shape so that in form they are indistinguishable from the sun himself. Being supplied by the sun with weapons with which to slay the monsters, they return to earth on a streak of lightning and set about their mission. One by one the monsters are overcome, a trophy being taken in each case. Incidentally there occurs a discussion of the old problem of the presence of good and evil in the world, since certain semi-evils—old age, poverty, and cold—were allowed a continued existence on certain conditions. After the task of ridding the world of evil had been completed, the culture-hero went to live at the mouth of the San Juan river and *Estsanatlehi* to the western ocean, where she receives the sun as he sets.

Men themselves were created in various ways. According to the Navaho, the gods placed ears of corn of various colours between blankets, which, animated by the wind, became boys and girls. These, considered relatives, married other semi-divine couples. People were also produced by *Estsanatlehi* by rubbing cuticle from her side. The origins of agriculture, of the clan organizations, and of the various ceremonies are explained by separate myths, which frequently relate the experiences of certain individual men.

Agriculture was introduced by a young man so devoted to, and uniformly unfortunate in, gambling that his relatives were on the point of killing him. With the help of the gods he floated down a large river in a hollow log, escaping many dangers by the way. His pet turkey had followed, and, hearing a desire for something to plant, spread its wings and shook out seed-corn of the various colours. This corn, together with tobacco and melons, was planted on a flat by the river, where it matured with miraculous rapidity. The young man found and married the daughter of Deer Raiser, who gave his daughter as her marriage-portion the game animals which until this time had been kept in enclosures. Most of the ceremonies are believed to have been obtained from the anthropomorphic gods, who live in the cliff-ruins and the mountains. Some man in dire need is taken to the homes of the gods and taught the songs, prayers, and dances of the ceremony. Being relieved himself, he is hidden to return to his fellow-men and teach them what he has learned.

3. *Religious ceremonies.*—The Apache, and in all probability the Navaho, hold adolescent cere-

monies for maturing girls. The girl during the time is called *Estsanatlehi*. While she dances, songs are sung for her during four nights. The ceremony is concluded on the morning of the fourth night with a race by the girl and the painting of the girl and the spectators with white earth. The songs sung are those of *Naiyenesgani*, which he obtained of the sun when he was given the sweat-bath. During the nightly ceremonies for the girl masked men representing the anthropomorphic gods come in procession and dance. A special series of songs connected with their cult is sung for them.

There are healing ceremonies of various sorts which, among the Navaho, take place in a specially built house. Masked men representing the various gods participate in the ceremony. The songs of the two kinds mentioned above are sung and many prayers are recited. The final night, usually the tenth of the ceremony, is given over to a public spectacle during which much amusement is furnished by clowns.

One of the striking features of Navaho ceremonies is the use of dry paintings. Under the direction of the priest in charge, large and elaborate pictures are made on the floor of the lodges by sprinkling down dry pigments. These pictures usually represent scenes taken from the myths, which also furnish the themes of the songs. The use of pollen is also noteworthy. It is sprinkled as the accompaniment of prayer, and is used to mark out trails and indicate boundaries.

The religion of the Navaho and Apache, like that of the Hopi, is largely conditioned by æsthetic motives. The arrangement of the parts of the songs and of their sequence in groups is according to a numerical rhythm. The songs and prayers are filled with imagery and refer constantly to the four world-quarters with which are associated colours, certain semi-precious stones, and definitely named gods.

The major ceremonies of the Navaho and Apache are held under the direction of individual priests who by long study have acquired the ritual, which may include a hundred or more songs, many prayers, numerous and elaborate dry paintings, and various detailed items of knowledge. This information is most frequently, but not necessarily, obtained from an older relative. Many individuals have charms or fetishes which ward off evil or give good luck in hunting and the raising of their flocks and herds. The ceremonies connected with agriculture are but little known.

4. *Objects of worship.*—The religion of the south-west is of great interest, rivaling in its complexity that of the Plains and north-west coast of N. America. From the myths, songs, prayers, and other sources of information it appears that natural objects are of supreme importance in Navaho and Apache religion. The sun, the moon, dawn, sunbeams, rainbows, lightning, the four world-quarters; wind, and the all-pervading darkness are all mentioned and invoked as powerful agents concerned in human affairs. Besides these are the gods of human form, the *gan* of the Apache, the *yai* of the Navaho, immortals who live in hollow mountains or in the cliff-ruins. They join with men in their ceremonies, particularly those of healing, which they have themselves provided as a cure for human ills. These anthropomorphic gods are by some believed to be the ghosts of ancestors, although the Indians themselves look upon them as a separate race who preceded men upon the earth. Various animals are also objects of worship. The bear is generally associated with healing and the panther with hunting. Of the tabus that which prevents the eating of fish is the most important.

P. E. GODDARD.

NAYARS.—1. Introduction.—The habitat of the Nāyars ('Narā' of Pliny) is the extreme south-western littoral of the Indian peninsula between Cape Comorin and Point Dely, 16 miles north of Cannanore, a strip of beautiful thickly wooded country from 20 to 60 miles in width, flat only near the sea—where is a chain of lagoons—and in the rice-fields. This portion of the Madras Presidency is known as Malabar, divided politically between the Malabar District of British India and the native States Cochin and Travancore—in all about 11,000 square miles.¹ The incidence of population is, in parts, higher than it is in Belgium. In its peoples, history, customs, land-tenures, and ordinary ways of life Malabar is unlike the rest of India. The architectural style of the mosques and temples is curiously like that of Nepāl; the forms of jewellery resemble those of Sind. The very origin of Malabar is the subject of myth. Parasurāma, wishing to create a new land for the re-establishment of *dharma*, is said to have raised it from the sea from where he stood, at Cape Comorin, to as far as he could fling his axe. The land which emerged from the sea was the ancient Kērala, its old and well-loved name. Protected by its physical barriers, the high western Ghāts, Malabar has survived apart from the turmoil which has changed the face of India, the home of rigid conservatism in customs, beliefs, and practices. It is a miniature world. Highest of the Hindus are the Nambūtiri Brāhmins, purest of the Vedic stock and faith, sacerdotal, aristocratic, rich; lowest are jungle folk having a nasal index of nearly 100², guided by the crudest animistic ideas.³ Below the Nambūtiris are the Nāyars, and in a descending scale is a variety of peoples in different conditions of culture.

The orthodox view of the Nambūtiri Brāhman is thus stated in an official document of Travancore:

'His person is holy; his directions are commands; his movements are a procession; his meal is nectar; he is the holiest of human beings; he is the representative of God on earth.'

2. Inheritance, marriage laws, etc.—Descent among the Nambūtiris is patrilineal. Eldest sons alone inary; their sons inherit the family property. Younger sons are authorized to mate organically with Nāyar women. In the cases of the royal houses of Travancore and Cochin and families of lesser chiefs and people of importance, the fathers are always Nambūtiris. The Nāyars are divided into clans which are mostly but not entirely exogamous. By a rule, infringement of which is never condoned, a Nāyar woman is allowed to associate intimately with a man of her own clan or of a superior clan, or with a Nambūtiri, but never with one of an inferior clan or caste. The former practice is known as *anulōman*, 'following the hair.' Its converse, *prātīlōman*, 'going against the hair' (or 'grain'), brings complete social degradation. The restrictions placed upon Nāyar men are well expressed in the *Lusiad*:

'The haughty nobles and the vulgar race
Never must join the conjugal embrace'
(tr. W. J. Mickle, London, 1793, bk. vii. p. 156).

Mother-right obtains. A man's sister's sons, not his own sons, are the heirs. As a rule, the woman remains in her own *tarawād* ('household'), where she is visited by her husband. She may visit him,

¹ Hills and forests where no Nāyars live excluded.

² On the fringe of Hinduism, but not, strictly speaking, Hindus by caste.

or he may visit her for a period, but she never joins her husband's *tarawād*; she brings up her children, who are members of her *tarawād*, in her household. The eldest male—the *karanavan*, as he is called—conducts the entire management of the *tarawād* property. Nāyar girls without exception observe certain formalities before entering upon the marriage state. Chief of these is the *tālī-kettukalayānam* ('marriage-token-tying-ceremony'), obligatory before attainment of puberty. A boy whose horoscope is in agreement with the girl's is usually the bridegroom for the occasion—which, however, confers upon him no prescriptive right to her person.

'A cloth is severed into two parts and each part is given to the *mana valen* (bridegroom) and the girl separately; symbollo of divorce (*Report of the Malabar Marriage Commission*, Madras, 1891, p. 15).

Subsequently, under formal family consent she forms an alliance which constitutes marriage. While the Nambūtiris' marital arrangements are governed exclusively by considerations of property, those of the Nāyars are not. Position, pride of family, and the like naturally exert influence, but the Nāyar marriage involves no transference of family property. It is never mercenary.

The Nāyars were the military element. Thus in the *Lusiad* we read:

'By the proud Nāyres the noble rank is claimed;
The toils of culture and of art they scorn,
The warrior's plumes their haughty brows adorn;
The shining faulchion brandished in the right,
Their left arm wields the target in the fight,
Of danger scornful, ever armed they stand
Around the King, a stern barbarian band'

(bk. vii. p. 156).

Now, while the Nāyar no longer knocks the hilt of his sword against his shield as he walks along his shaded lanes to warn low-caste people to wait at a distance until he passes by, lest their proximity should pollute him, he is almost as careful to prevent pollution from whatever source, for personal purity, cleanliness, is an essential of his religion. Pollution is conveyed by a person of inferior caste approaching a Nāyar within a prescribed number of paces as well as by the slightest contact, and the Nāyar is especially careful to permit no violation of this social rule when, having bathed and donned clean clothes, he returns home after his devotions in the temple. Bathing before eating is imperative.

3. Religion.—The Nāyars are Hindus; their religion is therefore Hinduism. But, as a Travancore Hindu observes,

'Hinduism is a very comprehensive term, and has many shades and degrees of varying hues in it, ranging from Brāhmanism, the highest and purest and most philosophical form of Theism, and the fetish worship of the aboriginal castes. . . . It has in its course of evolution from nature-worship to its present form passed through various phases, has come in contact with all the other religions of the world and has imbibed something from all. It is, in fact, "all tolerant, all compliant, all comprehensive, all absorbing." Hence it has been found difficult to exactly define what Hinduism means' (V. Nagam Aiyar, *Travancore State Manual*, II. 29, 42).

Undoubtedly the belief in the transmigration of souls as caused by the law of *karma* is its most distinguishing feature.

"As we sow, so shall we reap." So long as this doctrine is the basis of a Hindu's belief, it is a safe guide inciting him to do good and deterring him from evil. Every moment of his daily existence the pious Hindu is reminded of the law of Karma, that "every deed in his life . . . leads to its legitimate results in one's future life, whether it be in another world or in another existence in this world." Self-righteousness lies at the root of Hindu religious belief, and no man is counted righteous except through his works, acts and thoughts' (ib. p. 103).

Self-realization, self-mastery, control of the mind are the ideal.

'As all action, right or wrong, proceeds from desire, and as desire springs from the mind, the mastery of one's mind and habit to which uncontrolled mental activity makes a man a slave, constitutes true worship; and all rights and ceremonials

are either preparations for or applications of that mastery' (N. Subramanya Aiyar, *Census of India, 1911*, vol. xxiii. pt. i. p. 199).

The use and purpose of sacred images are well described by the same writer :

'Although in the anxiety to exonerate themselves from the charge of venerating what is in substance a piece of stone or metal, apologists have not been wanting to explain away these *Vigrahas* as mere symbolic representations to catch the popular mind or, at most, mechanical aids to concentration, the fact remains that according to Hindu Scriptural texts and to the belief of the great mass of worshippers, the image is a living Divine presence. The basic theory of image-worship as far as one is able to make out from enquiry and research, is that, in the image, a particular power among the various Powers or Gods provided in the scheme of cosmic order . . . is embodied, and placed . . . within reach of those who may not have the power to dive into the occult but none the less real world' (ib. p. 201).

Throughout S. India to the east of the Western Ghats, Hinduism in its varied aspects is conspicuously sectarian, followers of even the same sect often exhibiting active and bitter hatred of each other in their quarrels concerning unimportant details of ceremonial. Worship by a votary of Siva in a Viṣṇu temple would be unthinkable. But in 'the Land of charity,' a name by which Malabar is known, it is quite otherwise. Sectarianism is unknown. Viṣṇu and Siva are little more than mere names. Whether Bhagavati is male or female no one knows or cares. An *avatār* of Viṣṇu may be found in the list of evil spirits acting under control by a magician. This local non-sectarian character of Hinduism is, probably, largely due to the influence of the great philosophical religious teacher, Sankarāchārya, expounder of the Vedānta, who is held in special veneration by the Nambūtiris and by the Nāyars. Himself a Nambūtiri Brāhman, he was born, as most scholars now agree, in N. Travancore in A.D. 788.

'He preached the universal doctrine that all created things, animal, vegetable and mineral, are manifestations of a supreme, eternal, unchanging and impersonal Spirit, Brāhman, through Māya and openly proclaimed the absence of difference between Viṣṇu and Siva, laying down sectarian neutrality as an inviolable law for Kērala' (N. S. Aiyar, *Census of India, 1901*, xxvi. [Trivandrum, 1903], pt. i. p. 101).

Another name for Malabar was 'Karmabhūmi,' the significance of which is given as follows :

'The spiritual salvation of the inhabitants of this land depends on good actions, as contrasted with the East Coast . . . where a man obtains salvation by mere birth irrespective of his actions, as the land itself is consecrated ground' (V. N. Aiyar, i. 1).

But, while the lofty ideas of the Vedānta philosophy inspire, more or less, the Nambūtiri in almost every moment of his life, they do not in the same degree of completeness represent the religious ideas of the Nāyar, who is far more deeply imbued by the lower, the magico-religions, cult. In the case of the Nāyar the serpent is an object of regular worship.

'A serpent Kavu (shrine) or an abode of snakes is an indispensable adjunct to every Nāyar house' (ib. ii. 59).

A Nāyar house, even of the very poorest class, is always detached, in its own well-shaded garden. Around the shrine the trees and shrubs are untouched by the axe. Images are placed, and, in addition to periodical ceremonies, offerings are made 'there in propitiation of the serpent gods' (ib. ii. 61).

The myths and legends relating to serpents are innumerable. In addition to the serpent, Adīśṣha, who supports the earth and is the bed of Mahā Viṣṇu, the cow, giver of all things, the bull, a vehicle of Siva, and the Brāhmany kite, a vehicle of Viṣṇu, are held sacred. Sacred trees are: *asvatta* (*Ficus religiosa*), circumambulated by women desiring children, and by men to avert the evil influence of Saturn under which every man suffers during some period of his life; its twigs are indispensable in all sacrificial offerings to the gods; *bilva* (*Aegle marmelos*), sacred to Siva; *tulasī* (*Ocimum sanctum*), to Viṣṇu. 'The worship of animals and plants

is not outside the cult of the most Sāstric Hindu' (N. S. Aiyar, p. 99). There is 'no clear line . . . between the Animists and the Hindus' (V. N. Aiyar, ii. 39), and it is to the many minor deities, serpent and other, and the more notorious spirits of mischief and evil that the Nāyar offers most of his devotion. This may be called the land of magic; for magic in all its bearings—witchcraft, divination, oracular demonstrations, and so on—is an actuality of life. Every Nāyar wears on his person from childhood at least one amulet and more often several amulets, each one consisting of a magic formula or a figure enclosed in a golden case. Expression of religious feeling is seen in ceremonies, notably those concerned with birth and death, and during religious festivals. After the seventh month of pregnancy the Nāyar woman bathes and worships in the temple every morning, and before her morning meal she eats a small quantity of butter over which holy *mantras* ('charms') have been muttered by priests. Personal ceremonies, ante-natal, during childhood—such as naming a child, boring its ears, and so on—and throughout life, are numerous. When death is at hand, before the breath leaves the body each member of the household, one by one, pours into the mouth of the dying man a few drops of water from a little cup formed of leaves of the *tulasī*, holding in the hand a piece of gold over which the water runs. A light is kept burning day and night, and near it a large measure of unhusked rice and a small quantity of husked rice, while one member of the *taravād* holds the head of the dead in his lap, the body lying on plantain leaves, as relatives enter to bid farewell. As conducive to the happiness of the dead, cremation takes place without delay. The body is washed, anointed, and covered with new cloths, and, as it is being carried to the pyre—always to the south—the senior male present tears from one of the cloths upon the body a piece, which he fastens round his waist; and he holds in his hand, or sticks in his waist, a piece of iron. He is the chief mourner. The corpse is laid head to the south, and on the fuel, which, all or in part, must be wood of the mango tree, is placed a little camphor, sandal-wood, and *ghī* (clarified butter). No elder member of the *taravād* of either sex may be present. The deceased's younger brother or nephew lights the pyre at the head. The son may, at the same time, apply fire at the feet of the corpse. While it is being consumed, every member of the *taravād* bathes in the small pond which is in the garden of every Nāyar's house. The chief mourner carries a pot of water, pierced so that the water spills as he walks thrice round the pyre ere the corpse is consumed, and dashes the pot to the ground. A small image of the deceased is then made of raw rice, and rice and gingelly seeds are offered to it. Balls of food are offered daily during the following seven days, and at the end of this period all members of the *taravād* bathe together, the chief mourner having in his possession the strip of cloth and the piece of iron. During these seven days the deceased is represented by a piece of palm-leaf, knotted and placed upright in the ground. The essence of the food goes direct to the spirit of the deceased and appeases him. The piece of cloth and the piece of iron are tied to a pillar of the house nearest the palm-leaf. The food is scattered to crows or thrown into water. Death-pollution continues until the fourteenth day, when the calcined remains are carried in a pot to a river and thrown into it. Then follows more ceremonial bathing, and on the fifteenth day the purificatory ceremony takes place, releasing the members of the *taravād* from the ban of the death-pollution. Subsequently there are other ceremonies and the chief mourner remains un-

P. E. GODDARD.

NAYARS.—1. Introduction.—The habitat of the Nāyars ('Narā' of Pliny) is the extreme south-western littoral of the Indian peninsula between Cape Comorin and Point Dely, 16 miles north of Cannanore, a strip of beautiful thickly-wooded country from 20 to 60 miles in width, flat only near the sea—where is a chain of lagoons—and in the rice-fields. This portion of the Madras Presidency is known as Malabar, divided politically between the Malabar District of British India and the native States Cochin and Travancore—in all about 11,000 square miles.¹ The incidence of population is, in parts, higher than it is in Belgium. In its peoples, history, customs, land-tenures, and ordinary ways of life Malabar is unlike the rest of India. The architectural style of the mosques and temples is curiously like that of Nēpāl; the forms of jewellery resemble those of Sind. The very origin of Malabar is the subject of myth. Parasurāma, wishing to create a new land for the re-establishment of *dharma*, is said to have raised it from the sea from where he stood, at Cape Comorin, to as far as he could fling his axe. The land which emerged from the sea was the ancient Kērala, its old and well-loved name. Protected by its physical barriers, the high western Ghāts, Malabar has survived apart from the turmoil which has changed the face of India, the home of rigid conservatism in customs, beliefs, and practices. It is a miniature world. Highest of the Hindus are the Nambūtiri Brāhmins, purest of the Vedic stock and faith, sacerdotal, aristocratic, rich; lowest are jungle folk having a nasal index of nearly 100°, guided by the crudest animistic ideas.² Below the Nambūtiris are the Nāyars, and in a descending scale is a variety of peoples in different conditions of culture.

The orthodox view of the Nambūtiri Brāhman is thus stated in an official document of Travancore:

'His person is holy; his directions are commands; his movements are a procession; his meal is nectar; he is the holiest of human beings; he is the representative of God on earth.'

2. Inheritance, marriage laws, etc.—Descent among the Nambūtiris is patrilineal. Eldest sons alone marry; their sons inherit the family property. Younger sons are authorized to mate organically with Nāyar women. In the cases of the royal houses of Travancore and Cochin and families of lesser chiefs and people of importance, the fathers are always Nambūtiris. The Nāyars are divided into clans which are mostly but not entirely exogamous. By a rule, infringement of which is never condoned, a Nāyar woman is allowed to associate intimately with a man of her own clan or of a superior clan, or with a Nambūtiri, but never with one of an inferior clan or caste. The former practice is known as *anulōman*, 'following the hair.' Its converse, *prātīlōman*, 'going against the hair' (or 'grain'), brings complete social degradation. The restrictions placed upon Nāyar men are well expressed in the *Lusiad*:

'The haughty nobles and the vulgar race
Never must join the conjugal embrace'
(tr. W. J. Mickle, London, 1793, bk. vii. p. 156).

Mother-right obtains. A man's sister's sons, not his own sons, are the heirs. As a rule, the woman remains in her own *tarawād* ('household'), where she is visited by her husband. She may visit him,

¹ Hills and forests where no Nāyars live excluded.

² On the fringe of Hinduism, but not, strictly speaking, Hindus by caste.

or he may visit her for a period, but she never joins her husband's *tarawād*; she brings up her children, who are members of her *tarawād*, in her household. The eldest male—the *karanavan*, as he is called—conducts the entire management of the *tarawād* property. Nāyar girls without exception observe certain formalities before entering upon the marriage state. Chief of these is the *tāli-kettu-kalayānam* ('marriage-token-tying-ceremony'), obligatory before attainment of puberty. A boy whose horoscope is in agreement with the girl's is usually the bridegroom for the occasion—which, however, confers upon him no prescriptive right to her person.

'A cloth is severed into two parts and each part is given to the *mana valen* (bridegroom) and the girl separately,' symbolic of divorce (*Report of the Malabar Marriage Commission*, Madras, 1891, p. 15).

Subsequently, under formal family consent she forms an alliance which constitutes marriage. While the Nambūtiris' marital arrangements are governed exclusively by considerations of property, those of the Nāyars are not. Position, pride of family, and the like naturally exert influence, but the Nāyar marriage involves no transference of family property. It is never mercenary.

The Nāyars were the military element. Thus in the *Lusiad* we read:

'By the proud Nāyres the noble rank is claimed;
The toils of culture and of art they scorn,
The warrior's plumes their haughty brows adorn;
The shining faulchion brandished in the right,
Their left arm wields the target in the fight,
Of danger scornful, ever armed they stand
Around the King, a stern barbarian band'
(bk. vii. p. 156).

Now, while the Nāyar no longer knocks the hilt of his sword against his shield as he walks along his shaded lanes to warn low-caste people to wait at a distance until he passes by, lest their proximity should pollute him, he is almost as careful to prevent pollution from whatever source, for personal purity, cleanliness, is an essential of his religion. Pollution is conveyed by a person of inferior caste approaching a Nāyar within a prescribed number of paces as well as by the slightest contact, and the Nāyar is especially careful to permit no violation of this social rule when, having bathed and donned clean clothes, he returns home after his devotions in the temple. Bathing before eating is imperative.

3. Religion.—The Nāyars are Hindus; their religion is therefore Hinduism. But, as a Travancore Hindu observes,

'Hinduism is a very comprehensive term, and has many shades and degrees of varying hues in it, ranging from Brāhmanism, the highest and purest and most philosophical form of Theism, and the fetish worship of the aboriginal castes. . . . It has in its course of evolution from nature-worship to its present form passed through various phases, has come in contact with all the other religions of the world and has imbibed something from all. It is, in fact, "all tolerant, all compliant, all comprehensive, all absorbing." Hence it has been found difficult to exactly define what Hinduism means' (V. Nagam Aiyar, *Travancore State Manual*, ii. 39, 42).

Undoubtedly the belief in the transmigration of souls as caused by the law of *karma* is its most distinguishing feature.

'"As we sow, so shall we reap." So long as this doctrine is the basis of a Hindu's belief, it is a safe guide inclining him to do good and deterring him from evil. Every moment of his daily existence the pious Hindu is reminded of the law of Karma, that "every deed in his life . . . leads to its legitimate results in one's future life, whether it be in another world or in another existence in this world." Self-righteousness lies at the root of Hindu religious belief, and no man is counted righteous except through his works, acts and thoughts' (ib. p. 103).

Self-realization, self-mastery, control of the mind are the ideal.

'As all action, right or wrong, proceeds from desire, and as desire springs from the mind, the mastery of one's mind and habit to which uncontrolled mental activity makes a man a slave, constitutes true worship; and all rights and ceremonials

are either preparations for or applications of that mastery' (N. Subramanya Aiyar, *Census of India, 1911*, vol. xxiii. pt. i. p. 199).

The use and purpose of sacred images are well described by the same writer:

'Although in the anxiety to exonerate themselves from the charge of venerating what is in substance a piece of stone or metal, apologists have not been wanting to explain away these *Vigrahas* as mere symbolic representations to catch the popular mind or, at most, mechanical aids to concentration, the fact remains that according to Hindu Scriptural texts and to the belief of the great mass of worshippers, the image is a living Divine presence. The essence of the food goes direct to the spirit of the deceased and appeases him. The piece of cloth and the piece of iron are tied to a pillar of the house nearest the palm-leaf. The food is scattered to crows or thrown into water. Death-pollution continues until the fourteenth day, when the calcined remains are carried in a pot to a river and thrown into it. Then follows more ceremonial bathing, and on the fifteenth day the purificatory ceremony takes place, releasing the members of the *taravād* from the ban of the death-pollution. Subsequently there are other ceremonies and the chief mourner remains un-

shaven either for forty-one days or for a year.¹ The people who practise these rites are good Hindus, and, according to the tenets of their religion, the spirit, which is emancipated from the body at death, at once inhabits another body, for suffering or enjoyment measured by the deserts of the bodily existence which has just ceased. This is the higher religion. Nevertheless they admit that the spirit is connected with the shadow, not with the breath, and feel in their hearts that it still lingers in the house and absorbs the essence of the food offered to it, and that it must be propitiated or it will cause harm to the living. This is the lower religion. The religion of the Nāyar is a mixture of both.

Sacrificial offerings consist usually of cereals, milk products, or flowers, but there are occasions when cocks are decapitated, and, rarer still, when black goats are smothered. Nāyar pilgrims, while on the way to one of the more important shrines during the annual festival, indulge in every kind of disorderly and even obscene conduct, which not only is permissible, but is, for this occasion only, the right conduct; while on the return journey they are in possession of that calmness which follows communication with unutterable mysteries.

Fulfilment of vows involving pilgrimage to places perhaps far beyond Malabar is common. Vows may be made for receipt of any favour from the hand of God, and, when the desire is obtained, the devotee awaits, perhaps for years, the divine injunction to proceed. He then undertakes his pilgrimage in the garb as well as in the spirit of humility. Votive offerings are usually such as may be seen at any Roman Catholic shrine.

NAZARÆANS.—See MANDÆANS.

NAZIRITES.—There are certain assured facts in regard to the Nazirites, but there is much that has been thought to relate to them which is uncertain as applied to them exclusively, and in regard to which a careful balance of judgment must be exercised. They appear on the stage of Jewish history at widely different periods, from the period of the Judges down to early Christian times—roughly a thousand years. They show themselves for a time quite clearly, and then for a long period we hear nothing of them; afterwards they re-appear as if their life and organization had been continuous, active, and universally acknowledged. There are some well-known sources of information, such as in Judges, Numbers 6, the Mishnah, and sporadically elsewhere, and a few famous treatises, as Spencer, *de Legibus Hebræorum*, but the data are few and the information

somewhat intricate owing to the meteoric appearances of the Nazirites, and the partially similar relationship in which their forms of religious devotion stand to others.

1. Various types.—We shall see, as we proceed, that there existed two, if not three, types of Nazirite, viz. the life-long Nazirite, the 'Nazirite of days,' and the Samson Nazirite; and it is a matter of considerable dispute whether the types were co-existent or convergent. The dates of their appearances have also to be approximately fixed, and the relationship between the earlier and later Nazirites determined. It is generally acknowledged that the Nazirites were much more numerous than the scattered information concerning them would lead us to suppose, and there is a fairly general agreement as to the prevalence in most periods of their history of the principal restrictions imposed upon the Nazirites, viz. abstinence from wine, etc., letting the hair grow uncut, and the avoidance of pollution by contact with the dead. Indeed, it is mainly through these various regulations that we are enabled to piece together the history of the institution.

2. Life and purpose.—Making use of the facts which are admitted by scholars as practically assured, we may sketch the life and purpose of the Nazirites with some probability. It was a 'dedicated' or 'consecrated' life. It was marked by both negative and positive qualities. It was a life essentially lived under a solemn vow. Ordinarily, to show their adhesion to the deity, men made material offerings; in the case of the Nazirite, he offered himself. It recognized a divine 'call' from Jahweh in days when the primitive simplicity of devotion to Jahweh was being undermined and supplanted by various forms of self-indulgence. It aimed at setting up an ideal of consecrated life, not necessarily ascetic. It thus had definite purposes with practical issues in relation to God and man. Jewish writers have taken different views as to what those purposes were. Some, e.g., contend that the Nazirite vow was intended to signify the working out of the divine nature in man made in the image of God, and, as the growth of the hair was supposed to indicate the growth of the intellectual life, the wise man would not allow this part of his nature to be in any way diminished; for the same reason he would abstain from wine, lest the intellectual faculty should be blurred; and his care to avoid contact with the dead would indicate his witness to the eternity of God and his own nature.

Others see in it 'the principle of stoicism, and imagine that it was intended to cultivate, and bear witness for, the sovereignty of the will over the lower tendencies of human nature' (Smith's *DB*, London, 1893, ii. 474). It was for purposes of self-mastery: the Nazirite wore his hair long as a crown, 'quod ipse rex sit cupiditatis imperans præter morem reliquorum hominum, qui cupiditatem sunt servi' (J. G. Carpzov, *Apparatus Historico-Criticus*, Leipzig, 1748, p. 162; so similarly Aben Ezra (Darius, on Nu 6⁷).

Philo, who calls it ἡ εὐχὴ μεγάλη, regards it in the light of complete self-oblation to Jahweh (*de Animal. sacrificio idoneis* [Mangey, ii. 249]).

'According to him the Nazirite did not sacrifice merely his possessions but his person, and 'as no spiritual state or act can be signified by any single symbol, he was to identify himself with each one of the three victims which he had to offer as often as he broke his vow by accidental pollution, or when the period of his vow came to an end. He was to realise in himself the ideas of the whole burnt-offering, the sin-offering, and the peace-offering' (Smith's *DB*, loc. cit.).

Although these views of Naziriteship were later developments of a more philosophical age, they enable us to see some of the purposes of its life and service, which were doubtless of a manifold

¹ Nāyars shave the whole body excepting the crown of the head.

character. The Nazirites have been described as 'men of real moral worth, good gifts of God to His sinful but beloved people' (*HDB* iii. 500^a). Though not debarred from innocent social life, their consecration would afford them special opportunities for prayer and study. In a certain sense, the Nazirite's life partook of the nature of the priestly as well as of the prophetic office; it was a protest against the self-indulgent habits of the surrounding nations; and something of the warrior and the judge was also inherent in the service which the Nazirite rendered for God and His people, as in the case of Samson in his exploits against the Philistines.

3. Principal features.—We can now pass to consider the principal features of Naziriteship, and the periods during which the Nazirites make their appearances, and draw what inferences we can from them.

We go to the stories of Samson (c. 10th cent.) in Judges for the earliest accounts, and to Josephus in the 1st cent. A.D. for the latest, covering a period roughly of a thousand years, during which it seems (as might be expected) that the institution underwent considerable changes. The law in Nu 6 (P), which is obviously directed to the regulation of a known usage, and the post-Exilic references, such as that in 1 Maccabees, would naturally fall between these periods.

Taking the law in Numbers as a basis round which we can collect evidence of the institution, we can classify our subject under the following heads, and estimate its significance by the regulations in regard to it.

(1) *The vow*.—In Nu 6 it is clear that Naziriteship consisted partly in the assumption of a vow. Vows, of course, were common in all periods of Jewish history, and would take the form of a solemn promise in order to secure the divine aid, or of the expression of an act of piety, or of an act of self-discipline by means of certain abstinences. Contrasting these regulations with those of an earlier period, we should bear in mind that in cases like those of Samson or Samuel and the Nazirites referred to in Am 2^{11a} we have no evidence to assure us that the vow was actually taken, though Hannah herself makes a vow before the birth of Samuel, and this would seem to involve the offspring; so, similarly, a prophet (like Jeremiah) might be sanctified from the womb (cf. Jer 1⁵ with Jg 13⁵).

(2) *The duration of the Naziriteship*.—When we compare the data at our disposal, two clear facts emerge, viz. (a) the existence of the Nazirite for life, and, whether synchronously or otherwise, (b) that of the Nazirite for a limited period. It seems probable, on the whole, as we balance the evidence, that in the days before the Exile the Naziriteship was of a permanent, life-long character. Samson was a Nazirite for life (Jg 13⁵⁻⁷), and Samuel (though the case is not precisely parallel) remained unshorn all his days. In this connexion the passage in Amos (2^{11a}) is important and would appear to support this view, for the Nazirites are placed presumably on the same footing as the prophets who assume their office as the result not of a vow but of a divine call, and the character of the office is, therefore, of permanent obligation.

When we pass to post-Exilic days, the inference is that Naziriteship was of a temporary character. The evidence for this must be sought in Maccabees, in Josephus, and in the Mishnah (*Nazir*). We read in 1 Mac 3⁴⁹ of certain Nazirites who had 'accomplished their days' (ἐπλήρωσαν τὰς ἡμέρας), which clearly indicates a terminable period. Josephus (cf. *Ant.* iv. 4, XIX. vi. 1) speaks of an order of Agrippa requiring that many of the Nazirites were to have their heads shorn—passages

which indicate the numerical extent of the institution as well as the temporary character of the vow, and the fact that it was a customary practice of benevolence to defray the expenses of the offerings of persons who were under the obligation of the vow of Naziriteship. And with this we should compare the case alluded to in Ac 21^{23a}, when St. Paul was at charges for the four men who had a vow upon them; the character of the latter vow was analogous to that of the Nazirites, and may have been 'allowed to Jews of the Dispersion as a substitute for the strictly legal vow' (*HDB* iii. 500^a). From the treatise *Nazir* in the Mishnah, it is probable that temporary Naziriteship was common in later Jewish history.

In the later Jewish period and in Christian times we cannot be certain of any life-long Naziriteship. The case of St. John Baptist is not strictly to the point, as it lacks the principal characteristic mark of Naziriteship, viz. the growth of the hair. Eusebius (*HE* II. xxiii. 4-6) mentions Hegesippus's description of James the Lord's brother. Both these cases resembled the Nazirites, but represent merely a part of their ascetic life; they were probably both permanent ascetics; the early Nazirites were not, however, ascetics, as can be inferred from the case of Samson. It is doubtful, as Gray points out (*JThSt* i. [1900] 204, 202 f.), whether the regulations in later Judaism (as in *Nazir*) were called forth by the actualities of life or are to be attributed to the speculative legalism of the Rabbis. He inclines to the view that in early Jewish history Naziriteship was of a permanent character; after the Exile and down to the Fall of Jerusalem temporary Nazirites were numerous; the cases of the permanent Nazirite at this period were rare, if they existed at all.

(3) *The treatment of the hair*.—Robertson Smith (*Religion of the Semites*, p. 324) points out that the hair 'is regarded by primitive peoples as a living and important part of the body, and as such is the object of many taboos and superstitions'; he also shows that the principles underlying the offering of hair and the offering of blood are of a similar character; sometimes the hair is cut off in mourning, sometimes it is offered at the funeral pyre, sometimes it is made as an initiatory offering on the attainment of manhood or womanhood, when the offerer is admitted into full religious and social status, and sometimes on the occasion of pilgrimages for safe preservation, or in the assumption of a vow to secure the divine aid in times of sickness or other misfortune. As in the case of the offering of blood, so here a bond of union is established between the offerer and his god, or between the living and the dead.

The growth of the hair seems to be the most essential characteristic of the Nazirite vow, common to both forms of Naziriteship, but obviously there is a difference between the two: in the case of the temporary Nazirite, the hair becomes, at the close of the period of the vow, an offering; in the case of the life-long Nazirite, this would, of course, not apply. The important thing to bear in mind is that the hair, whether it is cut off or remains unpolled, is part of the personality of the individual. If this is so, then it follows that the hair, representing a man's personality, is (like the blood) a suitable sacrifice to the deity, and, as it represents the man's power and strength, it must be preserved inviolable and 'consecrated.'

(4) *Avoidance of pollution by contact with a dead body*.—The regulation in Nu 6 is, of course, applicable only to the temporary Nazirite, for in his case the period of the vow could be recommenced. It would be inapplicable to the permanent Nazirite. Samson's life, e.g., was inconsistent with this regulation. The Rabbis saw this difficulty, and solved

it by practically placing Samson in a class by himself: a Nazirite of the Samson type must never cut his hair, and, if he contracts defilement by contact with a corpse, he does not bring the usual offering in such cases (אִינוּ מִכֵּי קָרֵן מִכֵּסָה). Samuel, too, it should be observed, must have suffered pollution when he hewed Agag in pieces (1 S 15³³).

(5) *Abstinence from all products of the vine and from all intoxicants.*—There may have been a prejudice in favour of this from the nomadic tendencies of ancient Israel. There is no evidence to show that it was a permanent element in Naziriteship. The case of Samson shows that no such abstinence was practised by him, and in the case of Samuel it is clear that he was present on several festal and convivial occasions, when the fruit of the vine would ordinarily have been used. The general conclusions on the subject of Naziriteship are helpfully summarized by Gray (*JThSt* i. 210 f.) and are mainly as follows.

The practice of leaving the hair unshorn is based on primitive belief and practice. The devotees of Jahweh in the 10th cent. left their hair unshorn in token of their devotion. In the 8th cent. the Nazirites were a familiar class of sacred persons in some respects resembling the prophets. Later, the Nazirites took a vow upon themselves for a short period, and at the end made an offering of their hair and presented certain animal sacrifices as well. These changes may be accounted for by the fact that vows were commonly taken in early times, and certain abstinences were observed at the same time. In some cases the hair was suffered to grow uncut, and at the close of the period of the vow it was offered sacrificially. On account of this treatment of the hair the term 'Nazirite,' originally used of permanent religious devotees, was extended to persons under a vow. But at what period it is impossible to determine. It may have been when the secondary sense of the term 'Nazirite' (a person with unshorn hair) exceeded in prominence the primary sense (a devotee); and this had certainly taken place by the 6th cent. B.C., as is shown by the metaphorical use of the root in *Lv* 25^{5, 11}.

4. *Nazarene and Nazorean.*—Elucidation of this subject, requiring minute technical consideration, should be sought in two recent contributions of modern scholars, E. A. Abbott, *Miscellanea Evangelica* (I.), Cambridge, 1913, and F. C. Burkitt, 'Syriac Forms of New Testament Names' in *Proc. Brit. Acad.*, 1911-12, p. 392 ff. The latter seeks to show that the Gr. ζ is rarely the equivalent of the Sem. נ, and therefore Ναζωραῖος cannot mean a native of נֶזְרַת, but must be connected with נִזְרִי and the Nazirite vow. He also suggests, rather as a counsel of despair, owing to the 'ordinary view of Nazareth' being 'unproved and unsatisfactory,' that Nazareth has arisen by a literary error, and that the real name of our Lord's home was Χοραζην, not Ναζαρέθ. There is much more to be said in favour of his views as to the historical position of Χοραζην and Ναζαρέθ than for those referring to the relation of the Greek and Semitic letters, as it would appear that there are too many exceptions to the rule which he notices in respect of ζ and נ for it to be safe to base any definite conclusion upon it.

In Abbott's minute discussion of many technical difficulties in the words 'Nazarene' and 'Nazorean,' the opening paragraph will be sufficient to show his line of argument:

'In this Chapter it will be argued that (i.) "Nazarene," meaning a man of Nazareth, and (ii.) "Nazorean," meaning the Nétzer or Rod of Jesse mentioned by Isaiah, were probably interchanged by a play on the two words; so that the populace, acclaiming Jesus as the Lifegiver and Healer, altered "Jesus the Nazarene," into "Jesus the Nazorean." To state the theory more exactly, we should say that they called Him Jesus the

Nétzer, or the Na(t)zorean, partly because there was a pre-existing belief that the Messiah would be the Nétzer, and partly because they vaguely felt what Matthew ventured definitely to express, that His residence from childhood onward in Nazareth had been ordained to fulfil the prophecy "He shall be called Nazorean (i.e. Nétzer)."

LITERATURE.—J. von Grill, in *JPTA* vi. [1880] 645 ff.; G. B. Gray, *ICC*, 'Numbers,' Edinburgh, 1903, and specially in *JThSt* i. [1900] 201 ff. (best account in English); S. R. Driver, *Camb. Bible*, 'Joel and Amos,' Cambridge, 1897; G. F. Moore, *ICC*, 'Judges,' Edinburgh, 1895; G. A. Cooke, *Camb. Bible*, 'Judges,' Cambridge, 1913; E. A. NECESSITARIANISM.—See **LIBERTARIANISM** AND **NECESSITARIANISM**.

NECESSITY.—See **FATE**, **LIBERTARIANISM** AND **NECESSITARIANISM**.

NECROMANCY.—See **DIVINATION**, **MAGIC**.

NEEDS.—The conception of needs is a recent one in theology and is not yet clearly defined. It arose in apologetical literature in the endeavour to justify religious beliefs and practices by their supposed satisfaction of needs. As no attempt has so far been made to elucidate the idea or to investigate what are rightly included in human needs, much superficial writing has confused the issues. Whatever the degree of validity of this form of argument, the nature of the needs ought to be established before individual beliefs are referred to them.

'Needs' is essentially a metaphysical conception, but, as such, it must have some relation to psychological facts. Psychology talks of 'conative tendencies' (G. F. Stout, *Manual of Psychology*, London, 1913, p. 121), which form the active factor in consciousness, in its endeavour to realize certain aims in relation to the objective world. Needs lie behind these conative tendencies, of which they are the source and in which they first become evident. All activity involves a relation of subject and object, and the nature of the activity will depend on that of the subject, and specifically on its needs. Subjective needs give rise to activity exerted upon the objective world. Metaphysically, it might also be urged that needs are what they are because of the ultimate nature of the objective side of reality, since only thus would there be a real unity of the subjective and objective aspects of existence.

Some of the errors in the use of the argument have arisen from a failure to distinguish between needs and desires. The former must be conceived as wants, without the satisfaction of which the subject of them is imperfect. A perfect being has no needs; human needs in their totality imply an ideal of human perfection. The presence of error and sin in human experience shows that some conative tendencies turn towards ends other than those involved in perfection. Desires, as distinct from impulses, are conative tendencies defined by the presence of an idea of the aim. Needs express themselves in desires, but not all desires are the expression of needs, for a person may desire what is in opposition to his needs. The distinction is most clear in reference to the physical: men may desire kinds and quantities of food, drink, rest, exercise, opposed to what is physically requisite. As with the physical, so with the spiritual. Some of the general characteristics differentiating needs from mere desires may be stated briefly. Desire is always conscious and may be good or bad, i.e. it may be for something not related to true well-

being, and may even be detrimental to it. The distinction of good and bad is not applicable to needs; and individuals or even a whole race may have needs of which they have no conscious knowledge. 'In even savage bosoms, there are longings, yearnings, strivings, for the good they comprehend not' (Longfellow, *Hiawatha*, Introd.). A desire may be modified or deliberately and entirely suppressed without satisfaction; it may be in the highest degree capricious and is often transient. Needs continue until completely satisfied or until the extinction of the subject of them; they can be modified only by partial satisfaction. Desires are based upon some actual previous experience, while needs exist prior to any specific experience. Mere desires, therefore, generally have an individual and temporary character, while needs express themselves rather as generic appetites or as definite tendencies to function, having an essential relation to the permanent nature of the subject experiencing them, so that their satisfaction is fundamental to the attainment of the ideal. A desire is often for what one thinks one needs; for consciousness of the nature of needs may come only with the success or failure of the activity that is rooted in them.

The absence of any consensus of opinion as to the nature of needs is chiefly due to the neglect of their study and to the necessity of distinguishing them from their form of expression, which depends not only on the stage to which thought and language have evolved, but also on the adequacy and accuracy of the analysis implied in their expression. Different races and individuals at the same time, and the same race and individuals at different times, have held diverse and even contradictory beliefs, and these appear to involve diverse and contradictory needs. The solution of the difficulty of apparent contradiction must be sought in the indication of faulty analysis and expression. Allowance must also be made for human development, for with the satisfaction of some needs others become clearer, and through the total or partial satisfaction of the latter further advance is made. Historical and comparative studies should seek for evidence of greater comprehensiveness and consistency in conative tendencies, beliefs, and practices. Consciousness of needs and what is offered to satisfy them should, in the language of Bergson (*L'Évolution créatrice*, Paris, 1907, p. 399), be 'in process of being adapted to each other and making towards final rest in a common form.'

Needs may be classified either as physical and spiritual or as physical, æsthetical, intellectual, moral, and religious; human perfection demands the satisfaction of all. The present discussion is limited to moral and religious needs. The reality and universality of the latter are now rarely denied, even though some may say with Spencer:

'Religious creeds, which in one way or other occupy the sphere [life and mind] that rational interpretation seeks to occupy and falls, and fails the more the more it seeks, I have come to regard with a sympathy based on community of need' (*Autobiography*, London, 1904, ii. 471).

'Men will not rest in peace until they have a Faith; they cannot consent to forego a religious sense of duty and reverence' (F. Harrison, *Philosophy of Common Sense*, London, 1907, p. 427).

Religious needs may be studied directly, by introspection and psychological analysis, or indirectly, in the historical and comparative study of religious beliefs and practices—i.e. by a consideration of the methods which men have taken to satisfy needs, and the degree in which such satisfaction has been real and enduring. Though religious rites and doctrines are of the most diverse character and in the course of history have undergone innumerable changes, it does not follow that the underlying needs are different. Evidence shows that the consciousness of religious needs

and the capacity for satisfying them are subject to development. Though some needs are revealed by the persistent elements in religious experience, the factors which differentiate religions are also of fundamental importance, for in them lie the results of evolution and the grounds of superiority. The attitudes of primitive races and times must be considered from the point of view of more advanced peoples; and the moral and religious needs of the latter must themselves be estimated with reference to those individuals who have been more or less generally recognized as the highest religious characters of the community or of humanity as a whole. For needs of a higher kind have been brought to light and partly or entirely satisfied by religious saints and moral teachers. Capricious and temporary desires have no real and abiding effect on the evolution of religion. Most sociological studies of religion (see, e.g., E. Durkheim, *Les Formes élémentaires de la vie religieuse*, Paris, 1912) are vitiated by the assumption that it is to be best understood by the consideration of the common denominator of religions. Yet, where the influence of ideals is so great as in morality and religion, neglect of the higher forms seriously limits the trustworthiness and diminishes the value of conclusions respecting the lower and more primitive forms. The highest needs are present from the beginning; one might say of them what J. F. Ferrier says of principles:

'They have influence and indeed operate largely and powerfully long before they come to the surface of human thought and are articulately expounded' (*Institute of Metaphysics*, Edinburgh, 1854, p. 13).

But if, on the one hand, changes in the consciousness of needs lead to modifications of religious doctrines and practices, on the other hand, changes in the latter may bring about clearer consciousness of the former. The process of religious and moral evolution is made possible by man being at once an individual mind and a member of a social group. The influence of the social environment tends to make the individual conscious of his needs; but the effect of society does not always make for progress, since doctrines accepted by men through social pressure may lead them to fancy that they have real needs corresponding to these doctrines, which, if false, will thus hinder the religious life of the individual. What appear to be religious needs may only be temporarily acquired tendencies due to beliefs adopted as a result of traditional and ecclesiastical forces, as, e.g., the supposition of needs to which many have been led by unethical ideas of salvation. Up to a certain point, however, history and religious organizations aid the individual in understanding and appeasing his needs; and, if doctrines can be shown on independent grounds to be true, their acceptance will lead to development.

When we come to the actual nature of religious needs, the naturalistic theories that reduce religion and morality to mere means must be declared inadequate. H. R. Marshall (*Instinct and Reason*, New York, 1898, p. 247 ff.) regards religion as simply serving a valuable function in the biological evolution of the human race, leading to the suppression 'of the force of individualistic elemental impulse' in favour of something higher. B. Kidd (*Social Evolution*, London, 1894, p. 97 ff.) similarly thinks of it as having its essential value in restraining the individual for the biological future of society. E. Metchnikoff (*The Nature of Man*, Eng. tr., London, 1903, p. 151) interprets the desire for immortality merely as the physical impulse to go on living. In contrast with all such theories, one of the most important and constant factors in human history has been the answer which religion has given to men's undeniable metaphysical needs. Religion has also answered

needs other than those of the inquiring intellect, for religious experience is not simply a promise of satisfaction, but is itself a real satisfaction in which the soul finds actual and present peace and rest.

'If religion is a practical need, the response to it can only be a practical action. No theory would suffice. Religion is nothing if it is not the vital act by which the whole spirit seeks to save itself by attaching itself to its principle' (L. A. Sabatier, *Outlines of a Philosophy of Religion*, Eng. tr., London, 1897, p. 23).

Beliefs can, therefore, be fully understood only in relation to this wider complex attitude of the spirit. The social character of moral and religious needs is fundamental, the individual finding complete satisfaction only in an active life in a 'Kingdom of God.'

A short consideration of some prominent religions and ethical beliefs, in the light of the preceding principles, will indicate some human needs and the methods of investigation. The beliefs in God, immortality, and a way of salvation are the most important and best repay study. The most advanced conceptions must be the starting-point. All attempts to conceive of God as supra-personal end in representing Him as less than personal:

'The religious consciousness demands a personal God: no profound and enduring relation to the non-personal is practicable' (G. Wobbermin, quoted by G. Galloway, in *RThPh* iii. [1907-08] 199). 'If man is to be successful in the struggle, he must be persuaded that he is not alone, or in the language of religion, that God is with him, and that therefore nothing can be ultimately against him' (A. Seth Pringle-Pattison, *The Philosophical Radicals and other Essays*, Edinburgh and London, 1907, p. 270). R. Seeberg (*Fundamental Truths of the Christian Religion*, Eng. tr., London, 1903, lects. i., ii., xvi.) maintains that man needs a 'near firm Object' on whom to depend and a 'Goal far-off' at which to aim; and R. Wimmer (*My Struggle for Light*, London, 1903, p. 51.) thus expresses some of the needs which belief in God as personal satisfies: 'I must trust'; 'I must give thanks'; 'I must worship'; 'I must love . . . fully and entirely surrendering my whole heart.'

It is a sure ground for the authority of the moral conscience; it points to a source of consolation in trouble, of help towards righteousness and of hope for the future, and leads to communion in a fellowship which, unlike human relationships, gives perfect peace. The history of religion manifests a more or less consistent development of the consciousness of needs resulting finally in the belief in God as personal.

'I surveyed the history of men, and I found that all nations have felt the necessity of bringing their finite being into fellowship with the Infinite, and I found that this necessity is the basis of all phenomena of religion' (Wimmer, p. 6).

Prayer is essentially the outcome of practical need, and its evolution from a predominantly non-spiritual to an ethical and spiritual character indicates the course of development of the consciousness of needs and of the idea of God sought to satisfy them. L. R. Farnell (*Evolution of Religion*, London, 1905, p. 183) has not been able to find 'any example of a savage prayer for moral or spiritual blessings.' A higher stage is reached by the Psalmist: 'My soul thirsteth for God, the living God'; and in its latest form prayer is for conformity to the will of God. Deification in ancient times; mariolatry and saint-worship in the Middle Ages; the virtual deification of 'humanity' as a 'being immense and eternal' by the positivists; the religious attitude of Spencer towards 'the Unknowable'; the proposal of Haeckel to base a religion on the theory of neutral monism regarding the cosmic ether as a divinity; the attempt to supply an ideal for human effort and an object of worship in the conception of the Superman—are all evidence of man's need 'to enter into some vital relationship with an Other.' The question, therefore, concerns not the reality of the need, but its actual and full nature, and the character of the 'Other' and of the relationship to the 'Other' which will be a com-

plete and rational satisfaction. A merely immanent principle never has done justice to the requirement of mankind: God must be conceived as a real objective Being. The feeling of dependence (F. Schleiermacher, *Discourses on Religion*, Eng. tr., London, 1893) implies simply the need of a superior Power. The application of the term 'Father' to this Power suggests that man has felt the need of other qualities in God. The historical and comparative study of religion gives us as the common denominator the idea of a Power (or powers) at least partially friendly; but only the notion of God as personal is adequate to the needs of which mankind has now become conscious.

The desire for immortality is not universal, and the contradictory beliefs concerning the destiny of the human spirit necessitate a careful analysis to see whether any common need may possibly underlie beliefs and hopes so different as those of immortality and extinction. An appreciation of the good in life, together with a consciousness of the inadequacy of the present, the insufficiency of the actual, leads to a demand for and expectation of greater and complete good in the future. The majority of mankind have appeared indifferent to the question of immortality; their lives have been neither predominantly good nor bad. Underlying all desire for extinction is a dissatisfaction with life as experienced; the evil in these lives impresses more than the good or the prospect of good. It should be noticed that the desire for immortality could arise only with a more or less definite conception of time. In the earliest ages of mankind men were occupied solely with the present and the very proximate future; desires and beliefs concerning the future in general appeared much later. But even the earliest men needed 'everything' to be 'good.' The common need seems therefore to be for a state completely good—desire for continuance depends on the quality of life. In Buddhism the same need is implied, though it has acquired a definitely negative form of expression. Both the conceptions, immortality and extinction, are in actual life defective in relation to the need: the former tends to the neglect of the values of the present, the latter to the neglect of those of the future. There may be no precise and exact way of stating what will satisfy a specific need, and choice must be made between several more or less imperfect statements.

Sacrificial rites and doctrines of redemption and atonement have been persistent and almost universal elements in religion.

'There is an immense *a priori* argument for the truth of some atonement, past, present, or future—some way of realising and feeling that we are at one with God—from the need, all but universally felt, in human nature, of some way of approaching God' (J. M. Wilson, *The Gospel of the Atonement*, London, 1899, p. 26).

Salvation and atonement are thus related to the consciousness of sin, which is felt to be more than a falling short of an ideal of one's individual perfection, in that, through his place in the universe, by sin man violates the purpose of God. The solidarity of man with God and the need of reality is an indispensable condition of the rest of redemption. Salvation is in part dependent on the realization of goods (physical and spiritual) through a man's own effort, and from this point of view 'my essential personal need is simply for a chance to find out my rational purpose and to do my unique duty' (J. Royce, *HJ* v. [1906-07] 744). But the need of harmony is felt most keenly in the desire for forgiveness and reconciliation, as between man and man, and men and God. The conviction of forgiveness is a real want of the penitent mind, and without its satisfaction further effort is hindered. If sin is not merely a failure to realize the ideal of personal welfare, but also a

breaking away from the cosmic purpose, it is an alienation from God, and repentance and forgiveness are necessary before the relationship of love between man and God can be felt by man again. To satisfy the need of salvation in its fullness the belief must indicate a justifiable basis for the realization of individual perfection and also an assurance of divine pardon of sin.

The attempt to justify religious beliefs by the claim that they satisfy human needs has generally been associated with a sceptical attitude concerning the capacity of thought to establish religious conceptions. In modern times Kant is the source of both tendencies. In the *Critique of the Pure Reason* he limits thought to the phenomenal, and in the *Critique of the Practical Reason* he urges the acceptance of the beliefs in God, freedom, and immortality on the ground of practical needs. Lotze, who under the influence of the Hegelianism of Weisse certainly meant to acknowledge the importance of thought in matters of religion, ultimately adopts the same attitude, basing belief upon a resolution of character in the direction of personal needs. Ritschl, who was much nearer Kant than Lotze in his view of thought, founded his apologetics entirely upon the practical valuation of Jesus in relation to the needs of the individual. Sabatier, also starting out from a Kantian view of knowledge, interprets religious beliefs and conceptions as ever-changing symbols which are justified solely by the satisfaction that they give. But, like Kant and Lotze, he gives evidence of some slight recognition that man needs a unity and harmony of his intellect and his religious and moral feelings, and, also like them, suggests that 'the synthesis will be found in a teleological consideration of the universe' (p. 82; cf. Kant, *Critique of Judgment*, tr. J. H. Bernard², London, 1914, and Lotze, *Microcosmus*, Eng. tr., Edinburgh, 1894, and *Outlines of a Philosophy of Religion*, Eng. tr.³, London, 1903). H. Höfding's critical monism varies little from the Kantian scepticism.

'If religious ideas are to have any significance at all, it can only be in serving as symbolical expressions for the feelings, the aspirations, and wishes of men in their struggle for existence' (*The Philosophy of Religion*, Eng. tr.³, London, 1903, p. 6). The 'core' of religion consists in the 'conviction that no value perishes out of the world.' 'The nature of a being determines its needs, and its needs determine what shall have value for it.' The belief in the axiom of the conservation of value is not justified by experience, for 'there are no definite empirical values in the conservation of which we may believe' (p. 257); the axiom is thus assumed purely on 'a practical personal need' (p. 248).

W. James (*The Will to Believe*, London, 1897, *Pragmatism*, do. 1907, and *Varieties of Religious Experience*, do. 1902) and the pragmatists, also sceptical as to the capacity of the intellect, adopted the satisfaction of needs as a general principle of justification. The need of an eternal moral order is one of the deepest needs of our breast, and the notion of God guarantees an ideal order that shall be permanently preserved, and consequently our belief in God is justified. Roman Catholic modernists like G. Tyrrell represent religious doctrines as symbolical 'truths of faith' satisfying personal needs (*Through Scylla and Charybdis*, London, 1907, ch. vi.).

The manner in which the argument is used by popular writers may be seen in J. N. Figgis's *The Gospel and Human Needs* (London, 1909); he urges the acceptance of certain doctrines on the ground that man has need of what they imply, and this even in cases of doctrine concerning which it is not clear what needs they do imply. To assume, e.g., that man 'needs mystery' and to base on that an argument for belief in certain doctrines is to adopt a form of apologetics as dangerous as it is simple, and, moreover, tends to obscurantism. Religious beliefs give satisfaction just in so far as they show

life to have a meaning and make it more intelligible than it is without them. The attempt to disregard thought or underestimate reason in the establishment of religious conceptions is frustrated by the fact that beliefs bring satisfaction only when they are accepted as true, so that their truth cannot itself rest on their religious or moral satisfaction. It is methodologically incorrect to treat the moral and religious aspects of experience as quite separate from the rest, as in the Kantian dualism, from which these systems mostly spring. Doctrines are the work of thought, and their validity can be judged only by consideration of all the data implicated. Among these data human needs are of fundamental importance and must not be omitted; but it is before all else necessary that the nature of human needs shall be rightly understood, and that they shall not be confused with mere desires. Expectations and desires in mundane affairs are continually being disappointed by the actual course of events, and similarly mere desires in religion may not be fulfilled. But, when the nature of human needs is known with accuracy, and they are not confused with transitory wishes and merely acquired tendencies, they will be an essential factor in the justification of religious beliefs. For, unless we are to assume a radical contradiction at the heart of things, the ultimate nature of man which determines his needs must be in harmony with and form a unity with the rest of reality, which is to satisfy those needs. If the world is rational, intellectual and religious needs must be fundamentally at one.

'It seems to be easier to believe that the interpreters of human experience have lost their way than to maintain that experience itself is rent in twain, and that the fundamental conditions of human welfare are inconsistent' (H. Jones, *HJ* I. [1902-03] 252).

ALBAN G. WIDGERY.

NEED-FIRE.—It is not surprising that fire, the mysterious element which was one of the greatest benefactions to the human race and which was so dangerous under certain circumstances, should have created in the mind of man a feeling of reverence and awe and should find a prominent place in his conception of the supernatural. There has been some discussion as to whether any section of mankind has been ignorant of the means of producing fire, and it has been claimed that this was a condition of the Andaman Islanders. A. E. Crawley, in art. FIRE, has set out the main facts showing the universal practices in fire-production and fire-use at the different stages of human culture, and has pointed out that, as a consequence of these practices, fire is used with more or less sacred rites by every race whose life-history has been investigated by anthropologists. There is, however, this to add to Crawley's conclusions: fire-worship has been overcharged with survivals of rite and ceremony to such an extent that it has been found impossible for most inquirers to arrive at a scientific conclusion as to its origin and development, and this confusion is reflected in all its parts.

Need-fire is only a secondary element in fire-worship, and it seems to be possible to arrive at its origin without touching the confusion incidental to the wider question. It was a reversion to primitive methods of lighting a fire, if and when a fire which was to be kept ever burning was allowed to become extinct. Now there exists throughout Europe a series of fire customs, which have been exhaustively collected and examined by J. G. Frazer (*GB*³, Index vol., s.v. 'Fire'). These fire customs have a remarkable number of common features, which, equating with certain Hindu and Persian fire customs, make it fairly certain that they belong to the Aryan-speaking peoples in a

special sense. The meaning and significance of the Aryan fire customs both in origin and in survival can be ascertained only through their sociological aspect, and for this purpose it is necessary to work through the tribal organization of the Aryan peoples. This is, of course, not the place for the entire subject, but a portion of the evidence may be used for the investigation of need-fire.

The tribe, not the family, was the primary unit of the Aryan peoples, and its religious aspect was represented by the ever-burning fire. L. R. Farnell rightly considers the sanctity of the fire maintained by the tribal king as 'the source from which the public Hestia-cult of the historic period immediately descends' (*CGS* v. 351). But, except in Greece and Rome, the tribal-fire cult has in Europe given way to the house-fire cult. It followed the break-up of the tribe and led directly to the formation of the family; and this means that the break-up of the tribe was into family units.

It was at the stage when the break-up of the tribe took place that the secondary cult of need-fire became fully developed. It exists throughout Europe, and, when it is remembered that Celtic, Teutonic, Scandinavian, and even Slavic tribalism broke itself in the struggle against the Roman empire and its highly developed institutions, it seems very probable that the origin of such a custom as need-fire is sufficiently indicated. The explanation is that the destruction of the tribe meant the destruction of the tribal religion, but, just because religious ritual lasts longer in survival than social structure, we have survivals of the tribal-fire cult where no other survivals of the tribe exist.

Strange to say, the most perfect example in illustration of this point occurs in Scotland, and not in the Scandinavian north. This can be shown by two selected examples for purposes of analysis and comparison. The Scandinavian custom is as follows:

In ancient times on the 31st of Dec., a festival called *Eldbjargmess*, or 'feast of fire salvage,' was observed in the north, and the name is still given to 7th Jan. in Icelandic almanacs. 'The name signifies that on this day the Yule fires, which had been kept alive from Christmas day, were put out. On that day the festivities came to an end and the Christmas guests took their departure. From Telemarken in Norway a tradition is preserved illustrative of the customs which were observed on this particular day, in the olden time. The mistress of the house entered the room, where round the fire burning on the hearth the household were seated, and took her stand before the fire, and from a bowl of beer which she carried in her hand she drank the fire's toast with this formula—

"So high my fire

But neither higher nor yet hotter."

Then the company seated on the floor drank the fire's toast in the following manner: the beer bowl was placed between their legs on the floor, and each one had to take it up with his teeth and empty it and then throw it over his head so that it came down behind him. If the bowl came down bottom upmost, the thrower's was a forfeited life and he must die within the ensuing year' (E. Magnússon, 'On an early runic Calendar found in Lapland, 1806,' in *Camb. Antig. Soc.'s Communications*, iv. (1873) 42).

This custom gives us (a) the continuity of the fire during a specially religious period, (b) the extinction of the fire at the end of the period, (c) the anniversary character of the fire, (d) the offering to the fire by the mistress of the household, and (e) the divination derived from the hearth rite. All these elements are primitive in character, but do not extend beyond the stage of pure survival.

The Scottish example is the well-known Burghead custom of 'burning the clavic.'¹

The fire is made by the sons of the original inhabitants, and every stranger is rigidly excluded from the ceremony.² This

is a clear recognition of the blood-bond, because the early ties of relationship still hold their place against the later ties of locality. Secondly, the clavic must be lighted by a burning peat, the custom being that no form of modern lighting is allowed to approach the precincts.¹ The next point is that the smoking embers of the clavic were scattered among the assembled villagers, by whom they were eagerly caught at, and with them the fire on the cottage hearth was at once kindled.² The date fixed upon for the ceremony, viz. New Year's Eve (old style), is the next important element to note, it being obvious that a fire kindled on the last day of the old year, and allowed to burn into the first morning of the new year, has carried on its flame from one year to another, though actually only through one year's end into another year—a fiction which may very well stand for an original perpetual burning. And, finally, there are details of ritual in this custom. The object of the ceremony is the perambulation, with the sacred fire, of the bounds of the village and of the fishing-boats. At certain street corners a halt was made, and a brand whipped out of the clavic and hurled among the crowd. He who seized the brand was the favourite of fortune during the months of the coming new year. Afterwards the fire was carried to a small artificial promontory, where a circular heap of stones, called the 'durie,' was built up for the purpose, and the still burning clavic was placed in the hollow centre, from which it was distributed to the villagers.³ The whole community joined in the ceremony as an act necessary to its welfare and prosperity during the year. If the hearer stumbled, it was looked upon as a dire calamity foretelling disaster to the place and certain death to the hearer in the course of the next year;⁴ 'the first "lift" is an honour,' and was usually conferred upon some member of the community who had recently been married. As soon as one hearer gave signs of exhaustion, another took his place, and, should any of them meet with an accident during the journey, 'the misfortune excites no pity even among his near relatives.'⁵ In the construction of the fire-pile every action is regulated by 'unwritten but unvarying laws,' one of which is that every article is borrowed, nothing bought; and, finally, there is the remarkable fact that, although the long nail which fastens the staves of the clavic is iron, and is made specially for the purpose by the village smith, the hammer used for the purpose must be a round stone.⁶

Analysis of this ceremony reveals the following details: (a) the fire is made by a group of men connected by a common descent, i.e. a kindred; (b) the original inhabitants of a village form the unit from which common descent is traced; (c) the flame for the fire is obtained in a sacred manner; (d) continuous life of the fire is symbolized; (e) the house-fire is derived from the village-fire; (f) the possession of an ember is the means to good fortune; (g) the bounds of the village have the fire carried round them; (h) the welfare and prosperity of the community are dependent upon the performance of the ceremony; (i) the bearers of the fire are honoured; (j) stone-age implements are used.

The element of the need-fire is to be found in item (c) of this analysis, and by symbolism it takes the place of the older condition of ever-burning, item (d). This is the most perfect example of the fire ritual of Europe in survival, and, when we compare other examples with it, the several stages of decadence are revealed, beginning with the need-fire prepared by friction and ending in the bonfire constructed by modern methods, but still retaining here and there relics of ancient ritual (*Report of British Association, Liverpool Meeting, 1896*, p. 650). Altogether it seems that need-fire may be defined as the perpetuation by primitive methods of a rite which became important when the ever-burning fire of the tribe ceased to exist as the tribe ceased to exist, and which thus carries through survivals the sacred formalism of an earlier ritual.

LITERATURE.—This is quoted throughout the article.

LAURENCE GOMME.

NEGATION. — Negation is a relative term which gets a definite meaning only when one can name or define of what, in a given case, something is the negation. In other words, there can be negation purely in general or negation which has no definite corresponding object of which it is the negation. Any particular case of negation has its own determinate corresponding object.

⁶ *Ib.* p. 13.

¹ The clavic is made of the lower half of an empty tar barrel nailed to a stout pole, and supported by staves taken from a herring cask. The remaining staves are used as fuel for the clavic.

² *FLJ* vii. [1880] 12.

1. Illustrations of various kinds of negation.—

(1) In the opening words of Hamlet's soliloquy, 'To be or not to be; that is the question,' 'not to be' involves a negation of 'to be'; both the expressions 'to be' and 'not to be' refer to possible modes of action. 'To be,' as Hamlet explains, includes in its meaning 'to bear the ills we have'; it names a mode of action which any man who chooses to continue his life decides to adopt; 'not to be' involves a course of action—namely, committing suicide—which is treated by Hamlet as the negation of continuing to live. The commandment, 'Thou shalt not steal,' commands a course of action which is the negation of that involved in stealing. Both in Hamlet's soliloquy and in the Ten Commandments, with their familiar 'Thou shalt not,' the negation of a possible course of action is considered or is commanded.

(2) Just as courses or plans of action may be the objects of negations, the negations being themselves possible courses of action which stand in the negative relation to their objects, i.e. to the courses of action of which they are the negation, so propositions, judgments, or assertions may be the objects of negations, the meaning of the negation in each case being relative to its object. 'Charity seeketh not her own' is the negation of the proposition or judgment that would be expressed by omitting the word 'not' from the sentence. 'Ten is not a prime number' is a proposition which is the negation of the proposition 'Ten is a prime number.' When the object of the negation is a proposition, the proposition and its corresponding negation stand in the logical relation of contradiction.

(3) Negations may also have as their objects kinds or classes of beings, real or ideal. In the classes 'believer' and 'not-believer,' and in the kinds of beings distinguished as 'rational' and 'not-rational,' the second term in each expression is a negative term whose object of negation is the first term.

(4) Lastly, the object of a negation may be a highly general type, grade, or state of being, to which definable characters belong or are attributed. Negations of this kind may, of course, be regarded as belonging to the previous class. But the importance of the problems or ideas involved in them may make it worth while to regard at least some of them as forming, for certain purposes, a type by themselves.

T. Harper, in *The Metaphysics of the School* (i. 322f.), maintains that 'evil is not a pure negation.' He expounds this thesis by saying that 'evil is a *privation*,' and by explaining what he means by privation. 'Privation,' in so far like 'negation,' is a relative term (see below, p. 267). But the use of the word 'negation' by Harper, and by many other theologians and metaphysicians in cases of analogous complexity, is distinct from the usage which the negation of propositions or classes brings to our minds, so that it will be convenient to speak of such negations as forming a type by themselves.

In a well-known passage of *The Imitation of Christ* of Thomas à Kempis the adoring subject begins by praying that he may adore God, and love God, 'above' all created objects. He then enumerates, in an eloquent series, glories and powers, both of this world and of the next, accompanying each mention of some wonder, or sweetness, or beauty of the created world by the prefixed phrase 'above all.' The passage culminates in the words, 'Above all that Thou art not, O my God.'

In this case God is explicitly regarded as in some sense the negation of the whole created world, and especially of all that is most wonderful and beautiful, and even good, in the noblest sense, about that world. Thus, to regard God as the negation of the finite world is a familiar and famous teaching of both practical and theoretical mystics.

A closely similar 'negative theology' is suggested by the legendary Hindu seer, Yājñavalkya, in his address to his wife, Maitreyi, when he says of the *ātman*, or self, the absolute: 'The only word concerning the self is "Neti, Neti," "It is not so, it is not so"' (*SBE* xv. [1900] 185).

Yājñavalkya here asserts that his absolute can be defined only by means of negations. The negations, in this case, as in the case of *The Imitation of Christ*, make the absolute itself a negation of 'all that Thou art not,' i.e. of everything finite and relative. There is, of course, a decided distinction between the actual doctrine for which Yājñavalkya and à Kempis are contending; but they are both emphasizing an aspect of their doctrine which constitutes a sort of 'negative theology.' When the absolute is thus defined as a negation, the object of the negation being the finite world or the empirical facts and significance of the finite world, the negation differs, historically at least, and in some important respects both logically and metaphysically, from the ordinary negation of the logical text-books, whose object is a class or a kind of being.

2. The negative relation as a purely logical relation; the meaning of 'not.'—Despite the variety of the foregoing instances, it is plain that, in every negation, a characteristic relation is concerned, viz. that which is naturally expressed in our ordinary language by the particles 'not' and 'no.' If a course of action is proposed or commanded, a dissenting voluntary agent may respond, 'I will not,' or simply 'No.' To respond in this way is to propose, threaten, or promise an alternative course of action which is the negation of the original proposal, and which may be said to stand in the not-relation to it. In the case of a defined class or other universal, such as the class man or the relation brother, the class not-man and the relation not-brother stand in a relation to the class man and the relation brother which furnishes a new instance of the meaning of the word 'not' and of the general meaning of the negative relation.

The not-relation is one of the simplest and most fundamental relations known to the human mind. For the study of logic no more important and fruitful relation is known. And none has a wider range of exemplifications in the whole realm of the experience of any rational being. Anybody who can act voluntarily is able to do so by virtue of the fact that he can also refuse to act in a case where his will is concerned; i.e., a conscious voluntary action is possible only to a being who understands the meaning of 'not,' when some mode of action is its object. The importance of this understanding of the meaning of 'not' for the development of the will is exemplified in the life of childhood.

In one of the psychological efforts to observe and record the vocabulary of a young child who had recently begun to speak fluently it was noted that the two words which he most frequently used in the course of a day's speech were, first, the name that he happened to employ in speaking of himself and, secondly, some word of the nature of 'no' or 'not,' used to express, not necessarily disobedient refusal, but objection, or unwillingness, or a preference and desire standing in some sort of negative contrast to the modes of action which the questions or the proposals of his elders or his playmates suggested. The vocabularies of individual children vary, of course, very widely, both in the words used and in the frequency with which they are used; but we cannot doubt how significant an advance is involved for the whole voluntary life of the child in his power to understand and use the expressions for 'no' and 'not.'

The nature of the not-relation may be most readily approached by considering the relation between a proposition and its contradictory. These are so related that, if either of them is true, the other is false, while, if either is false, the other is true; they are also so related that both of them are not true at the same time and in the same sense, while, with suitable definition of time and of sense, one of them must be true. The not-relation between two propositions is thus strictly mutual or symmetrical; i.e., if the proposition P is the

negation of the proposition Q, the proposition Q is the negation of the proposition P, and conversely. Further, the relation is what may be called, in a terminology favoured by a French logician, M. Couturat, 'bi-univocal'; i.e., a given proposition P cannot possess two negations, so that, if the proposition Q contradicts the proposition P, and the proposition X also contradicts the proposition P, Q and X are strictly and formally equivalent propositions. In the same way, a given proposition P is the negation of what is, essentially, one and the same proposition. Thus a proposition has only one negation, and is essentially the negation of only one proposition. Obviously connected with this fact is the familiar principle that the negation of the negation of a proposition is equivalent to the proposition itself; or, as is often said, a double negation is equivalent to a simple affirmation.

Closely bound up with the foregoing is a fact which has caused, in its relation to more complex problems, a good deal of difficulty, both for philosophers and for common sense—that, from the purely logical point of view, there is no distinct class of propositions that are essentially affirmative, and thereby opposed to or to be distinguished from a class of propositions that are essentially negative. There are excellent reasons for distinguishing between affirmative and negative propositions so soon as we lay stress upon well-known empirical complexities and philosophically important unions of ideas, which interest us when we are uniting the study of different propositions in some connected discourse. But, apart from such complications and from the purely logical point of view, every proposition is the negation of its own negation. So far as the judgments of human subjects are concerned, whoever affirms any proposition to be true thereby contradicts the opinion of whatever opponent may deny the original assertion. It is vain, therefore, to say, 'For my part, I prefer to avoid negations and to confine myself to such positive affirmations as I can make'; it is vain to attempt to confine oneself to 'merely affirmative' thinking; for to affirm is to deny the contradictory of whatever one affirms. It would be equally vain for one, in a sceptical mood, to declare that his favourite attitude is that of negation or of denial; for whoever denies any proposition affirms its contradictory, so that every denial is, in its logical meaning, an affirmation. In brief, it is essential to the whole business of thinking that propositions and the judgments which affirm or deny them go in pairs of contradictories—every proposition having its unique contradictory, of which, in turn, it is the unique contradictory. Hence, when Mephistopheles declares that he is 'der Geist, der stets verneint,' he asserts, from a logical point of view, precisely what is true of anybody who makes any assertions whatever.

In view of this indubitable logical fact, many very natural and important philosophical questions arise as to why affirmation and denial, as they occur in our actual thinking and discourse, appear to involve such strongly contrasted attitudes of mind, and why we regard those whose most noticeable or most usual attitude is that of affirmation as different in such important and practically potent ways from those whose habits and preferences emphasize or prefer negation. This is a problem which it is perfectly fair to consider on its merits. Despite the fact that every judgment is both positive and negative, we all actually do observe what makes us clearly distinguish, in some sense, affirming and denying as standing for decidedly different frames and attitudes of mind or states of knowledge. The attitude of Mephisto-

phes, that of denial, we all regard as different from the attitude which many of us prefer, that of affirmation.

This problem becomes still more important when we consider the philosophical types of negation exemplified in *The Imitation of Christ* and the assertions of Yājñavalkya. The worshipper in *The Imitation of Christ* adores a God whose divinity is defined in terms of a divine negation of the created world; the seer of the Hindu *Upaniṣad* tells of a self whose being consists in its negation of our finite distinctions. Such attitudes involve mainly negative types of thinking. Most of us, for comparatively good reasons, prefer a more positive or affirmative attitude in our assertions about both ethical and metaphysical matters. But, if every affirmation is *ipso facto*, from the logical point of view, a negation, since judgments, as well as propositions, essentially go in pairs of contradictories, how comes it that we so naturally and sharply oppose affirmative and negative thinking, regard Mephistopheles as engaged in some conceivable, although also diabolical, task, and find the Hindu mystic, as we often say, 'too negative'? For a suggestion as to the solution of this problem see below, p. 269 f.

We may sum up by saying that the relation to its object for which the term 'negation' stands is, from a purely logical point of view, and apart from various empirical and philosophically important complications, one which is 'bi-univocal,' or, as it is also called, a 'one-one relation,' and perfectly symmetrical. In the case of propositions the logical truth is that every proposition has its contradictory, while of two contradictories one must be true, the other false; and the contradictory of the contradictory of a given proposition P is precisely equivalent to the proposition P itself. For similar purely logical reasons negation, as applied to acts and modes of action, gives precisely analogous results: to every mode of action is opposed its contradictory mode of action. Of two contradictory modes of action, one who has the power to choose may put into execution the one mode; but he must choose one of the two, and he cannot choose both. One who has the opportunity and the power of choice may either steal or not steal. But one of the two he must choose. He cannot voluntarily refrain from both. Only the loss of his opportunity or of his power of voluntary choice can relieve him from being voluntarily in the position of one who steals or one who does not steal.

In the case of acts and modes of action the same complications arise as in the case of propositions and judgments. From the logical point of view, there are no modes of action which are essentially positive, and none which are essentially negative. If a man says, in answer to the request to work in the vineyard, 'I go not,' his act is, logically speaking, both affirmative and negative. He negates the request 'Go work'; he takes the contradictory, but for that very reason also distinctly affirmative, attitude of positively refusing to work. No one capable of voluntary choice and possessed of the opportunity for action can undertake to do anything without thereby refusing or negating the plan of not undertaking to do that same thing. For the same reason, no voluntary agent can refuse an act without positively expressing the will not to do that act.

Yet, for all of us, positive and negative commands seem, under ordinary circumstances, to involve a distinctly different attitude of will and of mind. The contrast between the negative mode of commands illustrated by the Ten Commandments and the positive attitudes of the will expressed in the Sayings which tradition attributes to Christ has

furnished a very frequent and important topic for both ethical and theological comment. 'Tell the children, in a persuasive way, what to do; but do not insist upon telling them what not to do, unless you are obliged to do so' is, at the present time, familiar pedagogical advice. It is fair to ask why the purely logical point of view, which inevitably regards negation as a symmetrical relation, seems to stand in such momentous contrast to what both common sense and experience, ethical as well as religious, so persistently exemplify.

In the case of logical classes the not-relation takes a form which we cannot here study in detail. In briefest summary, we may say that, when two terms are related as X and Not- X , the meaning of the terms is such that everything in the so-called universe of discourse to which one is confining his consideration is either X or Not- X , while nothing is both X and Not- X ; the relation of negation here preserves, from the point of view of pure logic, its character as a symmetrical and 'hi-univocal' relation. Any term X which has a determinate range of application has one, and one only, corresponding negative term, or negation of X . In turn, the negative of the negative of X is the term X itself. From this point of view, pure logic, so far as we yet see, has no reason to recognize the existence of any terms except those which are essentially and equally both positive and negative terms. If a term X has a determinate meaning, then, *ipso facto*, the term Not- X has a determinate meaning. The negative of the negative of X is once more X itself. Each of these terms is the negative of the other. Each is also a positive term in so far as it is the negation of its own negation. Yet common sense and ordinary experience sharply distinguish purely negative terms, or terms that are defined by negation, from terms that are positive. The reason for this difference between the logical point of view and that of common sense needs a little further explanation. We may close this elementary logical survey of the nature of the not-relation by mentioning the fact that, despite the baffling complications and abstractions with which this elementary study is beset, the not-relation remains one of the most momentous of all relations for the organization not only of all the exact sciences, but of all the systematic study of human experience and of all our knowledge concerning the order of the world and our own conduct (see, further, art. ORDER). If negation, considered in these formal aspects, seems barren and abstract we may assert—dogmatically enough at this stage of our inquiry—what more careful research would make clear in great detail: 'Without negation no order.' But order is not only 'heaven's first law'; it is that upon which science and righteousness, insight and ethics, equally depend.

3. Unsymmetrical relations associated with the not-relation: privation, affirmation, positive attitudes of will, and modes of knowledge.—In experience, in forming our plans of conduct and defining the topic of our discourse, the not-relation comes to appear, and in certain respects actually to be, unsymmetrical, so that there arises a significant distinction between positive, or constructive, and more purely negative modes of expression, of the description of objects, or of the formation of our plans of action. This is due to the fact that we very seldom consider the not-relation merely by itself. Both in experience and in action, both in our thoughts about things and in our observations of the real world, we find reasons for associating the not-relation with other relations, such, e.g., as are suggested by the manifold contrasts and differences which appear in our experience, and which interest both our thought and our will.

When the not-relation is associated with other relations, so that we are dealing with an object P which is in certain respects to be treated as the negation of Q , while, at the same time P and Q have certain interesting differences to which we also attend, or are conceived by us under the limitations which are imposed upon us by the facts of life or by the interests of our minds, we are often able to say that only in a certain respect is P the negation of Q , or that P and Q are each the negation of the other with respect to, or within, a certain field, under the limitations of a certain discourse, or from a certain point of view. At the same time P and Q may also be in other relations—which are not wholly symmetrical. It is under such conditions that we are led to make use of expressions such as that ' P is not the mere negation, but the privation, or the absence of Q ,' or that the meaning of P implies that P expresses a certain need or want directed towards the object Q , which is then, precisely as the object of this need or want, in an unsymmetrical relation to P .

Further, it is very often the case that, in considering P and Q , we are actually limiting ourselves, our discourse, our plans of action, or our definitions to considerations and distinctions that arise within some limited field, or from the point of view of some special interest of our life, thoughts, or modes of classifying objects. We may be conscious of this limitation, or it may be merely tacit or ill-defined, or even unconscious. Within the limited field in which we are considering the distinction between P and Q , the relation between them may be or may appear to be the not-relation. Any one of very numerous considerations associated with this limitation of our point of view, our field of discourse, or our plans of action may involve relations between P and Q which are unsymmetrical, so that, as in the case of the instances of privation mentioned above, the relation between P and Q may be regarded as not symmetrical, and sometimes as associated with relations that involve objects distinct from both P and Q , with which P and Q stand in still further interesting relations. In such cases the not-relation, symmetrical and dyadic as it is, may be or may appear to be not the only relation with which we are actually concerned. Therefore, side by side with the not-relation, we may be obliged to note the existence of certain other relations in which P and Q also stand, relations triadic, tetradic, and, in fact, polyadic, with various degrees of complexity. Thus, by association with other relations, what is, from a certain point of view or in certain respects, to be regarded as the not-relation between P and Q comes to appear in other respects no longer symmetrical, and frequently no longer dyadic.

So complex are the situations and relations which under such circumstances may arise that we do well here to help ourselves by means of examples, beginning with comparatively simple instances, in order to show that most of the philosophical and empirical problems about the nature and function of negation are principally due to the fact that the conditions for negation seldom arise either in life or in science without being associated with the conditions which involve other relations than the not-relation. To unravel the tangle which this union of negation with other relations frequently involves is one of the most delicate and difficult problems of logical analysis. We can here give only the most elementary and general indications of the way in which this unravelling is to be attempted.

In Lewis Carroll's *Hunting of the Snark* the Barrister dreams that the Snark is 'defending the pig on the charge of deserting his sty.' In one of his pleas the Snark says: 'The charge of

Insolvency fails, it is clear, if you grant the plea, "Never indebted." The point of view from which 'insolvency' can very naturally be regarded as the negation of solvency involves what constitutes—to borrow the well-known phrase used by de Morgan—a 'limited universe of discourse.' In this universe of discourse the distinction between solvency and insolvency arises; the classes 'solvent' and 'insolvent' appear as classes standing each in the not-relation to the other, and one who belongs to this universe is either solvent or insolvent, while he cannot be both. The relation between solvent and insolvent is, so far, a symmetrical one; each of the terms is the negative of the other; there is no reason to call either the essentially positive term, while the other is to be viewed as essentially negative.

The plea of the Snark is founded upon bringing to our consciousness, in a somewhat confused way, the fact that the universe of discourse whose beings are classified as solvent and insolvent is a universe of discourse of beings who are, or at some time have been, debtors, when these beings are considered with reference to the question whether they are, were, or will be able or unable to pay their debts when these debts are, were, or will be due. One who has never belonged to this universe of discourse, simply because he has never contracted a debt, certainly does not belong, so the Snark asserts, to the class of insolvent debtors, whatever else may be said about him, or whatever else is the class in which he ought to be placed. Of this limitation, whereby the universe of discourse of solvent and insolvent beings is characterized, we may be unconscious, and therefore each of the classes 'solvent' and 'insolvent' appears to us as the negation of the other. That is why the relation is, in so far, treated as merely a not-relation.

If we become, as the Snark apparently wishes his listeners in the 'Shadowy Court' of the Barrister's dream to become, aware of what this limitation is, the classes 'solvent' and 'insolvent' appear in a somewhat different light. For, as even the Barrister becomes at least dimly aware, if the classes 'solvent' and 'insolvent' are classes of debtors, considered with reference to their power to pay their debts at maturity, they differ in a respect which involves other relations than the not-relation. A solvent differs from an insolvent debtor in that he possesses a power to pay at maturity. This power, if he is an honest man, he intends and probably expects to possess in due time. If he discovers that he no longer possesses it, he fails from inability to accomplish what he presumably wants to accomplish. His need is to be, if possible, solvent. An insolvent debtor is thus deprived of something that he needs or wants. His insolvency is therefore an instance of what has been called 'privation.' On the contrary, the solvent debtor has what, as an honest man, he intends or desires to have—the power to pay his debts. The relation between the solvent and the insolvent debtor is now no longer symmetrical. It is the relation between one who has and one who has not the object of a need or a desire.

For closely associated reasons, insolvency may conceivably be the object of what the Snark calls a 'charge.' The insolvent debtor may be haled into court, declared a bankrupt, or imprisoned as if for crime. From such perils and obligations the solvent debtor may be free. Here, again, the contrast between needs and privileges or possessions, between legal, social, or other empirical restrictions and freedom from such limitations, becomes important. The not-relation, in a universe of discourse thus limited, is no longer symmetrical. We need some other term than those of mere negation to express the relation involved. The insolvent and the solvent debtor classes are no longer each the mere negation of the other. Solvency appears as something positive, while insolvency involves want of something desirable, privation of something whose possession would constitute success.

Trivial as it is, this instance illustrates a type of relation which has its importance throughout the whole range of conduct, opinion, classification, conception, and so throughout the whole range of science, art, and human interests. Side by side with pure negation there now appears the distinction between two objects, each of which is in certain respects the negation of the other, while, at the same time, the negation arises within some limited universe of discourse. Secondly, there appears the frequent, though the not universally present, fact that such limitations of the universe of discourse are or may be associated with empirical, conventional, legal, or ethical contrasts which lead us to regard one of the two negatively related objects as the positive, the required, the superior member of the two negations. In such cases, where, within a limited universe of discourse, the relation of negation is associated with a definable or empirically obvious distinction in value, dignity, or desirableness between the two objects, we speak of one of the two negatively related objects as involving, or as constituted by, the privation of the other; one of the two appears as the positive term, the other as what the elementary text-books of

logic sometimes call 'the privative term' of the negation. Sometimes this privative term is called the 'merely negative term,'—an expression more familiar than enlightening, which has helped to confuse both the popular and the technical discussions of negation.

In the case of the debtor relation we obviously have, in the universe of discourse which the Snark defines in the Barrister's dream, a limited universe. This is not the only reason why the condition of insolvency seems to involve privation. It is because the debtor wants to pay his share, or because the law may put him in peril if he does not do so, that the universe of discourse of the solvent and insolvent debtors comes to be not merely a world which is classified, but a world in which solvency, as something positive, is contrasted with insolvency, as something which involves privation. Cases where other relations than those which necessarily involve contrast and classification interesting to the will, or having different value according as X or Not-X is the term emphasized, lead to unsymmetrical relations between terms, each of which is the negation of the other, are easily to be found in the exact sciences.

The whole numbers are classified into those which are prime and those which are not prime. In the universe of discourse of number, to say that ten is not a prime number is to assert the contradictory of the proposition that ten is a prime number. The limitation of the universe of discourse makes it possible to regard the prime numbers and the numbers which are not prime as in some respects unsymmetrically related. For the numbers which are not prime have factors, such that, in each case, the factors of a prime number are distinct both from the number and from unity. But the prime numbers have no such factors. Here, in so far as we are considering the purely logical character of the classification, the two classes 'prime numbers' and 'numbers not prime' are, within the universe of the numbers, negatively and symmetrically related. But the possession of factors is associated with so many other characters used in the theory of numbers, while the prime numbers (each of which initiates a new series of numbers, namely, its multiples, which from that prime number outward extend without end in order, and in their due places, throughout the series of whole numbers) have so many of their properties due to this fact, that, from what one may call a purely ordinal point of view, the distinction between the prime numbers and those which are not prime is in many respects unsymmetrical. Nobody would speak of the character of being a prime number as a privation of the character of having factors. Yet the two classes, prime and not-prime, are not merely negations of each other, within their own universe of discourse. The limitation of the universe is associated with many ordinal characters, which the prime numbers possess, and which the numbers that have factors do not possess. From the point of view of these ordinal characters, the distinction in question thus becomes unsymmetrical.

Other interesting instances of unsymmetrical relations associated with and modifying the relation of negation are furnished by the distinction between 'continuous' and 'discontinuous' lines, aggregates of points, sets or series of numbers, 'rational' and 'irrational' numbers, 'chemical elements' and 'material substances' which are not chemical elements. In all these cases, within some limited universe of discourse, a classification involving a negation appears. At the same time some more or less important unsymmetrical relations are so bound up with the not-relation that we are certainly not dealing with mere negation.

The foregoing illustrations and considerations show how, in general, affirmation and positive and constructive attitudes of will and modes of knowledge are defined. In life we always deal with limited universes of discourse. Within these limited universes distinctions arise like those between solvency and insolvency, success and failure, acceptance and refusal, winning and losing. In all such cases the contrasts become unsymmetrical, and may be associated with extremely complicated situations, such as involve triadic or polyadic relations. Under these conditions, for reasons which may be mainly practical, and which may also be of great theoretical importance in more or less exact sciences, and may be bound up with the most various enterprises and incidents of life, conduct,

and knowledge, we accept as an 'affirmative' attitude or assertion, or as a 'positive' deed or state of mind, one of two contrasted objects each of which is the negation of the other. Our reasons are of various sorts, some of which have had to serve in the foregoing as illustrations. In consequence, 'pure negation' can play no part in our concrete thinking and life, simply because it involves a merely symmetrical and logical relation between objects each of which is the negation of the other, and therefore is in a wholly symmetrical relation with the other, while there is no reason to declare one of the two negations to be the 'positive' and 'affirmative' member of the pair. It is in association with the other relations which life and experience most significantly present that negation becomes of concrete importance. When a man refuses to steal, society and the moral law are interested, not merely in the purely logical distinction between stealing and not-stealing, but also in what else the man does who does not steal.

4. The function of negation in thought and life. —In view of the distinctions which have now been illustrated, the main purpose of this article can best be accomplished by indicating the practical function which negation has in the business and conduct of life and in the work of science and philosophy.

This function is frequently defined by pointing out that what are generally called positive attitudes of mind, affirmative assertions, positive commands and exhortations, constructive thinking, and equally constructive conduct and decision are inseparable from negative attitudes, expressions, and opinions, and are implied in the latter, so that 'pure negation' is indeed impossible, while a positive attitude of mind is, in general, more fruitful and more advanced in its attainment of reasonableness than a prevaillingly negative attitude.

What this article has attempted to add to the familiar philosophical lore which is thus summarized is (1) a somewhat clearer view of the general logical nature of the process of negation, and (2) an enumeration of some of the ways in which we have good reason for contrasting a prevaillingly affirmative or positive way of thinking and conduct with a prevaillingly negative way, and for preferring affirmation to negation in certain regions and from certain points of view, as well as for certain specific purposes.

Usually, in giving the traditional preference to affirmation over negation, those who discuss the subject have failed to recognize that, in their purely logical character, both affirmation and negation, both positive and negative modes of definition, conception, and counsel, illustrate the same fundamental logical function. This, as a purely logical function, involves what is illustrated by the not-relation in general, by pairs of terms each of which is the negation of the other, and by pairs of contradictories, whether of propositions or modes of conduct. Since the not-relation, as purely logical, is symmetrical, it seems to involve, in its essential nature, no particular reason why one of two contradictory propositions should possess a form which is superior in its fruitfulness to the other, or why, of two terms each of which is the negation of the other, one should help us to conceptions essentially more fruitful than those which the other involves.

We have now seen that the reason why the logically symmetrical not-relation becomes nonsymmetrical, and furnishes a pair of terms or propositions of which one is more fruitful, more instructive, or in general more valuable than the other, lies in the fact that, in a limited universe of discourse, one of two terms each of which is the negation of the other may have a value superior to that possessed by the other, and may, in any case, call to

our attention matters which have an interest not possessed by the matters brought to our attention by the negation in question. We have also seen how both the experience which lies at the basis of our classification, or which warrants our proposition, and the interest which guides our will may lead us to emphasize these distinctions between the values of two terms, modes of action, or propositions which stand to each other in the not-relation. The result of our study is therefore that, when we are considering the general value which negation is to possess for us, either in the guidance of our conduct or in the clarifying and organizing of our information, we should explicitly take account (1) of the limitations of our universe of discourse, (2) of the values and interests which guide us when we consider or set in order our knowledge of this universe or direct our conduct in dealing with it, and (3) of the sort of experience which guides us as we take account of the various not-relations in question. Once more we may be aided in this summary by a reference to some of the illustrations which we have already used.

Some one advises us to prefer a positive or affirmative mode of guiding our conduct to a prevaillingly negative mode, to consider what to do rather than what not to do, to give to the children positive rather than negative counsel, not to take Mephistopheles for our model, to prefer constructive to prevaillingly destructive modes of behaviour. What does such counsel practically mean? Whoever says, 'Do this,' logically speaking, counsels us not to refuse to do this, not to do the contradictory act. Thus, then, all counsel, in order to be positive, is also, in a strictly logical sense, negative; and, as we have seen, there is no such thing as purely negative counsel, as always denying, as the supposed purely Mephistophelian attitude. Nobody is purely constructive. Whoever builds the edifice destroys the original structure which existed before in the material out of which he constructs the edifice. Civilization implies a destruction of vast numbers of natural objects and processes. Whoever rears and trains the mature man destroys many of the natural tendencies and habits which, apart from training, nature would produce in the untrained child. Why, then, does one conceive of construction as something not negative? Why does one regard the affirmative attitude as something absolutely distinct from the negative attitude? Why does one prefer the positive in life, thought, and training?

The answer is, as we have seen, that we live in a limited universe of discourse, and that we wish to do so. The very conception of an absolutely unlimited universe of discourse would involve manifold logical contradictions, which are now well-known to logicians. Moreover, all that is valuable to us takes place in, and is subject to the limitation of, the universe of discourse of our present human life. Not only is this the case, but all the preciousness of life depends upon it. As experience shows us some of the limitations of this universe of discourse, it also reveals some of its values. Our ethical conceptions and distinctions give to many of these values a more rational character, but all the more reveal to us the importance of the asymmetries which our conduct both finds and prefers. We desire to live in houses. The desire has its well-known empirical foundation, and also its rational ethical justification. Constructing houses is an activity which stands in contrast with the activity of destroying them, and which has a corresponding value. In a duly limited universe of discourse we can at pleasure so define the activities of building houses and of destroying them that the two modes of action stand in a symmetrical not-relation to each other. But in this limited universe

Insolvency fails, it is clear, if you grant the plea, "Never indebted." The point of view from which 'insolvency' can very naturally be regarded as the negation of solvency involves what constitutes—to borrow the well-known phrase used by de Morgan—a 'limited universe of discourse.' In this universe of discourse the distinction between solvency and insolvency arises; the classes 'solvent' and 'insolvent' appear as classes standing each in the not-relation to the other, and one who belongs to this universe is either solvent or insolvent, while he cannot be both. The relation between solvent and insolvent is, so far, a symmetrical one; each of the terms is the negative of the other; there is no reason to call either the essentially positive term, while the other is to be viewed as essentially negative.

The plea of the Snark is founded upon bringing to our consciousness, in a somewhat confused way, the fact that the universe of discourse whose beings are classified as solvent and insolvent is a universe of discourse of beings who are, or at some time have been, debtors, when these beings are considered with reference to the question whether they are, were, or will be able or unable to pay their debts when these debts are, were, or will be due. One who has never belonged to this universe of discourse, simply because he has never contracted a debt, certainly does not belong, so the Snark asserts, to the class of insolvent debtors, whatever else may he said about him, or whatever else is the class in which he ought to be placed. Of this limitation, whereby the universe of discourse of solvent and insolvent beings is characterized, we may be unconscious, and therefore each of the classes 'solvent' and 'insolvent' appears to us as the negation of the other. That is why the relation is, in so far, treated as merely a not-relation.

If we become, as the Snark apparently wishes his listeners in the 'Shadowy Court' of the Barrister's dream to become, aware of what this limitation is, the classes 'solvent' and 'insolvent' appear in a somewhat different light. For, as even the Barrister becomes at least dimly aware, if the classes 'solvent' and 'insolvent' are classes of debtors, considered with reference to their power to pay their debts at maturity, they differ in a respect which involves other relations than the not-relation. A solvent differs from an insolvent debtor in that he possesses a power to pay at maturity. This power, if he is an honest man, he intends and probably expects to possess in due time. If he discovers that he no longer possesses it, he fails from inability to accomplish what he presumably wants to accomplish. His need is to be, if possible, solvent. An insolvent debtor is thus deprived of something that he needs or wants. His insolvency is therefore an instance of what has been called 'privation.' On the contrary, the solvent debtor has what, as an honest man, he intends or desires to have—the power to pay his debts. The relation between the solvent and the insolvent debtor is now no longer symmetrical. It is the relation between one who has and one who has not the object of a need or a desire.

For closely associated reasons, insolvency may conceivably be the object of what the Snark calls a 'charge.' The insolvent debtor may be haled into court, declared a bankrupt, or imprisoned as if for crime. From such perils and obligations the solvent debtor may be free. Here, again, the contrast between needs and privileges or possessions, between legal, social, or other empirical restrictions and freedom from such limitations, becomes important. The not-relation, in a universe of discourse thus limited, is no longer symmetrical. We need some other term than those of mere negation to express the relation involved. The insolvent and the solvent debtor classes are no longer each the mere negation of the other. Solvency appears as something positive, while insolvency involves want of something desirable, privation of something whose possession would constitute success.

Trivial as it is, this instance illustrates a type of relation which has its importance throughout the whole range of conduct, opinion, classification, conception, and so throughout the whole range of science, art, and human interests. Side by side with pure negation there now appears the distinction between two objects, each of which is in certain respects the negation of the other, while, at the same time, the negation arises within some limited universe of discourse. Secondly, there appears the frequent, though the not universally present, fact that such limitations of the universe of discourse are or may be associated with empirical, conventional, legal, or ethical contrasts which lead us to regard one of the two negatively related objects as the positive, the required, the superior member of the two negations. In such cases, where, within a limited universe of discourse, the relation of negation is associated with a definable or empirically obvious distinction in value, dignity, or desirableness between the two objects, we speak of one of the two negatively related objects as involving, or as constituted by, the privation of the other; one of the two appears as the positive term, the other as what the elementary text-books of

logic sometimes call 'the privative term' of the negation. Sometimes this privative term is called the 'merely negative term'—an expression more familiar than enlightening, which has helped to confuse both the popular and the technical discussions of negation.

In the case of the debtor relation we obviously have, in the universe of discourse which the Snark defines in the Barrister's dream, a limited universe. This is not the only reason why the condition of insolvency seems to involve privation. It is because the debtor wants to pay his share, or because the law may put him in peril if he does not do so, that the universe of discourse of the solvent and insolvent debtors comes to be not merely a world which is classified, but a world in which solvency, as something positive, is contrasted with insolvency, as something which involves privation. Cases where other relations than those which necessarily involve contrast and classification interesting to the will, or having different value according as X or Not-X is the term emphasized, lead to unsymmetrical relations between terms, each of which is the negation of the other, are easily to be found in the exact sciences.

The whole numbers are classified into those which are prime and those which are not prime. In the universe of discourse of number, to say that ten is not a prime number is to assert the contradictory of the proposition that ten is a prime number. The limitation of the universe of discourse makes it possible to regard the prime numbers and the numbers which are not prime as in some respects unsymmetrically related. For the numbers which are not prime have factors, such that, in each case, the factors of a prime number are distinct both from the number and from unity. But the prime numbers have no such factors. Here, in so far as we are considering the purely logical character of the classification, the two classes 'prime numbers' and 'numbers not prime' are, within the universe of the numbers, negatively and symmetrically related. But the possession of factors is associated with so many other characters used in the theory of numbers, while the prime numbers (each of which initiates a new series of numbers, namely, its multiples, which from that prime number outward extend without end in order, and in their due places, throughout the series of whole numbers) have so many of their properties due to this fact, that, from what one may call a purely ordinal point of view, the distinction between the prime numbers and those which are not prime is in many respects unsymmetrical. Nobody would speak of the character of being a prime number as a privation of the character of having factors. Yet the two classes, prime and not-prime, are not merely negations of each other, within their own universe of discourse. The limitation of the universe is associated with many ordinal characters, which the prime numbers possess, and which the numbers that have factors do not possess. From the point of view of these ordinal characters, the distinction in question thus becomes unsymmetrical.

Other interesting instances of unsymmetrical relations associated with and modifying the relation of negation are furnished by the distinction between 'continuous' and 'discontinuous' lines, aggregates of points, sets or series of numbers, 'rational' and 'irrational' numbers, 'chemical elements' and 'material substances' which are not chemical elements. In all these cases, within some limited universe of discourse, a classification involving a negation appears. At the same time some more or less important unsymmetrical relations are so bound up with the not-relation that we are certainly not dealing with mere negation.

The foregoing illustrations and considerations show how, in general, affirmation and positive and constructive attitudes of will and modes of knowledge are defined. In life we always deal with limited universes of discourse. and knowledge, we accept as an 'affirmative' attitude or assertion, or as a 'positive' deed or state of mind, one of two contrasted objects each of which is the negation of the other. Our reasons are of various sorts, some of which have had to serve in the foregoing as illustrations. In consequence, 'pure negation' can play no part in our concrete thinking and life, simply because it involves a merely symmetrical and logical relation between objects each of which is the negation of the other, and therefore is in a wholly symmetrical relation with the other, while there is no reason to declare one of the two negations to be the 'positive' and 'affirmative' member of the pair. It is in association with the other relations which life and experience most significantly present that negation becomes of concrete importance. When a man refuses to steal, society and the moral law are interested, not merely in the purely logical distinction between stealing and not-stealing, but also in what else the man does who does not steal.

4. The function of negation in thought and life. — In view of the distinctions which have now been illustrated, the main purpose of this article can best be accomplished by indicating the practical function which negation has in the business and conduct of life and in the work of science and philosophy.

This function is frequently defined by pointing out that what are generally called positive attitudes of mind, affirmative assertions, positive commands and exhortations, constructive thinking, and equally constructive conduct and decision are inseparable from negative attitudes, expressions, and opinions, and are implied in the latter, so that 'pure negation' is indeed impossible, while a positive attitude of mind is, in general, more fruitful and more advanced in its attainment of reasonableness than a prevaillingly negative attitude.

What this article has attempted to add to the familiar philosophical lore which is thus summarized is (1) a somewhat clearer view of the general logical nature of the process of negation, and (2) an enumeration of some of the ways in which we have good reason for contrasting a prevaillingly affirmative or positive way of thinking and conduct with a prevaillingly negative way, and for preferring affirmation to negation in certain regions and from certain points of view, as well as for certain specific purposes.

Usually, in giving the traditional preference to affirmation over negation, those who discuss the subject have failed to recognize that, in their purely logical character, both affirmation and negation, both positive and negative modes of definition, conception, and counsel, illustrate the same fundamental logical function. This, as a purely logical function, involves what is illustrated by the not-relation in general, by pairs of terms each of which is the negation of the other, and by pairs of contradictories, whether of propositions or modes of conduct. Since the not-relation, as purely logical, is symmetrical, it seems to involve, in its essential nature, no particular reason why one of two contradictory propositions should possess a form which is superior in its fruitfulness to the other, or why, of two terms each of which is the negation of the other, one should help us to conceptions essentially more fruitful than those which the other involves.

We have now seen that the reason why the logically symmetrical not-relation becomes unsymmetrical, and furnishes a pair of terms or propositions of which one is more fruitful, more instructive, or in general more valuable than the other, lies in the fact that, in a limited universe of discourse, one of two terms each of which is the negation of the other may have a value superior to that possessed by the other, and may, in any case, call to

our attention matters which have an interest not possessed by the matters brought to our attention by the negation in question. We have also seen how both the experience which lies at the basis of our classification, or which warrants our proposition, and the interest which guides our will may lead us to emphasize these distinctions between the values of two terms, modes of action, or propositions which stand to each other in the not-relation. The result of our study is therefore that, when we are considering the general value which negation is to possess for us, either in the guidance of our conduct or in the clarifying and organizing of our information, we should explicitly take account (1) of the limitations of our universe of discourse, (2) of the values and interests which guide us when we consider or set in order our knowledge of this universe or direct our conduct in dealing with it, and (3) of the sort of experience which guides us as we take account of the various not-relations in question. Once more we may be aided in this summary by a reference to some of the illustrations which we have already used.

Some one advises us to prefer a positive or affirmative mode of guiding our conduct to a prevaillingly negative mode, to consider what to do rather than what not to do, to give to the children positive rather than negative counsel, not to take Mephistopheles for our model, to prefer constructive to prevaillingly destructive modes of behaviour. What does such counsel practically mean? Whoever says, 'Do this,' logically speaking, counsels us not to refuse to do this, not to do the contradictory act. Thus, then, all counsel, in order to be positive, is also, in a strictly logical sense, negative; and, as we have seen, there is no such thing as purely negative counsel, as always denying, as the supposed purely Mephistophelian attitude. Nobody is purely constructive. Whoever builds the edifice destroys the original structure which existed before in the material out of which he constructs the edifice. Civilization implies a destruction of vast numbers of natural objects and processes. Whoever rears and trains the mature man destroys many of the natural tendencies and habits which, apart from training, nature would produce in the untrained child. Why, then, does one conceive of construction as something not negative? Why does one regard the affirmative attitude as something absolutely distinct from the negative attitude? Why does one prefer the positive in life, thought, and training?

The answer is, as we have seen, that we live in a limited universe of discourse, and that we wish to do so. The very conception of an absolutely unlimited universe of discourse would involve manifold logical contradictions, which are now well-known to logicians. Moreover, all that is valuable to us takes place in, and is subject to the limitation of, the universe of discourse of our present human life. Not only is this the case, but all the preciousness of life depends upon it. As experience shows us some of the limitations of this universe of discourse, it also reveals some of its values. Our ethical conceptions and distinctions give to many of these values a more rational character, but all the more reveal to us the importance of the asymmetries which our conduct both finds and prefers. We desire to live in houses. The desire has its well-known empirical foundation, and also its rational ethical justification. Constructing houses is an activity which stands in contrast with the activity of destroying them, and which has a corresponding value. In a duly limited universe of discourse we can at pleasure so define the activities of building houses and of destroying them that the two modes of action stand in a symmetrical not-relation to each other. But in this limited universe

of discourse the distinction in value between the two processes remains both empirically manifest and rationally justifiable. Of the resulting mutually negative modes of action one is called the 'positive' mode, the other involves that destructive treatment of houses which leaves people homeless, and which robs the world of its value. Therefore the counsel, 'Build rather than destroy,' has a perfectly definite warrant, which at once depends upon the logical symmetry of the not-relation in its own limited universe of discourse and makes clear why the one mode of action appears as a privation, a wiping out of values, while the other appears as both empirically and rationally preferable.

If Mephistopheles always denies, his denials, which are practical as well as theoretical, are modes of action which have their place and value in a definitely limited universe of discourse, both social and ethical. In their simplest forms and instances they appear as a 'snubbing' of the proposals which others made, a sarcastic and cynical showing of contempt for human hopes and aspirations; they leave hearts desolate, ruin lives, and add to the sum of human horror. Under these circumstances, we can understand how every mode of action does indeed involve a destruction of something as well as a construction of something else, and how the not-relations involved are perfectly symmetrical, while we equally well understand why we prefer that hearts should not be made desolate, that lives should not be ruined, that the noblest in man should not be destroyed. The world in which we condemn Mephistopheles for his negation is indeed a limited universe of discourse, but the relation between heaven and hell in that world is not merely a symmetrical not-relation, but an asymmetrical relation—a relation of lower and higher, of the noblest to the basest, of the heights of justice and holiness to the depths of diabolism. It is important to see that the logical symmetry of the not-relation is needed as the basis of such unsymmetrical relations between good and evil, heaven and hell, salvation and perdition. Without negation none of these contrasts could be defined, none of these distinctions between the lower and the higher could come to clear consciousness at all; hence negation is an absolutely essential function of our thought and will. Without negation there would be no clearness with regard to values, no knowledge of heaven or hell, of good or evil; hence Mephistopheles is indeed the inseparable companion of the one who is to learn what these distinctions are, and is even thereby to come into contact with what constitutes their value.

We turn for a moment to the case of the types of pedagogical advice which we have already mentioned. It is true that, if we give positive counsels to the children, we, logically speaking, inevitably give them advice which is also negative. For we cannot tell them what to do without counselling them not to do the contradictories of what we counsel. And, as the children are also more or less crudely logical, while some of them are more or less quaintly or crudely Mephistophelian, they will frequently find their own way of planning and performing the contradictory of what we counsel. But it is one thing to give them encouraging advice which awakens them by winning suggestions; it is another to play in our own way the part of Mephistopheles, by first finding out what their desires are and then explicitly snubbing them, and thus condemning them to the depths of discouragement, or inflaming their already existing disposition to rebel against our counsel. The Ten Commandments appear to make their appeal to an already more or less evil-minded, rebellious, or wayward people, whom the thunders of the law

are to terrify into submission. The use of the word 'not' gives to the Commandments this outward seeming, not because the relation of negation is logically unsymmetrical, and not because we can ever command without also forbidding the contradictory of our command, but because the limitations of the universe of discourse about Mt. Sinai, as well as the unsymmetrical distinctions between the thunders on the top of the mountain and the way downward to the plain where the people listen to the thunders, strongly suggest the overcoming by terror of an already-existing stubborn will.

On the other hand, the Sayings and the Sermon on the Mount give their counsels in a universe of discourse where the unsymmetrical relations between the Father and His children, between the Shepherd and the lost sheep, already inspire confidence, a tendency to harmony with one's counsellor, and a disposition to regard him as one who speaks with a peculiar and winning 'authority.' In such a world the not-relation is as definitely present as in any other logically definite world of counsel. On occasion the Sayings, the Parables, and the Sermon on the Mount make explicit both the not-relation and the limitations of the universe of discourse. But, on the whole, while the not-relation is logically just as prominent in the universe of discourse of the Parables and of the Sayings as it is in any other sharply defined universe of discourse, the particle 'not' does not play so large a part as in the Commandments, or as would be the case in negative appeals to the unwise or to the erring. The logic of the situation is identical. What one emphasizes in the mode of expression used is distinct; privation is in the background. What ought to be is made attractive; what ought not to be is more frequently left to be discovered by the enlightened doer of the will, who is expected 'to know of the doctrine' all the better, the more he has been won over 'to do the will.'

The practical moral of all such instances is that, both in our definition of the not-relations which interest us and in our whole use of negations, we should carefully consider the universe of discourse which we propose to employ as the field within which to make our logical distinctions, and also the asymmetrical distinctions of value which arise within that universe. The problem of the relation between these limitations and values and our use of negation is partly a psychological one, and partly one of limiting one's field of operations, for the sake of accomplishing to the full one's enterprise.

'In limitation alone can mastery be displayed.' Thus the problem of negation is one of limiting the field of attention and following the guide of the asymmetrical relations which appear within that field.

The case mentioned above, of the so-called 'negative theology' of the mystics, of *The Imitation of Christ*, and of the Hindu seer, still calls for a word. A 'purely negative' metaphysical doctrine is logically quite as impossible as any other 'purely negative' doctrine. For a metaphysical doctrine must consist of propositions; and a system of propositions essentially consists of a series of pairs of mutually contradictory propositions. If we call either of these propositions 'positive,' its contradictory 'negative' is its inseparable companion; if we call either 'negative,' its own contradiction, which then appears as an 'affirmative' proposition, is equally inseparable from it. But the Hindu seer, or the author of *The Imitation of Christ*, or any other teacher who uses expressions which illustrate a 'negative theology,' is actually thinking or speaking in a more or less deliberately

limited universe of discourse. This universe of discourse is supposed to contain every thing possible, because it contains two beings, God and the world, the absolute and the finite. But an absolutely complete universe of discourse is logically impossible; and the mystic's universe of discourse is, in general, a very limited one—consisting of the objects of our more ordinary experience and the apparent object of the mystic experience itself. These two objects stand in a relation which is certainly not merely the not-relation, although Yājñavalkya and a Kempis are unnecessarily fond of speaking as if this were so. The relation is unsymmetrical in this sense that, for the mystic, one of these objects, viz. God, the absolute, or the 'self,' is ineffably precious, and is defined in terms of the decidedly unsymmetrical relation 'above' or 'beyond,' and the other is defined as 'beneath' or sometimes as 'without.' The relation between this precious or perfect absolute object of the so-called 'negative theology' and the objects of ordinary experience is sometimes defined in terms of a contrast between 'created being' and 'uncreated being.' Now, whatever the relation of creation is, it is obviously viewed by those in question as unsymmetrical. The world 'emanates from,' or 'descends from,' or is 'produced by' its conceived Creator. The mystic God is therefore not merely and negatively uncreated, but He is that from which created being emanates or through whose will it is produced. The Hindu seers, pantheistic as they were, had still their own doctrine of 'emanation' and their various unsymmetrical relations.

It follows that the so-called 'negative theology' never tells us anything in terms of 'pure negation.' On the contrary, it very volubly characterizes a set of unsymmetrical distinctions of value, of preciousness, of grades of being, and of processes of emanation, which include numerous not-relations, but which depend for all their interest upon the fact that the mystic presents to us something of which he can say that it is best known 'when most I feel there is a lower and a higher.'

Perhaps this final illustration, when added to the foregoing, may serve to indicate the function of negation. In brief, the function of negation is, by means of the indispensable and fundamental not-relation, to lay a basis for an understanding of the complexities and asymmetries of the world of experience which may serve to clarify our ideas and systematize our conduct.

LITERATURE.—Kant's *Critique of Pure Reason* and Hegel's *Logic* both contain very extended discussions of various aspects of negation. To Kant belongs the doubtful credit of having deliberately attempted, in his discussion of the Table of Categories, to treat negation as involving an essentially triadic rather than a dyadic relation. This doctrine has, since Kant, been justly neglected. Hegel's logical discussions of the topic are manifold, and have been historically very influential. See also the *Logics* of R. H. Lotze (2nd Leipzig, 1880-84), C. von Sigwart (3rd Tübingen, 1904), F. H. Bradley (London, 1883), B. Bosanquet (2nd Oxford, 1911), and W. Wundt (2nd Stuttgart, 1893-95), as well as A. N. Whitehead and B. A. W. Russell's treatment of various aspects of this not-relation in their *Principia Mathematica*, Cambridge, 1910-13, and elsewhere. See also T. Harper, *The Metaphysics of the School*, London, 1870-84. The term 'negative theology' is used by Dionysius Areopag., *de Myst. Theol.* 1st ff., *de Div. Nom.* i. 4. See also Scotus Erigena, *de Div. Nat.* ii. 30.

JOSIAH ROYCE.

NEGRILLOS AND NEGRITOS.—The existence of living Pygmy peoples in Africa (Negrillos) and in Indonesia and Melanesia (Negritos), and the discovery of their skeletal remains in Europe, have given rise to much theorizing as to the position of such dwarf peoples in the genealogical tree of the human race. According to J. Kollmann (*Korrespondenzblatt der deutsch. anthropol. Gesellschaft*, xxxvi. [1905] 9, and *Globus*, lxxxvii. [1905] 140), the oldest forms of man were of small stature; from them the modern races gradually developed,

each tall race being preceded by a correlated small one. W. H. Flower says:

'We may, therefore, regard them [Pygmies] as little-modified descendants of an extremely ancient race, the ancestors of all the Negro tribes [African and Indo-Pacific]' (*JAL* ix. [1880] 132). W. Schmidt (*Die Stellung der Pygmäenvölker*, Stuttgart, 1910, p. 298) describes them as humanity in its childhood. Other authorities regard the Pygmy tribes as degenerate forms; G. Schwalbe (*Studien zur Vorgesch. des Menschen*, Stuttgart, 1906) states that they are due to selection under poor and isolated conditions; indeed, their position is still an open question (cf. art. DWARFS AND PYGMIES).

As regards the ethnology of the Pygmies, we find them to be uniformly at a very backward stage of culture. They are collectors and hunters, whose weapon is the bow and arrow; some Negritos, however, have learned from neighbouring peoples to till the soil. They are typically monogamous.

1. Negrillos of Central Africa.—In the work named above Schmidt summarizes our knowledge of the Pygmy peoples. He there quotes A. Le Roy (*Les Pygmées*, Tours, 1905, p. 176 f.), who emphasizes the great difference between the religious ideas of the Negrillos and those of the Negroes among whom they live. The Negrillos have hardly any cult of the dead, and no fetish huts or images dedicated to them, no amulets, no professional sorcerers or priests. They have certain charms for ensuring success in hunting, but it has not yet been ascertained whence these derive their power. A marked contrast to the polytheism and nature- and ancestor-cults of the Negroes is afforded by the notions of certain Pygmies as to the supreme being. The chief of the Boni Pygmies of E. Africa gave Le Roy the following account of Waka, their god:

'He is lord of all. He gave the Boni these lands, forests, rivers, and all by which they live. He cannot be seen, but he sees men very well. Sometimes he descends into the Boni camp and kills one of them. Then they bury that one deep in the earth and move away from there; for it is dangerous to remain under the eyes of Waka. He is strict and must have his share of everything. Therefore when they kill a buffalo the best piece is taken and laid on the fire; part is burnt on the fire, the rest the man and his children eat. If any one finds honey, he does not take any till he has thrown a little into the forest and up to the sky. If he wants to drink palm-wine, he first pours a little on the ground. The following words are said: "Waka, thou hast given me this buffalo, this honey, this wine. See there thy share. Give me henceforward strength and life, and let nothing evil befall my children!"' (quoted by Schmidt, p. 232).

It should be noted, however, that the Hamitic Galla of E. Africa have a supreme being, Wāq, who is conceived as the omniscient and all-powerful creator of everything earthly and represents the principle of good; he possesses all the sublime qualities of godhead and is prayed to for preservation of life and property and for all worldly prosperity (P. Paulitschke, *Beiträge zur Ethnographie und Anthropologie der Somäl, Galla und Harar*, Leipzig, 1886, ii. 19). Le Roy also gives an account obtained from a member of the Ajongo tribe of Gabun, which has mixed with the Negroes but retains distinct and 'higher' religious ideas. The supreme being is called Nzambi—a name which also occurs among some W. Bantu, though with vaguer significance. He lives up above, and speaks through thunder to tell men that rain will fall. He is lord over all and has made and disposed all things, and before him we are very small. He causes life and death; after death the shade sinks into the earth and then gradually mounts up to him, and receives reward or is cast into the fire according to his merits (quoted by Schmidt, p. 232 f.). The Nkula Pygmies offer the firstfruits of the nkula-nut to their god with a short ceremony. The Bekü mixed Pygmies honour a supreme being, Nzame, maker of the sky, the stars, light, and the

eyes, the pupils of which reflect his image and are the seat of life. Beasts and men arose from his union with a lesser maternal deity. The Bekü also have a spirit-cult 'which is evidence of Negro influence.' J. M. M. van der Burgt states (*Un grand Peuple de l'Afrique équatoriale*, Bois-le-Duc, 1904, pp. 46, 74, 82, 119-121, 137, quoted in Schmidt, p. 234) that the Wa-Twa of Urundi have a supreme spirit Indagarra, who created a man and woman, and judges people after death according to their deserts. Below him is Ryangombe, a spirit who is associated with the ancestral pair, of whom, however, there seems to be little or no cult. The Wa-Twa wear few amulets themselves, though they are said to make all those of the Wa-Rundi.

P. H. G. Powell-Cotton ('Notes on a Journey through the Great Ituri Forest,' *Journ. Afr. Soc.*, 1907, pp. 5, 6) found among the Pygmies of Mawambe the belief that thunderstorms were controlled by a higher power, and an offering of food to the supreme spirit at a ceremonial feast to give them luck on moving to a new hunting-ground. H. H. Johnston writes:

'Even these dwarf hunting nomads [in the Congo basin], leading a life equivalent to one of the earliest stages of human culture, believe—so far as their impressions have been recorded—in some vague superhuman power of the sky (*Nzambi*, if they speak in Bantu dialects), and think that chiefs or village elders live again after death in the form of bush-pigs or snakes' (George Grenfell and the Congo, London, 1903, ii. 632).

Among some, at any rate, this power seems to be regarded as bad, for it occasionally slays men with its fire (Johnston, *The Uganda Protectorate*, London, 1902, ii. 539).

2. Negritos of the east. —(a) *Andamanese*.—The Andamanese, according to A. R. Brown (*The Andaman Islands*, Cambridge, 1916, ch. iii.), believe in two different kinds of supernatural being: (1) the spirits inhabiting the forest and sea respectively, which are the ghosts of dead men and women; and (2) other beings connected with the sun and moon, lightning and thunder, and the monsoons (Biliku and Tarai); these are all associated with the phenomena of nature. The only being outside these categories about whom Brown could discover anything was Nila, who lives in hollow *Pterocarpus* trees and comes out to slay human beings who approach his trees. The most important beliefs are those relating to the weather and seasons, which are under the control of Biliku (Puluga) and Tarai (Deria). The connexion between Biliku and the north-east monsoon is fundamental; throughout the Great Andaman wind, rain, and storm are associated with Biliku, or with Biliku and Tarai, who is identified with the south-west monsoon. As to other points accounts differ in various parts: in the north Tarai is often said to be Biliku's husband; elsewhere they are said to be two friends (male) who have quarrelled, or again Biliku is a pair whose children are the winds. In all the groups bad weather is regarded as the result of Biliku's anger; lightning is a fire-brand flung by her (him). There is complete unanimity also as to the three things which are punished in this way: (1) the melting or burning of bees-wax; (2) cutting or interfering with a certain number of plants, especially at a certain period of the year; and (3) killing a cicada or making a noise during the time cicadas are singing at morning or evening. The idea that Biliku dislikes the smell of burning wax may be due, Brown suggests, to the fact that honey is collected and wax melted every year just before the rains begin, and so the breaking of the monsoon has come to be regarded as resulting from the offence caused to Biliku in this way. Similarly, the season for digging up yams is in October, and November is the month for the worst storms and cyclones.

There are numerous legends about the 'ances-

tors' who first inhabited the Andamanese world, in which Biliku figures.

In one Lumatut (the kingfisher) stole fire from Biliku, who lived on a separate island from the ancestors; Biliku woke up and flung a fire-brand at him, after which in wrath Biliku went to live in the sky. Another tale from the south tells how Puluga was sent away out of the world by the ancestors whose huts and property he used to destroy. In another version it was a ba shell that Biliku flung at the thief, which is used by women for slicing yams and seeds. One informant said that Biliku (who had a husband Porokul) made the earth, sky, and sea, discovered the use of all the edible roots known to the Andamanese, and is very angry if these are gathered in the rainy season. The points to note in these tales are that Biliku lived on earth but apart from the ancestors, that fire was stolen from her, and that she flung a fire-brand or shell-slicer. The belief in Biliku as the first being is sporadic and undeveloped, and, in Brown's opinion, an accretion (*FL* xx. [1909] 257-271).

It has been stated that the Andamanese tend to personify natural phenomena, and, just as the sun and moon are regarded as two persons, the sun being the wife of the moon, so the two monsoons were personified as Biliku and Tarai and made wife and husband. In the five northern linguistic groups of Great Andaman Biliku is female; so also is her counterpart Oluga in Little Andaman; in two other groups she is male, and in the remaining three predominantly so. Two facts indicate that Biliku was originally feminine: (1) that at the two extremities of the islands Biliku and Oluga are female, while three of the five central groups seem to reveal an intermediate stage; (2) that she hurls fire-brands or shell-slicers instead of shooting arrows, as a man would do. There seem to be no legends about Tarai; in the south he is generally ignored, even storms from the south-west being attributed to Puluga.

The account of Andamanese beliefs by E. H. Man (*On the Aboriginal Inhabitants of the Andaman Islands*, London, 1883, pp. 84 ff., 88 ff.), differing from Brown's more in interpretation than in actual data, forms the basis of Schmidt's version, in which Puluga is made to figure as a high god, creator and supreme judge, 'who has forbidden deceit, theft, raids, murder, adultery, and the burning of wax (for magical purposes)' (p. 195). The prohibition on yams and other edible fruits during the first half of the rainy season is interpreted by Schmidt as a sort of offering of firstfruits; according to Brown, they are not available for food until the end of the rainy season. When Man denies to the Andamanese any form of cult or religious rites (p. 88), and M. V. Portman confirms this as regards prayer and sacrifice, adding that no love is felt for Puluga (*A Hist. of our Relations with the Andamanese*, Calcutta, 1899, i. 44), then Schmidt questions whether our knowledge of the Andamanese justifies such categorical negatives (pp. 197-200), and adopts the rôle of counsel for the defence of Puluga as high god, revered and beloved by man, preferring to ascribe certain anthropomorphic tendencies in the deity to a later mythological stratum (p. 203). He is convinced that a moon-mythology similar to the Austronesian must formerly have dominated the Andamans; according to this, the waxing moon is male, the waning moon male or female. Thus the male waxing moon which appears first in the south-west is Tarai, the male, and so the sex of Biliku when regarded as female is satisfactorily accounted for. To sustain his theory Schmidt is obliged to assume that S. Andaman, where Man's observations were made, is in a more primitive condition than the north, for which assumption he offers no adequate proof. The conflicting views of Brown and Schmidt found expression in a short controversy in *Man* (x. [1910] 2, 33, 66, 82).

Ceremonial observances of the Andamanese are social rather than religious in character (cf. chs. ii. and v. of Brown's *Andaman Islands*). Certain periods in the life of the individual are regarded as

critical, and at such times food-tabus are strictly observed. Thus on attaining puberty both boys and girls have to abstain from honey, turtle, dugong, etc., and a number of vegetable foods for two or three years, on the expiration of which the turtle-eating ceremony takes place, when a new name is conferred. After some months the pig-eating ceremony follows, and then by degrees the youth or girl reverts to normal diet. During pregnancy and for one month after the child is born a mother observes certain food-tabus, in which her husband shares.

Disease and death are attributed to the ghosts of jungle and sea. The body is decorated, flexed, and enveloped in the sleeping mat, and a shell-knife is placed in the hand. It is either buried in the ground or exposed on a platform, with the face to the east; platform disposal is regarded as more honourable. A fire is lighted and a vessel of water is placed beside the grave; sometimes the dead man's bow and an arrow or two or a harpoon and line are left on it. After the funeral the camp is abandoned, and a period of mourning ensues, at the end of which the bones are exhumed, broken up, and strung together into ornaments to be worn by the near relatives. The bodies of enemies are burned, so that blood and fat ascend in smoke and the ghost does not trouble the slayers. After killing turtle, pig, etc., certain precautions are taken to avoid trouble with the animal's ghost.

The Andamanese think that a man can die and come to life again. It is the man's double, reflexion, or shadow that leaves his body at death, and may visit people in dreams while he is alive.

'In every tribe there are alternative and inconsistent beliefs as to the place where spirits go, which by different accounts is in the sky, beneath the earth, out to the east where the sun and moon take their rise, or in the jungle and sea of their own country' (Brown, p. 170).

These ghosts haunting jungle and sea can be kept at a distance by wearing strings of human bones or certain leaves, by fire, bees-wax, an arrow, or red paint; but whistling attracts them. Medicine-men (or, less often, medicine-women) acquire their power by contact with the ghosts; a man can come into contact with them by dying and then coming back to life, or by meeting them in the jungle, or in a less degree power may be obtained through dreams. Medicine-men are able to cause or cure disease, and to control the weather by simple rites directed either against Biliku or Tarai or against the ghosts of the sea. Among all supernatural forces it is Biliku, controller of the weather, who is of paramount importance, for on fine weather depend the hunting, fishing, and dancing which make up the work and pleasure of the Andaman Islander's life.

(b) *Semang of the Malay Peninsula*.—A full account of the religious beliefs of the Semang, based largely on the observations of Vaughan-Stevens, is given by W. W. Skeat and C. O. Blagden (*Pagan Races of the Malay Peninsula*, London, 1906, ii. ch. vi.).

'The Semang religion,' they observe, 'in spite of its recognition of a "Thunder-god" (Kari) and certain minor "deities," has very little indeed in the way of ceremonial, and appears to consist mainly of mythology and legends. It shows remarkably few traces of demon-worship, very little fear of ghosts of the deceased, and still less of any sort of animistic beliefs' (ii. 174.).

Kari is of supernatural size, but is now invisible. He created everything except the earth and mankind, but when Plé had made men Kari gave them souls. He is omnipotent and knows whenever men do wrong; certain acts anger him, but sometimes he pleads with Plé on man's behalf. Kari is the giver of life, the causer of death, and the supreme judge of souls. He requires a blood-sacrifice; during a thunderstorm a few drops of blood are drawn from the shin, mixed with a little water in a bamboo receptacle, and thrown up to the sky.

accompanied among the E. Semang by a form of invocation. As a rule, however, invocations, which are requests for material advantage, have not advanced to the stage of a fixed form, but are simply a wish expressed in conversational phrase addressed to the great spirits or deities. Plé also receives blood-sacrifices. R. Martin (*Die Inland-stämme der malayischen Halbinsel*, Jena, 1905, p. 956) regards this proceeding during a storm as simply a weather-charm and in no sense an act of worship or cult. Besides Plé and his sister Simei there are other deities subordinate to Kari who act as his messengers.

The E. Semang believe that each man has a soul shaped like himself, blood-red, and the size of a grain of maize. New souls sit in a tree behind Kari's seat till he sends them forth; they are conveyed by a bird which is killed and eaten by the expectant mother. Each species of animal has a corresponding soul-plant; 'fish-souls come from grasses, bird-souls from their eating certain fruits' (Skeat-Blagden, ii. 215 f.). When Kari desires to punish a person, he sends a disease borne by the wind-demon, who deposits it upon the culprit's forehead. The god Plé pacifies Kari and permits the Semang to avert the punishments by giving them a talisman: a woman is protected by the special designs engraved on the combs worn in her hair; according to Vaughan-Stevens, the patterns used by her sex to avert the special ills affecting them were the invention of Simei, the sister (or daughter?) of Plé (*Veröffentl. aus dem. königl. Mus. für Völkerkunde*, iii. [Berlin, 1894] 110). Definite patterns ward off specific diseases; as many as eight different combs may be worn at once. These combs are buried with a woman to afford protection to her soul. Men avert diseases by means of patterns invented by Plé on quivers, blow-pipes, and bamboo staves. Similar combs are worn by the Pangan Sakai of Perak, and most of the mixed tribes. Martin says (p. 703) that he found them mainly confined to the Sakai, being much rarer among the woolly-haired Semang; he notes various amulets in use among the Semang (p. 954; cf. Skeat-Blagden, i. 396 ff., 149).

When a man dies, his burial bamboo is inserted in his girdle. On this tube, which is larger for men than for women, patterns are incised by the tribal chief. If a man has been very wicked, his chief will refuse to cut the patterns on it, and the soul will have to appear before Kari without it and will certainly be condemned.

'The soul was believed to cross over into Paradise by means of a tree-bridge, from which the souls of the wicked fell into a boiling lake beneath, through fright of a monstrous figure that mounted guard over the bridge' (Skeat-Blagden, ii. 217).

After swimming about there desperately for three years, they may be rescued by the chief of the heaven of fruit-trees, who lets down his great toe, to which they cling and are drawn out. The old and wise (chiefs and medicine-men) are buried in trees, so that their souls may be able to fly over the head of the monster at the bridge. The Kedah Semang believe that the heavens consist of three stages: the highest, filled with fruit-trees yielding luxuriantly all the year, is inhabited by the greater persons of mythology; the second also contains wild fruit-trees; the third has nothing but low brooding clouds which bring sickness to mankind (ib. i. 460, ii. 207 f., 217).

The medicine-man is usually the most important member of the tribe; chiefs nearly always seem to be medicine-men of more or less repute. They obey prohibitions on the flesh of goats, buffalo, and fowls which are not incumbent on other tribesmen. They are able to enter the fruit paradise in a trance, to turn themselves into tigers, to slay men at a distance, and to supply infallible love-charms

(ib. ii. 225-227). There are a good many myths and beliefs about animals—elephants and tigers in particular are occupied by the souls of dead chiefs; and there are vague ideas of a big conflagration replacing the wide-spread flood-myth (ib. ii. 221 ff., 219). Martin regards animal tales as of Malay origin (p. 950).

As regards the supreme position of Kari, Martin considers (p. 986 f.) that Vaughan-Stevens' data upon which mainly Skeat and Blagden base their statement require confirmation before a primitive theistic system can be ascribed to the inland tribes. 'From the primitive spirits . . . a single almighty, wrathful and rewarding god has developed under foreign influence,' undergoing a new connexion with a much more primitive animism and demonism, though of these only traces appear among the Semang. There are thus two views: (1) a wholesale substitution of religious beliefs for which there is no evidence as yet available; and (2) that of Schmidt (pp. 219-229), who states that the Semang afford a striking contradiction to most modern evolutionary theories as applied to religion. For of the three main groups of backward peoples, we find among the Pygmy Semang, who are culturally at the lowest stage, 'recognition and reverence of a Supreme Being with practically no manism and animism . . . but retrogression of reverence for the Supreme Being and growth of manism and animism the more cultural development advances among the Senoi and Jakun' (Schmidt, p. 228). As to the foreign influence assumed by Martin, it should be noted that the Semang live farthest from and the Jakun nearest to the zone from which such influence could emanate. See, further, art. MALAY PENINSULA.

(c) *Philippine Islanders*.—Not much is known about the religion of these tribes, and some accounts are contradictory. The best is that of W. Allan Reed ('Negritos of Zambales,' *Phil. Is. Ethnol. Survey Publications*, vol. ii. pt. i. [Manila, 1904]), who says:

'The basis of all the superstitious beliefs of the Negritos . . . is the constant presence of the spirits of the dead near where they lived when alive' (p. 65).

All places are inhabited by them, and all adversity—sickness, ill-luck in hunting, failure of crops—is attributed to them; as long as things go well, they are not much considered. In one place there is a huge black boulder which is believed to be the home of one powerful spirit; it seems that the spirits of all who die enter this one spirit, or *anito*, dwelling in the rock. No Negrito passes without leaving a banana or some article of food there. Disease is usually regarded as a punishment, the more serious maladies being sent by the supreme *anito*. Lesser diseases are inflicted by minor spirits, but these have to invoke the aid of the supreme spirit when a more severe punishment is to be meted out. A sickly child's name may be changed so as to avoid the attentions of some spirit. A medicine-man or medicine-woman (*mañga-anito*) can exorcize a spirit causing trouble. Charms are also used to remedy diseases. A certain yellow parasitic plant imparts great powers, and can attract a woman.

After a hunt the game is divided. The chief man present takes a small part of the entrails or heart, cuts it into little pieces, and scatters them, chanting a few words of thanks to the spirits; this is never omitted. F. Blumentritt (*Globus*, xlv. [1884] 75), referring to the Negritos of N. Luzon, states on the evidence of Father Villaverde that a single piece is thrown into the air with an invocation to one spirit only (cited by Schmidt, p. 230).

According to A. de Quatrefages (*The Pygmies*, Eng. tr., London, 1895, p. 159 f.), all Negritos believe that the spirit survives the body and has

the same requirements as in life; a dead man's bow and arrows are therefore hung above his grave and gifts of tobacco and betel are placed on it. A. Schadenberg (*ZE* xii. [1880] 144) states that there is a kind of moon cult (cf. also D. G. Brinton, in *The American Anthropologist*, 1898, pp. 293-307). Dances are held at the full moon, though it may be that they are held then merely for the convenience of light (cf. F. H. Sawyer, *The Inhabitants of the Philippines*, London, 1900, p. 204). Their mimetic dances are described by Reed (pp. 52-54), but he does not say whether there is any underlying religious significance. Combs analogous to those of the Semang, but apparently non-magical in character, are worn by both sexes (Reed, p. 38, pl. xxxvi.).

The only true Pygmy peoples as yet discovered in New Guinea are the Tapiro and Pesechem, who are too slightly known for anything to be said about their religion. The peoples of mixed Pygmy descent are dealt with in art. NEW GUINEA.

Though there exists among certain Pygmy peoples, both African and Indonesian, a more or less definite belief in a supreme spirit, any suggestion that this is a general characteristic of Negrillos and Negritos is to be regarded as highly speculative and premature in view of the fragmentary evidence as yet available.

LITERATURE.—This is sufficiently indicated in the course of the article.
A. C. HADDON.

NEGROES AND W. AFRICA.—1. Introduction; fetishism.—The pure pagan Negro is represented by numberless tribes inhabiting the coast-line from Cape Verd to Calabar, and extending here and there even to the borders of the Sahara. Within this vast area, much of which is still only partially explored, are to be found several dominant Negro races, many large tribes, more or less independent, with numerous branch tribes, and smaller tribes having distinct characteristics. On the outskirts of this Negroland, where the Muhammadan wave has swept forward from the north and north-east, and where the Negro is gradually merging into the Negroid, the religious beliefs of the people are losing much of their originality and becoming impregnated with Muslim ideas, though, on the other hand, the Muhammadans of this border-land show themselves willing to accept freely many so-called superstitious pagan beliefs. South of Calabar, and inland to the eastward, i.e. in the Cameroons, Gabun country, and Loango, the people belong to the great Bantu family.

With the scant knowledge that we possess, it is difficult to reduce the religion of the aboriginal Negroes to any really systematic form; for there is little intercourse between one great tribe and another, little exchange of religious ideas, and no one supreme religious head to whom all the Negro peoples look for guidance. Again, the Negroes have no written language; except by word of mouth, they have no means of communicating with each other; and therefore there are no sacred books or other writings handing down the history or tenets of their religion from one generation to another. What has been discovered about their religion has come to light principally during the last two centuries; before that little was known of the country for more than a few miles from the coast-line. The slaves conveyed to the W. Indies and America came from all parts of the interior; but, since they shared a common misfortune, it may be assumed that the men of one tribe would be prone to assimilate the beliefs of their fellow-slaves of other tribes, so that the religion of the old W. Indian and American slaves cannot be held to represent that of any individual Negro tribe. There is always the possibility, also, that the

natives' beliefs have been warped and confused by the statements of the Christian preacher.

Theories as to the process by which the W. African natives have arrived at their present state of religion are of two kinds: (1) that, in the beginning, Jahweh revealed Himself to all men on earth, and that He alone was worshipped; that subsequently this monotheism gave place to polytheism, out of which in the course of time grew idolatry, superstition, demonism, etc. (this theory is upheld by some Christian missionaries who have lived long among the people, and who have been careful students of their religious ideas); and (2) that the Negroes (and the Bantu) are gradually working upwards to monotheism. But we might equally well theorize that the natives began with monotheism, fell away, and are now drifting back to monotheism. It matters little how the people reached their present stage of religion; it is with the actual state of religion as now found to exist among the various tribes that we have to deal.

Modern students of the Negro religion who have conducted their researches on the spot are few in number, and the two to whom the world is indebted for a great part of its knowledge unfortunately died before the completion of their work. A. B. Ellis left behind him a storehouse of valuable information, to which Mary H. Kingsley added in no small degree, the former dealing more especially with the true Negroes of the Gold Coast and of the Slave Coast, and the latter with those of the Oil Rivers and with the Bantu further south. Of these Bantu in the neighbourhood of the Gabun R. H. Nassau has written fully, as has R. E. Dennett of the Fjort (or Bavili) Bantu. But, in the districts beyond those named above, there remains a virgin field, where the student of W. African religion may find a sufficiency of work. Now and again notes are made by careful observers travelling through, or residing in, those districts, and such scraps of information increase our knowledge; but the gaps are still wide.

M. H. Kingsley¹ divides W. Africa into four main 'schools' of religion, which may be said to extend geographically along the coast: (1) from Sierra Leone to the Niger mouth, (2) thence eastwards to the Cameroons, (3) the Mpongwe country, about the Gabun River, (4) the Loango country (north of the Congo), peopled by the Fjort (Fjât, Fiote, or Bavili). In each division, she considers, the religious aim, or guiding motive, is distinct and clear; and, though the various peoples of the tribes thus grouped have not all arrived at the same stage, yet the fundamental aim of each 'school' appears to exist in every case. Thus, the one aim of the religious practices of the Negroes westward of the lower Niger basin is to preserve human life; of the Oil River natives to enable the soul to pass successfully through death; of the Mpongwe Bantu to attain material prosperity; while the religion of the Fjort Bantu (Nkicism) is concerned chiefly with the cult of the mystery of the power of earth (*nkici*=mysterious power; *nkici-ci*=mysterious power of the earth; *nkici-kici*=mysterious power in personal protective charms, etc.). Such religious ends are not easy for the Christian mind to grasp, and to understand them at all it is necessary to realize that a Negro thinks in quite a different manner from a European.

With the exception, perhaps, of some of the Bantu, the peoples of W. Africa do not appear to speculate on such far-off things as the creation of the world, but almost every Negro tribe possesses some legend connected with the origin of man. Sometimes the legend is unmistakably of Phœnician introduction (for the Phœnicians are known to have penetrated as far as the Gold Coast); at

other times it shows signs of having come from the Christian missionaries on the coast or from the Muhammadans of the interior; while, again, there are legends so local and narrow in their notions as to be clearly marked as of tribal evolution.

The Yorubas maintain that, before the earth was peopled by men, there was always Olorun, the great god of the firmament, and that by him another god, Obatala, was created and placed in charge of all things connected with the firmament and the earth. For Obatala was created also a goddess-wife named Oduduwa, who bore a boy and a girl named Aganju and Yemaja. The brother and sister married, and had a son (Orungan), whose evil doings brought about the violent death of his mother, at which event there sprang from her body fifteen gods and goddesses. On the spot where Yemaja died, runs the legend, the town of Ifé was built, and was for many centuries considered a sacred city. In this manner the Yorubas account for the creation of their gods, by whom alone, they believe, the world was at one time inhabited. As to the period of man's creation Yoruba opinions differ, some holding that the first couple were made out of mud by Obatala, others that they came from Yemaja's body with the gods, and that they were named Obalofun ('Lord of Speech') and Iya ('Mother')—names which strike one as having been inspired by Christian missionaries.

Among many tribes there seems to be a more or less general belief that, for a long time before the creation of man, there was a god epoch, followed by a giant epoch; and that the advent of man caused the giants, if not also the gods, to become invisible, but to remain on the earth to harass man.

In some parts of W. Africa the Negroes have a legend that, in the long-ago, a ladder was placed between the earth and the abode of the gods in the skies, and that, when a person was old and infirm, he was called by the gods to ascend the ladder; one day a cripple boy began to ascend the ladder, and was pursued by his mother, whereupon the gods, infuriated at women and children attempting to intrude, flung down the ladder for ever. But legends of this kind are regarded as mere fairy-tales by the mass of the people, and their religion does not in any way hinge on them.

There are also myths about the sun, the moon, the stars, and the rainbow. These are found principally in Dahomey and the adjoining countries, and, judging from their similarity to myths existing in other parts of the world, are probably not of Negro origin.

Lissa, the spirit of the sun, is worshipped by the Dahomans, as is Gleti, the spirit of the moon, who is the wife of Lissa. The stars are held to be the children of Lissa and Gleti; and eclipses are accounted for as domestic wrangles between the spirit of the sun and that of the moon. Anyi-Ewo, the spirit of the rainbow, is worshipped by the Ewe tribes, who have the myth that the rainbow is a huge serpent which, when thirsty, comes forth from the sea, stands on its tail at one side of the earth, and bends its head over to drink at the other side.

Those students who maintain that the Negro tribes are working up, or working back, to monotheism have noticed that, in many instances, peoples that have undoubtedly sprung from a common stock have not advanced towards monotheism equally rapidly, although they may show little difference in other respects, i.e. in the European idea of civilization. This is, perhaps, attributable to environment—to the nature of the country in which the respective tribes dwell. In an open country, where means of communication are easy, the people are enabled to discuss matters and exchange ideas more freely, whereas, in heavy forest-land, where little intercourse exists between one village and another, things remain at a standstill. The result of this condition of affairs is shown principally in the number of the gods worshipped. The peoples held to be most advanced in the religious scale have cast aside many of their old gods, retaining only a few; and these are common to the whole tribe, so that the inhabitants of one village worship the same gods, under the same names and with the same rites, as the inhabitants of another village of the tribe. On the other hand, peoples held to be low in the religious scale have gods without number, but for the most part purely local—very often known to and worshipped by one person only. In short, it is con-

¹ *W. African Studies*, p. 116.

sidered by these students that religious advance among the Negroes carries with it a reduction in the number of gods worshipped, which may imply that, as the Negro's mind develops, he realizes that, since the greater gods control the lesser ones, it is a waste of time to endeavour to propitiate the latter. All this may be true of the Negroes, but, as will be seen below, it does not appear to hold good with the semi-Bantu and Bantu tribes who dwell immediately east and south of the true Negroes.

The word generally used by Europeans to describe the religion of W. Africa is 'fetishism' (*q.v.*); from the Portuguese *feitiço*, 'a charm,' or 'magic.' Synonymous with 'fetish' (implying charm) are the words *gri-gri*, used by the natives about Sierra Leone and Liberia, *ju-ju*, used by Europeans in the neighbourhood of the Oil Rivers and the Niger Districts (said to be derived from French *jou-jou*), *nkici-kici* of the Fjort, and so on. Now, this word 'fetishism' is unknown to the natives themselves, and its use in its original sense conveys a totally erroneous impression of the nature of the W. African's religion, implying, as it does, a system of idolatry or worship of tangible images, combined with a great amount of magic. As we shall see, the religion of the Negro and Bantu is something quite different, and the error arose from the superficial observations of early travellers, who noticed only what may be called the lower form of the religion of the people. The word has been so long in use, however, that it is unlikely to be abolished, though its original meaning may, in the course of time, be forgotten. Pure fetishism does exist to a certain extent in many parts, but it does not often hold the ruling place in the religion of the people. Among most of the tribes there is a higher and a lower form of religion, both thoroughly believed in and practised, as often as not, by the same people at the same time. With the Fjort, *e.g.*, there is the worship, or reverence, of the goddess Nzambi, with all the strange mystery appertaining to the earth-spirit, which is in a sense a perfectly good religion; but there is also fetishism of the lowest form—superstitious dread of evil spirits, a belief in charms, witchcraft, and every abomination of what may be termed the 'black art.'

To fathom the depths of W. African religious thought we must start with a knowledge of certain matters on which the Negro bases his beliefs. (1) His religion has no connexion whatever with morality; no Negro imagines that he is 'living in a state of sin'; nor, as far as morality is concerned, does he see any harm in murder, theft, or any other crime. If, therefore, he commits an offence for which he is punished by a European court of law, by his king, by a secret society, or by the community, he considers, not that he has sinned, but that, by some omission or some act of stupidity (apart from the commission of the actual crime), he has unwittingly brought down on himself the wrath of some god or evil spirit. (2) All Negroes, however low they stand in the religious scale, have a firm belief in the existence of an indwelling spirit in almost everything animate and inanimate (except such things as are made by human hands). Holding these convictions, and believing that nearly every non-human indwelling spirit is capable of utilizing at will the material wherein it dwells as a powerful agent for influencing or controlling the actions of man and of all living things, the Negro argues that everything that occurs—every accident, every natural phenomenon, in fact every event—is caused by the workings of an indwelling spirit, by some human spirit which has temporarily lost its abiding-place, or by some other spirit of the spirit-world. It was originally believed that the in-

dwelling spirits of all things in nature were hostile to man; it was their aim to thwart man in every possible way, and even to destroy life.

With a knowledge of the above beliefs, it is not difficult to trace the evolution of Negro worship. Every object in nature was believed to possess an invisible spirit, ever on the look-out to work destruction on man. The spirit of the sea caused shipwrecks; that of the river upset canoes; trees and rocks, impelled by their spirits, fell and crushed those passing by. In order to ward off the anger of these spirits, the Negro sought to appease them by offering them something which he imagined would be acceptable to them and at the same time be a deprivation to himself. The nature of the sacrifice or offering would depend on the importance of the god or spirit, *i.e.* on the degree of misfortune which the god or spirit would be able to produce. It might take the form of merely a little food, or might require to be something greater—a blood-offering of a goat or even of a human being; for it is thought that the spiritual essence or indwelling spirit of anything offered to a god is enjoyed by, or enters the service of, that god. By constant propitiation of a particular god or god-spirit it was imagined that, in the course of time, the worshipper became not only immune from harm, but also more or less under the protection of the god. Consequently, it became every man's object to devote his attention to one particular god, and he usually selected for his special worship the god whose actions he most dreaded. It is easy to understand from this that several individuals of the same family, following similar vocations, feared the malignancy of the same god, so that the god was worshipped by the family and became a family-god. For similar reasons, a whole tribe or a whole nation would worship the same gods. They shared a common fear of a common enemy, and, on the principle of co-operation, agreed to appease him by combined worship and sacrifice, or by the same means to obtain his goodwill. In order further to save trouble in guarding the abiding-places of the gods or spirits and looking after the sacrifices made to them, certain individuals were appointed by the tribes and maintained at the expense of the people. This was, at any rate in the Gold Coast and Slave Coast regions, the foundation of the priesthood, which henceforward increased, and in many districts became paramount. It was imagined that the priests, by close association with the surroundings of the god for whom they cared, became his confidential agents, and so mediators between man and the god.

2. Gods and idols.—The use of English equivalents for W. African conceptions is unsatisfactory, since it is almost impossible thus to define clearly the native's ideas. Still, when writing of many tribes, speaking many different languages, it is impossible to employ Negro or Bantu words always. It is, therefore, necessary to explain at the outset what is implied by certain words which have been adopted in the following pages as the nearest equivalents to W. African notions. The words most likely to be misunderstood are 'god,' 'spirit,' 'soul,' and 'ghost'; for very frequently they appear to overlap one another. Negroes and Bantu of W. Africa believe that their gods are material and tangible beings, generally of human form, residing in the skies, in the world, or under the world, and invisible to man, but making themselves visible on occasion to their special priests. These gods possess invisible indwelling spirits, which have permanent or temporary abodes, and which have the power of passing themselves into any article they choose—even, for a period and for some particular purpose, into the body of a priest. The word 'spirit' is used to denote (1) the indwelling spirit of a god;

(2) the indwelling spirit conceived to have its residence in all things animate and inanimate; and (3) that spirit, good or evil, which belongs to the great world of invisible spirits, and which will ever remain in it. 'Soul' is the indwelling spirit of a human being, as long as he is alive, or, where re-incarnation is believed in, until re-birth takes place. 'Ghost' (as distinct from 'spirit' and 'soul') is the filmy individuality supposed by some people to leave the man's body at death, and occasionally to make itself visible in a shadowy form.

With regard to the gods of the people, it is maintained by some observers—chiefly by Christian missionaries—that all W. African tribes, whether god-worshippers or not, believe in the existence of a supreme being, manlike in form, and dwelling in the skies, but no longer taking any interest in the affairs of man, and therefore not worshipped. Such are Nyankupon of the Tshis, Nyommo of the Gas, Mawu of the Eves, Olorun of the Yorubas, Abassi of the Efiks, Osovo of the Indems, Anyambi of the Mpongwe, etc. In preaching of the Christian God the missionaries use the name of the supreme god of the people, and, consequently, it is probable that the Negro's ideas of his chief god are not the same to-day as they were before the advent of the missionaries. But even now the natives regard him not as an omnipotent creator, but as merely one of many gods, having no influence or control over the other gods, and neither feared nor loved. To this there is, perhaps, one exception, viz. Nzambi-Mpungu, whom some of the Fjort people believe to have been the creator of the world, though they no longer worship him.

Ellis and others have collected much information concerning the gods worshipped by some of the peoples dwelling between Sierra Leone and the Niger mouths, and the information is of great value, more particularly as showing the condition of the Negro mind. The gods that have been best studied are those of the Negroes of the Gold Coast and of the Slave Coast, and a knowledge of their characteristics and functions will assist in understanding the extent to which a W. African's life is bound up in his religion. It must be recognized, however, that, although a Negro may be able to describe exactly what he thinks each particular god is like, he does not pretend to have ever seen the god, and he does not for a moment imagine that the image or representation of the god is the actual god. But he does believe that the gods are material beings, each possessing an indwelling spirit; that they reveal themselves in a material form to their priests, into whom on occasions they pass their spirits; but that to ordinary people they are spirits, and, like other spirits, invisible. These gods or their spirits have their abodes (permanent or temporary) in objects of nature, in images, in the elements, in the surf, the tornado, the lightning, the pestilence, fire, etc.

Taking the Gold Coast and Slave Coast tribes from west to east, we find that the further east one travels, the fewer are the gods of the people. The Tshi-speaking and the Ga-speaking tribes of the Gold Coast have innumerable gods, while the Yorubas of the Slave Coast have few. All these gods may be classified according to grade or importance; thus, among the Gold Coast peoples there are: (1) national gods universally worshipped; (2) local deities universally worshipped under the same names; (3) local deities; (4) town, village, and family deities; and (5) private gods. East of the Gold Coast tribes dwell the Ewe-speaking peoples of the Slave Coast, whose gods can be reduced to three classes, while eastward again we find among the Yorubas only two distinct classes of deities. It would be quite possible to classify the deities according to their origin; for

some evidently belong to the old mythology, while others—the greater number—are of more modern creation. East of the Yoruba country, and inland along the banks of the Niger, the gods worshipped appear to be again numerous; then in the Oil Rivers, although certain gods are acknowledged, little attention is paid to their worship, for reasons which appear below. Further down the coast, where the true Bantu succeeds the Negro, no active gods are even acknowledged by the Mpongwe and other tribes of the Gabun region. But among the Fjort, to the north of the Congo, there is the great goddess Nzambi.

The following is a description of the more important gods recognized or worshipped by the better-known tribes.

i. GOLD COAST TRIBES.—(a) *National gods universally acknowledged or worshipped.*—Bobowissi is supposed to dwell at Winnebah Hill, and was originally the principal god of the tribes along the coast between Appollonia and Barracu (near Accra), as well as of the Wassaw, Arbra, and Assin tribes inland. He appointed all local deities and had control over the elements—thunder, lightning, storms, etc.; he has a day of annual sacrifice (Kohbor) at the end of August. Formerly it was usual to sacrifice human beings to him. He is represented in human form, though twice the size of man, and black. In his right hand he carries a sword, and his left hand is held behind his back. His wife is Abu-mehsu (spirit of the river of the same name), who is worshipped as a goddess by some of the coast tribes.

Tando is the principal god of the Ashantis and other northern tribes of the Tshi group, and is represented as similar in appearance to Bobowissi. Driver ants are sacred to him, and his wife is Katarwiri (spirit of that river). She is represented as of human shape, black, and of enormous size, and crocodiles are her special care. As the southern tribes were for several centuries at war with the Ashantis and northern tribes, Bobowissi was held to be hostile to Tando, and tribes throwing off their allegiance from Ashanti exchanged the worship of Tando for that of Bobowissi.

Nyankupon, or Nana-Nyankupon (i.e. 'Lord of the Sky'), is acknowledged by some of the southern tribes to have supplanted Bobowissi as chief god. His origin appears doubtful, and by some he is supposed to have been introduced by Christian missionaries. He has no priesthood, and little account is taken of him. The Negroes seem to have gradually come to the conclusion that Nyankupon dwelt at too great a distance from the earth to take any interest in its inhabitants, except occasionally to show his displeasure by means of some great calamity. They feared his wrath, but were unable to propitiate him except through his deputy Bobowissi; and they still regard Bobowissi as obtaining his power solely from Nyankupon. Nyankupon is represented as a man-like god, possessing the faculties and passions of man, and essentially a material being.

(b) *Local deities universally worshipped under the same names.*—Sasabonsum is a monster of human form, of red colour, and with long hair. His abode is either below or above the ground wherever the earth is red, i.e. stained with the blood of his victims. He is also said to dwell in bombax (silk-cotton) trees. He is a most malignant and death-dealing god, and cannot be appeased. When dwelling in a tree, he crushes his victims by causing it to fall; when living underground, he produces earthquakes; and in all cases he devours those on whom his wrath descends.

Srahmantin is a hideous female monster, dwelling only in certain bombax trees. She terrifies those who pass by her abode, seizes them, and keeps

and is represented as an old man with a withered leg. Flies and mosquitoes are his messengers, and the badge of his followers is a stick with red and white marks. Dada (Eda, or Ida), the god of newborn children and vegetables, is represented by a calabash studded with cowries and containing a lump of indigo. Oya, the principal wife of Shango, and goddess of the Niger, is sometimes represented by an image with nine heads (mouths of the Niger). Afeke, the wind, is her messenger. Oshnn and Oba have been already mentioned as being wives of Shango and goddesses of the rivers bearing their respective names. Aje Shaluga is the god of wealth, and his badge is a large cowry-shell. Orisha-Okò, the god of the farm and of crops in general, is worshipped far and wide, and has many priests and priestesses. He corresponds to the yam-god of other tribes, but, besides looking after the fruits of the earth, he is also concerned with human fertility. Bees are his messengers, and his emblem is an iron rod. Oke is the god of mountains, and is worshipped by people dwelling in hilly or rocky country. Oshosi is the god of hunters, and helps them to kill game, while Orun (the sun) and Oshu (the moon) are nowadays worshipped by only very few of the people, and no sacrifices are offered to them.

Other minor deities worshipped by the Yorubas are: Shigidi, Olarosa, Osanhin, Aroni, Aja, Oye, Ibeji, Oshumare, and Olori-merin.

Shigidi, the god of nightmare, is a malevolent god, whose evil actions can be invoked by one man against another during sleep. He is represented by a short, stout cone of clay, embellished with cowries. Olarosa is the house-god, and is represented by an image, in the form of a man with a stick, set up at the door of the house. Osanhin, the god of medicine, is much worshipped; his emblem is a bird upon an iron bar. Aroni, god of medicine as well as of the forests, is represented as a one-legged man, with the head and tail of a dog; and Aja, goddess of the forests, is said to resemble a woman in miniature, being only 18 inches in height. Oye is the god of the Harmattan wind, and gigantic in stature. Ibeji, the protector of twins, corresponds to Ho-ho of the Ewes; and Oshumare, the rainbow-god, is identical with Anyi-Ewo, worshipped by those people. Olori-merin was a four-headed god, with the legs and feet of a goat, who protected towns; but his worship appears to have now ceased.

iv. NEGROES OF THE LOWER NIGER.—About the gods of the tribes dwelling on the banks of the Niger and in the districts of the Oil Rivers little reliable information is forthcoming. Gunu, the chief god of the tribes in the neighbourhood of the confluence of the Niger and Benué, is believed to be a deified ancestor of the Igaras, and is of a beneficent disposition. Provider of children and crops and controller of the elements, he dwells in certain groves and has an actual festival (Jan.-Feb.), when offerings of food are made, principally by childless women praying for offspring, and cultivators anxious about their crops. Sebo is a tribal god of the Igbiras; Okenga is a tribal god of the Igbiras and Igaras; Ebo and Ode are local gods of the Igaras; Ikenga, Offo, Isu-Chuku, Isi are tribal gods of the Ibos; Eki, Aroh, Onisseh, Anni-Asaba, local gods of Asaba (Ibo); Orinse, Anni-Onitcha, Okikeba, Ojedi, Utoh, Azeh, local gods of Onitcha (Ibo); Anni-Mogoro, Adjeh, local gods of Oko (Ibo); Igi-Oji, local god of Odekwe (Ibo); Fejokoo, local god of Abo (Ibo), is represented in clay at the celebration of the yam-festival, and regarded as the supplier of yams; Ogbooka, local god of Abo (Ibo), is represented in wood and carried in this form at the yearly festival, being the Abo god of mirth.

Incomplete as the above list is, it shows that among the Ibo people on the banks of the Lower Niger the gods are innumerable, and doubtless, were the list complete, it would be found that the religion of this great tribe is in much the same stage of development as that of the peoples of the Gold Coast.

v. NATIVES OF THE CROSS RIVER.—These tribes, according to C. Partridge, have many gods besides the greater one or overlord whom the Efik people call Abassi, and the Indem people Osowo, and in addition to the lesser god Nfam, who is worshipped by most of the tribes. There are deities common to a tribe, town, village, club, or belonging to a private household. Among the local gods and goddesses may be mentioned: Akwoainsi and Ekissi (a deified ancestor), worshipped at Ingkimm (Atam); Majo (a deified ancestor), represented by a wooden post carved in human form, and worshipped by the people of Akerita and Abia. At Obubura (Eshupnm) the most important local god is Binokkpabi, whose wife is Awtoha; their son, Agadiden, and daughter, Ebu, are also worshipped. Other gods of Obubura are Ibrambri, Emanna, Binokkpabi (in female form), Obumuku, and Nchuku, while each household in the town possesses gods of its own. At Oburukpon (Eshupnm) the people worship the yam-god Osibi Keiwurra, who is concerned with marriages, and Ibillekpari, protector of women. At Awakande the yam-god is called Abanna, his wife Ekpaga, and his daughter Oka. The most important tribal god of the Aruns is Okeiworo, who is represented by a clay figure of a man, having goat's horns stuck on his head, cowries for eyes, and a white cloth round his loins. 'His right arm is covered with sheep's wool, and in each hand he grasps a wooden weapon.'

vi. FJORT (OR BAVILI) BANTU.—Mpungu, or Nzambi-Mpungu, i.e. 'Father,' or 'Father of the Fearful First-born,' is regarded by the Fjort as the overlord, and there is a legend (possibly introduced by missionaries 400 years ago) which says that he created the universe, as well as Princess Nzambi, whom he then married, with a view to populating the world. After that he handed over the control of everything to Nzambi, and retired to his far-off palace. He has no priests and no worshippers.

Nzambi is the great goddess whose cult is the foundation of the higher form of Fjort religion. At the present day she is represented by an immense wooden image of a woman, though it is generally thought that prior to some 250 years ago she had no such image. Her name means Mother Earth (lit. 'Terrible Earth First Created'), and she is considered to have been the mother of man and of the lower animals. She is served by priests, who are held to be able to obtain from her such benefits as the people desire, for Nzambi is well-disposed towards mankind and all animals. Her place of abode is in the sky, but her spirit is everywhere in the earth, in mountains, rocks, etc. Failing to distinguish between Nzambi and Nzambi-Mpungu, the early Christian missionaries assumed that Nzambi was the creator, and therefore adopted her name as a translation of the word 'God.' And, later on, Jesuit missionaries, in the endeavour to assimilate Christianity with the religion of the people, led the natives to believe that their goddess Nzambi was identical with the Virgin Mary—the result being to produce complete confusion in the Fjort mind.

The effect of the belief in an all-powerful goddess has been to raise the position of women among the Fjort to a much higher level than elsewhere in W. Africa.

Certain things, such as sacred groves, trees,

plants, rivers, and even animals, are believed to be filled with the sacred spirit of earth, i.e. the *nkici-ci* is held to be inherent in them by nature. Such things are holy, and possess mysterious powers, received originally from Nzambi. But, so far as the actual worship of the goddess is concerned, everything is left to the priest (the *nganga-nzambi*, or *nganga nkici-ci*), who dwells in a hut on the edge of a small plot of sacred ground, which is kept scrupulously clean. To these places the people repair when they have any simple benefit to ask of the goddess, such as rain, children, good crops, etc. The priest is paid handsomely for his advice or divination, and the matter is left in his hands. At certain times the chiefs assemble their people to clean up these sacred plots of ground, when sacrifices of white fowls are offered, and much dancing takes place. This may, perhaps, be considered an act of worship. Otherwise there is no popular worship of Nzambi. It seems almost established that the cult of Nzambi was imported several centuries ago from outside. For, according to local history, or tradition, when Fumu Kongo, king of Congo, occupied the province of Loango, he sent priests of Nzambi with the princes who took over the country. Wherever these princes stayed, there a priest remained, and established a plot of ground sacred to the spirit of earth (*nkici-ci*).

Besides the above-mentioned naturally sacred things, there are other objects which the priests, by the performance of certain ceremonies, can make sacred. These, then, are bound up with the higher form of Fjort religion; e.g., each village and each family has its holy ground, on or near which there is a hut containing the family gods, or images, as well as a tree with holes made in it. 'Medicines' are placed in the holes, which are then closed with pieces of looking-glass. These family or household gods are said to be connected with the spirits of the winds, and Dennett¹ mentions the following different kinds:

(1) Mpumbu (supposed to be brought by the east wind); two little wooden figures of a man and a woman, about 18 ins. high, which are made sacred by the priest, with particular ceremonies. A man of the family has first to be sanctified, i.e. the mysterious spirit (*nkici-ci*) is passed into his head, and henceforward he becomes the spokesman of the figures, which, after having been filled with 'medicines,' are handed over to his care. His method of invoking their aid, to kill or protect, is to throw palm-kernels or dust at them. (2) Mabil (also brought by the east wind) is a kind of boundary gateway, consisting of two upright poles and a cross-pole or string, decked with grass and feathers. (3) Tshimbuka (brought by the west wind) is a round basket made of certain leaves, and holding the family remedies. It is invoked by rattling a gourd containing a few hard seeds at it. Two guardians, a man and a woman, properly spiritualized (as in the case of the guardian of the Mpumbu), look after it and speak for it. (4) Nzaci (brought by the west wind) is also a basket, somewhat similar to the last-named, though the ceremonies of spiritualizing its guardians are different. (5) Ngoto (brought by the south-west wind) is another kind of basket, flat and open. In this case the guardians go through a marriage ceremony, and each wears an iron bracelet. (6) Lembe (brought by the south-west wind) also takes the form of a basket containing medicines, the guardians being bound by the most sacred marriage ties, and wearing bracelets.

It seems hardly accurate to apply the term 'god' to such things as these, yet there is no very great difference between them and the family and private gods of the Gold Coast tribes—the *boksum* and the *suhman*. The *boksum* is held to have been appointed by some higher god, and to have received, through a priest, the spirit of that god; the *suhman* is also inspired, but without the assistance of a priest. Similarly, it might be maintained that the east wind appointed the *mpumbu*; but apparently the Fjort priest does not pass the mysterious spirit (*nkici-ci*) into the figures, baskets, and bracelets, but rather into their guardians. In the articles themselves he places 'medicines,' i.e. the spirits of herbs (*nkici*, not *nkici-ci*).

¹ At the Back of the Black Man's Mind, p. 87 ff.

All the above belong to the higher form of Fjort religion in that they are, in one way or another, connected with the spirit of the earth, emanating from the goddess Nzambi. The lower form of religion, which deals with the 'black art,' may be said to be the religion of the common people. It has no connexion with the *nkici-ci*, the sacred spirit, and is worked by a distinct class of fetishmen, who are believed to have the power of passing into images and other articles every description of evil spirit. This is true fetishism; it is discussed below, § 4.

3. Human souls and futurity.—Connected with the conception of the indwelling spirit previously referred to is the Negro's belief concerning what may be termed his 'soul' or 'souls,' i.e. the spirit or spirits which he believes to dwell in him. Probably the whole theory of the indwelling spirit had its origin in the man's belief in his own indwelling spirit. Be that as it may, it is maintained by many W. Africans that a human being possesses four souls—the surviving, or immortal, soul, the bush-soul, the shadow-soul, and the dream-soul. The immortal soul is held to be the most important, and the others are dependent on or subservient to it. The Tshis and some others believe that this soul has a definite earth-dwelling period allotted to it; and that, if the body of an individual passes away before that period has elapsed, the soul remains in the world to complete its earthly existence as a homeless wanderer. Being without an abode, this wander-soul endeavours to find a resting-place in the body of some human being—a new-born child, if possible. The bush-soul dwells in the body of a wild animal in some part of the bush; the man himself possibly does not know the animal or the part of the country; the animal and the human owner of the bush-soul die simultaneously. The shadow-soul exists in the man's shadow, and the Negro is careful to keep in the shade at noon-tide, so as not to lose his shadow-soul. When the sun sets, the shadow-soul takes its rest, and at sunrise awakes in great strength and length; but it can be destroyed by an enemy thrusting a weapon through it; and the death of the shadow-soul brings death to its human possessor. Of the dream-soul there is much to be said. When the Negro is awake, his dream-soul is practically dormant; but, as soon as the man goes to sleep, it endeavours to escape from its human prison and enjoy itself with other dream-souls. A dream, therefore, results from the escape of the dream-soul, which, wandering forth, encounters the dream-souls of other men and the souls or indwelling spirits of inanimate things. When the man awakes, the dream-soul returns, the mouth being the means of egress and ingress. But, should the chain of the dream be broken by the sleeper being suddenly awakened, there is the danger of the dream-soul being shut out. Such a catastrophe produces immediate illness, the other three souls being affected at once; and, unless the dream-soul can be conjured back into the body forthwith, the case must prove fatal. The dream-soul can be brought back only by a fetishman, or witch-doctor, who is possessed of the power of catching it and returning it to its proper place, by way of the patient's mouth. With regard to the wander-soul, i.e. the immortal soul with a period of mundane existence remaining after the death of the body to which it belonged, its first object is to find a body from which the dream-soul is temporarily absent, and to take its place. This introduction of a strange soul, of course, deranges the body, and the witch-doctor, having been summoned and having discovered the presence of the wander-soul in the body, proceeds to draw it out, and insert the dream-soul in its stead. But the witch-doctor does not

and is represented as an old man with a withered leg. Flies and mosquitoes are his messengers, and the badge of his followers is a stick with red and white marks. Dada (Eda, or Ida), the god of newborn children and vegetables, is represented by a calabash studded with cowries and containing a lump of indigo. Oya, the principal wife of Shango, and goddess of the Niger, is sometimes represented by an image with nine heads (mouths of the Niger). Afefe, the wind, is her messenger. Oshun and Oba have been already mentioned as being wives of Shango and goddesses of the rivers bearing their respective names. Aje Shaluga is the god of wealth, and his badge is a large cowry-shell. Orisha-Oko, the god of the farm and of crops in general, is worshipped far and wide, and has many priests and priestesses. He corresponds to the yam-god of other tribes, but, besides looking after the fruits of the earth, he is also concerned with human fertility. Bees are his messengers, and his emblem is an iron rod. Oke is the god of mountains, and is worshipped by people dwelling in hilly or rocky country. Oshosi is the god of hunters, and helps them to kill game, while Orun (the sun) and Oshu (the moon) are nowadays worshipped by only very few of the people, and no sacrifices are offered to them.

Other minor deities worshipped by the Yorubas are: Shigidi, Olarosa, Osanhin, Aroni, Aja, Oye, Ibeji, Oshumare, and Olori-merin.

Shigidi, the god of nightmare, is a malevolent god, whose evil actions can be invoked by one man against another during sleep. He is represented by a short, stout cone of clay, embellished with cowries. Olarosa is the house-god, and is represented by an image, in the form of a man with a stick, set up at the door of the house. Osanhin, the god of medicine, is much worshipped; his emblem is a bird upon an iron bar. Aroni, god of medicine as well as of the forests, is represented as a one-legged man, with the head and tail of a dog; and Aja, goddess of the forests, is said to resemble a woman in miniature, being only 18 inches in height. Oye is the god of the Harmattan wind, and gigantic in stature. Ibeji, the protector of twins, corresponds to Ho-ho of the Ewes; and Oshumare, the rainbow-god, is identical with Anyi-Ewo, worshipped by those people. Olori-merin was a four-headed god, with the legs and feet of a goat, who protected towns; but his worship appears to have now ceased.

iv. NEGROES OF THE LOWER NIGER.—About the gods of the tribes dwelling on the banks of the Niger and in the districts of the Oil Rivers little reliable information is forthcoming. In the articles themselves he places 'medicines,' *i.e.* the spirits of herbs (*nkici*, not *nkici-ci*).

¹ At the Back of the Black Man's Mind, p. 87 ff.

All the above belong to the higher form of Fjort religion in that they are, in one way or another, connected with the spirit of the earth, emanating from the goddess Nzambi. The lower form of religion, which deals with the 'black art,' may be said to be the religion of the common people. It has no connexion with the *nkici-ci*, the sacred spirit, and is worked by a distinct class of fetishmen, who are believed to have the power of passing into images and other articles every description of evil spirit. This is true fetishism; it is discussed below, § 4.

3. Human souls and futurity.—Connected with the conception of the indwelling spirit previously referred to is the Negro's belief concerning what may be termed his 'soul' or 'souls,' *i.e.* the spirit or spirits which he believes to dwell in him. Probably the whole theory of the indwelling spirit had its origin in the man's belief in his own indwelling spirit. Be that as it may, it is maintained by many W. Africans that a human being possesses four souls—the surviving, or immortal, soul, the bush-soul, the shadow-soul, and the dream-soul. The immortal soul is held to be the most important, and the others are dependent on or subservient to it. The Tshis and some others believe that this soul has a definite earth-dwelling period allotted to it; and that, if the body of an individual passes away before that period has elapsed, the soul remains in the world to complete its earthly existence as a homeless wanderer. Being without an abode, this wander-soul endeavours to find a resting-place in the body of some human being—a new-born child, if possible. The bush-soul dwells in the body of a wild animal in some part of the bush; the man himself possibly does not know the animal or the part of the country; the animal and the human owner of the bush-soul die simultaneously. The shadow-soul exists in the man's shadow, and the Negro is careful to keep in the shade at noon-tide, so as not to lose his shadow-soul. When the sun sets, the shadow-soul takes its rest, and at sunrise awakes in great strength and length; but it can be destroyed by an enemy thrusting a weapon through it; and the death of the shadow-soul brings death to its human possessor. Of the dream-soul there is much to be said. When the Negro is awake, his dream-soul is practically dormant; but, as soon as the man goes to sleep, it endeavours to escape from its human prison and enjoy itself with other dream-souls. A dream, therefore, results from the escape of the dream-soul, which, wandering forth, encounters the dream-souls of other men and the souls or indwelling spirits of inanimate things. When the man awakes, the dream-soul returns, the mouth being the means of egress and ingress. But, should the chain of the dream be broken by the sleeper being suddenly awakened, there is the danger of the dream-soul being shut out. Such a catastrophe produces immediate illness, the other three souls being affected at once; and, unless the dream-soul can be conjured back into the body forthwith, the case must prove fatal. The dream-soul can be brought back only by a fetishman, or witch-doctor, who is possessed of the power of catching it and returning it to its proper place, by way of the patient's mouth. With regard to the wander-soul, *i.e.* the immortal soul with a period of mundane existence remaining after the death of the body to which it belonged, its first object is to find a body from which the dream-soul is temporarily absent, and to take its place. This introduction of a strange soul, of course, deranges the body, and the witch-doctor, having been summoned and having discovered the presence of the wander-soul in the body, proceeds to draw it out, and insert the dream-soul in its stead. But the witch-doctor does not

allow the wander-soul to go free, for, as a rule, a subscription is got up, and the witch-doctor takes the spirit home, with a promise to educate it, so that it may be able to find its way straight to soul-land, though, as often as not, he lets it slip into the body of a new-born child, who soon dies of convulsions.

The belief in the four souls is not universal throughout Negroland. The Tshis hold that in every man there dwells a *kra*, or guardian-spirit, which leaves the man at his death and becomes a *sisa*, but can, within a given time, revert to the position of a *kra* by being re-born in a new body. Should such re-birth not take place, the *sisa* must quit the world for *sisa*-land (somewhere beyond the river Volta). But even thence it is able to return to the world as an evil spirit, and enter a body from which the *kra* is for the time absent. Thus the *kra* of the Tshis is somewhat similar to the immortal soul of some of the other tribes, and it performs also the functions of the dream-soul; but the shadow-soul and the *bmsh*-soul are not acknowledged.

The Gas divide the *kra* (or *kla*) into two distinct souls, or guardian-spirits, the one male and the other female, the former being well-disposed, and the latter evilly-disposed. The *nian* acts according to their advice; in other words, they represent his conscience.

The Ewes hold views similar to those of the Tshis, but they have no equivalent for *sisa*-land, the wander-soul continuing as such, or being re-born either in a human body or in the body of some animal. In the latter case it shows its disposition towards mankind by its choice of an animal; if malignant, it enters the body of a beast of prey; if well-disposed, the body of a harmless animal.

The Yorubas have three souls, dwelling respectively in the stomach, the head, and the great toe. Of these the stomach-soul is of greatest importance, and shares all the food that the man eats; the head-soul guides the man in all his actions, and has special offerings (usually the blood of fowls) made to it; the toe-soul receives attention only when the man is about to undertake a long journey.

But, whatever the number of souls that the Negro or Bantu believes to dwell in his body, the general idea is always the same, viz. that, as long as life remains, the body, like everything else, contains an indwelling spirit or several indwelling spirits; that, if the belief is in more than one such indwelling spirit, then one—the immortal soul—has higher functions than the others and has a future existence. Concerning the nature of this future existence beliefs differ, but the *kra* of the Tshi, the *kla* of the Ga, the *luwo* of the Ewe, the *iwini* of the Yoruba, the *inina* of the Mpongwe, the *ilina* of the Benga, the *nsisim* of the Fang, the *nkulu* of the Fjort, and the immortal soul of other tribes, by whatever name it is known, continue to exist in one form or another after the death of the body with which they had previously been connected.

No Tshi doubts the fact that the material corpse remains in the grave where it has been placed, but he holds that at death the indwelling spirit, and at the same time the man's individuality, in a shadowy form, quit the body. Thus from the latter there emanate the man's immortal soul (*kra*) and his ghost (*srahman*)—a shadowy representation of the living man. The ghost goes to the 'land of ghosts' (*srahmanadzi*), but not necessarily at once. If the deceased completed his proper term of life, the ghost proceeds to the other world forthwith; but, if the man was killed, or died before his time, the ghost remains on the earth to haunt people, until taken in hand by the

priests and forced to depart. Ghost-land is believed to be beneath the earth, but is similar in every respect to the world, and the ghost retains the same status as the man held when alive. For the latter reason funeral customs are of supreme importance; the ghost of a chief must have its retinue of ghost-slaves, or their equivalent in ghost-wealth, and the ghosts of the man's clothes, property, food, etc., must accompany the ghost-chief; otherwise he will not be received with due respect by his fellow-ghosts.

The Ewes believe also in ghost-land, and in the fitting of the indwelling spirit at death, but the actions of their *luwo* are not quite the same as those of the *kra* of the Tshis. It becomes a *noli* (corresponding to *sisa*), but there is no *noli*-land for its eventual disposal; it may be re-born as a *luwo* in a new-born infant or transmigrate into the body of an animal; failing either of these, it becomes a wandering *noli*, with powers of doing good or evil.

The Yorubas have made further developments in the conception of what takes place at death. They have the ghost and the ghost-land like the Tshis and the Ewes, but they believe that, unless the funeral-rites are properly performed, the ghost cannot go to ghost-land, and, therefore, wanders as a ghost on the earth, until hunted down by evil spirits and dispatched to an uncomfortable place set apart for stray ghosts, from which there is no return. They also say that it is possible for a ghost to return from ghost-land and commence life apart in a new-born infant. This is not a little confusing, for apparently here the ghost is regarded as the man's soul.

But none of these tribes dwelling westward of the Niger believe that metempsychosis always takes place. They occasionally observe in a child a marked resemblance to some deceased relative, whose individuality, ghost, or spirit they imagine must have been re-born in the infant. It is probably due, therefore, to the fact that metempsychosis is not universally believed in that the aim of this 'school,' as was pointed out above, is to preserve human life. With this object all sacrifices are made to the gods and spirits. Death must be averted at all costs, for the after-life is an unknown quantity.

In the region lying between the Niger and the Cameroons the belief in re-incarnation is practically universal, though, where the true Negro merges into the Bantu (e.g., Cross River), the people have various opinions as to what happens to the soul or human indwelling spirit at death. According to Partridge, the majority of the Cross River natives have no definite ideas on the subject; there are some (possibly from intercourse with Christian missionaries) who believe that the spirit goes up to live with the 'big god' in the sky; others that it passes into the sacred tree which every village possesses, and which the people call their 'life'; others that it is re-born in an infant or in a wild animal; and others that it wanders about, as a species of evil apparition, to haunt the world. Yet these Cross River people do think that they can, to a certain extent, control the destiny of the soul, and help it to attain one or other of the above resting-places. In the Oil Rivers, however, where it is held that re-incarnation is the natural and only fate of the human soul, the Negro's one concern is to guide and control the actions of the soul from the moment when it leaves the body until its re-birth in an infant, in order that it may be re-born into the same status as it previously had. A soul of a dead chief, e.g., must be re-born in an infant who will some day become a chief. This guidance and control of the soul is undertaken by the fetishmen—not only the head

of the house, who is *ipso facto* the family fetishman, but also by the fraternity of fetishmen, corresponding to the priesthood in other parts. As soon as the breath leaves the body, the fetishmen take the soul in hand, and the elaborate funeral-rites connected with the burial of a chief, with the gifts, sacrifices, etc., are for the purpose of proclaiming the rank of the dead man when the soul reaches soul-land. Human sacrifices are much more important here than among the Tshis and other western tribes. There wealth in any form can take the place of slaves, for, as long as the ghost-chief arrives in ghost-land with sufficient wealth, his position is established. The soul, however, with re-birth in prospect, must be accompanied by a retinue befitting its rank, to keep up its dignity until the time arrives for re-incarnation. The length of time that this takes varies, for it depends on the birth of a suitable infant. But during this interval the fetishmen believe that they are able to hold intercourse with the soul, and to guide it in the way that it should go.

Although the Oil River natives concern themselves so much with the destiny of the soul after death, they are not callous of life. On the contrary, they desire long life for themselves and their friends, because, unless the soul lives its allotted time in the body, it cannot have acquired all the knowledge necessary for its re-incarnation. Hence witches, who, by means of evil spirits, cause premature death, are here, as elsewhere in W. Africa, regarded with intense hatred, and ruthlessly destroyed, it being one of the duties of the fetishman to hunt them down, and counteract their evil deeds. The Mpongwe native believes that at death his indwelling spirit, or immortal soul (*inina*), leaves the body and passes into the spirit-world, which he vaguely imagines to be everywhere around him, including the air that he breathes. The spirit (in an invisible form, of course) then continues its existence as a spirit in a spirit-world, much resembling the world in which the man had lived, the spirits of his wives and other property being with him, and his hunger being satisfied with the spiritual essence of earthly food. The majority of these spirits have no fixed place of abode, but wander about; some take up their residence temporarily in natural objects—mountains, rocks, trees, etc.—while others enter the bodies of wild beasts. Not one would willingly become a wanderer were it left to itself, but, at the death of the body which it tenanted, would settle down in the village and house where the body had spent its life. This, however, would be inconvenient to the family of the deceased, as no son wishes to be perpetually interfered with by the spirit of his father, and consequently every endeavour is made, by firing guns and beating drums, to frighten away the spirit whenever it becomes disembodied.

Since, in the opinion of a Mpongwe native, a disembodied human soul possesses in its new existence the good and bad qualities of the dead man in whom it dwelt during life, it is capable of good or bad actions towards mankind. But by the medium of the fetishmen man is able to avert evil, and, indeed, to induce good, at the hands of the spirits (see below, § 4). One point, however, must be borne in mind, viz. that any influence which a man may obtain over a spirit can be but temporary, for the spirit never ceases to exist, and can never be destroyed.

Lastly, the Fjort people do not differ very widely from the Mpongwe people in their ideas concerning the human soul. At death the *nkulu* of a good man may remain about the house of the deceased for twenty days, after which it passes into the

spirit-world, which is everywhere, though most of the spirits dwell in the woods and forests. The *chimbindi*, as it is now called, is hostile to mankind in general, and is, in fact, an evil spirit of the worst description. The soul of the Fjort, however, does not always join the spirit-world quietly and at once; e.g., in the case of a corpse whose eyes are not closed special precautions have to be taken as to the disposal of the body, or the family of the deceased will die. Moreover, if the *chimbindi* of such an individual is seen by a member of the family, that member may die; if the *chimbindi* beats him, he will certainly die. Again, sometimes the soul refuses to become a *chimbindi*, and then it is necessary for a priest or fetishman to pass it into the head of some member of the deceased's family. The spirit of the dead man (*nkulu qianzi*) is then able to hold intercourse with his family.

What happens to the souls of bad people (e.g., witches) seems to be doubtful. It is possible, however, to imagine that, since the bodies of witches are hurled from the summits of the highest precipices, to be broken to pieces on the rocks below or thrown into rivers to be washed away to the sea, the people believe that, in thus dealing with them, they destroy their souls also. Otherwise there would be no object in these drastic methods, and, it must be remembered, the Negro thinks deeply, and does nothing without a purpose. Still, there is a belief that the *nkulu* of a dead witch may be passed into the head of a living witch, and thus continue its existence, while some say that the *chimbindi* of a witch remains for ever to haunt the place where the witch died.

4. Priests, fetishmen, and witchcraft. — The origin of the priesthood in the greater part of W. Africa was undoubtedly the inability or unwillingness of the people to manage their own religious affairs, and in all probability the first priests were men—either more intellectual or more cunning than their fellows—who gained a local reputation as soothsayers, and on whose prognostications the community placed great reliance. When they had once acquired a hold over the people, it was a simple matter to increase their power by the invention of mysterious rites and ceremonies, and, aware that they were not immune from the effects of old age or from death, they trained a younger generation in their art. Thus a special class grew up, whose members, in the course of time, may perhaps have imagined that their practices were real, that they themselves possessed attributes not given to ordinary human beings, and that they were able, by incantations and similar methods, to avert or bring down the wrath of the god who was their special care. Believing this, the Negro consults the priest on all occasions, paying him what he asks. Should he wish to compass the death of an enemy, he goes to his priest, who, inspired by his god, prepares a 'medicine' to bring about the desired end, or instructs the applicant how by some other means the enemy can be secretly destroyed. Should he wish for a charm or amulet as a preventive of misfortune, his priest will sell him one. Moreover, it is the priest who conducts the proceedings when trial by ordeal is resorted to, in order to discover the perpetrator of a crime. The power of the priests is without limit, though the natives maintain that it is the god that strikes or assists, and that the priest is merely the agent or mouthpiece of the god.

Among the Gold Coast tribes the priesthood, although certainly a fraternity, has no real organization. Each deity worshipped by the people has its priests or priestesses, but all are equal, work together for the common cause, and owe no allegiance to any one. The people themselves, however,

recognize a difference in the individual abilities of their priests, and credit some with possessing superior powers. Among the Ewes of the Slave Coast the priesthood had developed into an organization, the priests of each of the more important gods forming themselves into a separate brotherhood, or sect, with proper rules and a distinct ritual, the king of a country usually being their head. Priestesses also are more numerous here than on the Gold Coast. The Yoruba priesthood is more highly organized still, and is in intimate connexion with the Ogboni secret society (see below, § 7). In most cases the chief of a kingdom or State is chief of the society, and as such is, *ex officio*, head of the priesthood, which is divided into three orders, each being subdivided into classes. In the first order there are three classes: (1) the priests of Ifa (the god of divination), who are superior to all other priests, and have two high priests at their head; (2) those of Osanlin and Aroni (gods of medicine), who practise medicine; and (3) those of Obatala and Odudua. In the second order there are two classes: (1) priests of Shango; and (2) priests of all other gods, except Orisha-Oko. The third order is also divided into two classes: (1) priests of Orisha-Oko (god of agriculture); and (2) priests of such gods as are supposed to be deified men. In addition to these orders and classes, there are also grades among the priests of a class; e.g., the priests of Shango are presided over by a chief priest (the *magba*) and twelve senior priests, each with a title and a place in order of precedence. Priests of the respective orders are distinguishable one from the other, and some of the classes have distinctive marks or badges. Thus, the priests of the first order all wear white; those of the second order wear red and white, and shave the crown of the head; and those of the third have a small white paint-mark on the forehead. Again, the priests of Ifa wear armlets of palm-fibre and carry a cow-tail whisk; those of Obatala wear necklaces of white beads; and those of Shango necklaces of black, red, and white beads; those of Ogun have an iron bracelet on the left arm, and those of Oshun brass armlets and anklets.

As a rule, a Yoruba priest's sons follow in their father's footsteps, though the priesthood is also recruited from outside. There are regular institutions where boys and girls are trained for the offices of priest and priestess, the novitiate occupying two or three years, during which many strange and mysterious ceremonies take place.

It will be observed, therefore, that a true priest is one who concerns himself with the worship of one particular god. This does not, however, preclude him from believing in the existence of other gods; he does believe in their existence and in the sincerity of the priests who serve them, but his attentions are all devoted to the service of his own god, from whom he is convinced, or pretends, that he can obtain for the followers of the god whatever they require. But, besides the ceremonial worship which he performs for his god, the priest has other functions: he is a diviner, a maker and seller of 'medicines' and charms, and, at times, even a judge and executioner. In fact, he is not only a true priest, but also a fetishman (sometimes termed 'witch-doctor,' or 'medicine-man').

Eastwards of the Niger, in the Oil Rivers, and thence southwards, in the Mpongwe country, true priests are rare, for the worship of gods is hardly recognized; but fetishmen are numerous. The difference between a true priest and a fetishman is that the former devotes himself to some particular god, maintaining certain forms and ceremonies of worship, whereas the latter deals with all gods and all spirits of every degree, dispensing charms and 'medicines,' conducting trials, etc. The true

priest is a fetishman, but the fetishman is not a true priest.

In the Oil Rivers, as has been pointed out, the one great guiding motive of the religion of the people is to deal with the human soul after death. This is the principal concern of the fetishmen (*ngujumen*), of whom there is a large fraternity, i.e. men who have no other profession, and who, doubtless, came into existence much in the same way as the priests. But here the head of each house considers himself the fetishman of the house, although at times he may deem it necessary to call in some outside fetishman more skilled than himself in the ways of the spirit-world—and the spirit-world rules the unfortunate Negro with a rod of iron. Besides the guidance of the recently-disembodied human soul, fetishmen have many other duties to perform—all the duties (unconnected with worship) mentioned above as being performed by the priesthood elsewhere.

Among the Mpongwe-speaking tribes the fetishman wields far more power than even in the Oil Rivers; for the Mpongwe native, although he cares nothing for gods, is overwhelmed with the vast concourse of the spirits of the spirit-world, who are ever striving to thwart him. He desires prosperity in this world, and this prosperity he can obtain only by gaining a mastery over the evil spirits which stand in his way. He himself, as an ordinary man, is unable to battle with such spirits, but from the fetishmen he can buy 'medicines' and charms wherewith to overcome all difficulties; for the fetishmen possess the power of controlling all spirits, by means of one great and strong spirit with whom they are on intimate terms.

South of these godless and priestless regions we find among the Fjort people both priests and fetishmen; for here, perhaps more than anywhere else in W. Africa, there is a well-defined dividing line between the higher and the lower forms of religion. In the former, as has been said, there is the cult of Nzambi and the mysteries connected with the *nkici-ci*, concerned with which are the king, chief, or head of the family, and the true priest (*nganga-nzambi*, or *nganga-nkici-ci*). But this priesthood differs from that of the Slave Coast and Gold Coast in that it is not a fraternity, for each priest is independent and works for himself on lines of his own, though always through that power which is considered to fill the earth and everything yielded by the earth, and which comes from Nzambi, i.e. Mother Earth. To the lower form of religion belong the fetishmen who work by 'black art,' such as the *nganga-nkawci* and the *nganga-nkici-mbowu* ('keeper of a nail-fetish'). The descriptions given below of spirits and charms will make clear the methods of these fetishmen. Besides the true priests and fetishmen, there is a third class of *nganga*, the *nganga-bilongo*, who is regarded by the people almost as a fetishman, but who, in reality, is merely a medical practitioner, with a knowledge of herbs. This knowledge he keeps in his family, but his methods of using it are quite rational.

Priests and fetishmen are frequently described by Europeans as 'witch-doctors' or 'medicine-men'—terms which leave the impression that these individuals practise witchcraft, or, to use an old term, are 'in league with the devil.' In a sense this is true; at any rate, the fetishmen profess to be able to hold communion with all kinds of evil spirits, and to be able to dispense 'medicines' in order to bring about any desired results. On the other hand, no small part of the duties of the priests or fetishmen is the detection of witches, the frustration of their evil designs on human beings, and their condemnation to death. The fetishman

is therefore not a friend of witches. As a matter of fact, there appears to be very little difference between the methods ascribed to the witch and those of the fetishman; but the native has an abhorrence of a witch, because he believes that she possesses powers not possessed by priests and fetishmen, that she strikes secretly (by poison, etc.), and that she has at her beck and call a host of evil spirits about which the fetishman knows nothing. Of this witch-power the priests and fetishmen are undoubtedly jealous; the witch is infringing their rights, so, for the most part, they uphold the native in his hatred of witches, and do all in their power to get rid of them. Since to be suspected of being a witch means immediate trial by ordeal and certain death, or even death without trial, no one proclaims that she practises witchcraft; and in all probability the idea of the existence of witches is kept alive solely by the fetishmen, in order to explain away their own failures. Witches, they say, can produce sickness and death, can kill swiftly or slowly, by passing evil spirits into the human body, and are ever endeavouring to undo all the good done by the priests and fetishmen. Among the many cruel acts with which they are credited may be mentioned the charge that they catch wandering dream-souls in traps and on baited fish-hooks, and prevent them from returning to the bodies from which they have absented themselves, until purchased by a fetishman. At the same time, although the priests hate witches as rivals and as enemies to what they consider an elevating religion, and although fetishmen hate them for somewhat similar reasons, and because a witch-belief has a bad effect on the community, the fact remains that in some parts this hatred is not instilled into the people by the priests or fetishmen, yet it is as intense as elsewhere. Moreover, the belief in witches is strengthened by the strange fact that not infrequently a woman accused of witchcraft confesses that she is a witch. Wizards are not unknown in W. Africa, but they are far less numerous than witches; in fact they are rare.

Whether the methods of the priest and fetishman be called witchcraft, fetishism, or anything else is a matter of small importance. The distinction between their methods and those of the wizard or witch is said to be that the latter secretly causes sickness or death (usually by poison), and denies that he or she does so, whereas the priest or fetishman practises openly, is acknowledged by the people as following a legitimate calling, and maintains that all his actions are for the welfare of the people. It is a distinction without a difference; for the priest or fetishman can be procured to assist in the making-away with an enemy, using for the purpose the identical means said to be employed by witches—such as ‘medicines’ and the calling-in of evil spirits.

5. Spirits and charms.—The whole difficulty of the Negro's life arises from his firm belief in the existence all around him of countless evil spirits. The air, the earth, the under-earth, are all filled with spirits of the spirit-world. The mere matter of his gods and their worship does not cause him much uneasiness; he supports a priest to look after them, he propitiates them with the necessary offerings, and he feels convinced that he has done his duty. He has no love for any of his gods, but he fears their ability to do him harm. He has the utmost faith in his priest, and he knows that he himself cannot wrestle with a god—a superhuman being. With the host of minor spirits, i.e. supernatural beings, however, things are different; for, by cunning and other methods, they can be successfully kept under, prevented from working destruction, and even made benevolent. It is no

longer a matter of propitiation, but one of hard fighting—pitting one spirit against another, and leaving them to fight it out. The arrangements for these trials of strength entail a vast amount of trouble.

Superhuman god-spirits, including the indwelling spirits of natural objects and the indwelling spirits, or embodied ‘souls,’ of human beings, have already been discussed. What remains to be dealt with is that great army of spirits of the spirit-world, pervading the universe, hemming in the Negro and Bantu on all sides, and influencing every action of man.

In the Bantu (Gabun and Loango) mind spirits are graded according to rank, and it seems to be the general idea that the spirits of gods that are worshipped are superior to all others (of course, among god-worshipping people), and that human embodied souls are superior to the spirits of things non-human. But these two main classes are subdivided into several grades, and the lower spirits are also subdivided into grades. Miss Kingsley maintains¹ that there are two classes higher than human souls, several classes equal to human souls, and at least eleven classes lower than the latter; and she further maintains that spirits which are human disembodied souls remain in that class for all time, never passing into a higher or a lower class. She, therefore, denies the deification of human beings in W. Africa. The most reliable authority on the subject, so far as the Mpongwe-speaking tribes of the Gabun are concerned, Nassan,² names six classes which affect human affairs:

(1) *Inina* is the human embodied soul, which, on becoming disembodied and passing into the world of spirits, continues to take an interest in human affairs, more especially in the affairs of the family with which it was connected when embodied. (2) *Ibambo* is the name applied to a class of spirits with the power of appearing in ghost-like form and frightening human beings. *Abambo* (plur.) have no fixed abodes, can appear anywhere and at any time, and are thought to be the spirits of dead ancestors. They are much dreaded and are worshipped; whether they are universally malevolent is not certain, but, when a man is ‘possessed of a devil,’ it is generally an *ibambo* that has entered into him and has to be cast out. (3) *Ombwiri*, *nkinda*, and *olaga* are the disembodied souls of men, which have taken up a temporary residence in natural objects, such as rocks, trees, etc. They are revered and offerings are made to them by passers-by, who fear to incur their displeasure. The *ombwiri* is the soul of a chief, the *nkinda* that of an ordinary native of the country, and the *olaga* that of a stranger. In many respects they resemble the local deities and the private gods of the Gold Coast tribes, but they have no priesthood and communicate with man direct. They also have the power of causing sickness by entering into human beings. (4) The *mondi* is an evil spirit greatly feared, which brings disease and all kinds of trouble to humanity by taking possession of the body, from which it has to be expelled by exorcizing some stronger spirit to fight it. (5) *Yaka* is a family fetish supposed to contain the spirits of ancestors; and for its edification portions of the bones, eyes, skull, etc., of generations of deceased members of the family are carefully preserved. The greatest reverence is paid to the *yaka*, offerings of food and drink are made to it, and it is consulted on all occasions; for the people believe that the spirits of their ancestors continue to take the deepest interest in the affairs of the family. (6) The last kind is the spirit that enters into a wild animal for the purpose of doing some evil act. This may be any ordinary spirit of the spirit-world, or it may even be the indwelling spirit of a living human being temporarily absent from the body. But such possession of a wild beast is not permanent, i.e., it is not the same thing as transmigration of souls.

All these Mpongwe spirits are in one way or another derived from or connected with the human soul, and they are for the most part distinctly malevolent. They are not unlike some of the spirits believed in by the Gold Coast and Slave Coast tribes. It will be remembered that the *kra* (of the Gold Coast tribes), when disembodied, becomes a *sisá*, that it can be re-born as a *kra* in a human body, but its proper destination is *sisá*-land. Occasionally the *sisá* leaves *sisá*-land and returns to dwell in the world as an evil spirit, sometimes passing itself into the body of a wild beast. The *kurwo* of the Ewe people (Slave Coast) becomes a

¹ *West African Studies*, p. 170.

² *Fetichism in W. Africa*, p. 64 ff.

noli, and, failing re-birth in a human body or in that of a wild animal, it remains on the earth as a good or an evil spirit. Among the Yorubas there is the belief in evil spirits known as *abiku*, dwelling everywhere in uninhabited tracts of country, and apparently similar in origin to the *sisa*. The *abiku*, it is thought, suffers from hunger, thirst, and other privations, and his particular object is to enter the body of a child, and share the child's food, comforts, etc. Since, however, the *abikus* are more numerous than children, they form a compact among themselves that any *abiku* fortunate enough to take up its residence in the body of a child shall support, with food, etc., a certain number of its fellow evil spirits. The consequence is that the child possessed of an *abiku*, having to share its food with many other *abikus*, soon sickens and frequently dies. There are, of course, methods of ridding the child of the evil spirits—e.g., enticing the *abiku* and its fellows to quit the child to partake of savoury food placed somewhere close by, and then, while the spirits are eating, tying rings and bells round the child's ankles, in order to scare the evil beings away altogether; or rubbing pepper into small cuts made on the child's body, which is supposed to be an effective method. The heavy infant mortality in this part of W. Africa is ascribed to the evil operations of *abikus*, with whom witches are held to be in league.

Not unlike the *ombwiri* of the Mpongwe people are certain tree-spirits believed in by the Yorubas, such as the spirit that dwells in the *ashorin* tree, that which dwells in the *apa* tree, and that of the silk-cotton tree. Before cutting down any of these trees, the woodman makes offerings to their spirits. But these are not regarded as the spirits of local deities, though very possibly they were at one time; and they differ from the *ombwiri*, which is a human disembodied soul. It is said that witches assemble at night round these trees, whose spirits they invoke to assist them in their malpractices.

The dislike which a native has to discussing with Europeans matters which he feels will be ridiculed is accountable for the lack of detailed information concerning the spirit-beliefs of the people; yet enough information is at hand to enable us to form some idea of the W. African's conception of the inmates of the spirit-world. It is certain that both Negroes and Bantu think that there are spirits without number everywhere; that, as a spirit's existence never ends, the spirit-world grows more congested every day and every hour; that the majority of the spirits of the more active kind are disembodied souls of men; and that they are nearly always maliciously inclined towards mankind. Questioned as to what he thinks a spirit is like, the native will reply that, though it is usually invisible, it is similar in form to a human being, or to something with whose form he is familiar. He believes that the spirit is material; his mind is not capable of conceiving anything else; and, if he has not himself seen a spirit, he knows many people who have. Moreover, there are few natives who have not experienced, on a dark night in the bush, the clammy touch of some spirit, and fled from it for dear life.

As to what may be termed the lower order of spirits, some are good and some evil, and an idea of their number can be formed by recalling what has been said of the midwelling spirit theory. Everything not made by human hands has an indwelling spirit—the lower animals, the earth, the grass, flowers, herbs, etc. Knowing this, one can understand the notions of 'medicines' entertained by the people. The spirits of certain things, when properly dealt with by trained fetishmen, can be made subservient to the will of the fetishmen, and their powers thus utilized for certain

purposes. The fetishmen are well aware of the medicinal properties of various herbs, but whether they believe in the spirit theory is probably open to doubt. Still, by upholding the belief, they are able, while effecting a cure for some simple illness by the administration of a simple drug, to increase their reputation as fetishmen; for the administration of the drug is always accompanied by mysterious ceremonies and incantations; and the invocation of the spirits of the various ingredients of the drug is kept well to the front.

In this manner arises the charm, or fetish, certainly of the Bantu, if not also of the Negro. In one respect at least there is no difference between the amulets, or charms, of the Negroes and those of the Bantu, viz. their use, which is to protect the wearer or possessor from evil spirits, and to guide and assist him in all undertakings. The Gold Coast Negro creates a certain class of charm for himself through the medium of his *suhman* (see above, § 2. i. (c)), but besides these there are the numerous charms made and sold by the priests of all the god-worshipping Negro tribes, and such charms are always consecrated to a god, the priest maintaining that the ingredients in the charms are derived from a god and are consecrated to the god. The priest, therefore, keeps up the fiction of the religious nature of these charms, because he thereby strengthens the people's faith in their gods, and at the same time adds to his own importance as sole intermediary between man and the god whom he serves.

A brief description of some of the charms and 'medicines' sold by the priests of the Gold Coast and Slave Coast may be of interest, as showing the faith of the Negroes. The following may be taken as typical of those found to exist among all the god-worshipping tribes dwelling westward of the Niger.

As a protection from wild beasts, an amulet made of teeth and claws of animals is used; to ward off sickness, a human tooth and a Popo bead strung together and worn round the neck, or a lump of clay adorned with cowries and pieces of broken pottery. To protect a family from various injuries, a scarecrow resembling a man is planted in front of the house. To prevent bullets and other missiles from taking effect, the tail of a horse, cow, or goat is waved in front of the body during battle. To protect a house from fire, a charm is made of hare's fur. Anklets, bracelets, and necklaces of sacred beads are worn by women prior to childbirth in order to keep away evil spirits; and for a similar purpose such things are fastened to the child as soon as it comes into the world. Amulets containing various preparations are worn to keep away particular ailments, such as headache; and similar things are hung up in the fields to protect the crops. Strings of leaves or of feathers are suspended over a doorway or across a path to stay the inroads of evil spirits. Then there are the 'medicines' prepared by the priests and sold to the people for special purposes, viz. magic powders and unguents which, when used as directed, will produce certain results. The amulets and charms are used as preventives, but these 'medicines' are used otherwise; and, in many cases, those using them, as well as the priest who supplied them, would, if detected, be dealt with as witches. There are powders which, if blown against a door or window, will cause it to open forthwith; others scattered on an enemy's footprints will drive him mad, or blown after an enemy will cause his death; while there are unguents which will produce love or will even cause a man to lend money to another. In fact, the priests are prepared to sell 'medicines' to meet all the requirements of their customers, who, firmly believing in the efficacy of the 'medicines', are ever in dread of their being used against them. Consequently, the priest does a double trade; for, if a man thinks that his enemy has purchased a 'medicine' to be used against him, he will obtain from his own priest a counteracting powder.

In reality there is very little difference between the charms and 'medicines' of the priest and those of the fetishman; the former are connected with a god or gods, while the latter are spirit-born. In the creation of both, secrecy, mystery, incantations, and weird ceremonies are ever present. Yet charms are certainly not regarded by the Negroes of the Slave Coast, etc., as of such vital importance to their welfare as they are by the Bantu of the Gabon and Loango districts. These Bantu stake everything on the possession of charms, and

to the Mpongwe-speaking people they are the essence of religion. Possibly this is the earliest form of, and the nearest approach to, true fetishism in W. Africa. It is, therefore, of considerable interest. The Mpongwe native has only one idea in life: he desires to secure material prosperity for himself and his family, i.e. to live in comfortable circumstances to a good old age; for, although he may have some hazy idea of a future life, the general belief is that beyond the grave there is only the world of spirits and constant wrangling. Now, these spirits of the dead swarm round the living, and are always trying to annoy them; but by taking due precautions (getting possession of the proper charms) the Mpongwe imagines that he is able to frustrate the evil designs of the spirits. Each man, therefore, works for himself, and shapes his own destiny by means of charms (or fetishes, for the term is here permissible). But man himself cannot create his own charms, and thus the fraternity of trained fetishmen holds the people in an iron grasp, dispensing charms at varying prices.

Before the Mpongwe is old enough to be the owner of charms and to understand their value, his parents or the fetishmen perform certain ceremonies for him, as a protection against evil spirits. On reaching years of discretion, he begins to battle with the spirits, and procures from the fetishmen the necessary weapons of defence and offence, in the shape of charms and 'medicines.' The amulets or charms used by the people of the Mpongwe country, and supplied by the fetishmen, take almost any form, but usually consist of some small article capable of holding the ingredients necessary for the special purpose for which the charm is required. It may be a shell, a horn, or, in fact, anything, but the preparation placed in it by the fetishman varies. His assortment of materials is extensive, and includes such things as the ashes of herbs, plants, and bones, portions selected from human bodies or from the bodies of wild beasts, etc., which, with incantations and mystic rites, he prepares and mixes in strictest privacy. In making his compounds, he works on methodical lines, each ingredient being supposed to have its proper use; and, although the effect may be imaginary, the fetishman is careful to have what he considers the right materials in his concoctions.

E.g., a man has a grudge against another; he goes to the fetishman to procure a charm which will bring misfortune to his enemy; in the compound the fetishman will place (if he can obtain them) nail-parings, hair-clippings, or a drop of blood, of the person against whom the spell is to work. But the shell, or horn, with the mixture which it contains, has no efficacy of itself; a spirit—good or evil, strong or otherwise—must be passed into it; and, in selecting the ingredients for his mixture, the fetishman includes spices and other things likely to attract the particular class of spirit which he desires to take up its abode in the charm. For all this working by means of charms is nothing more than warfare among the spirits, and the man whose charm contains the more powerful spirit wins the day.

Besides innumerable charms to secure prosperity in this world, the well-to-do Mpongwe native has other means for bringing good or causing evil. These include certain cabalistic expressions, supposed to influence the spirits, and used by individuals, as well as incantations by the fetishmen in the nature of curses or blessings.

In the lower form of Fjort religion charms are everything, if we include in the term not only the personal protective charm (*nkici-kici*), but also the nail-fetish (*nkici-mbowu*). These things have no connexion whatever with objects having sacred powers inherent in them by nature (*nkici-ci*), nor is the nature of the charm quite the same as that of the Mpongwe charm.

The nail-fetish is an extraordinary institution, which without doubt is the curse of the country. It consists of a wooden image, in the form of a man, made under the following circumstances. The

party, beaded by a special fetishman, proceeds to the grove where the tree for the image is to be cut down. The spirit of a man has to be passed into the tree, in order that human passions may dwell in the image, and for this purpose the man must die—though not necessarily at once. When the grove is entered, should a man's name be called, even accidentally, that man will die and his spirit will enter the tree. But, as a rule, the man whose spirit is to preside over the image is specially selected for his great courage or some other manly attribute, and his name is solemnly called in the grove. The fetishman then fells the tree, and the sap that flows from it is thought to be its blood; with this is mingled the blood of a fowl sacrificed for the purpose. The man whose spirit is to enter the image dies within ten days—by what means is not known, though the natives deny that he is killed by any human agency. The image is carved, and stuffed by the fetishman with the proper 'medicines,' long and mysterious ceremonies being performed; it is then set up among the other images in the fetishman's hut. The nail-fetish is now ready for use, the people supposing that the *nkulu*, or spirit, within it is able to kill whom it pleases. The process of invoking its aid is simple: if a man thinks that another has done him an injury, or is likely to harm him, he goes to the fetishman of a nail-fetish, tells him his trouble, pays him handsomely, and persuades him to drive a nail, knife, or spear-point into the image. This having been done with proper ceremonies, his enemy will surely die. If this were all superstition or imagination, there could be no great harm in nail-fetishes, but the fact is clearly established that the man to compass whose death the nail has been driven does actually die—at the hands of the *nkulu* within the image, the natives say. It is not unnatural to suppose that the fetishman, who has been paid for the murder, sees to it. But there are ways of avoiding this death. If a man has reason to suppose that his enemy has had a nail hammered for his death, he seeks out a priest or diviner, whom he pays to tell him the name of the particular nail-fetish which has had the nail driven into it. He then proceeds to the fetishman and, having discovered his own nail, pays to have it extracted. Endeavours have been made by European officials to suppress these images; several have been seized, and are now to be seen in museums in England; but doubtless new ones are created to take their places.

The *nkici-kici*, or personal protective charms, are also imbued with power by ceremonies performed by the fetishmen, but the respective sources from which the fetishmen derive the power by which the *nkici-kici* and the nail-fetishes are made efficacious are totally different. There are differences also in the ceremonies performed when passing the power into the objects, in the manner of invoking or consulting them, and in the purposes for which they are used. Of these *nkici-kici* of the Fjort the following are examples:

Bracelets of iron and of plaited palm-leaves and cloth, to protect from various misfortunes; a bracelet made of *baobab* fibre, to preserve health; a piece of the skin of a sloth, attached to a string, and worn round the head, to keep away pain and other ills; a charm made of elephant's skin, to give a man virility; a piece of skin of the sloth (different from the above), worn by a woman to protect her unborn child; a gazelle's horn filled with 'medicines,' worn by a woman to guard her in childbirth; and various similar things. There are also iron and copper marriage-bracelets, worn by both men and women as protective charms.

All such *nkici-kici* are obtained from different *zinganga* (plur. of *nganga*), or fetishmen, and, of course, are supposed to contain a *nkici*, or spirit, like the charms of other tribes.

6. Tabu, totemism, ancestor-worship, cannibalism, and sacrifices.—Among all W. African

tribes there appears to exist, in one form or another, prohibition or abstention from eating some particular articles of food. In the majority of cases the nature of the abstention is a family affair; and its origin is supposed to be connected with the family name—a species of totemism. On the Gold Coast and in many other parts there are families bearing the names of animals and plants. How they came by such names is not known; some have traditions that their ancestors sprang from the animal or plant; some believe that at one time an animal befriended a member of the family and was thenceforward revered, if not worshipped; and others maintain that the name was given to an ancestor because he was thought to resemble the animal in appearance or in habits—that it was, in fact, originally a 'nickname.' Whatever may have been the origin of the name, at the present time the members of a family abstain from eating the flesh of the animal whose name they bear. Thus a member of the Buffalo family does not eat the flesh of the buffalo, nor a member of the Corn-stalk family the corn-stalk, and so on. This form of prohibition or abstinence may be called ancestral prohibition, and it is found almost everywhere in W. Africa, among both Negroes and Bantu, even when the family bears no animal name. In addition to this, there are tabus laid on individuals by the priests and fetishmen, for some particular reason—e.g., for the protection of the individual.

The Fjort word used to express anything forbidden is *kazila*, or *xina*; and Dennett's names nine classes of things that are *xina*. Eagles, owls, crows, bats, snakes, etc., are universally prohibited as food, probably because they are considered, from their nature and habits, unclean, or possessed of some evil spirit, and no person, except witches, would think of eating them. Then each tribe and family has its distinct *xina*, and each member of a family his own special *xina*, to knowingly eat which results in the direst consequences—trouble, sickness, and even death—produced, the people believe, by unseen and malignant spirits. To certain tribes (about the Congo, Loango, etc.) the leopard is *xina*; and each province has also its separate forbidden animal. Moreover, a member of the family has to respect what he knows to have been the *xina* of his father, as well as those of his mother, his grandfathers, and his grandmothers. It will thus be observed that every native, in all probability, is forbidden to eat the flesh of several different animals; if he is a chief, or other high official, his list of prohibited animals will be still longer. To mention all the animals that are *xina* would be impossible, for to one person or another nearly every known beast and bird is *xina*. Then there are special tabus—e.g., certain priests may not eat food cooked by unmarried women; members of a royal household may not even touch a pig; doctors may prohibit a patient from eating certain foods. Finally, all animals parts of which (skins, horns, claws, shells, etc.) are found to be stored up by the fetishmen in the sacred groves are *xina*.

The *orunda* of the Mpongwe is not so widely applied as the *kazila* (or *xina*) of the Fjort, though the idea is similar. As a rule *orunda* is laid on a child when quite young by the parents and fetishmen. Lengthy ceremonies are performed, and the child is prohibited for the remainder of his life from eating some particular animal, or some particular part of an animal. The *orunda* may take other forms; thus an individual may be forbidden to eat in the presence of a woman, to drink except at certain times of the day, etc. How the *orunda* is selected in each case, or for what reason, does not appear to be known. But the object of

the ceremony is a dedication of the article selected to the indwelling or guardian spirit of the child, in order to obtain the spirit's goodwill and assistance through life. Consequently, should a man at any time break his *orunda*, his insulted spirit will turn against him, and call in evil spirits to cause trouble. The underlying idea in *orunda*, *xina*, *ibet* (of the Efiks, Old Calabar), and the abstinence of other W. African tribes is always the same; but the peculiarity about it is that, though it is voluntarily assumed, and though the priests and fetishmen do not interfere to see that it is carried out, no native would dare to face the consequences of breaking his prohibition—so great is his dread of the unseen spirits which rule the universe.

From the ancestral prohibition of families with animal names, it seems probable that animal-worship was at one time more prevalent in W. Africa than it is now. At the present time the actual worship of animals is by no means common, though several animals (snakes, monitor lizards, etc.) are protected by the priests. Still, as has already been mentioned, certain of the Ewe-speaking people worship the crocodile, and the Dahomans worship the leopard, but apparently only because of the belief that the homeless *kra* of some human being takes possession of the animal for evil purposes. In some parts of Dahomey the python is worshipped as a chief god, and any disrespect shown to one of these snakes is severely punished. Beyond this animal-worship in W. Africa does not go, and, as a matter of fact, it is no more the animal that is worshipped than the wooden image representative of a god; what is worshipped is the spirit residing in the animal, whether that spirit is regarded as a *kra*, a bush-soul, or some malevolent spirit which the native dreads. It may be that, in some cases, the animal is emblematic of an ancestor, and is thus regarded as in a measure sacred. This opens up the whole question of ancestor-worship, if true ancestor-worship may be said to exist in W. Africa. A respect for ancestors is found among all the tribes, and ancestor-esteem is part and parcel of the religion of the Negroes and Bantu, but that a W. African habitually regards any one of his ancestors as a god is not true. Nor, as a rule, does he, in the true sense, make sacrifices to an ancestor; what he offers to the spirit of the departed is merely a gift, the spiritual essence of which, he thinks, will be acceptable. His conception of the spirit-world leads him to believe that its inmates require spiritual food and drink, and before eating and drinking, therefore, he lays aside a portion for the spirit of his dead father or other relative. This gift of food is not made from fear, nor for the purpose of warding off threatened wrath; for the spirits of ancestors are deemed to be guardians of the living members of the family, and not hostile to them. The gift is evidently made out of pure kindness of heart, in return for the protection which the ancestral spirits are thought to afford their living offspring.

On occasions, more especially in times of national calamity, a king and his people will invoke the aid of the spirits of departed kings, and in Ashanti, Dahomey, and elsewhere there are annual festivals for honouring deceased rulers. The skeletons of the kings are carefully preserved, and offerings of food are made to each one. Moreover, until recently, sacrifices of human beings were made to the spirits of the dead chiefs out of gratitude for past protection. In Benin and the various kingdoms of the Oil Rivers the chiefs celebrate what is termed 'making father' on the anniversary of the late chief's death. Formerly this ceremony was accompanied by human sacrifices, but now it is more a public festival attended with

dancing and rioting, the religious part being performed by the chief at his father's grave, where offerings of food are made. So also among the lower classes of all these Negro tribes the greatest respect is shown for dead relatives. The skulls of the family ancestors are kept in earthen pots, in rows on a shelf, or in some small temple built for the purpose, food is placed before them, and they are consulted whenever assistance is required. This, however, can hardly be called true ancestor-worship, if by worship is implied adoration of a god through a priest. Yet some of these tribes do occasionally worship gods whom they believe to be deified ancestors—*e.g.*, Adanlosan, Ajahuto, Kpati, and Kpasi, worshipped by the eastern Ewes, and Gunu, the chief god of the Nupés, Igaras, and other tribes in the neighbourhood of the Niger-Bennué confluence. Again, the Mpongwe are without doubt ancestor-worshippers, proof of which is to be found in the *yaka* hundle previously referred to. Lastly, connected with ancestor-worship—carried perhaps to extremes—is the custom of certain tribes of the Upper Cross River, where, it is said, in order to assimilate the good qualities of their ancestors, the people eat their relatives as soon as they die. In contradistinction to this relative-eating is the case of the Fang and other remote tribes of the interior, whose members eat all corpses except those of their own family. But these are not wasted, for they are sold to another family or exchanged for other corpses. This form of cannibalism, however, is not common in W. Africa, and there is no proof that cannibalism of any kind prevails to a great extent among Negroes or Bantus of the coast regions. There are known cannibal tribes even on the coast, but their cannibalism is not of the lower order; human flesh is eaten not because it is enjoyed, or to stay the pangs of hunger, but rather from a religious motive. They believe that in warfare their gods are ever present, aiding them in the fight, and they are led by their priests to believe that the gods demand that a proportion of the captives of war shall be slaughtered and eaten by the conquerors, so that the fighting qualities of the victims may pass into the system of the victors, and thus strengthen them for future battles. But, besides eating the flesh of captives of war, no great human sacrifice offered for the purpose of appeasing the gods and averting sickness or misfortune is considered complete unless either the priests or the people eat the bodies of the victims. Such practices, however, are fast disappearing, and have, of course, been stamped out wherever European administration has been established.

With regard to sacrifices and offerings, it is necessary to recall two points: (1) there are two distinct purposes for which sacrifices and offerings are made, or, rather, two distinct classes of recipients, viz. the gods of the people, and the spirits of the departed; and (2) the Negro's conception of a sacrifice or offering, for whatever purpose it is made, is that its spirit or spiritual essence passes into the use of the spirit to whom it is offered—whether it be the spirit of a god or the spirit of a dead person. Human sacrifices are made to a god, because it is thought that he requires numerous attendants to do his bidding, and the ghosts or spirits of slaughtered slaves are supposed to pass immediately into his service. To obtain the goodwill of a god, therefore, especially in times of great trouble, it is necessary to offer up human beings. On occasions of victory a wholesale slaughter of prisoners of war is carried out for the reason that all warfare is held to be as much the affair of the gods as of men, that the gods fight on the side of their devotees, and consequently the gods of the

victors are particularly pleased at receiving into their service the spirits of worshippers of the vanquished gods.

The sacrifice of human beings at funerals has already been discussed. It may be remarked, however, that such sacrifice is not made to a god, but to the spirit or ghost of the dead man. The motive of the sacrifice is the same, viz. that the spirits of the victims shall pass into the service of the spirit of the departed; for the ghost of a dead chief must be accompanied to ghost-land by a retinue of ghost-wives and ghost-slaves befitting his rank. All other sacrifices and offerings are made with similar intentions—to appease or please a god or to furnish the supposed requirements of the dead. A blood-offering of any kind is deemed of greater value than anything else, and, where before the advent of European administration a human being would have been offered to a god, now a goat, sheep, or fowl is sacrificed. Of minor offerings food and drink are the most usual, but almost anything may be offered; for, even if the offering be of no value to the god or spirit, it is thought that the mere act of offering will induce goodwill and aid.

7. Secret societies, oaths, trial by ordeal.—Since the ordinary Negro or Bantu is not morally restrained from wrong-doing, and sees no harm in cheating his neighbour or causing him even greater annoyance, fear of punishment alone keeps him within bounds. In those parts of W. Africa now administered by European governments law and order are, of course, maintained by regular courts of law, but, prior to the establishment of this European control, and in such parts as are still outside European influence, the welfare of the community was, and is, watched over by village or tribal councils. But these councils of themselves, although they may find a person guilty of an offence, do not possess the power of enforcing punishment or even of seeing that a wrong is made right. They have, however, at their back what may be termed a 'court of final appeal,' viz. the secret society, whose operations, under the cloak of religion, terrorize the people. The original purpose for which the majority of secret societies were formed was to prevent the chiefs from unduly oppressing their people; but no sooner were these socialistic ideas discovered than the chiefs themselves joined the societies, and used them for their own purposes. Thus, to-day, the head of a secret society will generally be found to be the king of the country or the chief of the tribe; but this is not always the case, for there are still some powerful societies which virtually rule the country, and to whose decrees the king himself is forced to submit. The best example of this is the Oghoni society of the Yorubas, with which is connected the whole priesthood, and which is therefore doubly powerful. The organization of the society is complete, each town and village having its 'lodge,' with a code of signs, passwords, etc., while the members are solemnly sworn to assist each other and to do the bidding of the society. The supreme head of the Ogboni is the Alafin of Yoruba, but in the various minor States the chief priest is the local head of the society. The heads assemble in council when any important matter (religious, judicial, or civil) has to be discussed, and they have powers of life and death (*i.e.*, of course, beyond the limits of British jurisdiction). No matter of public interest appears to be too trivial to occupy their attention, and they are at once judges and executioners. The society is under the protection of the goddess Odudua, but beyond what has been said, little is known about it; its organization and methods are secret, and the penalty for betraying its secrets is death.

Secret societies are found in all parts of W. Africa, and the work that they do is, up to a certain point, beneficial to the communities. They uphold the moral and social laws and preserve the ancient religious customs and institutions. On the other hand, as was perhaps only natural, they have overstepped the bounds of justice, and in many instances have become nothing more than an organized band of murderers or executioners, with the result that, wherever they have come into contact with European administration, they have had to be rigorously suppressed. Of such societies the better known are the Porroh of the Mendis (Sierra Leone), the Bondo of the Sherbro country, the Igwomori of Benin, the Otrada of the Sobos, the Ekemeku of the Asabas, the Aro ('Long Juju') of the Oil Rivers, the Egbo of the Efiks (Old Calabar, etc.), and the Ukuku and Yasi of the Bantu tribes to the south-east, though the last two have now been completely broken up. Their organization is always much the same: new members are initiated, with peculiar ceremonies and mystic rites, on reaching man's estate; and they bind themselves by the most sacred oaths, and on pain of death, not to reveal the secrets of the society, as well as to carry out the orders of the spirit which is considered to preside over its affairs. The mouthpiece of the spirit is, of course, one of the head officials of the society, selected by his fellows to act as chief priest; and consequently this official is in reality the judge of the people. His word (purporting to be the word of the spirit) is law, and the members of the society are bound to do his bidding—even to killing offenders, should this be ordered. As a rule, however, killing is seldom necessary; for so great is the dread of the guardian-spirit of the society that any idea of resisting its authority usually dies out the moment it becomes known that a meeting of members has been called to discuss a case.

From all accounts, the Porroh was the most bloodthirsty of these societies, and its members (known as 'human leopards' and 'human crocodiles'), dressed in the skins of wild beasts, lay in wait for unsuspecting travellers, tearing them to pieces and carrying them off to be eaten by the priests of the society. Its power has been crushed by the Sierra Leone authorities. The Egbo of the Efiks is the most prominent secret society of W. Africa now in existence; and, though it has been robbed of its higher functions by the British administrators who now rule the country, it still carries considerable weight with the people. Beyond the limits of British influence, its power is as strong as ever. Its secret has been well kept, for little is known of the rites and ceremonies connected with Egbo, or of its organization, except that it has numerous branches, subdivided into various grades. The *jujumen* (trained fetishmen) are generally the heads of the branches, and through them the Egbo spirit makes known its decisions. It rules by fear, and its members maintain their reputation by periodically assembling and passing in procession to their council-house. Disguised in hideous wooden masks and strange dresses, they lead the people to believe that they are evil spirits, and so great is the terror inspired by their appearance that the sound of the Egbo horn or bell is the signal for a general stampede; for any one found abroad by the Egbo is severely beaten, if not torn to pieces.

Secret societies are not restricted to the male population; there are women's societies also, and their secrets are guarded from men. Originally they were intended for the protection of young women from the tyranny of their husbands, but nowadays it is impossible to say what purpose such great secret societies as the Njembe of the

Mpongwe women serve. What goes on at their meetings in the bush is not known, and their power to do harm to the outside world appears to take the form of curses and poisoned food.

It is absolutely impossible to probe the secrets of any of these societies. Many attempts have been made by Europeans to acquire information from friendly natives, and bribery has been resorted to. But no man or woman, even after conversion to Christianity, can be induced to break his or her oath. It is not perhaps strange that a people, brought up in the belief that their gods, evil spirits, secret societies, kings, priests, and fetishmen each and all are ready to deal death on the slightest pretext, should hesitate before revealing a secret which they have been sworn to keep. Dread of the consequences is sufficient to make the oath absolutely binding.

The actual form in which the secret society oath is taken has never been divulged, and it is probably different in every tribe; but the nature of the oaths taken, on other solemn occasions, by the members of the various tribes may be considered as typical. This oath of allegiance or friendship is not merely the swearing of a simple oath, but rather an impressive religious ceremony performed in the presence of numerous witnesses.

The Gold Coast tribes are sworn by a god in the following way. Some article (a portion of earth, leaves, berries, sea-water, etc.) taken from the spot where the spirit of the god is said to reside is mixed up and eaten or drunk by the person or persons to be sworn, while the priest administering the oath calls on the god to punish any violation of the oath. Europeans sometimes term this 'eating fetish,' 'chopping ju-ju,' or 'swapping ju-ju.' Another method of taking an oath is by a *bohsum*, or even by a *suhman*, charm, over which water is poured and then drunk. Blood mixed with chips of wood from a chief's stool of office is sometimes eaten. But the actual eating or drinking of a certain article is not always necessary, and among some of the tribes the person taking the oath lays a portion of his hair or nail-parings at the shrine of his god, the priest at the same time invoking the god to vent his wrath on the man if he should ever break his oath.

In some districts the oath of friendship takes the form of the interested parties washing one another's feet. Among the tribes inland from Opobo (Oli Rivers) a goat is brought into the circle, its head is struck off at one blow, and the blood is smeared with the fingers over the foreheads and breasts of all present, after which pieces of raw flesh are crammed by one party into the mouths of the other. The blood-brotherhood ceremony of the Upper Cross River, known as 'chopping *imbiam*,' is somewhat lengthy. The fingers of the right hands of the two parties are interlocked, after which each man's wrist is lanced until the blood flows freely; a grain of Indian corn, one of Guinea corn, and a piece of kola-nut are then rubbed in the blood, and eaten by each man off the other's wrist. They now consider themselves brothers, and repeat an oath to the effect that, if either attempts to harm the other in any way, may he himself be killed in that same way. The brothers embrace and seat themselves back to back, when they are separated by dropping some earth between them. Lastly, they drink palm-wine out of the same vessel.

Every native uses some short form of oath or imprecation to impress on his fellows that he is speaking the truth. The methods of swearing witnesses in courts of law differ in different parts of W. Africa. The general nature of the oath is much the same, the native calling on a god or a spirit to make his food disagree with him or to cause him to die some manner of violent death, if he fails to speak the truth. But the most ancient, and perhaps the most reliable, way of testing a man's veracity is by ordeal.

Trial by ordeal has from time immemorial been resorted to by the natives of W. Africa, and is still employed where the people are left to their own devices. The original idea was a simple one; e.g., A accuses B of stealing his goods; B denies the charge; the matter is brought before the council or the chief; a decoction, supposed to be poisonous, is prepared in a bowl, and is offered to B to drink; if he refuses to drink, or if he drinks and becomes ill, his guilt is proved; but if he drinks and suffers no ill effects, he is deemed innocent. This method of trial had the advantage of doing away with the

tedious evidence of many witnesses; and, relying on the Negro's superstitious dread of the consequences, it was doubtless a deterrent of crime as well as of litigation in general. Had trial by ordeal gone no farther, no great outcry could have been raised against it; but those in power—the chiefs, priests, fetishmen, etc.—found the poison-bowl an easy instrument for getting rid of their enemies and for extorting large sums of money. The priest or fetishman who administers the test mixes the contents of the bowl, and, for a price, will regulate the amount of odum, sass-wood, casca, Calabar bean, or other poison, which he employs. The guilt or innocence of the party, therefore, rests with the priest or fetishman.

In private life ordeals are often employed to detect crime, though in most cases a confession of guilt is made as soon as the ordeal begins. Few natives are willing to submit to the test, unless their consciences are quite clear—not that they fear the actual bodily pain resulting from the hot iron, the boiling oil, or the needle, feather, or thorn thrust through the tongue, but because they are convinced that, by voluntarily undergoing the ordeal when guilty, they are defying the gods and spirits, and are sure to suffer the consequences.

8. Birth, marriage, and death.—In most parts of W. Africa births are made the occasion for a good deal of religious ceremony. On the Gold Coast, Slave Coast, and elsewhere where gods are worshipped, as soon as a woman discovers that she is about to become a mother, she takes special precautions, offers sacrifices to the family-god, and is bound with charms of beads by a priestess in order that all may go well with her. Among the Mpongwe Bantu, on such occasions, almost as much interest is attached to the husband as to the prospective mother, and he, as well as his wife, has to observe certain rules; he may not follow certain avocations, and must abstain from eating certain food. No sooner is the infant born than it is loaded with charms as a protection against evil spirits, and among such priest-ridden people as the Ewes and Yorubas it is at once taken charge of by a priestess. About a week later the birth ceremonies begin, and among the various tribes the differences in these are clearly marked, resulting from the degree of religion at which the tribe has arrived. The Tshis (somewhat low down in the religious scale) do not call in the aid of priests or priestesses, the father performing the necessary ceremonies. The child, as a matter of custom, is given as a first name that of the day of the week on which it was born, and on the eighth day after birth the father, attended by his male friends, proceeds to the house where the birth has taken place, where, seated outside, he receives the infant in his arms. He then returns thanks to his particular god, after which he gives the child its second name, which may be that of an ancestor or a friend; and he completes the ceremony by spitting some rum into the infant's face. Then follows the thanksgiving service; rum is poured freely on the ground for the benefit of the ancestral spirits, sacrifices are offered to the family-god, and feasting and dancing are carried on into the night.

The Ewes have almost identical customs, though the mother and infant are placed under the protection of a priestess for forty days after the birth, and the naming ceremony is different. Here the priest takes the place of the father in the naming of the child, which is accompanied by a good deal of religious ceremony, including the bathing of the child's forehead with water of purification. Since the Ewes have no names for the days of the week, the name given at birth is either that of a god or that of an ancestor. The eastern Ewes, dwelling in proximity with the Yorubas, have acquired the

belief in metempsychosis, and, when a child is born, it is the duty of the priest to discover what ancestor it represents, and its first name becomes that of the ancestor. Later in life the man takes a 'strong name,' and drops his birth name.

The power of the priesthood being greater among the Yorubas than among the Ewes, the religious ceremonies at birth are correspondingly more important in Yoruba-land than in the countries to the west. The belief in metempsychosis is universal, and the diviner or priest proclaims what ancestor has received re-birth in the new infant, who has to be trained to grow up like the ancestor. At the naming ceremony a hen is sacrificed to Ifa and a cock to the *olori* (indwelling spirit of the head), after which there follows the purification by water. The priest throws consecrated water on to the thatch of the house, and the mother and infant walk three times through the drips. Water is placed on the child's forehead, while his name is repeated three times; and the priest then holds him so that his feet touch the ground. Finally, there is the purification by fire. The fire burning in the house is put out and cleared away, the house is swept and cleaned, and a fresh fire is lighted, a sacrifice of fowls to Ifa concluding the whole ceremony.

Such ceremonies as the above prevail where the people have gods and a priesthood, but elsewhere, where the belief in evil spirits is strong, all energies are devoted to the preservation of the mother and infant from their malicious designs, and guns are repeatedly fired to frighten them away.

In former times, if a Tshi woman died in childbirth, her infant was buried with her; and it was the custom of the Ahanta people (Gold Coast) to destroy the tenth child borne by a woman. Everywhere in W. Africa, even nowadays, the birth of twins is regarded as a remarkable event—by some tribes as a sign of bad luck, by others as the reverse. It is probable that originally twins were considered unnatural, and the woman who bore them was regarded as possessed of an evil spirit; hence it was customary, as it still is in the Niger Delta, to proclaim her an outcast and to destroy her offspring. By some tribes, however, only one of the twins was destroyed. In the countries westward of the Niger, as well as in Gabun, Loango, etc., the advent of twins is hailed with joy, and religious ceremonies for their protection take place. Special names are given to them; thus, the Ewes call the first-born of twin brothers Atsu, the second Tse, while the first male child born after twins has to receive the name Dosu. Some of the Yoruba tribes reverence twins, who are deemed to bring the best of luck to the household and tribe, and the death of one of them is considered a grave misfortune. Should such an event happen, a wooden figure is carved to take the place of the dead infant, and laid by the side of the living one, the image then becoming a family-fetish. A mother who loses both of her twin infants has two images made to represent them, and these she worships continuously. Through life twin brothers do everything alike—eat similar food, wear similar dress, marry on the same day, etc. To do otherwise would break the spell, and result in the death of one of them.

Like twins, albino babies are destroyed as monstrosities by some tribes, by others welcomed as bringers of good luck. Then, again, there is the custom, still prevalent in remote districts, of making away with children who cut the upper teeth first.

Polygamy is universal among both Negroes and Bantu, the number of wives that a man possesses depending on his wealth, i.e. his ability to pay the necessary dowry. Except among the Fjort, marriage in W. Africa is a purely social institution, and not connected in any way with religion, though

the Yoruba priests, in the endeavour to strengthen their position, sometimes persuade the newly married couple to make sacrifices together to a god. Doubtless, in the course of time, religious ceremonies will be introduced, but at present there exist only certain social customs. Children may be betrothed, when quite young, or even before birth. When a girl who has not been betrothed arrives at a marriageable age, she is dressed, painted, decked with ornaments, and paraded through the streets by her companions, until a suitor comes forward. The suitor then has to come to terms with the girl's family, for in all cases he has to pay a sum for his bride. After this has been settled, a day is fixed for the marriage-feast, when the bridegroom takes charge of the bride, and dancing and wild orgies are indulged in.

The Fjort people hold marriage in much higher esteem than do the other natives of W. Africa—a fact doubtless due to the cult of the goddess Nzambi, and the superior status held by women. Betrothal and payment to the bride's father are much the same here as in other parts, but a curious custom takes place when a girl becomes marriageable. She is locked up in what is called the 'paint-house,' where she is painted red, and carefully attended to until those in charge of her think she is fit to marry. If she has been betrothed, she is washed, and the marriage-ceremony then takes place; but, if no husband is waiting for her, she is dressed up and paraded round the town in search of a suitor. The actual marriage-ceremony is more or less of a religious nature, and is accompanied by rites, such as those of *boomba, lembe, funzi, ngofo* (the family-fetishes brought by the winds [above, § 2. vi.]). In each case a metal bracelet is given by the bridegroom to the bride, who swears to be faithful to her husband, never to leave him, and to be buried with him when he dies.

Burial customs in W. Africa are very similar among all the tribes; the only real difference results from the conception of the particular tribe as to what happens to the soul after death. In all cases death is the occasion for wailing and lamentations, more especially by the women of the household; and the Gold Coast, Slave Coast, and neighbouring people dress the corpse in the dead man's best clothes, and deck it with jewellery and ornaments. The relatives and friends then visit the corpse, offer it presents, fire guns, and call on the dead man to return to life. The mourners abstain from food until after the burial, though intoxicating liquor is freely partaken of. The burial of property with the corpse, the slaughter of slaves, and other matters connected with funeral ceremonies have been mentioned above, and it will be remembered that such things are prevalent among those people who believe in the requirements of the ghosts dwelling in ghost-land, or in the requirements of the spirit awaiting re-birth. In other parts, particularly among the Bantu, where it is thought that at death a man's spirit quits the body, joins the world of spirits, and continues to have an influence over the living, the ceremonies that take place have for their principal object the ingratiating of the spirit of the deceased. It is necessary to keep the spirit in good humour, so that it may work for the welfare of the family.

The mode of actual burial and the place selected for interment vary considerably. Coffins are nearly always used, and the body is usually wrapped in cloths or grass mats. Some tribes (e.g., the Limbas of Sierra Leone) bury their dead upright, others place the corpse in a sitting position, while the majority place it on its side, with the face towards the east. Again, the place of interment may be under the floor of the deceased's house, the grave being so arranged that the head

of the corpse will lie just outside the outer wall of the house; or the body may be buried in the compound, or even outside the village, in which case a small hut is built over the grave. Some tribes—e.g., the Mpongwe—prefer the spirits of the dead to dwell at a distance from human habitations, and therefore bury their dead in the forest.

With a belief in witchcraft so strong as it is among the people of W. Africa, it is only natural that death should be regarded as due to the machinations of witches or evil spirits. By many death is held to be unnatural, and, when it overtakes a member of a family, his relatives summon the fetishman, who is called upon to state the cause of death and seek out the witch who brought it about. The witch proclaimed, she is required to undergo the poison ordeal in front of the corpse. If the fetishman considers that death resulted from the actions of evil spirits, the friends of the dead man have to take special precautions to prevent the same evil spirits from working destruction on the other members of the family.

A. F. MOCKLER-FERRYMAN.
NEGROES (United States).—I. Origin, numbers, and distribution.—Records are found of Negroes occasionally with the Spanish colonists in Florida and other southern sections of the country, and Negroes take pride in the presence of some of their race with Cortez de Narvaez, de Soto, and other explorers. The Spanish Government expressly permitted the settlers who owned slaves to bring them with them to America, and they were among the first in Florida (St. Augustine), Alabama, and New Mexico. Negro pride in adventure is illustrated just now in the case of Matthew A. Henson, who had accompanied Peary on several explorations and was with him on his successful dash for the North Pole. He is a greatly popular hero among his own race. He has had successful lecture tours and has written an autobiography, and half a page in the *Negro Year Book* for 1914-15 is devoted to him. The history of Africans in America has its beginning, properly, in the introduction of slaves into the English colonies in 1619, when, in the quaint record of Master John Rolfe, 'About the last of August came in a Dutch man-of-War that sold us twenty negars.' From that time for more than 150 years Negroes were imported from Africa, chiefly by British exploiters, who early secured a monopoly of this traffic. There is no way of knowing the total number brought into the United States, but it cannot have been less than 2,000,000. They were taken mainly from the west coast of Africa, although many were procured from the interior by methods well known (see SLAVERY). Many different tribes were represented among the captives, and they have preserved many physical marks of their different origins. Few of the Negrito Bushmen were included, but one occasionally observes their characteristics even yet. The splendidly-built Bantu is also sometimes seen in almost native purity. But chiefly the Hamitic Negroes constitute the main body of the African stock in America.

By the time of their emancipation (1861) the numbers had come to about 4,500,000, of whom nearly 500,000 were free—census 1860: total,

4,441,830; free, 487,970. At present there are 10,000,000—census 1910: 9,827,763—which is 10·7 per cent of the total (continental) population of the country. The percentage is gradually and rather rapidly decreasing owing to the great immigration, which is practically all white. In 1860 the percentage was 14·1. With only two exceptions the percentage has shown decrease at every census since the first, 1790, when it was 19·3.

From the start it was evident that slavery could be made profitable only in the cotton- and tobacco-growing States, and so it was in the south that the numbers of Negroes multiplied; they were never relatively numerous in the north. The warmer south was far better adapted to their habits of life, brought over from Africa, and to their inherited constitution. Contrary to what might have been expected, they have remained in the south during the period of their freedom. In seventeen southern States, including Delaware, District of Columbia, and W. Virginia, not distinctively southern, there are 8,749,970; while in all the rest of the country there are only a few thousand above 1,000,000, and of these fewer than half (450,000) were born in the south, whereas a few more than 40,000 now in the south were born in other parts of the country. In two of the southern States they constitute a majority of the total population—56·2 per cent in Mississippi, 55·2 in S. Carolina. In the whole south they are 29·8 per cent of the total. Only in the populous States of New York, Pennsylvania, and Illinois has the north as many as 100,000 in any one State. In the country as a whole 27·4 per cent live in the cities, while in the south the percentage is 21·2. Of the large cities Washington, the capital, has the largest proportion of Negroes—94,446 in a total of 331,069. In the western part of the country there are very few, less than one per cent in Seattle, and only about one-third per cent in San Francisco.

2. Social condition.—We have seen that from the beginning Negroes came to the country as slaves. In Virginia they were not legally and technically so designated until 1661. All the earlier States provided for slavery. There was division on the subject after the rise of the anti-slavery agitation which culminated in the Civil War. In some of the States they were theoretically allowed to hold property, while in others they could neither hold property nor borrow money. The conditions varied in degree with different economic conditions and varying sentiment. In general, the type of slavery was that of the household chattel slave. On the great plantations they were grouped in 'settlements,' controlled by 'overseers,' and dealt with largely on the group plan. The nature of the care and kindly attention received by them from the owners and their representatives was determined by the principles of humanity and the material interests at stake. It was generally recognized to be commercially advantageous to give the slaves a large degree of physical care, and as a rule their humanity was so far recognized as to lead to providing many humane and helpful conditions. On the whole, it should be set down as established that physically, as well as spiritually, the Negro in the United States was far more advantageously situated than in Africa in his native condition. Slavery is always in some of its features, and in its basal idea, inhuman; and it is beyond question that there was much relative neglect and not a little gross brutality in the treatment of the Negroes. It has been estimated (*Negro Year Book*, p. 111) that 6200 free Negroes in the country owned Negro slaves to the number of 18,000, but the estimate may not be well founded.

It was evident from the beginning that the

American conscience did not wholly approve of the practice of slavery. Active agitation against it began early. In legislation Rhode Island led the way as early as 1652 with a law prohibiting the holding in slavery for more than ten years of any person, white or black, after he was twenty-four years old. Legislation mostly took the form at first of prohibiting the importation of slaves into the States or of limiting it by an import duty. By 1776 the sentiment had sufficiently grown for the Continental Congress to resolve that 'no slave he imported into any of the thirteen colonies.' The Constitution of the United States left within the authority of the several States the control of slavery and of the importation from one State to another; and the Government accepted from several of the States territory ceded on condition 'that no regulations made or to be made by Congress shall tend to emancipate slaves.' Conflict of views and interests involved in the rights and policies with reference to slavery, beginning even before the founding of the Union, grew in severity and acuteness. Numerous measures of compromise and temporizing could only delay the culmination in the Civil War (1861-65), in the midst of which by proclamation of President Lincoln all slaves were emancipated (1st Jan. 1863). In 1865 the abolition of slavery was confirmed by an amendment of the Constitution, and under the regime of 'Reconstruction' all the State constitutions were made to conform to this principle, which was also made binding in the 'territories' by proclamation of the governors.

Later amendments to the national Constitution sought to remove all disabilities of the freed men and to guarantee to them full and equal rights of citizenship. This course, prompted by lofty sentimental idealism, nevertheless proved to have outrun sound statesmanship and practical possibility. The effort to confer immediate and full citizenship, with suffrage and possible official position included, upon 1,000,000 men just out of slavery was a political and social blunder, working grievous wrongs to whites and blacks alike, and the more so that the federal government had no plan or power at the time to provide for the education of the freed men in the meaning and responsibilities of that citizenship. Within a quarter of a century this came to be very widely recognized, so that the southern States that had by various illegal devices prevented, hindered, and nullified the franchise of Negroes now began to accomplish the result by constitutional amendment, and were supported by the federal courts in this course. This was possible in popular sentiment, because in the better understanding of the different sections of the country it was getting to be generally agreed that the problems of race adjustment could best be worked out in the regions where they existed and not by doctrinaire measures depending for adoption and execution upon men with little personal knowledge of the actual difficulties. Legally the course was made possible by avoiding in form all distinctions based on colour or race, the chief device being the 'grandfather clause.' Standards of literacy were adopted, with the proviso that the prohibition would not apply to those whose grandfathers had exercised that right, or had served in the armies of defence of their State. Thus nearly all whites were exempt from the operation of the limiting laws. So the matter was in process of solution, while the gradual and rapid extension of education among the Negroes brought them into the rights of full citizenship with hope for its worthy exercise. Now, however (1916), the final court of appeal has voided these laws and the situation is somewhat chaotic. It seems to be generally agreed that some legal means will be found for continuing

the method of solution indicated. Two Negroes have sat in the U.S. Senate, both for Mississippi, and twenty have been representatives in Congress for a total of thirty-five terms. They were from eight southern States. Several hold consular, subordinate diplomatic, and administrative office under appointment. In all branches of government service there were, in 1914, 22,440, including some 6500 in the army and navy (*Negro Year Book*, p. 153 f.).

It was inevitable that caste custom and race prejudice should make and maintain sharp barriers against 'social equality' for the Negroes. This has failed in no community where the Negroes were present in large numbers. While many Negroes have cherished hopes of such 'equality,' the majority have either never taken much thought about it or have recognized the impossibility of it, and not a few of them have urged its undesirability. Once a much-discussed question, it is relatively ignored to-day. Beginning about 1880, laws have been enacted in many States compelling the separation of the races in public conveyances, especially railway-trains, hotels, theatres, and other public buildings, and in schools. In Florida it is even illegal for a white to teach in a Negro school, and *vice versa*. Latterly a movement is spreading to segregate the two races in their residences. This has long been done by community agreement and by regulation of real estate companies in property deeds; and, as a rule, normal tendencies and race affinities procured general grouping according to colour, but not infrequently the purchase of property in white districts by Negroes was embarrassing, and encroachments of one race on the other frequently made readjustments necessary. Now the matter has become the subject of city legislation, the very simple, if unscientific, basis usually being the prohibition of a member of one race from acquiring property, by purchase or rental, within a city block wherein more than half the property is already occupied by the other race. In certain northern States there are towns in which public sentiment, with mob enforcement, does not permit a Negro to live at all.

Miscegenation is prohibited by law in twenty-nine of the States, and social custom renders intermarriage between the races rare even where there is no legal barrier. In some States the penalty is to 'void' the marriage, in others to punish the violators but not to 'void' the marriage, while in several the marriage is 'voided' and a penalty imposed—imprisonment, or fine, or both. In some States the official issuing the licence is also punished, and in some the minister or magistrate celebrating the marriage. Lustful and illicit miscegenation is, however, lamentably prevalent. There is no national definition of a Negro, and the local and State definitions are not uniform. In some provisions any Negro blood constitutes one a Negro, in others one-sixteenth, one-eighth, and one-fourth are the degrees specified. The estimate that one-fifth of all the Negroes have more or less of Negro blood cannot be far wrong, and it has the support of the 1910 censuses, which showed 20.9 per cent. This is an apparent increase in twenty years from 15.2; but in 1890 the enumerators were instructed to include as mulattoes only those having one-fourth or more of Negro blood, whereas in 1910 all were reported as mulattoes who had any trace of Negro blood, and, on the other hand, were 'not evidently full-blood Negroes.' Enumerators were usually ignorant of ethnological distinctions and judged merely by superficial appearance or report. Thus the apparently rapid rise in the last decade is not trustworthy. Except for the decade 1860 to 1870, when there is a drop from 13.2 per cent to

12 per cent, the percentage has risen slowly. In comparison with the total number of Negroes the proportion of mulattoes is lowest in the S. Atlantic States (10.4); in New England it is 28.6, and reaches its highest in the Pacific States (37.3). Miscegenation is nearly exclusively of white men with Negro women, and this must be one of the influences that account for the distressing number of attempted assaults of Negro men on white women.

Negroes have not often sought social relations with the white people on the basis of equality, although very many of them have entertained the hope that this might ultimately come to them. Aggressive efforts in this direction have, in the rare instances, been inspired by the vicious or misguided sentimental influence of white people. In the main there is a growing sense of race pride and an increasing determination to develop within racial lines. Not a few of their own leaders are directing the thought and ambition of the Negroes along this line. A growing respect for the Negro and appreciation of his potentialities and achievements on the part of the white race help forward this propaganda, and its progress is its guaranty of success. It is many years since there was any serious discussion of the proposition, once much agitated, of deportation or emigration of the Negroes. It may be taken as definitely settled that the present race of Africans in America will work out their destiny in that land, and with progressively satisfactory adjustment of the difficulties growing out of the occupation of the same territory by two races held apart by social and racial antipathies.

3. Education and culture.—Prior to emancipation no systematic provision for the general enlightenment of the Negro was made, and no public policy adopted. Various enterprises and movements for educating Negroes were undertaken by missionary and philanthropic organizations, and in some northern States the public schools were accessible to the few Negroes resident there. So far as progress was made, it was mainly by the efforts of the slave-owners, members of whose families in many cases taught the rudiments of learning to the slaves, especially to those to whom were assigned the household duties and personal service. Special provision was frequently made for the instruction of the slaves during the seasons when there was little work to be done. Those who were taught by white people were able to extend that knowledge in part to others. At emancipation not fewer than five per cent of the Negroes were able to read, and about 10,000 were in public schools; there were four schools for higher education and normal training; 150 Negro teachers; \$50,000 invested in property for education; an annual expenditure the first year for education of \$200,000, of which the *Negro Year Book* (p. 2) claims that \$10,000 was given by the Negroes.

The history of education of Negroes since 1863 reveals progressive concern on the part of all parties. Large activities are included on the part of missionary and benevolent organizations through which many millions have been expended and some great 'Funds' made permanently available, as the Peabody Fund, Slater Fund, Jaynes Fund, and part of the Rockefeller Fund dispensed by the General Education Board (New York). Negroes have contributed in a way that often manifests heroism, insight, and wide vision, and their gifts include some very considerable endowments. The extensive destruction of material resources by the Civil War and the demoralization of all social organizations, and the conflict of interests and opinion during the period of 'Reconstruction' (to 1876), left educational facilities for all, in the south, prostrate and

to be built up anew and on lines radically different from those that had existed before the War, and under circumstances of extreme difficulty. Personal property was nearly all destroyed and realty was in dilapidation, while business was either destroyed or utterly demoralized. Of the 4,000,000 Negroes only a negligible number had either property or business, and they had lost the right of immediate dependence upon white people for support and direction. They had neither the resources nor the training for independent development. It was fifteen years before systems of free public schools were generally established with any measure of completeness. While in some of the States the effort was made to keep separate the income from school taxation from the two races and to expend on each the funds so procured, in most States there was no such legal discrimination, and schools were established for all. In practical administration it was inevitable that the Negro should receive far fewer of the all too inadequate facilities so meagrely provided. The equipment of his schools and the length of his school term were both far below those of the whites, and the disparity has not yet been overcome, but by degrees it is being removed, notwithstanding the fact that far the larger part of the revenue for the schools comes from the white people. This public school system provided in the various States has been the greatest of all factors in the education of the Negro. Fifty years after emancipation (1913) Negro illiteracy had fallen to 30 per cent; there were 1,800,000 pupils in free schools; 3500 Negroes were engaged in teaching; there were 500 colleges and schools for normal training; there had been in all 3856 college graduates, of whom more than 1600 belong to the first decade of this century; \$200,000,000 are now invested in Negro education; the annual expenditure for this purpose amounts to about \$13,500,000, of which the Negroes themselves are estimated to contribute \$1,600,000 (*Negro Year Book*, p. 4). The best thought of the nation is now given to the task of removing illiteracy and providing adequate training to all. In this work account is taken of race and colour only as these affect the character and efficiency of methods to be employed in reaching the goal of well-trained citizenship. The Freedman's Bureau, which so signally promoted the facilities for Negro education, soon ceased to be needed. In the large sums expended and in the extensive work accomplished by this organization, and by the philanthropic societies of the white friends of the Negro, many mistaken aims and methods were employed in an experimental period. Not yet has universal agreement been reached, but more and more expert opinion suggests, and practical experience approves, vocational training for the majority of Negroes, involving a large element of industrial and domestic instruction and training. The demonstration of the value of this method has been signally wrought out at the government school for Indians and Negroes, Hampton (Va.) Institute, and the Tuskegee (Ala.) Normal and Industrial Institute. The former of these is generously supported by the National Government and the State of Virginia, while the latter has attracted the widest interest and support on account of the striking personality and sound wisdom of its President, Booker T. Washington († 1916), so that it now has property and endowment of some \$3,000,000 and an annual income of \$300,000, ministering to a student body of about 2000. Generally in schools for Negroes the inspirational element now plays a large part, cultivating ideals for the person and the home, racial and national consciousness, and respect. The purely academic training that once played so large a part in the tentative efforts to educate Negroes is

increasingly held to be secondary, while there is no loss of the aim after a sound culture. Professional training has its place. There are reported 3 schools of law, 4 of medicine, 5 of pharmacy, 17 agricultural and mechanical schools under government control and support, and 350 private (largely Church) schools with normal and industrial features; but most of these are small and poorly supported, often representing more of ambition and pride than of solid realization. The efforts of Negroes to build up institutions of learning have often been pathetic in their pretentiousness and pitiable in their poverty, but always inspiring in their heroism and idealism. A 'university' is sometimes hardly a good high school, and a 'college' not infrequently begins with the primary classes and does not reach beyond the grammar-school grades.

In spite of all limitations the present is full of encouragement. The points now emphasized in the policy with reference to public schools are: (1) to have the teaching vitally connected with the activities of the people; (2) to improve facilities; (3) to provide more helpful and efficient supervision; (4) to make the school largely assist in the general welfare of the community. With reference to secondary and high schools the policy includes also: (5) by concentration to limit the number of schools undertaking the highest grades of work and to extend the quantity and quality of such work; (6) to increase the financial resources, which is being done by State appropriations, by special endowments for specific schools, and by the use of the income from the various Funds referred to above; (7) stricter and more helpful supervision. Five agencies co-operate in this supervision—the Federal Government, State governments, religious societies, managers of educational funds, and voluntary associations of Negro educators.

In the fine arts the Negroes have made no great advance, nor as yet demonstrated any striking capacity. In music they have a native capacity for a peculiar type of melody, and they are almost universally lovers of music, especially of simple stringed instruments and of wind instruments. They have become famous for singing what are called 'plantation melodies.' A few have won distinction with popular songs, and many are proficient in the execution of music. They have done some creditable work in art and sculpture. They are producing many books and publish many newspapers, generally not of a high order. In literature they have thus far shown best in didactic work and essays dealing with social, political, and religious subjects. Some of the best works dealing with Negro questions have been written by them. Their most extensive efforts in publication work are in Sunday school and other religious literature.

4. Economic condition.—The 1910 census showed 71 per cent of Negroes over ten years of age engaged in useful occupations, including 3,178,554 males and 2,013,981 females—a larger percentage of the whole than is found in any other class of the population; 2,893,674 were employed in agricultural pursuits, 1,099,715 in domestic and personal service, 704,174 in manufacturing and mechanical labour, 425,043 in trade and transportation, 69,929 in professional service. The large falling off in the decade of the number in domestic service (224,445) is a significant feature in the economic and social life, inasmuch as in the south this service has been rendered almost entirely by Negroes. Increased efficiency of the men as bread-winners, increase of domesticity and home-life among the Negroes, acquisition of homes by them, and the instruction in home arts given in the schools are reducing the numbers of those who go out in service. To how great an extent the native African idea of the function of the female has been imported into America and

has persisted is indicated by the 1,051,137 females reported as in agricultural pursuits and the 68,440 in manufacturing and mechanical labour. Labour unions have been slow to recognize the Negro, and in northern States particularly, where the union has had its most extensive power, they have greatly hindered the development of the Negro in the trades of skilled labour. In the south, where immigrants are few and unionism less developed, far more friendliness and encouragement have been found. Some of the trades—*e.g.*, brick-laying—have been almost wholly in their hands; and others—*e.g.*, carpentry—have been largely open to them. In 1910, however, the National Council of the American Federation of Labor unanimously invited Negroes and all other races to enter the Federation. Nine of the sixty most important unions still bar Negroes from membership. In 1863 9000 Negroes owned their homes, 15,000 worked farms as owners or as managers, and 2000 businesses were conducted by them. In 1913 they owned 550,000 homes, worked 937,000 farms, conducted 43,000 business houses, and owned property estimated as high as \$700,000,000. From 1900 to 1910 the value of farms, live-stock, tools, etc., increased from less than \$200,000,000 to nearly \$500,000,000. There were 57 Negro banks with more than \$1,500,000 of capital and with an annual business amounting to about \$20,000,000—in spite of the fact that banking among Negroes has been marked by not a few disasters, due sometimes to dishonesty, more frequently to incompetency, and sometimes to the unfriendly action of other bankers and business men. The kinds of business most popular, in order of numbers of businesses, are restaurants and other forms of catering, groceries, vending, building and contracting, and butchers' and coal-dealers' businesses. The great majority of Negro labourers are unskilled and of a low average efficiency. Still they constitute, because of their numbers and docility, a very important factor in the economic life of the country.

For the most part the homes of the Negroes are of a very low quality, with few comforts and poor facilities for hygienic and moral conditions. In the country districts they live largely in small board or log houses that are usually untidy and unsanitary, except that they are very open. In cities thousands of them live in rooms over stables, in cheap houses built along alleys, and in tenement houses, where crowding and filth are very common. The results of these conditions are seen in diminished efficiency in labour, in extensive disease and a high death-rate, and in gross immorality. The average death-rate among Negroes is about 50 per cent higher than among whites. One authority (W. F. Willeox, *EB*¹¹ xix. 348) places the Negro death-rate at twice that of whites. The diseases most disastrous among them are consumption, pneumonia, nervous diseases, heart diseases, diseases of the bowels, and urinary troubles. Aggressive and intelligently directed campaigns of improvement in these conditions are now being made, but the situation will require much time and energy to recover from the long neglect.

5. Religion and morality.—If by religion one means the form of worship, organization, and dogmatic statement, and by morals the rules and range of conduct included under the religious direction of the life, then there is no necessary connexion between the two. In principle, however, religion always includes ethics. It stimulates and educates the conscience, but it does not directly inform the ethical judgment. Religion itself is subject to, and demands, education, interpretation, extension. The earlier movements of religion have reference only to the soul's relation to the spiritual environment (God), and include the personal relations of

man to man in the social group only as the group is conceived to be related to the spiritual environment as a whole. It is a later development that recognizes that the worship of God consists in doing His will in a personal society. Later still men come to recognize that their relation to God places them in ethical relation to all personal beings. Many, failing to recognize these principles, have severely criticized the Negro's religion as being non-moral, and think of it with contempt. As a rule the Negro has not yet gone very far in discovering that the religious emotion is to find expression in the rational direction of the life in human relationships, so as to realize the will of God in a righteous and loving personal order. Hence his morality represents a crude and undeveloped stage of religious ethics. The civil and criminal laws of the United States are designed for the stage of civilization reached by the white race, or for the restraint of the Negro race within limits approved by the white race from their own, and not from the Negroes' standpoint. For most Negroes, therefore, very many of these laws have no ethical significance and seem to them, when they know them at all, to be conventions of the dominant race to interfere with the Negroes' normal activities. And the administration of these laws, almost wholly by the white race, manifests a rigidity and a severity, often an injustice, by no means calculated to inspire respect and ready obedience in the weaker people. Laws are sometimes called for in a community only by reason of the prevalence of the Negro, and are enforced only with reference to him. Then there are white men who exploit the weakness and animism of the Negro for the sake of base gain and thus augment some of his easiest vices, bringing him under the condemnation of the law. The social sin of white men with black women, the lewd influences of much theatrical and other advertising, the corrupting suggestiveness of many of the amusements provided for them all serve to arouse the viler passions of the Negroes, who, wanting the restraints of enlightened judgment and established self-control, are led on to criminal practices. The multiplication of laws in a society of growing complexity adds to the violations, among whites as well as blacks. All these things must be taken into account in judging the records of crime and vice in a people as yet at a backward stage of the road from savagery to Christian civilization. Of prisoners to each 100,000 of population in 1904 there were among whites 77, among Negroes 278. In the north the figures were 83 and 743, in the south 40 and 221. All the figures show decrease as compared with 1890. Negroes had a lower rate than any immigrants except Poles. In major offences the Negroes were surpassed by all foreigners except Irish and Germans. It is gratifying to note that lynchings, of whites and Negroes, declined from 1908 (7 white and 93 black) to 1913 (1 white and 51 black), the lowest number since records have been kept (twenty-nine years). Petty crimes of Negroes against members of their own race, unless they disturb the community, do not usually result in arrests, and even gross evils often escape official notice. This is especially true of social sins.

Evils most prevalent among the race and most harmful are indolence, theft, drunkenness, gambling, and sexual sins. Much is to be said in mitigation of the Negro's guilt in these vices, but the fact remains that they are widely prevalent. Theft is violation of ownership, but in a tribal régime and under the conditions in Africa, where there is relatively little of exclusive ownership, the rights of property cannot be distinctly in consciousness; and a keen consciousness of individual personality is a condition of high regard for personal property and personal rights of all sorts. This

consciousness is not yet highly developed in the Negro. After his emancipation there were those who definitely taught the Negro that the wealth in the south was his creation, and that he had an essential right to as much of it as he could safely appropriate. The large measure of inequality which the Negro suffers in the social and economic life gives him some ground for reasoning that he may seek by all means to equalize the 'goods' of life. And poverty gives a strong impulse to theft.

Drunkenness is augmented by the greed of whites who exploit the weakness of the Negro for base profit. Negroes are not often allowed to own drink saloons, and in 1910 only 652 were in their hands. The necessity for protection from drunkenness among Negroes has been a strong factor in the prohibition of the sale of intoxicants in the south, now practically universal in rural sections and rapidly becoming so in the cities, State prohibition having been adopted by ten of the States. The bad conditions of living must also be chargeable with much of the vice found among Negroes.

Influences of the primitive animism of Africa are abundant in the superstitions and religious notions of the American Negro. The *voodoo*, usually called *hoodoo* in the United States, in its grosser forms has nearly disappeared, but there are milder forms of fear of subtle influences by spiritual powers, and of persons supposed to be *en rapport* with those powers, to be found on all hands. A modified form of witchcraft is met with, and a mild type of the medicine-man with his occult powers, presumably connected with some herb or concoction, has great influence with many. Ghosts are very real to most Negroes. Charms are trusted or feared, and dreams are often significant of divine communications or of messages from departed friends or enemies. The 'evil eye' can sometimes arouse the utmost terror. Unusual natural phenomena arouse an awesome sense of the supernatural and sometimes create great consternation. The behaviour of animals suggests to the Negroes superior and subtle intelligence, and awakens a feeling of uncanniness that almost approaches a belief in spirit-possession. Certain aspects of death are especially terrible, and the Negro is usually very fearful of cemeteries at night. Idolatry is practically unknown. Forms of spiritism prevalent among white people in America and Europe are little known by the Negroes. Their superstitions have affected the folklore of the whites, many of whom share some aspects of them.

Prior to emancipation the religious life of the Negro was cared for largely in the patriarchal way, the masters taking such interest in it and making such provision for it as their own religious sense prompted. Along with this were the white ministers, who often took the deepest interest in the religious welfare of the slaves; local religious workers; missionary organizations with such efforts as the conditions permitted; and especially preachers and pious women among the Negroes themselves, usually illiterate but often with imposing personality and genuine goodness, giving them unlimited power for comfort and instruction in righteousness. For the most part their church-membership was in the same organizations with the white Christians, a special part of the buildings for worship, usually galleries, being set apart for their use; but in the cities some very large and powerful Negro churches were built up, over which in some cases white pastors presided with love and ability.

It is at once an evidence of the essentially religious disposition of the Negro and a testimony to the religious interest of the whites that in 1863 there were more than 500,000 communicant church members, and that with 550 separate local church

organizations they owned property to the extent of \$1,000,000. Far the larger part of the Christians among them have been identified with the Baptist and Methodist denominations. These were the most numerous in the south, and were the most aggressive bodies, giving much energy to missionary evangelism, and demanding less of education and culture in their converts, and especially in candidates for the ministry. Since the Civil War Congregationalists and the other leading denominations from the north have laboured extensively among them, but have not much modified the popular hold of the Baptists and Methodists. Roman Catholicism would be expected to have found in the emotionalism and superstition of the Negro, his love of display and ceremony, and his rich imagination, to which symbolism so readily appeals, a most fruitful field; but only in the States, Maryland and Louisiana chiefly, where Roman Catholics were numerous and powerful have any considerable numbers of Negroes been identified with that Church, and then by no means in proportion to the opportunities. Notwithstanding exhortations of bishops and resolutions of councils, Roman Catholics have not until quite recently seemed greatly concerned to win the Negroes. Several societies are now interested, and 'a special "Catholic Board of Mission Work among Colored People"' since 1907 has sought to cultivate interest and provide funds for this purpose. A Roman Catholic authority (*CE* xii. 629) claims 200,000 to 225,000 Catholic Negroes, but the claim is not supported by the government census. The latest available religious statistics of the census are for 1906, when there were reported 5375 churches, and 477,720 communicants affiliated with white denominations. This inclusion with white organization refers to their general connexion, and not to local organization, in which they are nearly all in separate congregations. The great bulk of these (308,551) are in the Methodist Episcopal Church. All are Protestants except 36 congregations of Roman Catholics with 38,235 communicants. Of independent Negro denominations, all Protestant, the census enumerates 17 with 32,985 congregations, 3,779,681 communicants; 2,261,607 were Baptists, organized in the 'National Convention,' and 1,400,000 belong to one or another of several Methodist bodies. The rest are distributed among Presbyterians, Congregationalists, and others. In 1913 it was computed that the Negroes had altogether 40,000 congregations with 4,300,000 communicants, 41,000 Sunday schools with 2,200,000 pupils, and church property valued at \$70,000,000. They have 27 schools teaching theology, extensive publishing plants for Sunday school and other religious literature, a large number of Young Men's Christian Associations and a growing number of Young Women's Christian Associations, and almost innumerable semi-religious social and benevolent organizations and brotherhoods and sisterhoods, for which they have a great fondness. The larger denominations among them have organized foreign mission work, conducting missions in Africa. In proportion to their numbers, and taking account only of outward attachment to organized Christianity, the Negroes constitute decidedly the most religious element in the population of the United States.

The worship of the Negro is characterized by a high degree of emotionalism, which diminishes with education and the restraints of culture. Music plays a large part in the worship, where the singing is remarkable for its persuasive melody and subtle, almost hypnotic, influence over the congregations. Their bodies move with the rhythm, and it is easy for a skilful leader to sway them in mass. The preaching is dramatic, imaginative,

and powerful in emotional appeal. They have developed some of the greatest pulpit orators in American history, and the more enlightened of these have frequently been heard with enthusiasm and appreciation at white conferences and conventions, where they are often present to make appeals for sympathy and funds for worthy enterprises. There is growing co-operation between the missionary and benevolent organizations of the two races for the religious and moral elevation of the Negroes, and solid advances are being made in the sobriety, dignity, and intelligence of their worship. Several of their leaders are already men of splendid education, a high degree of culture, and sound moral life and influence.

6. Summary and appraisal. — (1) In the United States there is found the only large group of Negroes yet rescued from heathenism and set forward on the road to civilization, now living under conditions that contain the promise of continued and accelerating advance. G. Warneck (*Outline of a Hist. of Prot. Missions*, Eng. tr.³, Edinburgh and London, 1906, p. 194) calls attention to the fact that in the American Negroes there is much the largest group anywhere in modern times rescued from heathenism and brought into the Christian Church. The experience of success and failure here affords important material for the study of the methods of missionary work elsewhere, especially of work in Africa, where there is so much of basal similarity in the subjects to be won and developed. All who would work at the problem of the Negro in Africa should take account of the history of the Negro in America.

(2) There are many sympathetic friends of the Negro who share the thought that his capacity for development has not yet been fully determined. It is not true that the enlightened leadership among Negroes has been almost wholly by men with admixture of white blood (*EBR*¹¹, *loc. cit.*), but too many of the leaders have been men of mixed race for us to be able yet to affirm that the Negro has shown capacity for sufficient education, initiative, and resource to be capable of a native and independent realization of the ideals of Christian culture.

(3) There yet remain in the United States many problems of social, economic, and religious organization and adjustment, but the Negro is definitely established as an element in the life of the country, and his destiny lies along the lines of separate race development, with the cultivation of a worthy race consciousness, respect, and ideal. On purely theoretical grounds many argue that amalgamation must be the final solution of race problems, especially in a purely democratic social organism to which all caste distinctions are essentially repugnant (cf. Mecklin, *Democracy and Race Friction*); but history, the present tendencies in the United States, in S. America, and in S. Africa, and the deeper instincts of race division all oppose the amalgamation theory.

(4) Mutual understanding and sympathy between whites and blacks in the United States are making rapid progress. There is no intelligent sympathy with a brutal book that had a wide circulation by means of glaring advertisement and agency promotion and for a while exerted a pernicious influence, contending that the Negro is not a member of the human family at all but a soulless brute, nor with other unfriendly but less despicable works. It is coming to be recognized and appreciated that the two races are to live together and that neither can without the other gain the goal of civilization and national ideals.

LITERATURE. — There are numerous works dealing with various phases of this subject and the number is growing. Besides in works of general reference the facts are to be sought mainly in

the volumes of the United States Census Reports, in the 17 vols. of the Atlanta University Publications, and in the *Negro Year Book*, Tuskegee, 1914-15; facts and discussions will be found well covered by the following selected list: H. K. Carroll, *Religious Statistics of the United States*, New York, 1915; H. P. Douglass, *Christian Reconstruction in the South*, Boston, 1909; W. E. B. Du Bois, *Study of the Negro Problems* (= *Atlanta Univ. Pub.* 3 [1898]), *The Negro Church* (= *ib.* 8 [1903]), *Social and Physical Conditions of Negroes in Cities* (= *ib.* 2 [1897]), and *The Souls of Black Folk*, Chicago, 1903; D. Fraser, *The Future of Africa*, London, 1911; M. Helm, *The Upward Path*, New York, 1909; F. L. Hoffman, *Race Traits and Tendencies of the American Negro*, New York, 1906; G. B. Jackson and D. W. Davis, *The Industrial History of the Negro Race in the U.S.*, Richmond, 1911; H. H. Johnston, *The Negro in the New World*, New York, 1907; J. M. Mecklin, *Democracy and Race Friction*, New York, 1914; G. S. Merriam, *The Negro and the Nation*, do. 1908; E. G. Murphy, *Problems of the Present South*, do. 1904; F. P. Noble, *The Redemption of Africa*, do. 1899; H. W. Odum, *Social and Mental Traits of the Negro*, do. 1910; R. Patterson, *The Negro and his Needs*, do. 1911; W. H. Thomas, *The American Negro*, do. 1901; B. T. Washington, *Story of the Negro*, do. 1909, *The Future of the American Negro*, Boston, 1899, *The Negro in Business*, do. 1907, *Up from Slavery*, New York, 1900, *Working with the Hands*, do. 1904; W. D. Weatherford, *Negro Life in the South*, do. 1910, *Present Forces in Negro Progress*, do. 1912; G. W. Williams, *List of the Negro Race*, do. 1883.

W. O. CARVER.

NEMESIS.—See FATE (Greek and Roman).

NEO-CYNICISM.—We know that the Cynicism of Antisthenes and his immediate followers was gradually absorbed in Stoicism (see CYNICS STOICS), and that, after Chrysippus († 208 B.C.), unimportant, sporadic manifestations aside, it disappeared from history till the 1st cent. A.D. Meanwhile profound changes had overtaken the Mediterranean peoples, who, as a result, evinced a new attitude towards fundamental questions of religion and conduct. In particular, traditional restraints of civic or racial institutions, beliefs, and customs were weakening, thanks to the association of men 'out of every nation under heaven' (cf. Ac 2) in populous cosmopolitan centres like Rome, Alexandria, Corinth, and even Jerusalem. Bereft of ancient supports by denationalization, many approached the problems of conduct and destiny as individuals, no longer as citizens. Thus, the conception of life as a warfare—possibly the germ of the 'Church militant'—began to assert itself.

'The bond that formerly kept devotion centered upon the city or the tribe, upon the gens or the family, was broken. In place of the ancient social groups communities of Initiates came into existence' (F. Cumont, *Les Religions orientales dans le paganisme romain*², Paris, 1909, p. 42, Eng. tr., Chicago, 1911, p. 27).

Piety, a personal aspiration, replaced loyalty, a socio-political virtue. Hellenic intellectualism, brave and curious towards theory, waned as practical issues gained urgency. Morals ousted metaphysics; belief, often in the form of superstition, eclipsed logic. The masses desired assurance of immortality; the *élite* sought an 'inner' life wherein they could escape this present evil world. In both cases the state of the 'soul' became the question of the day. Accordingly, from Seneca (c. 4 B.C.—A.D. 65), Musonius Rufus (il. A.D. 53–81), and Dio of Pruso (c. A.D. 40–117), when Stoics aspired more and more to be 'physicians of the soul,' the Cynic element in their teaching re-asserted itself. The Neo-Cynics, at once products and evidences of this condition, embodied a special phase of general tendencies which were sweeping over the Roman world as a whole. Thus they form an aspect of a social and spiritual movement rather than a philosophical school of the Hellenic type.

1. History. — When Stoicism reached Rome (Crates, 159 B.C.; Diogenes of Seleucia, 155 B.C.; Panætius, client of Scipio Africanus, c. 142 B.C.), it was a complete system theoretically, and therefore ready to accommodate itself to Roman needs. The version taught by Panætius emphasized *officia*, or the duties of station to be rendered as proper service by every good citizen (cf. Cicero, *de Off.* ii.).

The harshness of the original was thus softened by adjustment to the calls of active citizenship, and the Cynic element of rigoristic individualism fell into the background. Nevertheless the moral 'inwardness' of the system, Cynic in origin, remained, as Marcellus Aurelius saw long after (viii. 49, 56, ix. 133):

'Remember that your Inner Self is inexpugnable, when once it rallies to itself and consistently declines to act against its will, even though the defiance may be irrational. How much more then, when its judgment is rational and made with circumspection? Therefore the mind free from passions is a citadel: man has no stronger fortress to which he can fly for refuge and remain impregnable. . . . To my moral will my neighbour's will is as completely unrelated as his breath is to his flesh. Be we ever so much made for one another, our Inner Selves have each their own sovereign rights; otherwise my neighbour's evil might become my evil, which is not God's good pleasure, lest another have power to undo us.'

'You are part of a social whole, a factor necessary to complete the sum: therefore your every action should help to complete this social life. Any action of yours that does not tend, directly or remotely, to this social end, dislocates life and infringes its unity. It is an act of sedition, and like some separatist doing what he can to break away from civic accord' (G. H. Rendall, *Marcus Aurelius Antoninus to Himself*, London, 1898, pp. 120, 123, 133).

The history of Roman Stoicism is a record of the conflict between these two authoritative calls. In the time of Caligula, and again after A.D. 96, the former prevailed with the Neo-Cynics, whose gospel had been foreshadowed, in turn, by Q. Sextius, the teacher of Seneca, in the last years of the Principate of Augustus. This development was gradual. Even during republican times Q. Aelius Tubero (c. 118 B.C.), Q. Mucius Scaevola (c. 95 B.C.), P. Rutilius Rufus (c. 92 B.C.), and especially M. Porcius Cato (95-48 B.C.), followed the Cynic ideal in public as well as in personal affairs. In the next generation Horace (fl. 41-8 B.C.) adverts not merely to the civic dutifulness of the Stoics (*Ep.* i. i. 16 f.), but also to their Cynic 'inwardness' (*Carm.* iii. iii. 1 f.). This rigorism steered the saints and martyrs of the 'opposition' under the Cæsars (cf. H. Schiller, *Gesch. des röm. Kaiserreichs unter der Regierung des Nero*, Berlin, 1872, p. 666 f.; G. Boissier, *L'Opposition sous les Césars*, Paris, 1905); its drift towards abandonment of a theory that placed nature above man, and towards exclusive emphasis upon consistency of conduct, is made plain by Persius (*Sat.* iii. 66 f.). Extant literary references suffice to show the extraordinary persistence of the 'Cynic sect'—from Caligula (A.D. 41) till Justinian (A.D. 530). The main body of information is furnished by Seneca (fl. 55), Epictetus (fl. 120), Lucian (fl. 180), and Eusebius (fl. 330). Further references, among others less important, are found in Plutarch (fl. 100), Dio Chrysostom (fl. 110), Justin Martyr (fl. 150), Tatian (fl. 166), Aulus Gellius, Athenagoras and Galen (fl. 175), Dio Cassius (fl. 220), Tertullian and Philostratus (fl. 230), Julian 'the Apostate' and Ammianus Marcellinus (fl. 361), John Chrysostom (fl. 400), Augustine (fl. 420), Damascius (fl. 520), Simplicius (fl. 533), and Suidas. But, to all intents and purposes, the movement attained its crests immediately after the death of Nero and, again, under the Antonines. Thereafter, it appears to have been absorbed gradually into Christian monachism (cf. E. Hatch, *The Influence of Greek Ideas and Usages upon the Christian Church* (HL, 1888), London, 1890, lect. v. f.; St. Paulinus of Nola, *Ep.* xxv.). The first onset is represented by Demetrius, associate of Seneca (fl. 71). Between him and the Antonine group we have Epictetus, who, although a Stoic in theory, was deeply affected by Cynicism in practice; and Dio Chrysostom, who seems to have adopted Cynic ways in life, although he was an eclectic in philosophy; while, in the reign of Hadrian, Cénomaus of Gadara flourished. But, thanks to Lucian, the representatives of the sect whom we know best are its saint,

Demonax (fl. 145-160), and its part-prophet, part-charlatan, Peregrinus Proteus (self-immolated, 165), both in the Antonine period. In addition, it is evident from the frequent references in contemporary literature that numerous Cynic missionaries traversed the empire, preaching to the masses, and standing much in the same relation to them as did the Stoic 'private chaplains' or 'house philosophers' to the educated minority. The very names of the great majority of these peripatetic exhorters have been lost—possibly two score, capable of historical proof, have been transmitted to us. It is evident, however, that, like votaries of similar movements always (cf., e.g., W. Benett, *Religion and Free Will*, Oxford, 1913, p. 204 f.), they ran the entire gamut of human nature, from authentic culture and sincere devotion to insolent sham or arrant rascality.

2. Teaching.—The Cynic disciples of Socrates were overshadowed by the original constructive philosophy of Plato and Aristotle. Hence their pragmatic sterility was at odds with an age interested vitally in positive thought. In short, the intellectual genius of the time surmounted their sectarianism. Similarly, civil autonomy in Greece did not pass away till the school had been active for two generations, and, even then, fresh memories of a glorious past, rooted in pride of citizenship, gave the lie to anti-social *παρρησία*. Moreover, the claims of citizenship acquired a new lease of life at Rome. So the gospel of revolt, unsupported by actual aspiration, faded away. Nevertheless, the ideal of the 'wise man'—one sufficient to himself, and this defensibly—had been set forth, and was destined to resurrection in due time. Immense social displacements occurred during the four centuries between the battle of Cheronea and the invasion of Britain by Claudius. Nowhere were they more conspicuous than in philosophy and civic patriotism. The one had sunk to the level of antiquarian exegesis or, worse, of profitable trade; the other had ceased to furnish an absorbing career, so that men grew importunate for a 'way of life.' Thus the ideal of the 'wise man' regained vitality, because it rebuked the conventional trifling of the schools, and promised norms for personal conduct. Philosophically, *conatus in suo esse perseverandi* appearing the sole recourse, *in magnis voluisse sat est* came to be the core of teaching. Briefly, philosophy ceased to be systematic or scientific, and assumed a purely disciplinary aspect. Man must turn to correction of the soul, in order that he may secure release from the ills of nature and society. Hence a class of professional (and therefore narrow) moralists appeared, preaching counsel and reproof. They desecrated a divine element in the human spirit, whereby the 'wise man' becomes the 'messenger of God' upon earth. As exemplars, they even professed to fulfil a mediatorial office. For, the conditions of the moral life being entirely internal, the end is quite *ἑαυτῷ*—to become one's true self, it is necessary to discover this self in self. Accordingly, an incommunicable indifference to all that is distinctively human in common life constitutes ethical perfection or, at least, attainment. The exercise of reason is futile—*facere docet philosophia non dicere*. The great wisdom is to develop self to the point where nothing remains to be willed. Renunciation affords the means. A man must therefore examine himself, experience remorse, and exhibit penitence, to the end that he may achieve the perfect peace of independent isolation. As a rule, then, the necessary activities of the average citizen must be eschewed, and this is as true of national religion and current esteems in good conduct as of the most disreputable vices or meaningless foibles.

The condition of a society where spiritual apathy and gross materialism were prevalent gave point and power to exaggerated preaching of obvious moral truths, with its trick of painting two pictures, one all black, the other all white, and setting them in melodramatic contrast.

'Their criticism of the society to which they belong and of all its institutions and modes of action and thought, attracts attention by the very violence and extravagance of the form in which they present it. And the neglected truth or half-truth, which they thrust into exclusive prominence, gradually begins by their means to gain a hold of the minds of others, forces them to reconsider their cherished prejudices, and so leads to a real advance' (E. Caird, *The Evolution of Theology in the Greek Philosophers*, Glasgow, 1904, ii. 56 f.).

Here the Neo-Cynics were strong, like their predecessors; they did not spend their 'genius in trying to regenerate a form of social and political life which mankind had outgrown' (*ib.* p. 68). Nevertheless, even at its best, in Epictetus, the doctrine corroded all particular ties, and deserved to be called a parasite upon the society which it repudiated. In fundamental principle it was intensely anti-social. Hence what has been said of the early Cynics holds of the latest representatives of the sect:

'They appealed largely to the poor, and most men were probably revolted by their roughness and their neglect of the ordinary decorum and courtesies of life, rather than attracted by the nobility and manliness inherent in their teaching' (W. W. Tarn, *Antigonos Gonatas*, Oxford, 1913, p. 30; cf. ch. viii.).

Finally, it may be said that the alleged influence of the Neo-Cynics upon the development of Christian doctrine is not proven, although the presence of some of the forces destined to produce Christian rigorism is apparent enough.

LITERATURE.—The best account of the general situation is S. Dill, *Roman Society from Nero to Marcus Aurelius*, London, 1905, bk. iii. ch. ii. The fullest bibliography is in E. V. Arnold, *Roman Stoicism*, Cambridge, 1911, p. 437 f., and in F. Ueberweg and M. Heinze, *Grundriss der Gesch. der Phil.*, 10, i., Berlin, 1909, §§ 65, 70. See also H. Ritter, *The Hist. of Ancient Philosophy*, Eng. tr., London, 1838-46, iv. 160 f.; E. Zeller, *A Hist. of Eclecticism in Greek Philosophy*, do. 1883, p. 283 f. (= *Phil. der Griechen*, Tübingen, 1844-62, iii. 1); A. Döring, *Gesch. der griech. Philosophie*, Leipzig, 1903, ii. 476 f.; L. Friedländer, *Roman Life and Manners under the Early Empire*, Eng. tr., London, 1908-13, vol. iii. ch. iii. (= *Darstellungen aus der Sittengesch. Roms*, Leipzig, 1910, vol. iii. ch. iii.); M. R. M. WENTLEY.

NEO-HEGELIANISM.—Neo-Hegelianism is a title which has been given to that current of thought inspired by Hegel and the idealists of Germany which began to make itself felt in British and American philosophy in the third quarter of the 19th century.

1. Chief thinkers.—Before attempting to elucidate the sources and general significance of the movement, we may refer briefly to some of the individual thinkers more immediately connected with it. As regards its origination three names have a claim to be regarded as outstanding: James Hutchison Stirling (1820-1909); Thomas Hill Green (1836-82), Fellow of Balliol College and Whyte's Professor of Moral Philosophy, Oxford; and Edward Caird (1835-1908), Professor of Moral Philosophy in the University of Glasgow, and Master of Balliol College, Oxford. Stirling's work, *The Secret of Hegel*, published in 1865, may be said to have revealed for the first time to the English public the significance and import of Hegel's idealistic philosophy. Green in 1874 published *Introductions to Hume's Treatise of Human Nature*, in the course of which he subjected the whole English tradition in philosophy to criticism; and he left at his death an almost completed work entitled *Prolegomena to Ethics*, in which is contained a groundwork of idealistic metaphysics, the positive basis for his earlier criticism. Caird published two successive critical studies of Kant in 1878 and 1889, in which he derived from Kant's 'Ideas of Reason' the outline of a metaphysic which is essentially Hegelian and which furnished a basis for contributions to other departments of thought, especially the philosophy of religion and the history of Greek philosophy. Other men of importance at the beginning of the movement were John Caird (1820-98), brother of the above, who belongs to the first generation of the school and whose *Introduction to the Philosophy of Religion* was published in 1880 and his *Fundamental Ideas of Christianity* posthumously in 1899; then a little later Richard Lewis Nettleship (1846-92), Tutor of Balliol College, Oxford, a pupil of Green, whose small output of published work bore no relation to the magnitude of his influence; and William Wallace (1844-97), a scholar of great attainments and an unusually luminous and imaginative philosophical writer, who succeeded Green at Oxford and published expositions of Hegel's thought and translations from his works. Among living writers and teachers the number of those whose bent of thought follows the tendency in greater or less degree is very large. Perhaps the most representative of them are F. H. Bradley, Bernard Bosanquet, and, in America, W. T. Harris.

These are a few of the exponents. But, to be just to the compass of the movement, it is necessary to remember two further sets of names: on the one hand, leaders of thought belonging to the period before it took its rise, who played a part in the eventual turning of English-speaking philosophers in the direction of Continental idealism, such men, e.g., as Jowett and Ferrier and William Hamilton, Coleridge, Emerson, and Carlyle; on the other hand, among contemporary teachers and writers, besides the large number who acknowledge their affinity with the Neo-Hegelian tendency, we must remember the very many more who make their departure from the school the beginning of their own teaching, and are so far within its sphere of influence that they are under constant necessity of criticizing its ideas. If we take the positive and the negative influence of the movement together into account, we shall probably find that no other way of thinking sends its roots so deep or extends its ramifications so far in the philosophy of the English-speaking world at the present time.

2. Rise of Neo-Hegelianism.—No mere chronicle of adherents with an enumeration of their works and a statement of their external philosophical affinities ever explains a philosophical movement. We must see it in its inception. In order to see Neo-Hegelianism in its inception we have to consider (a) the general state of culture in England from the beginning of the century till the time when it appeared, roughly, during the sixties and early seventies, for the movement was the outcome of that culture; (b) the Continental development in philosophy, for the movement springing from this English source found stimulus and guidance in German idealism. It was, in fact, an effort of the English philosophical mind to use the results of that idealism upon problems which English thought, art, and life had created during the first decades of the century.

(a) *English culture before its inception.*—English culture in the time of Green, Caird, Stirling, and the others referred to was fitted to lead any reflective mind in the direction which these minds took. A little earlier—in the period of the rise of our English romantic poetry and of romantic literature in Europe generally—a great development had been undergone by English and Continental culture alike. We of the present time are still too near to that great age to know all that it meant in European life and thought. It was a seed-time which must be judged by its harvest, and its harvest has probably not yet come. Yet the romantic movement as a whole was not without certain distinguishable features of great importance for the later English culture out of which Neo-Hegelianism arose, features which we are indebted to one distinguished scholar and student of the century—A. C. Bradley—for enabling us, for the first time, to discern distinctly.

The first of these is the obvious relation of the leading minds of the time to orthodoxy. If we take the romantic movement as a whole, the Continental and the English sides of it together, it is almost a commonplace to say that most of its great representatives were in disagreement with the accepted religious ideas of their age. Many of them may have tried to soften the opposition. They may have held in one way or another that their teaching and the orthodox believer's faith were rooted in the same facts and sprang ultimately from a common conviction. Some of them may even have felt sympathy with the details of the concrete scheme of the universe which figured before the ordinary believer's imagination. But no amount of such sympathy, where it existed, could obliterate the gulf between the two; and it is certain that in many cases it did not exist. These great men are separated by all degrees of alienation from the theological ideas around them. They stand in no such relation to the religion of their time as Dante, *e.g.*, stood to mediæval Christianity or Milton to Puritanism.

The fact is important in connexion with the influence of the movement upon educated minds during the period when Neo-Hegelianism appeared. It means that for them there had ceased to be any vital relationship between the bearers of the highest contemporary culture and the official religion of the time. Not that there was open schism between them, so much as simple indifference. Individual great writers might accept the ordinary religious formulae, but the acceptance was external. They might even be interested, but their interest in these things was not central and convincing. It was not supreme. It did not, *e.g.*, furnish them with a theme for a long poem.¹ There grew up in the cultured

mind a vague sense of a hiatus between what theology dealt in and what really mattered most to man. The fact might not be preached or proclaimed, but it was none the less a fact that, once Goethe and Shelley and Heine had spoken, orthodoxy began to suffer from the irrelevance of its ideas.

But, if the pioneers of 19th cent. culture were not orthodox, the next striking feature of their work is that it was not secular.

'Take a list of nineteenth century creators,' says Bradley,¹ 'and strike out the names of purely scientific men; which we must do, because science, as science, is not concerned with an interpretation of the whole. Consider, then, philosophy and the serious literature and art of the nineteenth century, and ask, is it on the whole irreligious or even non-religious? No one would answer "Yes." On the contrary it may be asserted with truth that no secular products of the higher kind since the Renaissance have been so religious as those of the nineteenth century. I am not thinking solely of men like Coleridge or Tennyson, unorthodox but obviously "Christians"; nor solely of Mendelssohn's oratorios, or Holman Hunt's pictures; but equally of writers like Schopenhauer or Shelley, George Eliot or Carlyle, or painters like Watts or Millet. By almost all the greater men, life is portrayed not only with a seriousness or even a passion which reminds us of religion, but in some kind of scheme which embraces the whole of things and indicates man's place in it. That surely means in some sense religion. This can be realised by thinking on the other hand of Shakespeare. He had so marvellous a mind that he could give to a secular theme the import of a divine tragedy. But compare his work with that of the nineteenth century poets and we see that the former is secular as the latter is not. He refuses to portray his subject in the light of its relation to the whole of things; and so, placed side by side with Milton, he is secular. But the typical nineteenth century poet is like neither. He is like Shakespeare in taking usually a theme which is not religious; but like Milton inasmuch as his atmosphere vibrates with pulsations from worlds beyond the sun.'

Now, to see the kind of mental atmosphere in which Neo-Hegelianism sprang up, we only need to place alongside these two features of the whole romantic movement—its doctrinal heterodoxy and its religious spirit—a further feature especially characteristic of the English part of it. This is the lack in the great English writers of a theoretical grasp of what the poetry and romance and even the great moral teaching of their time were revealing. Giants in art, and even in art and moral criticism, they could exhibit an astonishing amount of childishness in intellectual outlook. There were some exceptions. Carlyle, *e.g.*, had been through the wilderness, and out of his narrow Scottish Calvinism had wrought a philosophy somewhat commensurate with the universe with which he had to deal, before he began to deal with it. But, steeped as he was in Continental studies, he is an exception which rather proves the rule. How different, *e.g.*, was Ruskin. The spectacle of Ruskin's going forth with the ardour of a knight-errant to re-mould the deepest formative ideas of his generation, with no better metaphysical equipment than that of a crude evangelical Protestantism, strikingly illustrates the gulf that was possible, in the mind of a man of genius, between the vision of the world actually breaking in upon him and his theoretical notions about how the world was built. What was true of him was true in other walks of English culture, and was felt, if not understood, by critics of a slightly later time. Matthew Arnold was aware of it. And Bradley, corroborating Arnold's view that the opening of the century was intellectually limited although poetically great, points out the superiority of the imaginative and the comparative inferiority of the theoretic literature of the romantic period. Its poetry ranks higher among poetry, he says, than does its history, philosophy, theology, politics, or economics among the work of other epochs in the same fields. The theoretical crudities which startle us in the prose writings, the letters, and the recorded conversation of the poets themselves in Wordsworth's England are probably a further evidence of the same thing.

¹ See in this connexion Bradley's essay on 'The Long Poem in the Age of Wordsworth,' in his *Oxford Lectures on Poetry*, London, 1909.

² In an unprinted lecture.

'Assuredly,' says Bradley,¹ speaking of this prose, 'we read with admiration, and the signs of native genius we meet with in abundance—in greater abundance, I think, than in the poetry and criticism of Germany, if Goethe is excepted. But the freedom of spirit, the knowledge, the superiority to prejudice and caprice and fanaticism, the openness to ideas, the atmosphere that is all about us when we read Lessing, Goethe, Schiller, Heine, we do not find. Can we imagine any one of those four either inspired or imprisoned as Shelley was by the doctrines of Godwin? Could any of them have seen in the French Revolution no more than Scott appears to have detected? How cramped are the attitudes, sympathetic or antipathetic, of nearly all our poets towards the Christian religion! Could anything be more *borné* than Coleridge's professed reason for not translating *Faust*?² Is it possible that a German poet with the genius of Byron or Wordsworth could have inhabited a mental world so small and so tainted with vulgarity as is opened to us by the brilliant letters of the former, or could have sunk, like the latter, to suggesting that the cholera was a divine condemnation of Catholic Emancipation and the Reform Bill?'

There may have been reasons for this theoretic backwardness in English romantic culture, reasons connected with the previous history of English philosophy and science. But, however it may be accounted for, a certain incapacity for speculation, a certain preponderance of the intuitive over the theoretical mind, appears to have been there.

If we hold these results firmly together, we can easily conceive the mental atmosphere around any English youth of generous character and speculative mind, at a centre of English culture like Oxford, about the beginning of the third quarter of the century. The new spirit in literature and science had had its full effect upon religious life at Oxford by 1850. The University had got beyond the long controversy over the teaching of the Church in which it had been entangled. The old Oriel College school of 'Noetics,' with its noisy heterodoxy, and the 'Tractarian' reaction against it had alike exhausted themselves. The youth of the fifties and sixties were left free enough of sectarian controversy to breathe the ampler air into which the culture of the romantic period had really brought them. In view of the character of that new culture, the indifference to religious formulæ and yet the deep religious impulse which were all through it, it was not surprising that the need should be felt by serious minds for some scheme of metaphysical belief which should be at once religiously satisfying and scientifically defensible. There was as little hope of meeting such a need by an appeal to the current philosophy of the time as by an appeal to the orthodox theology. Hamilton and Mill were as un-religious as Newman was unscientific. It was whilst in this situation, whilst feeling the mystery of the romantic spirit on the one side and the incapacity of the English philosophical tradition on the other, that some young British thinkers stumbled on the interpretation which the romantic spirit had already given of itself on the Continent, applied it to their own problems, and gave it an English form. This was the rise of Neo-Hegelianism.

(b) *The Continental development.*—The salient matter, then, is the philosophy of the romantic movement. What interpretation had it given of itself? And with what general modifications did its interpretation reappear in the work of these English and Scottish thinkers?

In the first place, where lay the difficulty which made the romantic movement a problem to itself? It lay, more than in anything else, in a feature inseparable from its whole course—the tremendous invasion of the realm of the sacred by what had been called secular things. We have seen how the 19th cent. poets could elevate secular themes and make them pulse with religious significance. This meant a serious challenge to a long-established dualism, the dualism within which the whole preceding age of the so-called 'enlightenment' had

lived and moved. It meant, not exactly that religious ideas were being questioned—they had been so already—but rather that, damaged by scepticism as they were, they were now being passed over; their place was being usurped. That part of the mind which had been reserved for current religion was being addressed by thoughts from elsewhere. The result, with the best minds, was a solicitude lest the rising tide of interest in mere history, or natural beauty, or secular human affairs should interfere with the respect due to the very highest objects of human aspiration and hope. These extraneous things were caught up, it is true, by a poetry which could disclose real spiritual value in them. But that is not a fact calculated to allay such misgivings in any circumstances. 'Secular' things with an unsuspected spiritual value in them are all the abler to displace religious tradition. But this unexpected spirituality, if it intensifies anxiety, also defines the issue. It points people beyond the dualism—accustoms them to the thought, What if it did not exist? It forces forward the question whether the barrier here felt to be breaking is really a religious necessity. The situation is that the secular movement—on the surface a mere supplanting of religion by temporal things and a paganizing of Christianity—appears to have definitely come. But the question whether it may not be regarded as exactly the reverse of what it seems, whether it may not be a true permeation of what was secular by the religious principle, is not thereby settled. And this is the question which now comes uppermost. Things once frankly 'secular' have been discovered to have a profound human value. As a result the familiar landmarks have become confused. The one sphere appears scattered all through the other. The difficulty is simply to believe that things which have sufficient value in them are sacred for that reason, and to see convincingly what is sacred about them.

But there was help available in such a difficulty. This dualistic partition which broke at the push of 19th cent. civilization was a thing which philosophy on the Continent had faced. Speculation in Germany at the opening of the century built upon the foundations laid by Kant. Now, the dualism upon which Kant bent his critical strength was not exactly of this shape, but it was the same in principle. Kant was not confronted by the spectacle of an art which was religious in its inmost nature passing over to the world of experience and finding this more important than the religious world itself. He was confronted with a habit of thought for which the world of sense-experience was coming to be the only one that counted, so far as knowledge went. He felt with many minds of the 18th cent. the growing irrelevance of theology and all its lore of another world to anything that science and observation could tell us about this one. And he succeeded in reducing the issue between the two to clear terms, with the result that, if he did not leave a solution, he left the suggestion of one. His idealistic successors, advancing upon their master's position, seemed to arrive from it at exactly the relation between secular and sacred which the romantic spirit had been forcing into view.

Where could the distinction really lie—so ran the difficulty—between that higher world which calls forth religious veneration and gives morality a meaning and, on the other hand, the common world of sense-experience and positive knowledge? Or are they just the same? The whole question, to Kant's mind, has been prejudiced by an error which he would noproof. The one world is not a simple extension of the other. The world in which religion is interested is not one about which we have special *a priori* knowledge, and which we

¹ *Oxford Lectures on Poetry*, p. 180.

² *Table Talk*, 10th Feb. 1833.

know to lie simply beyond the confines of this one. The higher world, according to Kant, is not an object of knowledge at all. It is a world of whose reality we are convinced by our actually entering into it. And we enter into it in the act of being practical or moral. We do not prove the reality of God, freedom, and immortality by argument. Religious convictions do not rest on argument. The true proof of them is, rather, that in the moment of duty, in the consciousness of something absolutely worthy which I ought to do and he, I enact my freedom, my immortality, and my place in a Kingdom of God. This freedom which the moral consciousness confers, science cannot comprehend. But science cannot cavil at it; because it is the utterance of a world about which science, confined as it is to the world of experience, can neither assert nor deny anything.

Here we have the possibility of a clue to that confusion which was the perplexity of romantic culture and even its reproach—that taking of mere things of sense and investing them with a sanctity which did not seem to belong to them, thus leaving nothing holy. Kant's reading of the distinction between the secular and the sacred world suggests that in the last resort it is one between knowledge and practice. And, if it is so, then these two, it would seem, are sufficiently capable of being intermixed without ceasing to be different. Knowing and doing are functions never far from each other—combined, indeed, in all intelligent practice and in all courageous theory. Yet knowing what the world is remains a different thing from changing it into something else.

Personally, Kant would have repudiated the idea of taking anything out of his theory to justify a view so directly opposed to all his own sympathies as the view that the higher world permeated all the ordinary world of nature and experience. But he held that the moral imperative carried the higher world with it. And his great follower Fichte simply asks where, in all the wide range of human function, this moral imperative is *not* operative. In effect he answers, 'Nowhere.' Kant himself, he held, had taught him this. It had been the core of Kant's argument against Hume that no part of the world of nature and experience was merely passively received; all was actively constructed. Had the knowledge process been a mere matter of an external nature imprinting itself on a non-resisting mind, leaving the mind to read off the impression, it simply could not have existed. There would then have been no world to know, or only a world bereft of all form or order, a world in which there was neither space, time, unity, substance, nor causal connexion. All these constitutive features of the world had been shown by Kant to be the active syntheses of the knowing mind, whereby it works up the given sense-data into that objectivity with which man's senses deal. But this synthesis to Fichte is a deed of the spirit, entirely parallel to a moral deed. In fact, it is a moral deed. It is an expression of the free self-assertion of the rational mind. It is a further carrying out of that essentially moral activity which receives its first and most concentrated expression when a man is able intelligently to say 'I.' The synthesizing function whereby man wins his world is nothing else than a particular form of his consciousness of the moral imperative and of his springing up in obedience thereto. Now, since every part of the world of man's experience is a field for this spiritual construction, since it only arises, in the last resort, as such construction proceeds, every region of the world provides an opportunity for man to enter that higher realm of which religion speaks. To him who has eyes to see, the sacred is everywhere.

This reading of the situation is just what the romantic spirit had been waiting to hear. It had been deeply conscious of it. Engaged upon secular themes, it had yet felt itself constantly heating against ultimate things. Abandoning itself to the natural world, throwing its soul open to all that had been neglected in it, to 'the great, the obvious, the habitual, the common earth, the universal sky, the waters rolling evermore,'¹ it found such natural facts laden everywhere with spiritual treasure. And in neglected regions of secular human life, amid the drab and the dull, the sin and the wrong of the world, it found the same spirituality. This new art felt that, whether 'secular' or not, it was engaged on another mission than providing cultivated idleness with amusement. It was revealing the ultimate and the divine. But, if Fichte's theory is true, the ultimate is everywhere. Wherever a man opens his eyes upon the world, he interprets what is before him, he actively construes it into what shape it has. That, to Fichte, is a doing of his duty; and it carries with it all that Kant thought duty implied. It is therefore but a matter of a man's realizing what he is doing and doing it fully; and the divine is there—nigh him, in his mouth and in his heart. This mere having of a world before our intelligent eyes is to Fichte the very process of believing in God.

¹You do not believe in God because you believe in the world; rather you see a world at all, solely on this account, that you have to believe in God.²

3. General significance of the English movement.—The philosophy of Fichte contained the suggestion in the light of which both his own immediate successors and some English thinkers of a later date essayed a systematic interpretation of life. Its central doctrine is that of a free, creative, synthetic activity on the part of the soul of man, whereby to a limited degree he participates in or re-enacts that ultimate creative synthesis through which the universe as a whole is sustained. Fichte himself had expanded this view into what he thought a complete and satisfactory philosophy, embracing the entire round of man's experiences, sensuous, intellectual, moral, religious, æsthetic, political, etc. But two successors, Schelling and Hegel, sought in turn to expand it further, and render it more systematic and complete. And the Neo-Hegelian thinkers, seeing in the whole development what appeared to be a way of meeting the difficulties of English culture, also worked it over again in a manner which was perhaps all the more English for their having the example of Fichte, Schelling, and Hegel before them.

We cannot attempt in this article to treat all these thinkers individually and show how each modified the system which he found. But it is possible to characterize the group without damaging the individuality of its members by our generalization. We can say that to all of them idealism meant at least what we have just taken to be the essence of its original meaning, viz. the discovery of a principle of distinction between natural and spiritual which could fill the place of the arbitrary traditional distinction, which the experience of romanticism had broken down. Moreover, to the English thinkers as to their forerunners the spirituality was such that the whole universe could be spiritually discerned. And we can almost characterize the whole English way of working out a spiritual view of the universe by referring to the traditional empiricism of the English mind.

A certain esoteric character is inseparable from idealism in Germany. By the time it had received

¹T. H. Green, 'Popular Philosophy in its Relation to Life,' *Works*, iii. 120.

²J. G. Fichte, *Sämmtl. Werke*, Berlin, 1845-46, v. 212.

Hegel's treatment, the idealistic position had acquired, not by accident or design, but simply by the nature of the case, a certain impenetrability. In principle Fichte had got the romantic spirit out of its characteristic perplexity. He found the whole world of experience potentially the conscious product of free spiritual activity, and so potentially sacred. Such a discovery changes the character of the philosopher's task inherently. If knowledge is thus a deed, and not a mere static object of further knowledge, then to do this deed is the ultimate task of philosophy, all mere theorizing about how it is done being external and beside the point. It was but in the nature of the case, then, that Hegel, instead of telling us how he is going to explain the world, should proceed to explain it; instead of speaking about the point of view which he is going to adopt, should proceed to take it up, assuming that that is the only definition possible of an ultimate point of view. But it was inevitable that such literal idealism, such endeavour to enact before us, and along with us, the very synthesis which the world of knowledge is, should make his theory in a sense impenetrable, a thing not spoken about but simply begun, a system without approaches, a sort of enchanted ground into which the reader must simply insert himself and in which it may be long enough before he find his bearings.

The English thinkers have endeavoured to avoid all such suggestion of the esoteric as is contained in the classical form of the idealistic system. They have had to force their way into this system, by direct attack or through Kant. But none of them has been content simply to be in it, or simply to 'initiate' others. They may not all have been equally successfully exoteric. And in some of those who stood nearest to Hegel there is even a trace of complacency with this state of affairs. Harris has still an 'atmosphere' which the reader has somehow to learn to breathe. Stirling has a 'secret' whereby he will initiate us into all the hidden chambers of Hegel's thought. But of none of the English idealists can it be said that he valued the Hegelian system solely as a system. Its results must be translated into terms of concrete human values. Sometimes one set of values is dominant, sometimes another. The pioneers, e.g., are distinctly religious. Green centres his theory in an 'eternal consciousness.' Caird speaks constantly of a unity beyond all differences, to which the thinking consideration of the world always leads us back; and he names it God. Stirling's writing almost riots in the very picture-language of the ordinary religious consciousness, proclaiming the content of that consciousness as the very truth which Hegel came to teach. In the thinkers a very little later in date there is an appreciable change of emphasis. A sense of the importance of the ultimate or religious outcome of the system of course remains. But in many of them—in Nettleship, particularly, but also in Wallace, Bosanquet, and Bradley—there is a perceptible easing off from the religious note. Nettleship appears to have left Green to deal with the religious implications of philosophy, while he used it for its educational value. All that is recorded of him by contemporaries and by his biographer indicates a man whose way of studying the idealistic point of view was to throw its light on other things, and study them. And his mantle has descended on others. Bosanquet's *History of Aesthetic* and those literary studies of A. C. Bradley from which we have already quoted are conspicuous examples of the effort to study things other than idealistic philosophy without leaving out of account what idealism has suggested to be the ultimate nature of the universe. The work of William Wallace is practi-

cally all of this character. His writings are memorable for the brilliant sidelights thrown on questions of ethnology, philosophy, history, and all manner of current controversial topics. His systematic idealism is buried in the mass of this concrete reference. To all these idealists idealism means, in the first place, power in definite fields of concrete human interest. It is not to them primarily what it primarily was to their forerunners—a technically perfect metaphysical system.

Behind all their interest in the concrete there lay, of course, for the English thinkers, the point of view from which they regarded it, and the considerations which seemed to them to make their general point of view a metaphysical necessity. And they have done their part in giving these considerations point. They have contributed to the science of metaphysics. But the same concrete interest which makes them sometimes prefer being metaphysical students of other things to being metaphysicians operates in their metaphysical work itself and makes it distinct from the great system-building of the past. They are not in search of a system so much as the possibility of it. The classical idealism enveloped the universe in its system. In an age of spiritual world-conquest it had been its pride to be able to discern progressive manifestations of its principle in the great epochs of history, in the successive systems of philosophy, in the development of political institutions, in the periods of art, in the system of the natural sciences. To give to every matter of fundamental human interest its place in the evolution of one ultimate, dialectically moving principle had been the object, e.g., of Hegel's *Phenomenology*. As compared with this the later idealists are not greatly impatient to see the ultimate, divine order of the world. They are content to know that some such order exists and is the ultimate truth of things, so that there is substantiation for the ultimate hypothesis of religion. For the rest, they are interested in the particular departments of human experience as objects of a study which treats them for their own sakes although without forgetting that there is an ultimate principle in the nature of things and that they are connected with it. The Neo-Hegelian writers, one might say, are interested in the incidents of the dialectical process and they are interested in its ultimate outcome, but they are not specially interested in its cohesion. That this process invades their metaphysic is clear from the most notable metaphysical production of the school, Bradley's *Appearance and Reality*. There is something in the procession of the topics in that work which reminds us of the procession of 'categories' in the *Phenomenology*. But the difference is shown by the absence of the attempt in the English work to give each 'category' its place in an articulated system. The thought treats them *seriatim*. It does not make a feature of their ascending order. It is confined to showing about them all equally that they are not adequate to the spiritual whole which idealism takes the universe to be, but that, on the other hand, none of them can endanger the spiritual whole, while it is shown that, for indisputable reasons, the spiritual whole must be. This taking of what were but the incidents of the dialectical process for the classical idealists to be each a field for independent study and criticism, together with the interest taken in discussing what 'must be' the outcome of the whole process, is characteristic of the school. Despite the great advance towards a more positive presentation of the same main considerations in the latest great product of Neo-Hegelianism, Bosanquet's Gifford Lectures, the lightness of its touch on the question of the internal arrangement of the categories is entirely in the manner of the school, and effectually dis-

tinguishes even this, perhaps the most comprehensive and systematic Neo-Hegelian work, from any work of the classical German period.

LITERATURE.—It has been impossible to deal with the movement in its entirety. We have not named all or even the central writers. And, until some adequate history of the movement appears, the only way to get a grasp of what it had to teach is to read a few works of typical representatives of it. The following list taken in the order given will, it is believed, form an effective introduction to the standpoint: John Caird, *Introduction to the Philosophy of Religion*, Glasgow, 1880; Henry Jones, *Idealism as a practical Creed*, do. 1909; T. H. Green, 'Popular Philosophy in its Relation to Life,' in *Works*, ed. Nettleship, London, 1885-88, iii., *Prolegomena to Ethics*, Oxford, 1883; R. L. Nettleship, *Philosophical Lectures and Remains*, London, 1897; F. H. Bradley, *Appearance and Reality*², do. 1902; B. Bosanquet, *Principle of Individuality and Value*, do. 1912, and *Value and Destiny of the Individual*, do. 1913.

J. W. SCOTT.

NEO-KANTISM.—1. Meaning and explanation of the term.—Neo-Kantism is the philosophic endeavour to expound and justify Kant's theory of the world, so that it shall satisfy the demands, and solve the problems, of modern culture. It embraces also the thought performances of those thinkers who, deviating from Kant's methods and principles, find it first of all necessary to defend and justify any such deviation from him. Hence the term 'Neo-Kantists,' or 'Neo-Kantians,' is applicable in a collective sense to investigators like H. Vaihinger, A. Riehl, J. Volkelt, F. Paulsen, H. Cohen, P. Natorp, and many others of varying shades of opinion. Cohen, Natorp, W. Kinkel, and E. Cassirer are the chief representatives of the Marburg school, whose methods are idealistic. Very diverse points of departure mark this revival of Kantism. At one extreme we have the positive or immanent unconscious school of W. Schuppe, J. Rehmke, R. von Schubert-Soldern, and A. von Leclair. These noetical thinkers reject all extramental elements, and treat all being as only conscious content. Hence their advocacy of the monism of consciousness. Schuppe is a more significant thinker in this connexion than is often supposed, but his views cannot be expounded here. At the other extreme stands the metaphysical school of W. Wundt, E. von Hartmann, and Volkelt, of whom the last-named has actually tracked the inconsistencies and contradictions of Kant to their ultimate hiding-places in Kant's in-harmonious thinking.

In its inception, as seen in F. A. Lange, it was really a bifurcated movement. Founding on Kant's limitation of knowledge to the objects of experience, Lange would have philosophy, as science, confined to the task of yielding a more securely grounded and limited theory of knowledge. Again, availing himself of Kant's critical idealism, he would resolve the whole corporeal world into mere appearance for the apprehending consciousness, conditioned and fixed by *a priori* forms of knowledge. The antipathy to speculative philosophy in these positions is very marked, and Lange's theoretic materialism simply presented a regulative principle for scientific investigation. It is easy to see in Neo-Kantism the natural rebound from extreme idealism, in the lengths to which the Neo-Kantian doctrine of object-subject has been carried. But it is obviously unsatisfactory that Neo-Kantism should have attached itself to the empirical and sceptical sides of Kant's philosophy, leaving in abeyance the rationalistic element so characteristic of Kant as we find him in the whole presented to us by history. The modifications in the positions of Cohen, E. Laas, Paulsen, and Natorp are, in this connexion, interesting and suggestive. But Lange was the real head of the movement, in which, allied to the limitation of knowledge, experimentally, to the world of sense, was an aversion to inquiries of a metaphysical or transcendental character. Everything bore the

stamp of relativity, and absolute truth was de-spaiied of. Cohen's criticisms had a modifying effect, in certain well-defined respects, upon Lange's position, but what concerns us here is that he simply took his stand on knowledge as we find it in the natural sciences, whose methods he would apply to psychology. His is critical materialism, aware, as the older materialism was not, of the purely phenomenal character of matter. This, then, carries him back upon idealism, and between these two Lange's thought, which is a kind of idealistic naturalism, oscillates in no very satisfactory manner. In its later developments Neo-Kantism has really become a philosophy of culture. Its logic is a logic of development, whose aim is to get at the foundation of the culture-consciousness of humanity, as expressed in science, art, and morality. It is psychology—the critico-idealistic psychology of Cohen—that, according to Kinkel, makes possible the unity of these three directions in the consciousness of humanity. But it must be said that, though a philosophy of development, Neo-Kantism, like that of Cohen, is yet not a philosophy of history.

2. Historic development of Neo-Kantism.—Although Neo-Kantism may be taken as having its rise about the year 1865, yet the cry for a return to the epoch-making Kant had been raised long before. In that year the feeling of the time found strong expression in Otto Liebmann's *Kant und die Epigonen*. Weisse had, two decades earlier, declared that return should be made to Kant's point of view, and Liebmann, going much further, affirmed the idealistic tendencies of Fichte, Schelling, and Hegel, the realistic positions of Herbart, the empirical viewpoint of Fries, and the transcendental trends in Schopenhauer to be one and all rooted in the teaching of Kant, to whom, he insists, return must be made. He holds, however, Kant's 'thing-in-itself' to be an absurdity, responsible for the four erroneous tendencies just pointed out. In his next book, *On the Individual Proof for the Freedom of the Will* (1866), Liebmann demurs to Kant's way of reconciling freedom and necessity. In two later works (*Objective Vision*, 1869, and *The Analysis of Reality*, 1876) he adopts the standpoint of the criticism founded by Kant—the Newton of speculation—who discovered the laws of intellect. Lange's great work on the *History of Materialism* first appeared in 1866. He holds, in the main, with Kant, and regards the essential reality of things as unknowable by us, since our every act of knowledge is a result of what is outside us and of what is within us. He views with disfavour Kant's wish to find out *a priori* what exists *a priori* within us. He holds that other things besides space, time, etc., exist *a priori* within us, as development advances. With Lange, after Kant, knowledge is restricted to the sphere of sense, and truth is known only in the realm of experience. The cry for return to Kant had been made as early as 1832 by K. Fortlage, and later by E. Zeller and Kuno Fischer—to say nothing of E. Reinhold and others. Indeed, the real beginnings of the return to Kant lay with the appearance of Kuno Fischer's great exposition of Kant's philosophy, with its fine exhibition of the development in Kant's thought (1860). Co-operant with such influence was the treatment by H. von Helmholtz of physiological optics and acoustics as accordant in result with the critical philosophy of Kant—a line of inquiry then significantly new.

In the transcendental group high places are occupied by H. Cohen and P. Natorp. Cohen's logic of pure knowledge is neither a pure theory of knowledge nor a psychological logic, but a system of building up a thought-world, in pursuance of Neo-Kantian desire to be rid of anti-metaphysical psychologism. His abjuration of psychologism

runs through his whole logic. But, without entering on the discussion of the whole matter, it must be said that psychologic reflexion asserts itself for Cohen, in the concept-producing activity of thought, in spite of himself. His positions are at times paradoxical, as the result of his unreasonable attitude towards the 'given.' For him the weakness of Kant lies in his firm prejudice for the 'given'—the error that man need, or can, give anything to thought. Cohen's new treatment of psychology would reconstruct the mental out of its own factual productions. Natorp may be classed with Cohen, inasmuch as they both stand—though not without differences—for the Marburg principle that, instead of the dogmatic view of subject and object as ultimately given, subject and object are to be held as constituted only by fiat of thought itself. In these thinkers we see Neo-Kantism trying to pass from the objective to the functional, and from rigid substance, as it appears to abstract thought, to the vital activity of concrete mind itself. Thus Natorp erects his system of fundamental logical functions, not as existing, but as deduced from the fundamental act of knowledge. His work is subtle, and marked by logical precision, but he tends to depart from his own strictly logical positions, and to break through into the psychological sphere. His idealistic contention that thought first generates the object stands in obvious need of modifying sense, if we are to be saved from scepticism. Besides Cohen and Natorp, the transcendental group includes E. König, A. Stadler, K. Lasswitz, W. Koppelman, and F. Staudinger. König's view is a really phenomenist one, and, from attachment to the experiential side of Kant, he made studies of the causal problems of an extremely valuable character. Koppelman treats, with clearness and power, of Kant's relations to ethics and to Christianity.

Paulsen proved a powerful exponent of Neo-Kantism, setting forth historically the development of Kant's theory of knowledge. Later, he blamed speculative idealism for thinking that it could evolve a system of absolute knowledge of reality by rational thought, in independence of experience. He held that thought without experience leads to the knowledge of reality just as little as experience without thought. The efforts of B. Erdmann and H. Vaihinger at Kantian interpretation must be here noted, that of J. Volkelt having been already mentioned. It should be observed, further, that it was in critical connexion with Kant that such German positivists as E. Laas and A. Riehl developed their theory of knowledge. The work of both of these thinkers is acute and interesting, and the same may be said of that of R. Avenarius, who may be classed with them. Laas occupies a position approximating that of Mill. His positivism is one which founds alone on positive facts, that is to say, perceptions, and which demands that all judgments shall show the experiential bases on which they rest. Laas is viewed by Riehl as holding in effect the position of universal idealism or universal relativism—an unstable position. Riehl himself has affinities with the intellectualistic basis of the Kantian theory of knowledge, but is in many respects nearer of kin to Spencer. A critical realist, he holds to a transcendental ground of appearances, but, with Kant, grounds objectivity in the synthetic unity of appearance. Riehl is an incisive critic of idealism, and holds it no prejudice of Kant, but only of his expositors, that the critical philosophy is grounded in psychology. On this it may be remarked that the question how representations arise is quite different from the other inquiry whether these representations contain objective knowledge, or agree with the object, and that the latter question is not one to be decided by a psychology. Aven-

arius termed his system 'empirio-criticism,' and dealt with the theory of experience in such a way as to give us at the same time a theory of knowledge. He claims that his 'empirio-criticism' combines and transcends Hume and Kant. Professing an absolute realism, he lands himself in subjective idealism, even while appearing as its critic.

G. Thiele, in his important work on the philosophy of self-consciousness, held that to be true which corresponds with reality, and laid the usual Neo-Kantian stress on fact and experience. Quite recently W. Kinkel has shown affinities with the Marburg school, especially with Cohen. In this connexion it may be remarked that the movement back to Kant has meant a limitation of the field of psychology, at the hands of polemical logical idealism. The works of B. Bauch and E. Cassirer, within very recent years, are not without thought-relations to Neo-Kantism.

Neo-Kantism has proved a powerful impulse in the sphere of religion, as witness A. Ritschl, W. Herrmann, and J. Kaftan. It holds the religious instincts to be not less authoritative than the other instincts; it lays stress upon ethics; it emphasizes history; it puts in the foreground of its thought the idea of the Kingdom of God, as a sphere of right living. Among more recent developments we can merely note that of Neo-Kantist thought in socialism, as by K. Vorländer and others, who treat socialism in this connexion after a Kantian moral theory of the world.

In France neo-criticism, with C. Renouvier as leader, was essentially Neo-Kantist in character. Renouvier was almost more Kantian than Kant himself. He modified and supplemented Kantian criticism by subsuming all the categories under the principle of the relativity of knowledge, and by making them all modes of the category of relation. Though Renouvier thought the Kantian philosophy 'practically bent upon the ruin of the person,' yet, for him, 'no objective representation' could be 'more than *subjectively* objective'; and we have merely ideas aroused in us by the presence of objects or bodies, but no real perception of bodies in themselves. Renouvier allowed his system to become rather fanciful and composite, and somewhat heterogeneous in its answers. Critical and suggestive though his theory was in parts, its mixed character keeps it from being satisfactory.

3. Further criticism of Neo-Kantism.—In addition to the critical references in the course of this article, some further explicit criticism of Neo-Kantism may now be made. One thing that must be put to its credit is that, in severe comparisons with extreme idealistic systems, it has wonderfully maintained its inner force and its external efficacy. It is the abiding merit of Neo-Kantism to have re-discovered, amid the growing heaps of system, the most valuable ideas of the critical philosophy, and to have elaborated them in new and fruitful ways. But it was obviously wrong in thinking to derive all from Kant, and to ignore influences that came from Lessing, Herder, Goethe, Schiller, and others. As we have seen, one result, in Germany, of the Neo-Kantist movement has been a plethora of epistemological theories of the most divergent character, as exemplified in Cohen's criticism of knowledge, the philosophic criticism of Riehl, the immanent philosophy of Schuppe, and so forth. Naturally, the right of epistemological theory to build up a system of knowledge in its own strength, and without metaphysical presuppositions, has been keenly disputed. The bankruptcy of epistemological theory has at times been proclaimed by those who have fallen back upon metaphysics. As might be expected, the results are as diverse as the methods, and range from extreme phenomenalism to extreme realism. It cannot be said that

attempts at harmonization have proved more than vain. The root-trouble of Neo-Kantism lies in its point of departure. That consists of an unhistorical mode of thinking, which, rejoicing in its isolation and its alleged freedom from dogmatic dependence, corrects Kant, in spite of itself, in all the diversified forms of Neo-Kantist thinking. It is thus manifest that its isolated critical mode does not come near objective and universal validity. Neo-Kantism has been styled 'Half-Kantism,' on the ground that Lange rejected the whole practical philosophy of Kant, while Paulsen held to the very half which Lange spurned. Certainly the Neo-Kantists have shown a somewhat irrational leaning to the negative side of Kant, with the unspiritual and mechanical world-view attaching thereto. Wundt has opposed Neo-Kantist separation of science and metaphysics. Cohen and some others do not seem sufficiently to realize that Kant, in his *Critique of Pure Reason*, sought for experience a basis that should include physics and psychology. It seems clear that, in Neo-Kantism, the meaning of inner experience has not been at all sufficiently determined. Not less certain does it appear that the critical materialism, or idealistic naturalism, of much Neo-Kantism is too uncritical of the mind's part in relation to the knowledge given in science. If philosophy is to be critical, it must recognize the reality of matter to lie, for us, not apart from consciousness—this, without impairing the epistemological fact that the object, when given, wakes a conviction of extra-mental reality. Our knowledge implicates existence or reality beyond knowledge. The cognitive subject cannot fail to recognize that that of which he has knowledge exists without him, and cannot possibly be one with his own mental state. But, although the object is so important to many characteristic Neo-Kantists, it seems that, when subject and object come together, the Neo-Kantists fail to do justice to the part played in knowledge by the combining self-active subject. For the object exists but for this conscious subject—its necessary correlate, so far as knowledge is concerned. It must be said that the facts of the relation subsisting between psychology and transcendentalism have still been too little explicated by Neo-Kantism. The transcendental categories, it should be observed, are not deduced from psychological concepts. Rather is it the case that psychological ideas are here viewed from a transcendental standpoint. When Neo-Kantists have turned from the empirical to the rational—Cohen and Volkelt are examples—the influence of Hegel, rather than of Kant, has been apparent, in spite of Cohen's express repudiation of Hegel. Both Hegel and Cohen build up all-spanning thought-worlds, and they can be compared through the range of categories employed by them. In keeping with this, Kinkel insists that thought must have no source or origin outside itself, and Natorp proclaims facts to be not given, or attainable, by empiric knowledge in any absolute sense; so that we are brought at length to a doctrine of absolute relativity. In fine, Neo-Kantism lands itself in an unfortunate dilemma. For it says, practically, that we know that there is infinite knowledge, and that there are ideas, but that we, with our finite, discursive thought, can never reach them—the serious practical result of which would seem to be that object and knowledge, form and content, being-in-itself and culture-consciousness, never do, in Neo-Kantism, come together in their proper mode or relation of hanging all together, at least never in such a way as to meet the demands of philosophical requirement. What Neo-Kantism has increasingly evidenced itself, as a system, to be is a *Kulturphilosophie*, having its acme in the idea of humanity.

JAMES LINDSAY.

NEO-PLATONISM.—I. Precursors of Neo-Platonism.—The philosophy of Plato, and even that of his independent disciple Aristotle, was a kind of splendid digression from the main current of Greek speculation. Plato's was a many-sided nature. He is by turns sceptical and mystical, constructive and analytical, a socialist and a conservative. But at bottom he is a pessimistic aristocrat, who can find little to admire or hope for in the spirit of his age. Many of his ideas could be realized only under a theocracy such as the Roman Catholic Church attempted to establish in the Middle Ages, so that Nietzsche was not wholly wrong in calling him a Christian before Christ. The evolution of thought in his own mind was a curious foreshadowing of what happened at last to his school. His growing sympathy with Orphic and Pythagorean teachings, the devoutness and solemnity of his later attitude towards religion, the ethical rigorism of his old age, with its strongly marked ascetic tendency, his interest in oracles and demons, and the momentary appearance of an 'evil soul' in the *Timæus*, all pointed the way which Platonism was much later to follow. Loyalty to their master was always a tradition of the Platonic school; but his disciples were not content with mere commentatorship, like many of the Peripatetics, and they often diverged from their founder more widely than they knew. The members of the older Academy Pythagoreanized still further than Plato had done, laying stress on the lore of numbers, and dropping the 'doctrine of ideas,' which they could not understand. After a time they grew tired of number-mysticism, and concentrated their attention upon religion and ethics. Plato's idealism now fell into the background, and a speculation, at once arid and timorous, on epistemology led the school, under Arcesilaus and Carneades, to deny the possibility of knowledge, asserting that probability is enough for practical purposes. The 'New Academy' followed, given up to quibbling disputations about the grounds of probable belief. A period of frank eclecticism ensued. Greek thought was now entering upon a long period of comparative barrenness, which lasted from the early part of the 3rd cent. B.C. to the rise of Neo-Platonism. Such movement as there was in the Platonic school was away from scepticism and towards mysticism. The New Academy, in despair of metaphysics, had referred men to practical utility as a test of truth; and it became again necessary to ask what is the end to which action should be directed in order to be useful. Since dialectic was discredited, the only source of illumina-

tion could be the inner light. The school now taught that truth is given intuitively to the mind. Thus Platonism tended to become a philosophy of revelation, and scepticism (in spite of an attempt to revive it by Aenesidemus) passed out of the Platonic tradition. By teaching that the supersensual alone is real, and divine illumination alone blessed, the school returned, though with a difference, to the position of Plato himself. The whole influence of the school was now on the side of belief and piety.

But the cradle of Neo-Platonism was not the quiet university town of Athens, but the great manufacturing city of Alexandria. From the time when the Alexandrian school rose into prominence, the official Academy, with its professor—the Diadochus, as he was called—at Athens, fell into insignificance, until, near the beginning of the 5th cent., the Academy was captured by the school of Plotinus, or rather of Iamblichus, and remained Neo-Platonic till the edict of Justinian in 529 closed the series of Platonic professors who had taught at Athens for 800 years. It is to be noted that Plotinus, Porphyry, and Iamblichus wished to be called Platonists, not Academicians. It is well known that Alexandria was at this time not only a great intellectual centre, but the place where, above all others, East and West rubbed shoulders. The wisdom of Asia was undoubtedly in high repute about this time. Philostratus expresses the highest veneration for the learning of the Indians; Apollonius of Tyana went to India to consult the Brahmins; Plotinus himself accompanied the Roman army to Persia in the hope of gathering wisdom while his comrades searched for booty; and the Christian Clement has heard of Buddha (*Βουττα*). It is, therefore, natural that many modern scholars have looked for Oriental influence in Neo-Platonism, and have even represented it as a fusion of European and Asiatic philosophy. But, though the influence of the East upon the West was undoubtedly great during the decline of the Western Empire, it is not necessary to derive any Neo-Platonic doctrines from a non-European source. Neo-Platonism is a legitimate development of Greek thought, and of Plato's own speculations. In some ways it might even be said that Plato is more Oriental than Plotinus. It is another question whether Neo-Platonism was influenced in any way by the Jewish Alexandrian school, which is known to us through the writings of Philo. The resemblances between the Essenes and the Neo-Pythagoreans, and between Philo and Plotinus, are so striking that many have thought it impossible to deny a direct dependence. But it is more probable that the Greek and the Jewish Alexandrian schools developed side by side under parallel influences. Philo does not seem to have been much read by the educated pagans, who had strong prejudices against the Jews.

The Pythagorean school, as a philosophy, disappears from view in the 4th cent. B.C. But as a religious society, in connexion with the so-called Orphic rule, it was full of life. The Pythagoreans practised the simple life on a diet of vegetables and water. About 100 B.C. they produced a number of pseudonymous treatises, among them the metrical maxims called the 'Golden Verses of Pythagoras.' They taught that the Monad is the beginning of all things. From the Monad came the 'Indefinite Dyad,' and from the Dyad the other numbers, and geometrical quantities. The soul is divided into three parts (*νοῦς, θυμός, σπέρμα*), of which the first alone is immortal. The space between earth and heaven is filled by invisible spirits, who may be induced to foretell the future and give advice. The world is a living rational being, of which the animating principle is heat. As centres of heat the sun and stars are gods. For a time the

school or sect languished, at least in Rome, where, Seneca says, they could not find a professor to teach them (*Nat. Quest.* VII. xxxii. 2). But at Alexandria there was a strong revival. Neo-Pythagoreanism was consciously eclectic; it tried to fuse together the systems of Plato, Aristotle, and the Stoa, consecrating the whole under the name of Pythagoras, whose doctrines, they maintained, had come down to them by oral tradition. They did not discard the number-mysticism of the older school, but gave it a deeper metaphysical meaning. The Monad became the ultimate ground of all good and of all the order of the universe. The Dyad, on the contrary, was the ground of all imperfection and disorder. The Monad was the sign of the Godhead, of spirit and form; the Dyad of 'matter.' They acknowledged a plurality of subordinate gods, and deified the heavenly bodies. They taught that God is both immanent and transcendent, thus attempting to reconcile Stoicism with Platonism. The rift between God and the world was partly closed by the idea of a World-Soul, which vaguely embraced Stoic, Aristotelian, and Platonic conceptions. The phenomenal world is unsubstantial and constantly changing. It derives all the reality which it possesses from the Divine Ideas. But here came in the fantastic lore of numbers. Arithmetical symbols were converted into creative types of objects, and certain numbers, especially 3, 4, and 10, had a special sanctity. In their theory of knowledge they followed Plato. There are four kinds of knowledge, with corresponding faculties: (1) *νόσ* (*νόσις*), spiritual perception, (2) *διάνοια*, discursive reason, which produces *ἐπιστήμη*, science, (3) *δόξα*, opinion, which draws inferences from sensuous perception, (4) *αἴσθησις*, sensuous perception. As regards the fate of the world, they taught that the universe is eternal, and the human soul imperishable. The soul is a microcosm, with affinities to every grade of existence. They believed in transmigration. The Neo-Pythagoreans were strict vegetarians, and celibates, at least as a counsel of perfection. The 'Pythagorean life' was a recognized and standardized discipline. The Life of Apollonius, the typical Neo-Pythagorean saint, represents him as an ascetic, a model of piety and devotion. He wore only linen clothes, abhorred bloody sacrifices, and kept holy silence for five years. He had miraculous powers; he cast out devils and raised the dead.

The syncretizing tendency of the age is strongly marked in Plutarch and Maximus of Tyre. The former accepts the notion of an evil World-Soul, developing the suggestion in Plato's *Timæus*. But he is no Manichæan; evil, for him, needs only supplementing and redistributing to make it good. More important than either of these, as a precursor of Neo-Platonism, is Numenius of Apamea, who so far anticipated Plotinus that Amelius had to vindicate the originality of his master. Numenius wished to go back to Plato and Pythagoras, but also to sweep into his net the wisdom of the East, including even Judaism. He gathered together the crowd of inferior gods to whom Plato had entrusted the creation of the world, into a single Demiurge, with attributes like those of the Christian-Alexandrian Logos. The Godhead above the Demiurge he calls in so many words a *roi faînéant* (*βασιλεὺς ἀργός*, Eus. *Præp. Evang.* XI. xviii. 4). The world is 'a third God'; so that Numenius gives us a Trinity of unequal Persons. The immediate teacher of Plotinus was Ammonius Saccas, who is said to have been at one time a Christian. Next to nothing is known of his doctrines, which were not committed to writing; but Plotinus, on first hearing him, exclaimed, 'This is the man I was looking for' (*τοῦτον ἐζητούην*), and remained his disciple and friend as long as he lived in Egypt.

2. Plotinus.—Plotinus was not by intention an eclectic. It was no part of his scheme to combine the systems of Plato, Aristotle, and the Stoics. He considered himself a Platonist, and indeed a conservative Platonist. His reverence for antiquity, which was part of the spirit of the 3rd cent., when creative genius was at a low ebb, made him chary of finding errors in any of 'the ancient philosophers of blessed memory' (*οἱ ἀρχαῖοι καὶ μακάριοι φιλόσοφοι*, *Enn.* III. vii. 1), and he tried to represent their divergent views as no more than superficial differences. But to Plato alone he allows plenary inspiration. He will not admit that he ever deserts his master's teaching. Again and again we find such protestations as these:

'This doctrine is not new; it was professed from the most ancient times, though without being developed explicitly; we wish only to be interpreters of the ancient sages, and to show by the evidence of Plato himself that they had the same opinions as ourselves' (*ib.* v. i. 8).

He even maintains that his three hypostases, the One, spirit, and soul, are to be found, not merely in Plato, but in Parmenides, Heraclitus, Anaxagoras, and Empedocles (*ib.*). Pythagoras, next to Plato, is treated with most reverence, though Plotinus does not really owe very much to this school, except through the Platonic tradition. Aristotle is treated with more freedom; he frankly criticizes the Aristotelian categories. In reality, however, he borrows a great deal from him—especially the fundamental conceptions of *δύναμις* and *ἐνέργεια*, which are of vital importance in Neo-Platonism. The world of Ideas is really alive for Plotinus; each Idea is an *ἐνέργεια*. It is an original type of a definite individual: thus the Ideas have an independence which they have not in Plato. In psychology too there are important unacknowledged debts to Aristotle. It might even be maintained that Plotinus knew and understood Aristotle better than Plato, though he names him only four times. To his successors Plotinus seemed to have achieved in principle the unification of these two great philosophies, a task which was avowedly set before themselves by Porphyry, Iamblichus, and other Neo-Platonists down to and including Boëthius. To Stoicism the attitude of Plotinus is in the main hostile, since it is one of his main objects to combat materialism in all its forms. Yet he owes to the Stoics, in part, his dynamic pantheism—the doctrine that the living forces of the Deity permeate all nature; and the somewhat enigmatic part played in his system by *λόγοι* and *πνεῦμα* shows Stoical influence. He sums up his quarrel with Stoicism in *Enn.* IV. vii., where he says that it is a radical mistake to explain the higher by the lower, and to suppose that the merely potential can of itself develop activity.

The life of Plotinus extended from about 205 to 270, the exact dates being uncertain. He is said by Eunapius and Suidas to have been born at Lycopolis in Egypt. At the age of 27 he became a student of philosophy at Alexandria, and attached himself to Ammonius, whose lectures he attended for eleven years. At the end of this time he left Alexandria, and accompanied the emperor Gordian on his ill-starred expedition against Persia, his object being to gain a personal acquaintance with the philosophers of the East. Gordian was murdered during the campaign, and Plotinus with difficulty made his way back to Antioch. Soon after, he took up his abode in Rome, where he lived for the rest of his life. His mode of living is described by his disciple Porphyry as the ideal of the philosophic character. He had numerous pupils, of both sexes and all ages, to whom he

p. 187), his school room. It was not write. His confer-

ences were attended by several prominent men, such as the senator Rogatianus, whom he persuaded to renounce his worldly possessions and retire from public life. The emperor Gallienus and his wife Salonina had a great admiration for him, and even promised to help in a wild scheme to found a city on a deserted and probably malarious site in Campania, to be constituted on the model of Plato's Republic. Fortunately the idea was abandoned. In spite of this aberration, Plotinus was a good man of business, and was in request as a guardian and trustee of young orphans of the upper class. He also came forward as a peace-maker, and had no enemies, except among rival philosophers,

one of whom, Porphyry says, tried in vain to bewitch him by sorcery. He lived an ascetic life, eating no meat and sleeping but little. He died at the age of 66, after a long illness, at a country house near Minturnæ. His friend, the physician Eustochius, heard his last words: 'I was waiting for you, before the divine principle in me departs to unite itself with the divine in the universe.' In such a busy life, we might suppose that prayer and meditation could find but little place. But it was not so. Plotinus would often spend whole nights in 'the prayer of quiet.' In the words of Proclus, the greatest of his successors, his soul, which he had always kept pure, took flight towards the divine principle, prayed to it, and adored it. He had always endeavoured to raise himself above the stormy waves of this brutal life, which is nourished on flesh and blood. It is thus that this divine man, whose thoughts were always turned to the supreme God and the unseen world, merited the privilege of beholding several times the immediate presence of the Godhead, who has neither sensible nor intelligible form, since He is exalted above intelligence and being itself. (This is the beatific vision of all the mystics. Plotinus enjoyed it four times during the six years when Porphyry lived with him.)

The *Enneads*, edited by Porphyry, are mere lecture-notes, which Porphyry found as an unsorted heap of almost illegible MS; for Plotinus had weak eyes, and never cared to work up his lectures in literary form. Porphyry did his best to arrange his material according to subject, disregarding the date of composition. He was less wise in dividing it into six books, each containing nine chapters—a fanciful arrangement dictated only by respect for the 'sacred numbers.' Even the younger members of the Neo-Platonic school, who almost worshipped the memory of Plotinus, groaned over the obscurity of his style and the chaotic condition of his writings. 'Enigmatic,' 'harsh and unintelligible,' 'scattered and disorderly,' such are the criticisms of men who regarded his wisdom as almost superhuman. The modern reader will not differ from them. There is no harder Greek than the *Enneads*, because it is bad Greek. The author, writing notes to refresh his memory in lecturing, has no mercy on his readers. There are passages of noble sublimity, of tender charm, of lofty devotion, in the *Enneads*, which delight as well as instruct the reader; but on the whole it is probable that no great teacher has placed so many obstacles in the way of his own popularity as this devotee of the ever-charming Plato. Modern historians of philosophy have generally shirked the trouble of reading him—with the result that more blunders are current about this philosophy than about any other system, ancient or modern. Critics have merely copied each other's remarks about him.

Plotinus sets himself to overthrow three enemies of the true philosophy—materialism, scepticism, and dualism. These are the three errors which, in his opinion, it is most necessary to confute. Those critics who have found in Plotinus himself a philosophy of dualism have misunderstood him from top to bottom. Popularized Platonism often takes a dualistic form; but neither in Plato nor in Plotinus is there any justification for the notion that there are two world-principles and two worlds. In the case of Plato, this error has been exposed satisfactorily by Bernard Bosanquet (*The Principle of Individuality and Value*, London, 1912, p. 8).

Plotinus, then, in opposition to these heresies, maintains that reality is spiritual, knowable, and single. There are two fundamental trinities in his system. One is the trinity of divine principles, consisting of the Absolute or Godhead, which he calls indifferently the One and the Good, spirit (this is by far the best English word for *νοῦς*, which is commonly rendered 'intellect' or 'intelligence'), and soul. The other is the tripartite division of man into spirit, soul, and body. This triadic schematism was almost obligatory on a Greek philosopher. Three is the perfect number; its continual recurrence in all mental processes, particularly in the syllogism, led to an almost superstitious reverence for this symbol. But there is nothing forced or arbitrary in either of these triplets in Plotinus;

the dominance of the triad is much more marked in Proclus, as it is in Hegel. Besides (and this is a most important point), Plotinus wishes to draw no hard boundary-lines across the field of experience, whether physical, psychical, or spiritual. His map of the world is covered with contour-lines, which, as in the designs of modern cartographers, are understood to indicate not chasms but gradual slopes. He draws a ladder and gives names to the rungs; but the reality, he wishes us to understand, is much more like an inclined plane. This is eminently true of the three divine principles; it is not less the key to his anthropology.

In their objective aspects body, soul, and spirit are respectively the world as perceived by the senses (*κόσμος αἰσθητός*), the world interpreted by the soul as a spatial and temporal order, and the spiritual world (*κόσμος νοητός*). The organs which perceive the world under these three aspects are the bodily senses, the discursive reason (*διδόνα*), and spiritual perception or intuitive knowledge (*νόησις*). It is only when we exercise the last—the highest faculty of our nature, a power 'which all possess but few use'—that we are ourselves completely real and in contact with reality. This reality is neither an independently existing external universe nor a subjective construction thrown off by the mind. It is constituted by the unity in duality of the spiritual faculty and the spiritual world which it beholds in exercising its self-consciousness. Spirit and the spiritual world imply and involve each other; neither has any existence apart from its correlative. If the spiritual world may be called the self-externalization of spirit, spirit may with equal propriety be called the self-consciousness of the spiritual world. Plotinus is not an idealist in the modern, post-Kantian sense, though he argued against Longinus that 'the spiritual world is not outside spirit' (*οὐκ ἔξω τοῦ τὰ νοητά*). In saying this, he did not mean that all reality is mental, or that apparently external objects are created by the mind which perceives them; he only meant to deny one interpretation of Plato's Ideas—that which made them independently existing entities, which the mind contemplates as something other than itself. The *νοητά* are not outside *νοῦς*; but they are certainly not created by *νοῦς*.

Reality was conceived by Stoics and Epicureans alike as body itself, or as a quality or relation of body. As against these schools, Plotinus sees the issue more clearly than any previous thinker. Neither Cicero nor Plutarch ever calls the Stoics and Epicureans materialists. It is to Plotinus more than to any other philosopher that we owe the first clear doctrine of spiritual existence. His refutation of materialism is still valuable. The Stoics, he says, ascribe to matter (*ὄλη*) properties which cannot belong to it. Matter is really a mere abstraction; it is the bare receptacle of forms, the subject of energy, viewed by abstraction as subsisting apart from the energy which alone gives it meaning and existence. Plotinus's 'matter' is not material; it is not to be confounded with the ponderable stuff to which science gives the same name, and which it is now engaged in subdividing till it seems on the point of being sublimated into the subject of electrical energy—a strange approximation to Plotinus's own view. Matter is that intangible, impalpable all-but-nothing which remains when we subtract from an object of thought all that makes it a possible object of thought. This is quite clearly the Neo-Platonic doctrine about matter. It is immaterial; it is a mere abstraction; we arrive at it only by thinking away all that makes consciousness of an object possible. And yet it is commonly said, and not without some excuse, that 'matter' is in this philosophy the principle of evil. The difficulty is

a real one. It raises the question of the interrelation of the two hierarchies—that of existence and that of value. Plotinus has disposed of the claim of matter to possess substantial reality (*ὁλβία*). But the word 'evil' at once introduces another scale—that of value. The existential problem has, strictly speaking, nothing to do with values. An 'appearance,' as opposed to 'reality' (*ὁλβία*), is a partial presentation of reality which needs to be enlarged or harmonized in order to make it a true presentation. It is false if it claims to be a presentation of fact in all its relations, whereas in truth it ignores some of those relations. It is an error to mistake appearance for reality; e.g., it is an error to regard the world of sense as an objective, self-existing cosmos. This error may be the cause of moral fault; but there is nothing evil about the appearance itself. A shadow has its place in the order of the world, as well as the substance which casts it. It is, however, impossible to confine ourselves to the purely existential aspect of things. It is impossible for the biologist, e.g., to avoid using such words as 'degeneration,' 'survival of the fittest,' which imply an ethical or qualitative measurement. Only in pure mathematics are value-judgments excluded. Qualitative estimates are based on fact not less than quantitative, but they give us a different standard and different results, so that we are threatened with an intractable dualism. For Plotinus it is an article of faith that the hierarchies of existence and of value must ultimately be found to correspond, so that the class which has the lowest degree of reality in the existential scale must have the lowest degree of value in the ethical scale. But there is one important difference between the two series. In the scale of existence there are no minus signs; the all-but-non-existent occupies the lowest rung of the ladder. But in the scale of values we have to register temperatures below zero. There are many facts, and some persons, of whom we may say that it would have been better if they had not come into existence. The moral standard, therefore, is essentially dualistic, the existential monistic. We may either force the two schemes into harmony by investing 'matter' or 'flesh' with evil characteristics, in which case we have accepted metaphysical dualism, or retain monistic views by holding that the opposition between good and evil is only relative. The minus signs disappear, from the standpoint of the Absolute. The latter is the solution towards which Plotinus inclines; but he is too conscious of the positive obstacles which impede morality to be satisfied with a theory which makes evil a mere defect in the penetration of matter by spirit or soul. His utterances on the problem of evil cannot all be reconciled. But his deepest view is that matter is the absence of order which when isolated by abstract thought becomes the foe of order. In arguing against Stoical materialism, he sometimes uses 'matter' in the Stoical sense instead of his own, meeting his opponents on their own ground. But Zeller is quite wrong in saying that Plotinus makes matter the evil principle. Matter is 'potentially all things'; 'it is what it may become'; it is the necessary condition of all good. There is such a thing as 'divine matter' (*θελα ὄλη*), which is enriched and glorified by the spirit poured into it, so that it has a place in the eternal world. Here below, matter remains 'a decked out corpse,' because form and substratum are to some extent held apart; 'yonder,' matter too is delivered from the bondage of corruption. In heaven form and matter are 'one illuminated reality' (*μία ὁλβία πεφωτισμένη*). Evil, for Plotinus, is not a negation posited in the Absolute; the necessary tension belongs only to the world of becoming. Friction

and conflict belong to the world of soul, which is also the world of will; they are a condition of the actualizing of reality on that plane, but not in the realms above. When he is asked why strife and friction exist, even in this imperfect world, he can only say, 'It had to be.' Necessity is to Plotinus a part of the ontological argument. It belongs to the inner nature of goodness that it should create in the fullest and freest manner; and this creation is not a reduplication of a perfection which cannot be measured quantitatively, but the production of a hierarchy exemplifying every possible grade of existence and value. These hierarchies are also immediate data of experience, so that they cannot be explained from outside. They are the foundations on which philosophy has to build.

But now arises an epistemological difficulty. Reality is constituted by the trinity in unity of the perceiving spirit (*vous*), the spiritual world (*τὰ νοητά*), and the spiritual perception (*νόησις*) which unites subject and object in one. Reality is thought, thing, and the relation of identity between them. This correspondence and mutual dependence of subject and object holds good all down the scale. Like alone sees like. How then do we come by the 'false opinions' which invest matter with a spurious substantiality? There is, Plotinus says, an element of indeterminateness in the soul, which apprehends the indeterminate, matter. This half-blinded spiritual faculty, this clouded perception, this shapeless object, all 'desire' to rise together into a clearer light where they will be transformed. Our average life is lived on the middle level of the soul's activities, the organ of which is discursive reason (*διάνοια*). But, when the soul gives itself humbly as 'matter' for spirit, it is raised up to the higher sphere of life 'yonder,' in the spiritual world. The world of appearance may be described either as the real world seen through a glass darkly or as an actual but imperfect copy of a perfect original. The real-idealism of Plotinus holds these two views together. 'A feeble contemplation makes a feeble object of contemplation.' The world of appearance shows us a diversity which exists by the side of unity, instead of the concrete unity of spirit; mutual exclusion as the mark of differentiation, instead of the mutual inclusion or compenetration which exists in the spiritual world; strife and opposition in the place of harmony; time in the place of eternity; perpetual flux and change in the place of the unchanging activity of spirit. 'Sensible reality' (*ἡ ἐνταῦθα οὐκ ἀνύπνοος οὐσία*) is but a shadow of true reality. The sensible world is a reflexion of the eternal world in the mirror of matter.

The sensible world is the creation of the universal soul, through the medium of nature, which is its moving power. Nature is the active faculty of the universal soul, its outer life, the expansion and expression of its being, that without which it would be shut up in itself. Nature is sleeping spirit. All its activity comes from soul; it casts upon matter a reflexion of the forms which it has received from above. On nature's methods Plotinus says:

'If anyone were to demand of nature why it produces, it would answer, if it were willing to listen and speak: You should not ask questions, but understand, keeping silence as I keep silence; for I am not in the habit of talking. What ought you to understand? In the first place, that which is produced is the work of my silent contemplation, a contemplation produced by my nature; for being born myself of contemplation I am naturally contemplative, and that which contemplates in me
proc
figu-
but
the forms of bodies. I preserve the disposition of my mother the universal soul, and of the principles which produced me (the creative Logos). They too were born of contemplation, and I was born in the same way' (*Enn.* iii. viii.).

By contemplation Plotinus means attention directed to that which is above ourselves in the scale of reality and value. All creative activity is the (in a sense) unconscious result of this steady devotion to what is higher than ourselves. We always create after some pattern in a higher sphere; and the whole world, thus produced, is an image of the mind and thought of God. Foot-prints (*ἑρμῆ*) of the universal soul, and of spirit itself, are to be found everywhere.

Extension (*τόπος*) is the necessary form which results from the inability of matter to receive all forms without dividing and separating them. The purely indeterminate is spaceless; extension is given to it by the soul. Leibniz was only partially right in calling space the form of co-existence; for co-existence can be conceived, though not pictured, non-spatially. It is also the form of the whole and part relation; of the inclusion of one thing by another. Again, it is the form under which we recognize near and far, and so infer the reality of the unseen and unexperienced. The external world can teach us much about ultimate truth. Plotinus mentions especially order and limit (*τάξις* and *πέρας*) as the chief lessons of natural science. But he insists strongly on the reflexions of the divine beauty which we find in the visible world. His quarrel with the half-Christian Gnostics—the most vigorous polemic in the *Enneads*—is mainly on the ground that they despise this beautiful world and regard it as evil. 'All things that are in heaven (*ἐκεῖ*) are also on earth,' he says in a passage which should have saved some of his critics from many blunders (*Enn.* v. ix. 13).

Plotinus is well aware that time is one of the hardest problems in metaphysics. He does not claim to throw any new light upon it. Time, the moving image of eternity, arose through the desire of the soul of the world to exert its powers. Time is the form which the soul creates for itself when it desires to reproduce the eternal ideas as living activities. In the vulgar sense, time is as everlasting as eternity; it never began and will never end. It is 'the activity of an eternal soul not turned towards itself nor within itself, but exercised in generation and creation' (*Enn.* iii. vii. 12). This view of time implies teleology. Time is essentially the interval between the inception and completion of creative purpose. Causation is a teleological category, and belongs exclusively to psychical life, or to physical life as determined once for all by a first cause. If the world were merely a mechanism, there would be no causation, but only invariable sequence. Causation, in fact, is what Bergson calls creative evolution, and it requires *la durée*, as he says. But Bergson does not succeed in proving that psychical evolution, in 'real time,' is irreversible or unpredictable. He only makes it discontinuous, whether we read it forwards or backwards. It is unpredictable, not absolutely, but only by the laws which govern inorganic matter. Creative evolution may be the orderly development of psychical or spiritual laws. If so, his argument for contingency falls to the ground. For Plotinus, every distinct idea 'yonder' becomes a finite purpose 'here.' Every attribute of God's essence becomes an activity of His existence. The time-process is not the necessary form of the self-evolution of God; it is the product of His free but necessary creative activity. Nor is there any radical difference between the laws which regulate organic and inorganic objects. The same spirit which slumbers in the stone and dreams in the flower awakes in the human soul. Time then is not merely the measure of the impermanence of the imperfect. It is, in his careful definition, the measure of definite finite activity directed to some end from which it is quite distinct

(*Enn.* vi. i. 16). What is real in time is the potentiality of qualitative change. 'Movement of itself does not need time.' From the point of view of practical religion it makes a great difference whether we regard the phenomenal world as a polarization of changeless reality, or whether we hold that its being is radically teleological. The former view, when developed logically and held exclusively, leads to the vacuous existence of the Indian contemplative, the latter to the vulgar conception of eternal life as survival in time, and to the brutal activity of the western man, with whom, as Bosanquet says (*The Value and Destiny of the Individual*, London, 1913, p. 295), reliance on the future has become a disease. Plotinus tries to combine the truth in both; but he shows no interest in the larger life of nations, which may justly be regarded as representing unitary thoughts and purposes in the mind of God. His view of the fate of the world is nevertheless vastly superior to those dreams of perpetual progress which, in spite of their scientific absurdity, are so popular among ourselves. The world-order, according to Plotinus, evolves regularly till the end of an astronomical cycle, when the whole process is repeated. Thus the history of the universe consists of a number of vast but not infinite schemes, each of which has a beginning and an end. An infinite purpose is, as he sees, a contradiction in terms. We must find consolation for the inevitable disappearance of our species by remembering that in the eternal world all values are preserved intact.

The relation of the world 'here below' to the world 'yonder' has been completely misunderstood by most critics of Neo-Platonism. There is only one real world, the *κόσμος νοητός*. The kingdom of *οὐρα* includes soul, but nothing lower than soul. The half-real phenomenal world is a necessary product of soul, and without it the divine principles would not be what they are; for

'It is necessary that each principle should give of itself to another. The Good would not be the Good, nor Spirit Spirit, nor Soul Soul, if nothing lived dependent on the first life' (*Enn.* ii. ix. 3).

Thus every grade of being is bound in 'a golden chain about the feet of God.' All divine creativeness is what philosophers call transeunt or transitive activity. The higher does not need the lower; God does not need the world. The necessity of the world lies in the inner nature of all which derives its being from the One who is also the Good. Proclus (who, of course, must be used with caution as an interpreter of Plotinus) says that God created the world by His goodness, His will, and His providence, a trinity in unity (*ἐνοειδὴς τριάς*) of motives. The soul descends into the phenomenal world because it wishes 'to imitate the providence of the gods.' It is, in a word, the character, not the essence, of God that calls the world into being. There are some thinkers who deny the possibility of transitive activity. But this is to destroy, not merely Platonism, but all theism. If God is transcendent at all, part of His activity must be transitive. The analogy of mechanical laws need not frighten us. As soon as we reach the domain of *οὐρα*, we deal with values which are increased by sharing, with forces which 'operate unspent.'

The world of sense, then, is created by soul after the pattern of spirit. It is a construction of superficial experience, a rough-and-ready synthesis based on imperfect data. It is not identical with the world as known to natural science. The latter is an attempt to interpret the universe by the exclusive use of quantitative categories. The world of common experience is quite different from this. It is a blurred and confused picture of the spiritual world, distorted by defects in the organ of perception, and split up by the very conditions of soul-

life. For all that, it is a great and glorious thing, a vision of the eternal verities. Plotinus replies indignantly to the Gnostic theory that the world was created through a lapse of the universal soul:

'We affirm that the soul created the world not because it looked downward but because it looked upward. In order to look downward, the soul must have forgotten the spiritual world. But if it had forgotten it, how could it create the world? Where could it find its pattern, except from what it saw yonder? But if it thought of the spiritual world while creating, it did not look downward at all. . . . We must not allow that the world is ill made because it contains much that is disagreeable. It is only an image of the spiritual world, but could there be a more beautiful image? . . . Do you think that the world as we see it is the world as it is? When we love a person, we love an image that belongs to him; if we love the father, we love the children for his sake. But every soul is a child of our Father in heaven. How can this world, with the divine powers which it contains, be separated from the spiritual world? Those who despise what is so nearly akin to the spiritual world, prove that they know nothing about the latter except in name' (*Enn.* ii. ix. 4).

The flaws which we justly observe in the world as we know it are themselves evidence that the soul has her true home in a higher sphere, above the discordance, change, and strife which are the conditions of spatial and temporal existence. What is most real in this world is that which most reflects the mind and purpose of that which called it into being. The only way to understand anything is to view it in relation to its source and goal in the sphere next above it. The 'nature' of anything is to be sought in its completed development.

The Third Person in the Neo-Platonic Trinity is not the aggregate of individual souls, but 'the soul of the all.' To this Plotinus assigns attributes which hardly distinguish it from spirit. It is exalted above space and time. It remains itself at rest while it illuminates the world and gives it life. It is not in the world; rather the world is in it, embraced by it and moulded by it. The individual soul can understand itself only by contemplating the universal soul. The passage in which Plotinus urges us to this holy quest is one of the finest in the *Enneads*, and it is familiar to thousands who have never read Plotinus, because it is closely imitated by Augustine in the most famous chapter of the *Confessions*:

'The soul ought first to examine its own nature to know whether it has the faculty of contemplating spiritual things, and whether it has indeed an eye wherewith to see them, and if it ought to embark on the quest. If the spiritual world is foreign to it, what is the use of trying? But if there is a kinship between us and it, we both can and ought to find it. First then let us consider that it is the universal soul which created all things, breathing into them the breath of life. . . . The soul sets them in their order and directs their motions, keeping itself apart from the things which it orders and moves and causes to live. The soul must be more honourable than they, since they are born and perish, as the soul grants them life and leaves them; but the soul lives for ever and never ceases to be itself. This great soul must be contemplated by another soul, itself no small thing, but one that makes itself worthy to contemplate the great soul by ridding itself of deceit and of all that bequiles common souls, through quiet recollection. For it let all be quiet; not only the body that encompasses it, and the tumult of the senses, but let all its environment be at peace. Let the earth be quiet, and the sea and air, and the heaven itself calm. Let it observe how the soul flows in from all sides into the resting world, pours into it, penetrates and illumines it. Even as the bright beams of the sun enlighten a dark cloud and give it a golden border, so the soul when it enters into the body of the heaven gives it life and immortality and awakens it from sleep. . . . The soul gives itself to every point in this vast body. . . . But itself is not divided; it does not split itself up in order to give life to each individual. All things live by the soul in its entirety; it is all present everywhere, like the Father which begat it, both in its unity and in its universality. The heaven, vast and various as it is, is one by the power of the soul, and by it is this universe of ours divine' (v. i. 2).

Individuality is always a difficult problem in systems like that of Plotinus. Individual souls are not parts of the universal soul. They are rather *λόγοι* (active principles) of spirits, corresponding to distinct Ideas 'yonder.' But in the spiritual world there is distinction without separation. The separateness and mutual externality of

souls in this world is a *πρόημα* of bodies, not of soul itself. In this world we find separation without disparity, and resemblance without unity; 'yonder' it is not so. And even here the soul never loses its correspondence with the universal soul, through which 'all souls are one.' Sympathy is as much a fact of experience as individuality, and bears witness to a real unity behind apparent separateness. Plotinus is anxious to preserve human individuality. 'Each individual must be himself' (*δεῖ ἕκαστον ἑκαστον εἶναι*); and each individual soul is 'an original cause' (*πρωτοπυρρὸς αἰτία*, *Enn.* III. i. 8). The soul 'is present' with the body, but not within it; it remains pure of all admixture, and is always itself.

Psychology of Plotinus.—Sensation (*αἰσθησις*) is not a passive impression made by external objects on the perceiving faculty. It is an activity—an *ἐνέργεια*, not a *πάθος*. The difference between sensations and spiritual perceptions (*νοήσεις*) is one of degree; sensations are dim *νοήσεις*. The mind is never dormant in perception; what we call perception is largely the work of imagination. The fact that we can perceive external objects at all is a proof of the 'faint sympathy' (*ἀμυδρὰ συμπάθεια*, IV. iv. 40) which pervades all nature, for we can be aware only of what is akin to ourselves.

Pleasure and pain are not pure sensations, since they are states of consciousness; and, on the other hand, they are not affections (*πάθη*) of the soul. They belong to 'the compound' (*τὸ σύνθετον*), i.e. to soul present to body, or body present to soul.

Memory and imagination, which in Plotinus are closely connected, belong to the discursive reason (*διάνοια*). Recollection (*ἀνάμνησις*) demands a higher kind of volitional and rational activity than memory (*μνήμη*), and is confined to man, while the lower animals possess some memory. Plotinus transforms Plato's *ἀνάμνησις* into a doctrine of innate ideas potentially present. The higher soul is by choice forgetful of all that is foreign to its true nature, but it *recovers* ideas which belong to an earlier and nobler state of existence, which have been forgotten here below. Memory is of images only; spiritual perception is first transformed into an image reflected in the mirror of the imagination, and memory is the faculty which grasps this image. We do not 'remember' *νοητά*, because we contemplate them as permanent activities of our higher self. There is no memory 'yonder'; for all spiritual perception is timeless (*ἄχροτος πάντα νόησις*, *Enn.* IV. iv. 1). Imagination (*φαντασία*), opinion (*δόξα*), and discursive thought all float between the spiritual and sensible worlds. Perception seizes the forms (*εἶδη*) of sensible objects. At the summit of this faculty, when the *αἰσθημα* becomes a purely mental representation, the faculty takes the name of *τὸ φανταστικόν* in presence of the object, of memory in its absence. Imagination is mid-way between sensation and reason; its higher state is the same as opinion. Porphyry makes the three faculties of knowledge to be sensation, imagination, and *νοῦς*, and says that neither sensation nor *νόησις* is possible without imagination. *Φαντασία*, it will be seen, is nearer *Vorstellung* than 'imagination,' and *φάντασμα* is what modern philosophy incorrectly (to a Platonist) calls an 'idea.' Some modern writers, notably Wordsworth, have given imagination a far more exalted place. The 'imagination,' which 'is reason in her most exalted mood,' is Plotinus's *νοεῖα φαντασία*. Even 'intellectual love,' which ushers spirit into the presence of the One, is for Wordsworth inseparable from imagination—a profound truth which is the key to the understanding of religious symbols generally. In the discursive

reason (*διάνοια*) the proper function of the soul is achieved. Self-consciousness belongs to it; the yet higher activities of the soul are not self-conscious. Plotinus does not regard self-consciousness as the highest of human powers. He has observed that we do things best when we are not thinking of ourselves as doing them; our organs remind us of their existence only when they are out of order. What we call consciousness of self is in truth consciousness of a contrasted not-self. There is a kind of unconsciousness in the highest experiences of the soul; our senses 'protest that they have seen nothing' (*Enn.* v. viii. 11); but we can no more doubt them than we can doubt our own existence. But discursive thought is only the polarized copy of *νόησις*. The soul, in knowing itself, 'knows that there is something better than itself'; it knows itself as another's (v. iii. 4 and 6). Plotinus purposely makes *νοῦς* and *διάνοια* overlap; discursive reason is never separated from *νόησις* at the one end, and creativeness (*ποίησις*) at the other. The realm of soul is 'the world of life' (*κόσμος ζωτικός*, identified with *ψυχὴ* by Proclus). Soul has *οὐσία*, but the soul-world is fully real only when it is taken as a whole, not as split up among individual *foci* of consciousness, and in time. There are three planes on which a man may live, and his rank in the scale of existence depends on the choice which he makes: he may live a purely external life, obeying his natural instincts, or he may live in obedience to his discursive reason, the life of an intelligent but unspiritual man, or he may, in rare instances, attain to 'the life of gods and godlike men,' the life of the spirit. The soul, as a microcosm, has affinities with every rung of the ladder which reaches from earth to heaven. These stages shade off into each other; Neo-Platonism knows of no rigid barrier-lines.

Before our birth, says Plotinus, we existed as pure souls and spirits, attached to the universal soul. Why do souls ever leave this happy state, and 'come down' to earth? This is a real crux of Neo-Platonism, and Plotinus, who always seems to be thinking aloud, does not conceal his perplexity about it. He throws out several suggestions which do not pretend to be consistent with each other. He has consulted Heraclitus, Empedocles, and Pythagoras without finding any clear answer to the question. Even the divine Plato does not always use the same language. How shall we reconcile his well-known words about the body being the cave, the prison, the tomb of the soul, and about the moulting of the soul's wings through contact with matter, with the doctrine of the *Timæus*, that the Creator sent soul into the world to make it the abode of spirit or intelligence, and with a view to its perfection? If we follow the *Timæus*, the soul is not to blame; 'we may care for that which is below us without ceasing to abide in the highest and best.' Plotinus shows us that he would like to follow the *Timæus*, not the *Phædrus*. But he characteristically tries to prove that both may be true. It is permissible to say that God sent the souls down to earth, for 'the operation of the highest principle, even though there are many stages between, can be traced down to the end of the process.' And yet the soul commits two faults, one in coming down, and the other in entering into bodies. It does so by choice, and because it desires to bring order into what is below. If it returns quickly, it has suffered no hurt; indeed it has put forth powers which would otherwise have remained latent. The soul *must* communicate its gifts, for all grades of reality and value must exist, down to the lowest degree possible. The soul learns its own good by the experience of contraries, though the strongest souls may understand evil without experience of it (IV. viii.). The

soul descends into the body prepared for it, as if summoned by a herald (IV. iii. 13). The soul has a desire to go forth and create according to what she has seen in the spiritual world (IV. vii.). The ascents and descents of the soul are necessary parts of the universal harmony (IV. iii. 12). Yet there is a danger lest the soul be 'deceived and bewitched' by the charm of sensuous being (IV. vi. 3). It beholds itself in the mirror of matter, and like Narcissus falls in love with the image and plunges in after it (IV. iii. 12). These last passages represent the real view of Plotinus. The local metaphors of ascent and descent must not mislead us. The soul does not sin by desiring to create after the eternal pattern in a lower sphere; it is entirely right and necessary that our world should exist; but, as soon as we forget that we are strangers and pilgrims here, sin begins. There is a want of firmness and consistency in the teaching of Plotinus on this subject; he is hampered partly by reverence for Plato, and partly by the very natural tendency to *Weltflucht* in a dismal and hopeless age; but his deeper thought is unquestionably that which most decisively excludes the Gnostic errors which he combats so strenuously.

Plotinus also asks, Can the soul itself sin? Does it 'descend entire,' or is there a divine nucleus at the heart of humanity, which can take no stain? Plotinus holds that there is, and he expresses this in spatial imagery by saying that 'part of the soul remains above.' This is his own theory, though he tries to father it on Plato. And it is most interesting to find that the later Neo-Platonists, in spite of their almost superstitious reverence for the 'most divine Plotinus,' frankly desert him here. Iamblichus, Proclus, Simplicius, and Priscian all maintain that the soul comes down entire; only Theodorus and Damascius follow Plotinus. Proclus, who is quite emancipated from the Platonic doctrine of *πτεροφόρησις*, makes the creation of the world an essential movement of spirit. The soul descends 'because it desires to imitate the providence of the gods. What nobler enterprise could it set itself than to hand on to other created beings the gifts which God has given to itself?' (Proclus, in *Timæum*, 338). It is plain that later Neo-Platonism is more willing to receive a true incarnational doctrine than Plotinus was. The soul may still be at home in heaven while it energizes with all its powers on earth. The more deeply it penetrates into the darkest recesses of nature, the more fully is it fulfilling its divine task. Heroic action and real struggle are proper to the divine life.

The soul, which exists in its own right, neither comes into being nor perishes. When separated from the body it no longer exercises its lower faculties, which are not extinguished by death, but remain *δυνάμει* only (*Enn.* III. iv. 6). Such faculties as opinion, reasoning, and memory are superfluous under the conditions of eternal life. Resurrection, he says pointedly, is an awakening from the body, not with the body (III. vi. 6). Discarnate souls help the universal soul to govern the world; their separate individuality is not lost, but latent (*οὐκ ἔστιν ἐνεργεῖα οὐδ' αὖ ἀπόλωλεν*, VI. iv. 16). And yet beatified spirits enjoy a happy communion with each other. Unrighteous souls are sent into other bodies, even the bodies of ignoble beasts, as a punishment. Chastisements are proportioned to offences by divine law (IV. iii. 24). A man's guardian angel (*δαίμων*) may also inflict chastisement on the disembodied soul (III. iv. 6). There is a higher and a lower soul. The higher soul cannot be lost, but we may, so to speak, lose it by identifying ourselves with lower interests. The soul of the bad man may be lost, but not the soul

which would have been his if he had not been a bad man. We are what we love and care about.

We now come to what for Neo-Platonism is the centre of the whole system—the spiritual world. It is here that we are to find the fully real and the completely true. This reality is neither thought nor thing, but the unity in duality of spirit (*νοῦς*) and the spiritual world (*νοητόν*). Plotinus is no idealist in the modern sense. 'Spirit, the whole of reality, and truth, are one nature' (III. ix. 3). 'Being, by being perceived, gives to Spirit perception and existence' (*τὸ δὲ ὅν τῷ νοεῖσθαι τῷ νῦν διδόν τὸ νοεῖν καὶ τὸ εἶναι*, V. i. 4). 'Spirit in beholding reality beheld itself, and in beholding entered into its proper activity, and this activity is itself' (V. iii. 5). Nor does reality consist in a relation: 'reality is that which is seen, not the act of seeing' (VI. ii. 8). *Νόησις* is the relation between *νοῦς* and *νοητόν*, but the two are identical, though not absolutely fused. 'Where Spirit energizes in itself, the objects of its activity are other spirits; but where it energizes outside itself, the soul' (VI. ii. 21). 'The *νοητόν* are many in one and one in many and all together' (VI. v. 5). Spirit 'wanders among realities' (*ἐν οὐσίαις πλανᾷται*) on 'the field of truth,' remaining always itself. Though it does not change, it is constantly active.

Plotinus has much to say about the categories of the spiritual world; but he is again hampered by Plato, who gives one set of categories in the *Philæbus* and another in the *Sophist*. In the spiritual world there are certain antinomies which cannot be reconciled in our ordinary experience, but which in a higher sphere are fully harmonized. These are—thought and its object; identity and difference; change and permanence. The discussion of these categories, which occupies a great deal of space in the *Enneads* (for he takes the opportunity of criticizing Aristotle at great length), has been very differently estimated by modern critics. To the present writer it seems disappointing. The subject-object relation is not on the same footing as change and permanence. The real attributes of the spiritual world are truth, beauty, and goodness, as Plotinus is well aware. In the spiritual world these are both fully realized and fully operative. He insists repeatedly that it is a *life* which he is describing, a state of intense activity which, as being unimpeded, may also be called rest. Some of the finest passages in the *Enneads* (e.g., V. i. 3, V. iii. 3, V. viii. 4, VI. vii. 31) describe with enthusiasm the glory of life in the eternal world.

The individual spirit is the same being as the individual soul, only transformed into the divine image and liberated from all baser elements. There is 'something unique' in every spirit; but it is no longer any bar to the most complete communion with all that is good, true, and beautiful in others. Spirits pass their existence in 'living contemplation' (*θεωρία ζῶσα*, III. viii. 8). In this state 'soul is the matter of Spirit' (III. ix. 3), which means that the self-transcendence of the soul is achieved by making itself the passive instrument of spirit. In knowing God, the spirit knows also itself; and the soul can have direct access to God—'there is nothing between.'

The whole philosophy of Plotinus is an ontology of moral, intellectual, and æsthetic values. The highest form in which reality can be known by spirits, who are themselves the roof and crown of things, is the general ideas of truth, beauty, and goodness, manifesting themselves in the myriad products of creative activity. These attributes of reality, which, so far as we know, constitute its entire substance, are spiritual; i.e. they belong to a sphere of unified existence which is neither subjective nor objective but constituted by the indis-

soluble unity in duality of subject and object. These three attributes are ultimates, in our experience. They cannot be fused, or even wholly harmonized. There is a kind of noetic parallelism between them.

We have now reached in our survey the last stage of the soul's upward journey, the absolute Godhead above existence, whom Plotinus calls the One or the Good. The spiritual world is the Neo-Platonic heaven, and the undivided spirit who is completely expressed in that world is the normal object of religious worship. But philosophy must distinguish between God and the Godhead. The God whom we worship is the revelation rather than the revealer, just as the personality that we know is the 'Me' rather than the 'I' who knows the Me. The source and goal of revelation cannot be revealed; the source and goal of knowledge cannot be known. The goal of the intellect is the One; the goal of the will is the Good; the goal of love and admiration is the Beautiful. Plotinus follows all three lines of ascent. The Absolute *must be*—this is the conclusion of the dialectic; it *ought to be*—this is the conclusion of ethics; it *is*—this is the discovery of the 'Spirit in love' (νοῦς ἐρῶν). The dialectical proof is that the idea of plurality implies that of unity, that of relativity an Absolute. The moral aspiration for the Good is assumed throughout the *Enneads*; it is regarded as too fundamental to need argument. Of the Beautiful he says that he who has not yet seen God desires Him as the Good; he who has seen Him adores Him as the Beautiful (I. vi. 7). It is true that he does not add τὸ καλόν as a third name of the Absolute. But he does not really subordinate Beauty to Truth and Goodness. Ultimately, they are one and the same. Since the One has no form, it is better, Plotinus says, to call Him Beauty than the Beautiful; he is 'the source and principle of all beauty, the power that is the flower of all the beautiful, the creator of beauty' (VI. vii. 8).

The Absolute is called by Plotinus the One. The Monad in Pythagorean arithmetic was not itself a number, but the source in which the whole nature of all numbers was gathered up and implicit. There is a sense in which unity and plurality are correlatives, so that we cannot have one without the other. In this sense the Absolute One is a contradiction. But for Plotinus the One is the transcendence of separability rather than of plurality. The One is 'beyond existence.' For Plato the Good had been within the circle of the Ideas; for Plotinus it is above them. He uses in speaking of the One the negative language familiar to all students of mysticism. The One is beyond existence, beyond spirit and life; he is in truth ineffable (ἄρρητον); whatever we deny of him we deny rightly; or rather we may speak of him if we add, 'yet not this but something higher.' Thus the Absolute does not think, and is not conscious; but he knows himself by a direct self-intuition (ἀπλῆ τῆς ἐπιβολῆς αὐτῷ πρὸς αὐτόν) and abides in a state of wakefulness (ἐγρήγορος) beyond being (V. iii. 13). In the Absolute knower and known coalesce so perfectly that no relation exists between them. The Absolute's knowledge of Himself is an ἀληθινὴ νόησις, though different from that of νοῦς. We must not attribute will to the One, but we may say 'he is what he willed to be, for he posited himself.'

If the One did not generate the spiritual world, its activity, says Plotinus, would have been dormant and hidden. The objection, 'How can multiplicity emanate from absolute unity?' is answered by boldly carrying the war into the enemy's country. 'Can you show any reason why the First Good should remain stationary in itself? Is it envious? Or is it impotent, though it is the source

and potentiality of all things?' (V. vi. 1). As a mere metaphor, he bids us think of the effluence of light from the sun, which loses nothing by shining. This is, as we now know, an unfortunate illustration; but it does not affect the argument, since, as has been urged, the law of the expenditure of energy does not hold good for spiritual existence. The One does not lose anything by creating spirit, but its power penetrates not only all the spiritual world, but the soul-world likewise, down to the lower confines of being. We must remember that there is no sharp division between the Absolute and spirit, nor between spirit and soul. Just as there is no obstacle to prevent soul from becoming spirit—'only then we call it no longer soul, but *our* Spirit'—so there is no barrier between spirit and the One. The chain is unbroken throughout. Indeed, he says once, quite clearly, that spirit is the self-consciousness of the Absolute. 'The One turned towards himself and looked, and this seeing is Spirit' (V. i. 7). Reciprocally, 'Spirit, while thinking itself, thinks the One, for it thinks of itself as active, and the activity of all things turns towards the Good.' All activity directed to spiritual ends is an unconscious contemplation of God.

When Plotinus calls the Absolute the Good, he may seem to fall under the censure of Bradley, who proves that morality, as such, must be transcended in the Absolute. He explains, however, that it is only in relation to ourselves that this name can be given to the One. Moreover, he does not use 'the Good' in a moralistic sense. Virtue, he says truly, is not the Good, but a good (I. viii. 6). 'The Good' is rather the *Perfect*—harmonious unity as the goal of desire. The Good is the fulfilment of the natural desire (ὁρμησις) for self-completion and self-transcendence, to which we are impelled by our nature. 'All things strive after life, immortality, and activity' (VI. vii. 20).

We can know the unknowable, because we ourselves in our deepest ground are the unknowable. This is the foundation of the Plotinian mysticism, which comes in as the crown of an all-embracing metaphysical system. The soul, when it has become spirit, has in a sense reached its goal; but even then it counts not itself to have apprehended. Even in heaven there is the mystery of love for something beyond; even the beatified spirit may still love and aspire. Even in this life moments are not denied us, though they are few, when the soul is swept entirely out of itself and carried up into the ineffable region 'beyond existence,' where the One manifests himself in his majesty.

'What is better,' he asks, 'than the life of Spirit, most wise and sinless and faultless as it is? . . . If we find nothing better than Spirit, we will stop there. But no! we must mount still higher, to find the absolutely One and self-sufficing, on which all these things depend. It must be something above and beyond being. Is it enough to say this and then leave the subject? No, the soul is in travail and longing. Can we find a charm for this pain? It cannot come through the discursive reason, but by some spiritual contact, about which we may reason afterwards, but not at the time. We must believe that the soul has truly seen, when it suddenly perceives a light. We must believe that God is present, when he comes into the house of him who invites him, and gives him life. . . . This is the soul's true goal, to touch that light, and to behold it by means of that light itself, and not by any other light; even as we see not the sun by any light except its own' (V. iii. 17).

There are many other fine passages in the *Enneads* in which the beatific vision is described. In the last chapter he imagines a worshipper at the mysteries led through the forecourts adorned with statues of the gods, and at the last admitted into the Holy of Holies itself.

'And when the vision is over, the man will once more awake the virtue that is in him. . . . This is the life of the gods, and of godlike and blessed men, a release from all else here below, a life that takes no pleasure in earthly things, a flight of the alone to the Alone' (VI. ix. 11).

The system of Plotinus has the appearance of mysticism superimposed upon rationalism, not unlike the philosophy of Spinoza. But it is not legitimate to limit mysticism to rapture or ecstasy. The central doctrine of mysticism is not that we can see God only in a state of swoon, but that we can see only what we are. This principle is applied consistently by Plotinus at every stage of experience. He uses it to confute in turn materialism, naturalism, and intellectualism, each of which is shown to be a synthesis from imperfect data, composed by an imperfect instrument. At the final stage spirit itself is led to define itself against the background of a deeper mystery. In this sense mysticism is present and active throughout the whole scheme. Another fundamental doctrine of mysticism is that love is the key to all mysteries, the guide and revealer of all higher truth. Here also Plotinus applies a great principle to the whole of life. There is a half-unconscious upward striving (*ἐρσις*) in all creation, which groans and travails to be delivered from the bondage of corruption. At the top of the ladder the *νοῦς ἐρῶν* throbs with the *amor intellectualis Dei*, and at rare intervals feels that its passion is satisfied. The main difference between the mysticism of Plotinus and traditional Christian mysticism, as standardized in Roman Catholic manuals of ascetical theology, is that the ecstatic state is with Plotinus an exceedingly rare phenomenon, encountered only at the summit of spiritual development; and it is noteworthy that his successors in the school do not cheapen it at all. Christian mysticism, on the other hand, speaks of such visitations as common in the early stages of the life of holiness, and warns beginners not to think too much of them. Some female mystics are recorded to have spent a considerable fraction of their lives in a state of trance. This difference is in no way to be traced to the teachings of Christianity, which gives no encouragement to the indulgence of violent religious emotion. It is the result of the discipline of the cloister, and of the peculiar mental conditions induced by that kind of life. The Hellenic mind was averse from this kind of asceticism, and Plotinus at any rate would not have approved of deliberate self-hypnotization such as was practised by many mediæval mystics. The sanity and calm of Neo-Platonic discipline preserved its votaries from the terrible reactions which fill so large a place in the biographies of Christian mystics. There is not a trace in Plotinus of 'the dark night of the soul,' or the experience of 'dereliction.' Even if we grant that the Greeks made too little of sin and repentance, the balance of good seems to be decidedly on the side of Plotinus and his disciples. And it must be remembered that no religious teacher appealed less to religious excitement than the Founder of Christianity.

The mystical state is always the result of intense mental concentration, which Plotinus calls *ἀπλῶσις*. The mind must be resolutely shut against all impressions from outside; hence the language used by all mystics about the blankness or darkness of the mind at the moment of vision. Plotinus experienced this vision several times—Porphyry says four times during his own association with him. But the importance of ecstasy in Neo-Platonism has been as much exaggerated as that of Nirvāna in western books about Buddhism. What the doctrine of the One as the supreme object of love really secures is that human spirits in their most exalted mood may share not only a common life and a common happiness, but a common hope and a common prayer.

The connexion of ethics with philosophy was becoming closer throughout the whole history of Greek thought. In Plotinus the two blend very

completely. But there is not much—perhaps too little—about social and political morality in Plotinus. He tells us that the 'political virtues' must be acquired first, but touches very lightly upon them. They are a preparatory stage; next comes 'purification' (*καθάρσις*). The soul must cleanse itself from external stains, and strip off its own lower nature:

'Chisel away from thy soul what is superfluous, straighten that which is crooked, purify and enlighten that which is dark, and do not cease working at thy statue until virtue shines before thine eyes with its divine splendour, and thou seest temperance seated in thy bosom in its holy purity' (i. vi. 9).

Discipline of the thoughts is the most important part of this training; if the heart be kept pure, right action will follow almost necessarily. The simple life, rather than mortification of the flesh, is in harmony with Neo-Platonic ethics. But in the matter of love and marriage he is not much superior to his contemporaries. He sees that sensuous indulgence rivets the chains which bind the soul to earth; he does not see that the love of man and woman, consecrated by marriage, may be the best initiation into heavenly love. The conflict with evil is a process of emancipation rather than a struggle with a hostile spiritual power. Human wickedness is never absolute. 'Vice is still human, being mixed with something contrary to itself.' Most sin is caused by 'false opinions' (*ψευδείς δόξαι*), untrue valuations, and ignorance of all kinds. Goodness must be sought for its own sake. 'If any man seeks anything else in the good life, it is not the good life that he is seeking' (i. iv. 12). The only true motive is the desire 'to become like to God.' The ultimate good is to be something, not to do something. Thus all virtues are in a sense a preparation for contemplation (*θεωρία*); and the three main roads which lead us upward are the arts, philosophy, and love. The cult of beauty is thus, as for Plato himself, an indispensable part of the moral life. But 'beauty' is an attribute not only of visible forms, but still more of noble actions and noble thoughts. Plotinus would have us admire truly, think truly, and love truly—these three, in his view, 'lead life to sovereign power.' The great sin is selfishness or self-will, which makes us 'forget our Father.' The separate self is a figment; we are members one of another, and may be compared to a choir which sings out of time when it ceases to look at the conductor. The Plotinian ethic is theocentric, but not unsocial.

Plotinus himself felt no need of the popular mythology and worship. He surprised his disciples by his indifference to the externals of religion; and, when they ventured to question him on the subject, he replied, 'It is for the gods to come to me, not for me to go to them.' In this attitude he differed greatly from his most famous successor, Proclus, who spent much of his time at the temples, engaged in devotional exercises. Plotinus uses the names of the gods to serve as an allegorical presentment of his system. They have no reality for him. But he leaves room for them by his doctrine that the universe contains many beings more divine than man—demons, and gods, who are demons of a superior order. He believes in magic, like all his contemporaries, and to some extent in astrology; but he reduces these beliefs as much as is possible without abandoning them. He attaches importance to prayer, but prefers 'the prayer of quiet,' which does not offer petitions. He does not encourage us to pray for deliverance from earthly calamities. Some of these are necessary in a universe constituted like ours; others have their appropriate remedy (e.g., if a nation wishes to avoid servitude, it must learn to fight); and all of them are of small account to an immortal being, who knows that he is only a temporary sojourner in a world where such things happen. The soul is not in

jured by such occurrences, and we should bear public and private calamities philosophically. Death only means that 'the actor changes his mask.' We may trust that Providence orders all for the best.

3. Neo-Platonism after Plotinus.—The appearance of a great speculative genius like Plotinus in a period so barren of originality as the 3rd cent. of our era had an immediate and decisive influence on the future of Greek philosophy. The school of Plotinus swallowed up and absorbed all other systems. A hundred years after his death Eunapius could say that he was more read than Plato himself, and adds quite justly that his fame is very largely due to his disciple Porphyry.

(a) *Porphyry*.—Porphyry (he took this name as the Greek equivalent of his Syrian name Malehus = Melek, a king) was born in 233 and died soon after 300. He is best known as a formidable opponent of Christianity; but our present subject is his influence upon the development of Neo-Platonism. He was mainly an expositor and commentator, his writings being afterwards much used for educational purposes; and it is to him that we owe the preservation of Plotinus's own writings. So far as we can judge from the rather scanty remains of his numerous books, he attempted to schematize the progress of the soul from the lower to the higher virtues more thoroughly than his master had done, and laid much more stress on asceticism, especially on abstinence from a flesh-diet. The philosopher, he held, ought not to live like the rest of mankind, but to follow rules like those which priests, who have accepted the obligation to lead a holier life than other men, lay down for themselves (*de Abstinencia*, 4, 18). He denied the transmigration of human souls into animal bodies, which Plotinus had accepted, though perhaps not quite seriously. Porphyry was a devout and highly moral man, of a somewhat sombre and fanatical temperament; on one occasion Plotinus had to dissuade him from taking his own life. He was dutifully credulous of his own mythology, though his rationalist attacks upon the NT miracles showed much acuteness. Augustine, writing, of course, after his death, pointed out that some of his beliefs were derived 'not from Plato, but from his Chaldean masters,' and that the Chaldean superstitions which he favoured were as criminal by Roman law as Christianity itself.

(b) *Iamblichus and others*.—Iamblichus, another Syrian, had been a pupil of Porphyry. He was a more considerable philosopher than his teacher. He showed his independence by teaching that every soul must descend and ascend periodically; there is no permanent abode in heaven for any one. The soul also descends entire, and is not impeachable. 'If the will sins,' he asks, 'how can the soul be sinless?' (*ἐἴ ἡ προαίρεσις ἀμαρτάνει, πῶς ἀμαρτάνητος ἡ ψυχή*; Proclus, in *Tim.* 341). He also developed the triadic arrangement of the stages of emanation. The scheme of Iamblichus is nevertheless a religion, of the Gnostic type, rather than a philosophy. He turns the ideas and hypostases of Plotinus into gods and demons, and leaves the door wide open for magic and theurgy, though he does not seem to have encouraged these superstitions deliberately. At any rate he laughed (a rare event with him) when asked whether it was true that he sometimes floated in the air while saying his prayers. He is throughout more in sympathy with the Pythagoreans than with the Platonic tradition. Iamblichus died about 330.

The names of several lesser men, belonging to the school of Iamblichus, are preserved. Julian was himself a philosopher of this school, and his brief reign raised the hopes of the pagans, who were now clearly on the losing side. Neo-Platonism

had definitely committed its fortunes to the sinking ship of paganism; and, as the abler minds transferred their allegiance to Christianity, carrying with them most of what was vital and permanently valuable in the philosophy of the later paganism, the Hellenists were driven more and more to rely, not upon the independent speculations of the great Greek thinkers, but upon the inertia of religious conservatism. The dividing-line between Christians and pagans was mainly the question of loyalty to the Hellenic tradition. The battle was not so much between Plato and St. Paul as between Homer and Moses. The real objection felt against Christianity was that it was the religion of 'barbarians.' One of the 4th cent. Neo-Platonists, Antoninus, predicted plaintively that 'a fabulous and formless darkness is about to tyrannize over all that is beautiful on earth.' Philosophically, this Syrian school is of very little interest after Iamblichus.

The next event in the history of the school is its capture of the professorial chair of Platonism in Athens. About 400, Plutarch, a member of the school of Plotinus and Iamblichus, became the Diadochus. Plutarch was followed by Syrianus, Syrianus by Proclus, who next to Plotinus is the greatest among the Neo-Platonists.

(c) *Proclus*.—Proclus was born in 410, at Constantinople, of a Lycian family. He studied first in Alexandria, and came to Athens at the age of nineteen, where both Plutarch (in spite of his great age) and Syrianus taught him. In 438 he became head of the school, and held the office till his death in 485. He was a man of great amiability and attractiveness, in spite of a slightly hasty temper. His life was that of a busy college tutor. He lectured five times a day, and wrote voluminously, but still found time to give his evenings to his pupils, and to take an active part in municipal business. This is the more remarkable as he was zealous in his religious exercises, worshipping the sun three times a day, observing all the holy days of the Egyptian calendar, and spending part of the night in prayer, praise, and sacrifice. His religion was an amalgamation of various cults, and has been compared to Comte's 'religion of humanity.' Legends gathered round him in his life-time. He was frequently visited by the gods in person, and was a great miracle-worker. It may be doubted whether Proclus himself ever encouraged these stories. He was too much in earnest about philosophy to wish it to be submerged by theurgy and magic.

Proclus carries much further the method of finding triads in every stage of emanation. There are traces of this in Plotinus, and from Porphyry downwards this schematism becomes more popular and more arbitrary. Every creative energy produces things like itself, but less perfect. These strive to return to their source. There is therefore a universal circular movement away from and back to the creative source. The three stages are called *μονή*, *πρόοδος*, *ἐπιστροφή*, and we find these circles everywhere in nature. But the energy of the One extends down to the lowest of created things—a direct energy, in which the intermediate causes have no share. Plotinus (*Enn.* iv. viii. 6) had taught that the activity of the One extends as far as matter, and, in spite of some critics, there does not seem to be any real difference between the two philosophers on this point. The One is *ἀμέθεκτον*, which means that *all* its activity is 'transitive.' The creatures are informed by it, but they in no way share it among them. This doctrine of detached causes extends to other grades of being, and is rather obscure. It is connected with the interpolation of new intermediate terms, such as the 'independent henads' (*αὐτορρεαί*

The system of Plotinus has the appearance of mysticism superimposed upon rationalism, not unlike the philosophy of Spinoza. But it is not legitimate to limit mysticism to rapture or ecstasy. The central doctrine of mysticism is not that we can see God only in a state of swoon, but that we can see only what we are. This principle is applied consistently by Plotinus at every stage of experience. He uses it to confute in turn materialism, naturalism, and intellectualism, each of which is shown to be a synthesis from imperfect data, composed by an imperfect instrument. At the final stage spirit itself is led to define itself against the background of a deeper mystery. In this sense mysticism is present and active throughout the whole scheme. Another fundamental doctrine of mysticism is that love is the key to all mysteries, the guide and revealer of all higher truth. Here also Plotinus applies a great principle to the whole of life. There is a half-unconscious upward striving (*ἐφεύς*) in all creation, which groans and travails to be delivered from the bondage of corruption. At the top of the ladder the *νοῦς ἐπ' αὐτῷ* throbs with the *amor intellectualis Dei*, and at rare intervals feels that its passion is satisfied. The main difference between the mysticism of Plotinus and traditional Christian mysticism, as standardized in Roman Catholic manuals of ascetical theology, is that the ecstatic state is with Plotinus an exceedingly rare phenomenon, encountered only at the summit of spiritual development; and it is noteworthy that his successors in the school do not cheapen it at all. Christian mysticism, on the other hand, speaks of such visitations as common in the early stages of the life of holiness, and warns beginners not to think too much of them. Some female mystics are recorded to have spent a considerable fraction of their lives in a state of trance. This difference is in no way to be traced to the teachings of Christianity, which gives no encouragement to the indulgence of violent religious emotion. It is the result of the discipline of the cloister, and of the peculiar mental conditions induced by that kind of life. The Hellenic mind was averse from this kind of asceticism, and Plotinus at any rate would not have approved of deliberate self-hypnotization such as was practised by many mediæval mystics. The sanity and calm of Neo-Platonic discipline preserved its votaries from the terrible reactions which fill so large a place in the biographies of Christian mystics. There is not a trace in Plotinus of 'the dark night of the soul,' or the experience of 'dereliction.' Even if we grant that the Greeks made too little of sin and repentance, the balance of good seems to be decidedly on the side of Plotinus and his disciples. And it must be remembered that no religious teacher appealed less to religious excitement than the Founder of Christianity.

The mystical state is always the result of intense mental concentration, which Plotinus calls *ἐκλογισμός*. The mind must be resolutely shut against all impressions from outside; hence the language used by all mystics about the blankness or darkness of the mind at the moment of vision. Plotinus experienced this vision several times—Porphyry says four times during his own association with him. But the importance of ecstasy in Neo-Platonism has been as much exaggerated as that of Nirvāṇa in western books about Buddhism. What the doctrine of the One as the supreme object of love really secures is that human spirits in their most exalted mood may share not only a common life and a common happiness, but a common hope and a common prayer.

The connexion of ethics with philosophy was becoming closer throughout the whole history of Greek thought. In Plotinus the two blend very

completely. But there is not much—perhaps too little—about social and political morality in Plotinus. He tells us that the 'political virtues' must be acquired first, but touches very lightly upon them. They are a preparatory stage; next comes 'purification' (*κάθαρσις*). The soul must cleanse itself from external stains, and strip off its own lower nature:

'Chisel away from thy soul what is superfluous, straighten that which is crooked, purify and enlighten that which is dark, and do not cease working at thy statue until virtue shines before thine eyes with its divine splendour, and thou seest temperance seated in thy bosom in its holy purity' (i. vi. 9).

Discipline of the thoughts is the most important part of this training; if the heart be kept pure, right action will follow almost necessarily. The simple life, rather than mortification of the flesh, is in harmony with Neo-Platonic ethics. But in the matter of love and marriage he is not much superior to his contemporaries. He sees that sensuous indulgence rivets the chains which bind the soul to earth; he does not see that the love of man and woman, consecrated by marriage, may be the best initiation into heavenly love. The conflict with evil is a process of emancipation rather than a struggle with a hostile spiritual power. Human wickedness is never absolute. 'Vice is still human, being mixed with something contrary to itself.' Most sin is caused by 'false opinions' (*ψευδῆς δόξα*), untrue valuations, and ignorance of all kinds. Goodness must be sought for its own sake. 'If any man seeks anything else in the good life, it is not the good life that he is seeking' (i. iv. 12). The only true motive is the desire 'to become like to God.' The ultimate good is to be something, not to do something. Thus all virtues are in a sense a preparation for contemplation (*θεωρία*); and the three main roads which lead us upward are the arts, philosophy, and love. The cult of beauty is thus, as for Plato himself, an indispensable part of the moral life. But 'beauty' is an attribute not only of visible forms, but still more of noble actions and noble thoughts. Plotinus would have us admire truly, think truly, and love truly—these three, in his view, 'lead life to sovereign power.' The great sin is selfishness or self-will, which makes us 'forget our Father.' The separate self is a figment; we are members one of another, and may be compared to a choir which sings out of time when it ceases to look at the conductor. The Plotinian ethic is theocentric, but not unsocial.

Plotinus himself felt no need of the popular mythology and worship. He surprised his disciples by his indifference to the externals of religion; and, when they ventured to question him on the subject, he replied, 'It is for the gods to come to me, not for me to go to them.' In this attitude he differed greatly from his most famous successor, Proclus, who spent much of his time at the temples, engaged in devotional exercises. Plotinus uses the names of the gods to serve as an allegorical presentment of his system. They have no reality for him. But he leaves room for them by his doctrine that the universe contains many beings more divine than man—demons, and gods, who are demons of a superior order. He believes in magic, like all his contemporaries, and to some extent in astrology; but he reduces these beliefs as much as is possible without abandoning them. He attaches importance to prayer, but prefers 'the prayer of quiet,' which does not offer petitions. He does not encourage us to pray for deliverance from earthly calamities. Some of these are necessary in a universe constituted like ours; others have their appropriate remedy (e.g., if a nation wishes to avoid servitude, it must learn to fight); and all of them are of small account to an immortal being, who knows that he is only a temporary sojourner in a world where such things happen. The soul is not in

jured by such occurrences, and we should bear public and private calamities philosophically. Death only means that 'the actor changes his mask.' We may trust that Providence orders all for the best.

3. Neo-Platonism after Plotinus.—The appearance of a great speculative genius like Plotinus in a period so barren of originality as the 3rd cent. of our era had an immediate and decisive influence on the future of Greek philosophy. The school of Plotinus swallowed up and absorbed all other systems. A hundred years after his death Eunapius could say that he was more read than Plato himself, and adds quite justly that his fame is very largely due to his disciple Porphyry.

(a) *Porphyry*.—Porphyry (he took this name as the Greek equivalent of his Syrian name Malchus = Melek, a king) was born in 233 and died soon after 300. He is best known as a formidable opponent of Christianity; but our present subject is his influence upon the development of Neo-Platonism. He was mainly an expositor and commentator, his writings being afterwards much used for educational purposes; and it is to him that we owe the preservation of Plotinus's own writings. So far as we can judge from the rather scanty remains of his numerous books, he attempted to schematize the progress of the soul from the lower to the higher virtues more thoroughly than his master had done, and laid much more stress on asceticism, especially on abstinence from a flesh-diet. The philosopher, he held, ought not to live like the rest of mankind, but to follow rules like those which priests, who have accepted the obligation to lead a holier life than other men, lay down for themselves (*de Abstinentia*, 4, 18). He denied the transmigration of human souls into animal bodies, which Plotinus had accepted, though perhaps not quite seriously. Porphyry was a devout and highly moral man, of a somewhat sombre and fanatical temperament; on one occasion Plotinus had to dissuade him from taking his own life. He was dutifully credulous of his own mythology, though his rationalist attacks upon the NT miracles showed much acuteness. Augustine, writing, of course, after his death, pointed out that some of his beliefs were derived 'not from Plato, but from his Chaldean masters,' and that the Chaldean superstitions which he favoured were as criminal by Roman law as Christianity itself.

(b) *Iamblichus and others*.—Iamblichus, another Syrian, had been a pupil of Porphyry. He was a more considerable philosopher than his teacher. He showed his independence by teaching that every soul must descend and ascend periodically; there is no permanent abode in heaven for any one. The soul also descends entire, and is not impeccable. 'If the will sins,' he asks, 'how can the soul be sinless?' (*εἰ ἡ προαιρέσις ἀμαρτάνει, πῶς ἀναμάρτητος ἡ ψυχὴ*; Proclus, in *Tim.* 341). He also developed the triadic arrangement of the stages of emanation. The scheme of Iamblichus is nevertheless a religion, of the Gnostic type, rather than a philosophy. He turns the ideas and hypostases of Plotinus into gods and dæmons, and leaves the door wide open for magic and theurgy, though he does not seem to have encouraged these superstitions deliberately. At any rate he laughed (a rare event with him) when asked whether it was true that he sometimes floated in the air while saying his prayers. He is throughout more in sympathy with the Pythagoreans than with the Platonic tradition. Iamblichus died about 330.

The names of several lesser men, belonging to the school of Iamblichus, are preserved. Julian was himself a philosopher of this school, and his brief reign raised the hopes of the pagans, who were now clearly on the losing side. Neo-Platonism

had definitely committed its fortunes to the sinking ship of paganism; and, as the abler minds transferred their allegiance to Christianity, carrying with them most of what was vital and permanently valuable in the philosophy of the later paganism, the Hellenists were driven more and more to rely, not upon the independent speculations of the great Greek thinkers, but upon the inertia of religious conservatism. The dividing-line between Christians and pagans was mainly the question of loyalty to the Hellenic tradition. The battle was not so much between Plato and St. Paul as between Homer and Moses. The real objection felt against Christianity was that it was the religion of 'barbarians.' One of the 4th cent. Neo-Platonists, Antoninus, predicted plaintively that 'a fabulous and formless darkness is about to tyrannize over all that is beautiful on earth.' Philosophically, this Syrian school is of very little interest after Iamblichus.

The next event in the history of the school is its capture of the professorial chair of Platonism in Athens. About 400, Plutarch, a member of the school of Plotinus and Iamblichus, became the Diadochus. Plutarch was followed by Syrianus, Syrianus by Proclus, who next to Plotinus is the greatest among the Neo-Platonists.

(c) *Proclus*.—Proclus was born in 410, at Constantinople, of a Lycian family. He studied first in Alexandria, and came to Athens at the age of nineteen, where both Plutarch (in spite of his great age) and Syrianus taught him. In 438 he became head of the school, and held the office till his death in 485. He was a man of great amiability and attractiveness, in spite of a slightly hasty temper. His life was that of a busy college tutor. He lectured five times a day, and wrote voluminously, but still found time to give his evenings to his pupils, and to take an active part in municipal business. This is the more remarkable as he was zealous in his religious exercises, worshipping the sun three times a day, observing all the holy days of the Egyptian calendar, and spending part of the night in prayer, praise, and sacrifice. His religion was an amalgamation of various cults, and has been compared to Comte's 'religion of humanity.' Legends gathered round him in his life-time. He was frequently visited by the gods in person, and was a great miracle-worker. It may be doubted whether Proclus himself ever encouraged these stories. He was too much in earnest about philosophy to wish it to be submerged by theurgy and magic.

Proclus carries much further the method of finding triads in every stage of emanation. There are traces of this in Plotinus, and from Porphyry downwards this schematism becomes more popular and more arbitrary. Every creative energy produces things like itself, but less perfect. These strive to return to their source. There is therefore a universal circular movement away from and back to the creative source. The three stages are called *μονή*, *πρόοδος*, *ἐπιστροφή*, and we find these circles everywhere in nature. But the energy of the One extends down to the lowest of created things—a direct energy, in which the intermediate causes have no share. Plotinus (*Enn.* iv. viii. 6) had taught that the activity of the One extends as far as matter, and, in spite of some critics, there does not seem to be any real difference between the two philosophers on this point. The One is *ἀμέθεκτον*, which means that *all* its activity is 'transitive.' The creatures are informed by it, but they in no way share it among them. This doctrine of detached causes extends to other grades of being, and is rather obscure. It is connected with the interpolation of new intermediate terms, such as the 'independent henads' (*ἀντορεαίς*

éndes), which are the gods, and are above being and life and spirit. This difficult doctrine is at any rate intended to carry the source of plurality above the world of *voûs*. It might be made the basis of a metaphysical pluralism.

Critics have rightly discerned 'scholasticism' in Proclus. He relies almost exclusively on deduction, which assumes that philosophy is a system of known truths, and that the mission of the philosopher is to place them in logical order and perfect clearness (Chaignet, *Psychol. des Grecs*, v. 297). This apparent rigour of method more often obscures than illuminates the great and simple ideas of Plotinus. It is, however, not strange that Hegel admired him; for not only do the triads of Proclus anticipate to some extent the thesis, antithesis, and reconciliation of Hegelianism, but the doctrine that God arrives at self-consciousness in and by the world is not far off in the speculation of this Neo-Platonist. Bigg thinks that it would be as easy to drop Platonism out of Proclus as polytheism out of Plotinus (*Neoplatonism*, p. 325). This is going rather too far; but Proclus sometimes comes very near to the Gnostics, whom Plotinus, in the name of Plato, combated so strongly.

Proclus abounds in excellent philosophical aphorisms, such as:

'Three things make the perfection of divine beings and supreme principles—the good, science, beauty; there are three things inferior to these, but which penetrate all the divine orders—faith, truth, and love' (*Theol. Plat.* i. 1). (Porphyry had already adopted the Christian theological virtues, only adding 'truth' as a fourth, and changing *ἀγάπη* into *ἐρως*.) 'Discovery is a silence of the soul' (i.e. we only learn to know God when the soul is passive). 'The soul is the world of life' (*κόσμος ζωικός*, in *Tim.* 172). 'The movement of life is towards the Good, of thought towards Being' (ib. 229). 'Do nothing in vain, for God and nature do nothing in vain' (in *Alcib.* 3. 94). 'All things pray except him to whom all things pray' (in *Tim.* 65). 'Evil is not a disease or a poverty but a wickedness of the soul' (ib. 335).

(d) *Successors of Proclus.*—The succession of the Diadochi ran on after Proclus for over forty years, through Marinus, Isidorus, Zenodotus, Hegias, and Damascius. Simplicius, a member of the school, was writing his valuable commentary on Aristotle. Damascius seems to have been the ablest of Proclus's successors; his work on *Problems connected with First Principles* is extant. He emphasizes the impossibility of making any assertions about the unknowable Absolute. Then the blow fell which brought to an end the teaching of philosophy in Athens, after 800 years. Justinian, anxious to win a reputation for orthodoxy, closed the lecture-rooms and confiscated the endowments. Damascius and his friends determined to go outside the Roman Empire altogether, and repaired to the court of Chosroes in Persia. They were woefully disappointed in the East as a home for philosophers, and returned to Europe, Chosroes generously securing for them a promise from Justinian that they should be unmolested. They continued to write commentaries for several years longer.

4. Influence of Neo-Platonism on Christianity.

—There was in the 3rd and 4th centuries so much friendly interchange of ideas between Christians and pagans, especially at Alexandria, that, as Harnack has recently shown (*HJ* x. [1911–12] 65 ff.), there is very little difference between Porphyry and his Christian contemporaries in their general view of life and duty. The great lesson which Christianity had to learn from the Platonists was the meaning of 'God is Spirit.' The idea of timeless and incorporeal existence was accepted by the Church, but not without much difficulty. Tertullian is still materialistic, and even Augustine believed, before his conversion, that Christianity was committed to the doctrine that God has a body. The acceptance of Greek idealism necessarily modified the beliefs about the future life,

though here there was hardly an attempt to gain consistency. Eschatology everywhere is a congeries of incompatible hopes and contradictory symbols. Origen was an elder contemporary of Plotinus, and we can hardly speak of Neo-Platonic influence in his case, though he was doubtless acquainted with Ammonius Saccas. The Cappadocian Fathers, Basil and the two Gregories, are full of Plotinian ideas (see art. CAPPADOCIAN THEOLOGY). But it is with Augustine that the stream of Neo-Platonic influence flows strongly into Christian theology. Augustine was converted first to Platonism, and came through Platonism to Christianity. His early writings are steeped in Plotinus, whom he knew in a Latin translation, and some of the most famous passages in the *Confessions* show reminiscences of the *Enneads*. Even in later life, when the philosopher in Augustine was almost extinguished by the bishop and Church Father, the influence of Neo-Platonism upon his theology remained great. Passing over the hymn-writer, Synesius, who apostrophizes the Deity as *ἐνοτήτων ἐνὰς ἀγνή, μοράδων μοράς τε πρώτη*, we strike another channel of Neo-Platonic influence in 'Dionysius the Areopagite,' whose works were treated with reverence in the Church as the work of St. Paul's Athenian convert. 'Dionysius' may have been a pupil of Proclus, and was certainly influenced by him. Boëthius (put to death in 524) represents an eclectic Neo-Platonism mainly concerned with ethics. He and Macrobius, who also quotes the Neo-Platonists, were widely read in the Middle Ages. In the 9th cent. John Scotus Erigena bridges the gulf between Neo-Platonism and Catholic scholasticism. The Arabian philosophers were about equally indebted to Aristotle and to the Neo-Platonists, whose writings they were unable to distinguish from each other. Thomas Aquinas often quotes Dionysius; and the influence of Neo-Platonic doctrines upon Dante (in the *Paradiso*) is well known. Duns Scotus was a student of the *Fons Vitæ* of Ibn Gabirol (Avicbron), which is a Neo-Platonic treatise. Some of the heretical mystics of the 12th and 13th centuries held doctrines akin to those of Plotinus and Proclus. Such were David of Dinant, Amalric, and Joachim of Fiore. At the Renaissance there was a violent anti-Aristotelian reaction, which rested on Plotinus as much as on Plato. Marsilio Ficino published a Latin version of the *Enneads* in 1492. Bruno and Campanella seized the nature-loving and half-panteistic side of Plotinus, and preached a nature-mysticism not unlike that of Wordsworth. In England the little school of Cambridge Platonists (q.v.), in the 17th cent., tried to revive the diligent study of Plotinus. Berkeley's *Siris* is a Neo-Platonic essay. More important is the influence of Plotinus on German philosophy. Eckhart, however he arrived at his position, was purely and simply a Christian Neo-Platonist; and Boehme was a kindred spirit. From these pioneers, as may be traced in any German history of philosophy, was handed down and developed the great edifice of modern idealism. Platonism has also had a very marked influence upon English poetry, notably upon Spenser, Wordsworth, and Shelley. As Eunapius says, 'The fire still burns on the altars of Plotinus.'

5. *Permanent value of Neo-Platonism.*—Whitaker reminds us that Neo-Platonism is, metaphysically, the maturest thought that the European world has seen:

'The modern time has nothing to show comparable to a continuous quest of truth about reality during a period of intellectual liberty that lasted for a thousand years' (*The Neoplatonists*, p. 210).

Our educational method of treating Greek philosophy as if it came to an end with Aristotle, or with the Stoics and Epicureans, is most unfortun-

ate. It directly encourages the sheer ignorance or superficial knowledge which has interfered with any really intelligent and respectful study of the latest stage in the great debate. The Neo-Platonists are dismissed as pagans who, if they had had more sense, would have been Christians, as examples of 'extreme dualism' in philosophy, or as dreamy mystics whose ambition was to 'swoon into the Absolute.' Such views could hardly survive a diligent study of the *Enneads*. In the opinion of the present writer, Plotinus is one of the great thinkers of the world, whose philosophy is still of the utmost value to humanity. We shall not go to him for sound physical science, nor for instruction how to discharge the duties of a good citizen under a democracy. But even here we cannot help thinking that his theory of recurrent cycles, during which worlds are made, unmade, and remade, is far more scientific than the views which are popularly held; and that the scale of values which he gives us would, if adopted, promote a far more satisfactory social order than that under which we live. His idealistic ontology, which finally disposes of materialism without making the phenomenal world unreal and meaningless, comes near to solving one of our deepest problems. That his philosophy is throughout religious and ethical means that he has not left out the highest of human interests. The one defect in a grand constructive effort seems to be that on which Augustine laid his finger. 'The word made flesh—that found I not among them.' In other words, it is an error to make the highest Principle exempt from suffering. It is, as Plotinus knew, no necessity of the divine nature to plunge in the river of becoming; but it is part of the divine character to pity and redeem by a costing effort. An incarnational philosophy of religion, which teaches that the Son of God comes to seek and save the lost, has a profound effect upon the character of him who accepts it. For it becomes our duty and privilege to 'imitate the providence of God' by making sacrifices ourselves in order to help our brethren. This great truth, which Christianity can supply, does not seem to be incompatible with the ground-principles of Neo-Platonism. Rather it was assumed too lightly by Plotinus that spirit and higher soul must be inaccessible to pain and conflict, as also to sin. But, if the soul 'comes down,' it accepts the conditions of the world into which it comes: an invulnerable soul would not have truly 'come down' at all. With this exception, which is easily made good, the modern truth-seeker may well say of Plotinus what Plotinus said of *Aimmonius*—*τοῦτον ἐξήκουον*.

LITERATURE.—I. *EDITIONS OF PLOTINUS*.—Basel, 1580 (Gr. text with Ficino's Lat. tr.); F. Creuzer, 3 vols., Oxford, 1835 (with Ficino's tr. and commentaries, notes by Wytenbach, and apparatus criticus by G. H. Moser); F. Dübner, Paris, 1855, in Didot's Library (a reproduction of Creuzer's text); A. Kirchoff, Leipzig, 1856 (text without notes, the *Enneads* rearranged in chronological order); H. F. Müller, Berlin, 1878; R. Volkmann, Leipzig, 1884. The Dübner ed. contains also the *Sententiae* of Porphyry, and the *Institutio Theologica* of Proclus.

II. *TRANSLATIONS*.—M. Ficino, Florence, 1492; M. N. Bouillet, 3 vols., Paris, 1855 (a very free tr., clear and readable, but often inaccurate; the book contains also copious notes and appendices); H. F. Müller, 2 vols., Berlin, 1878 (a literal tr., more scholarly than Bouillet's, but crabbied and obscure); Thomas Taylor, several trr. of extracts, published at various times from 1787 to 1834; the chief of these has been reprinted, with an introd. by G. R. S. Mead, under title *Select Works of Plotinus*, London, 1895. A few other partial trr. have appeared.

III. *WORKS ON THE PHILOSOPHY OF PLOTINUS, AND ON NEO-PLATONISM GENERALLY*.—C. Steinhardt, *Meletemata Plotiniana*, Naumburg, 1840; C. H. Kirchner, *Die Philosophie des Plotin*, Halle, 1854; J. Matter, *Essai hist. sur l'école d'Alexandrie*, Strassburg, 1820; G. Loesche, *Augustinus Plotinizaris*, Berlin, 1881; L. Grandgeorge, *Saint Augustin et le néoplatonisme*, Paris, 1894; C. Steinbart, 'Plotin,' in *Pauly-Wissowa*; C. A. Brandis, 'Plotinus,' in *Smith's Dict. of Greek and Roman Biography*; J. R. Mozley, 'Plotinus' and 'Neoplatonism,' in *DCB*; J. Simon, *Hist. de l'école d'Alexandrie*, t. 1., Paris, 1845; E. Vacherot, *Hist. critique de l'école d'Alexan-*

drie, do. 1846; A. Richter, *Neuplatonische Studien*, 5 vols., Halle, 1864-67; E. Zeller, *Die Philosophie der Griechen*, Leipzig, 1903, last vol.; A. E. Chaignet, *Hist. de la Psychologie des Grecs*, iv. and v., Paris, 1893 (the fullest and in some ways the best account of the whole school; vol. iv. is devoted to Plotinus, vol. v. to the later Neo-Platonists); F. Ueberweg and M. Heinze, *Grundriss der Gesch. der Phil.*, 1., 'Das Alterthum,' Berlin, 1894 (very full bibliography both for Plotinus and for his successors); H. Siebeck, *Gesch. der Psychologie*, Gotha, 1884; A. W. Benn, *The Greek Philosophers*, London, 1882 (chapter on the spiritualism of Plotinus valuable); C. Bigg, *Neoplatonism*, do. 1895 (a good popular account of the whole subject); T. Whittaker, *The Neoplatonists*, Cambridge, 1901 (an admirable work); A. Drews, *Plotin*, Jena, 1907 (a very full and valuable work); Caird, *Evolution of Theology in the*, 1904, ii.; R. Eucken, chapter on 'Die Neuplatonisten' in *Ungen der grossen Denker*, Leipzig, 1909; B. A. G. Fuller, *The Problem of Evil in Plotinus*, Cambridge, 1912.

The writer of this article has long been engaged on a detailed study of Plotinus, which is now nearing completion.

For the later Neo-Platonists, the bibliography in Ueberweg-Heinze may be consulted.

W. R. INGE.

NEO-PYTHAGOREANISM. — Neo-Pythagoreanism was one among many kindred phenomena resultant upon the spiritual commotion which marked the gradual decline of classical culture and, at length, ended in the triumph of the Christian Church. It may be dated after the 'death of the oracles' in the time of Nero and his immediate successors (cf. Tacitus, *Hist.* i. 2), although presages of it occurred long before (e.g., the Bacchanalian affair; cf. Livy, xxxix. 8f.). Thus, despite his acquaintance with its ascetic discipline from youth (*Ep.* 108, 17), Seneca asserts towards the close of his life (c. A.D. 62) that the Pythagorean school had ceased to have an organization (*Nat. Quæst.* vii. 32). Possibly this was because he associated it with the school of the Sextii which, as he says in the same place, disappeared rapidly. But, although he was unconscious of it (failing to recognize his own defection from the 'old' Stoa), another reason probably had greater weight. Alexander and Aristotle dead, an era of change overtook the Hellenic spirit. Greek religion, having crystallized at the point where the mythological deposit was greatest, fell behind the intellectual consciousness of the race. The deeper insight suffered as a consequence. 'First philosophy' came to be confounded with impossible superstition. For the mysticism associated traditionally with Pythagoras, the sublime intuition of Polygnotus (cf. Aristotle, *Poet.* ii. 2), and the immaterialism of Plato as seen in the *Philebus*, *Parmenides*, *Phædrus*, and especially *Timæus*, failed to retain a hold upon a people forced by its critical genius into rationalistic natural religion and pragmatic ethics. Seneca lived at a time when this phase had nearly passed, when profound yearning for a positive, personal faith was beginning to manifest itself in reversion to Platonizing immaterialism and to venerable theosophy, but when the intellectual sobriety of the schools still retained much of its authority (cf. W. W. Fowler, *The Religious Experience of the Roman People*, Oxford, 1911, lects. xv., xvii.). And, as he missed the significance of men like Posidonius and Alexander Polyhistor, he could hardly be expected to note the import of the revival of movements akin to 'Orphic-Pythagorean' esoterism (cf. H. W. J. Thiersch, *Politik und Philosophie in ihrem Verhältniss zur Religion unter Trajanus, Hadrianus und die beiden Antoninen*, Marburg, 1853). It is important to recall that animism (*q.v.*) was still universal in the Roman world (cf. Ovid, *Fasti*, v. 429 f.; Propertius, v. 7. 1 f.; Lucan, *Phar.* ix. 1 f.). Inevitably, it favoured those 'private' as opposed to State religious observances against which the government felt compelled to take repressive measures, and 'Pythagorean' occultism seems to have been associated with such illicit oracles (cf. Livy, xl. 29, xxv. 1; Tac. *Ann.* vi. 12).

Astrology figured in these practices, so much so that, in 139 B.C., Qn. Cornelius Hispanus, the Prætor Peregrinus, ordered all 'Chaldeans' to quit Rome and Italy within ten days. Now, thanks to its cosmology, Stoicism (*q.v.*) had affinities with astrology, and when, in the person of Posidonius of Apamea (fl. 86-62 B.C.), Cicero's teacher (cf. R. Hirzel, *Untersuch. zu Ciceros philos. Schriften*, Leipzig, 1873-83, i. 191 f., ii. 257 f., 477 f., 756 f., iii. 342 f.; F. Cumont, *The Oriental Religions in Roman Paganism*, Eng. tr., Chicago, 1911, ch. vii., *Astrology and Religion among the Greeks and Romans*, New York, 1912; W. W. Jaeger, *Nemesis von Emesa*, etc., Berlin, 1914), Oriental ideas invaded the West under authoritative intellectual auspices, this pseudo-science gained most influential adherents (cf. Suetonius, *Aug.* 1), and was soon expounded by P. Nigidius Figulus (prætor, 58 B.C.). This, together with the blunting of the Greek critical habit, which found its last successful exponent in Carneades († 129 B.C.), the prominence of encyclopædic or antiquarian knowledge, and the growing thirst for mystical revelations, placed astrology in an incontestable position by the time of Tiberius (cf. Tac. *Hist.* i. 22, *Ann.* vi. 21), and marked the moment favourable for a revival of 'Pythagoreanism' (see DIVINATION [Roman]).

1. History.—Where so much remains obscure, detailed historical sequence is unattainable. In fact, we have an aspect of an elusive movement, in which man asserts his personal need for assurance of right relation with the divine, adopts doctrines of very diverse origin when they seem to lend him support, seeking all the while hoary authority to justify his beliefs, and, in an attempt to systematize, appeals at the moment to current traditions respecting one type of speculation. Seneca was right so far—Neo-Pythagoreanism never became more than a transitional phase. In itself, it left no permanent mark upon philosophy, and it influenced religion only to the extent to which it was absorbed into a larger whole (cf. J. Simon, *Hist. de l'école d'Alexandrie*, Paris, 1844-45, vol. i. bk. ii. ch. iv.). Thus when, in 181 B.C., the Pythagoreanizing forged 'Books of Numa' were unearthed on the Janiculum, the fraud testified to tendencies that had acquired momentum already. Repression by government served only to drive them underground, and, beginning with Alexander Polyhistor, the freedman of P. Cornelius Lentulus (c. 50 B.C.), to whom Diogenes Laertius and Clement of Alexandria assign a Life of Pythagoras and commentaries upon his teaching, many pseudonymous 'Pythagorean' works—those attributed to Archytas being most important—were produced during the period when the Roman Principate was developing. Like that of the 'Books of Numa,' their intent was obvious—to acquire the authority (cf. F. Beckmann, *Dissertatio de Pythagoræorum Reliquiis*, Berlin, 1844) of an august name for doctrines which, as yet, were anathema to the State religion. Possibly, too, they may have been designed to effect for 'Pythagoreans' what the Septuagint had done for the Hellenistic Jews, for Philo especially—in this regard the association of many of the Neo-Pythagoreans with Alexandria is significant; and when, early in the 3rd cent., Philostratus cast a halo about the career of Apollonius of Tyana (*q.v.*), he may have been trying, like Hierocles eighty years later, to parallel the authority derived by Christians from the Founder of their faith. In any case, from the outset, only one interpretation can be placed upon the appeal to antiquity. Philosophy was being transformed into a mystical creed. After Alexander Polyhistor the movement was sustained by P. Nigidius Figulus (a friend of Cicero), Endorus

of Alexandria (c. 20 B.C.), Arius Didymus of Alexandria (an intimate of Augustus), Sotion of Alexandria (the teacher of Seneca), Apollonius of Tyana (c. A.D. 65-85), Moderatus of Gades (c. A.D. 65), Secundus of Athens (c. A.D. 120), Numenius of Apamea and Niconaeus of Gerasa (c. A.D. 170), and Philostratus (c. A.D. 220). Doubtless there were many others; for even of those mentioned we know little, Apollonius excepted—and he became a subject of romance—and, ere the time of Secundus, Neo-Pythagoreanism was being absorbed rapidly, by a process of syncretism (*q.v.*), in the eclectic Pythagoreanizing Platonism represented by Plutarch of Chærenea (*q.v.*), who, in turn, was the harbinger of Neo-Platonism (*q.v.*).

2. Teaching.—Neo-Pythagorean teaching cannot be recovered in detail. The movement was very complex; records are largely lost; the stress laid upon the incidental doctrines wavers from representative to representative at different times; and, on the whole, there is little philosophical relation to Pythagoras. Further, the teaching was highly syncretist, drawing impartially upon previous systems, even upon Epicureanism, which it opposed vehemently, and making large drafts upon Stoicism, against which it was a reaction. The reasons are tolerably plain. The spiritual currents of the age set away from scientific, logical thought and flowed towards religious persuasion, which, perforce, sought support in popular fables and superstitions (cf. Cicero, *de Div.*). Philosophy had lost constructive power, and, the theoretical motive gone, all schools had grown fundamentally sceptical. Moreover, social unrest and dissatisfaction with life, consequences of ethical staleness and civic atrophy, had engendered a consciousness of failure or defeat that came nigh a sense of sin. This, in turn, bred an appetite for portents, dreams, horoscopes, and other marvels—the lower aspect of the movement. On a higher level, it produced a desire for immortality, for a perfection impracticable under corporeal conditions, and accordant eschatological speculation (see COMMUNION WITH DEITY [Greek and Roman]). Out of this arose attachment to a peculiar species of immaterialism, leading to a henotheistic (see MONOLATRY AND HENOtheISM) conception of an overruling Power, and to a yearning for assurance of personal relationship with a Supreme Being. But the emphasis upon the transcendence of deity—itsself a result of the opposition between matter and spirit—rendered intermediate beings necessary, and so the higher level of the movement returned upon the lower, in the doctrine of dæmons (see DEMONS AND SPIRITS [Greek and Roman]). Neo-Pythagorean teaching exhibits an attempt to satisfy these aspirations by appeal to Greek resources, just as Philo and his school (see ALEXANDRIAN THEOLOGY) revert to the Hebrew Scriptures and Jewish theology. They agree in availing themselves—somewhat unconsciously, it is true—of Oriental theosophizing notions. Thus, the teaching gleaned its materials from the past—there was no dominating or transitive contemporary leader—and ancient tendencies of Hellenic thought aided its syncretism.

While, then, it is impossible to outline a system, or even to detect a series of co-ordinate doctrines, the following factors may be noted. (1) The ideal of the 'wise man' was a consequence of the indigenous Greek contention that philosophy is a 'way' of life. And, when the 'wise man,' inculcating virtue as its own reward, remained aloof from the people and their demands, it was easy to transfer allegiance to God, and to envisage the 'blessed life' in terms of practices which assimilated themselves to the ceremonial purification (see ESSENCES) of the mysteries (*q.v.*) or could be linked with the reputed habits of the 'Pythagorean

band' (Sextius). It was no accident, accordingly, that the philosopher should become the hierophant (the Pythagoras or Apollonius of romance); because his extraordinary insight attested the incalculable abnormally, he stood midway between the gods and men (Apollonius). Again, this agreed with the tradition (cf. Plato, *Rep.* x. 600 A) that Pythagoras introduced a secret *δδός τις βίον*, designed to supersede or supplement the religion of the State—the essence of Orientalizing tendencies after Domitian. (2) Plato's doctrine of an incorporeal world which, thanks to its conceptual character, is superior to the realm of sense, could be developed readily in relation to the Pythagorean theory of numbers, thus affording a hierarchy of realities mediating between the 'Highest' (One) and the appearances of the phenomenal world (Alexander Polyhistor, on the *Pythagorean Commentaries*). This, again, following the Later Stoa, could be accommodated to a sharp dualism (see DUALISM [Greek]) between matter and spirit, or body and soul (see BODY [Greek and Roman]), by the simple expedient of depriving the ideas (numbers, forms) of ontological independence, and making them existences in the divine mind, i.e. teleological subordinates (Eudorus—the view of the Neo-Pythagoreans on the whole). If, as some held, the ideas had no existence outside of the divine mind, an ontological dualism necessarily resulted (Plutarch); on the other hand, if, as the stricter Neo-Pythagoreans seem to have contended, they possess such an existence, a theory of three, or many, principles was evolved (Moderatus, Nicomachus), and, in the end, by personification of the Supreme Idea, a trinity (Numenius). (3) In reaction against the implicit materialism of the Stoics, Aristotle's doctrine of the eternity of the world (cf. *de Caelo*, i. 10 f.) and of time (cf. *Phys.* iii. 6) was adopted; but the stress was shifted from its cosmological to its anthropological significance, i.e. to man's eternity (cf. *Pol.* ii. 8, 1269^a 4). Not that the cosmological aspect was dismissed summarily; it commended itself in the theory of the divinity of the stars (cf. *de Caelo*, ii. 1), which could be accommodated to astrological prediction, to the notion of cosmical harmony according to number, time, and, possibly, 'mixture' in space, where, as the Neo-Pythagoreans, misunderstanding Plato, did not observe, myth ousts philosophy; it was convenient also in connexion with speculations about the changeless medium that fills interstellar space (see COSMOGONY AND COSMOLOGY [Greek] and [Roman]). More important, however, was the doctrine of man's divinity. If creative force be eternal in the world, it is eternal in man; hence an open road to belief in divine 'participation'; as God is to the world, so is the soul to man. Therefore, if a man is to be selected as an object of divine grace, he must worship by 'the most beautiful faculty we possess,' i.e. reason (Apollonius, ap. Eusebius, *Præp. Evang.* iv. 13). This is the warrant for the asceticism (see ASCETICISM [Greek] and [Roman]) that delivers man from the snares of the body, for the helpful communion of the mysteries, and for belief in rebirth—a process which enables the soul to rise or fall in the scale of existence. Thus, the teleological relation of deity to the celestial and the terrestrial worlds, obvious in the motions of the stars, in the succession of the seasons, and so on, was adjusted to man also. Stoic self-sufficiency broke down utterly; deliverance from matter became the consummation. So the old gods, viewed now as daemons, could play the part of special providence to man (cf. Plutarch, *de Def. Or.* 13); touched in all things like as he is, they could come nigh him as the 'First, who is One above all,' could not. Thus, immanence of the divine in the human was

provided for indirectly under 'symbols,' directly by revelation through hierophants, who acquire illumination through holiness, which, in turn, they achieve by asceticism (Philostratus). Plainly, we are on the verge of special revelation here, and the introduction of the concept of authority is imminent (see Gnosticism). In general, then, it may be said that the substance of the teaching is Greek (see GREEK RELIGION), the mood Oriental; and, till Numenius, who had come under the spell of Philo, the material served, all things considered, as a defence against the more insidious, not to say degrading, issues of the mood (see ISIS); hence the transitional character of Neo-Pythagoreanism. But the ancient self-governing State was passing into a quasi-Oriental despotism; and this change found a parallel in the transformation of independent philosophy into a mystical theosophy with a theocratic trend. We therefore find no consistent system, but merely a group of ideas, strung together loosely, in which the sane intellectual curiosity of the Greeks is surcharged with a hybrid, if fervent, supranaturalism. For, the ancient aristocratic religion having failed to assuage popular imagination, men were seeking the purification and, at the same time, the immortality of the soul. Philosophy could not but be diverted to religious aims. The elevation of spirit over matter which it taught was taken to imply that matter could be directed by spirit, the limits of space and time notwithstanding. The eclipse of Hellenic rational science had begun.

LITERATURE.—See the bibliographies under the articles cited in the text, the books by Friedländer, Réville, Boissier, Gregorovius, Mahaffy, Wendland, Glover, Seeck, H. W. and F. G. Fowler, and the histories cited under Neo-CRISTICISM. The literature is given fully in F. Ueberweg and K. Prächter, *Grundr. der Gesch. der Phil.* 10, Berlin, 1909, vol. i., sects. 16, 65–67; the best digest is still E. Zeller, *Die Philosophie der Griechen*, Leipzig, 1909, iii. 2; the most vivid picture of the general situation is S. Dill, *Roman Society from Nero to Marcus Aurelius*, London, 1905, bk. iii. ch. iii., bk. iv. ch. iii. f. See also A. Baumker, *Das Problem des Altere in der griech. Philosophie*, Münster, 1890; G. Milhaud, *Les Philosophes-géomètres de la Grèce*, Paris, 1900; A. E. Chaignet, *Pythagore et la philosophie pythagoricienne*, 2 vols., Paris, 1873; J. Burnet, *Early Greek Philosophy*, London, 1908, chs. ii., vii.; A. Trendelenburg, *Platonis de Ideis et Numeris Doctrina*, Leipzig, 1826; A. Döring, 'Die eschat. Mythen Platos,' in *AGPh* vi. R. M. WENLEY.

NEPĀL, NIPĀL. — 1. Physical characteristics.—The kingdom of Nepāl, on the northern frontier of India, is a native State extending along the southern slopes of the Himālaya for about 500 miles, with an area estimated at 54,000 sq. miles, and a population of 4,000,000.

It falls into four zones: the Tarāi (probably Skr. *talā*, 'the tract below the hills'), the water-soaked malarious region along the British frontier; the hill range continuous with that of the Siwāliks; the hilly country extending to the Himālaya; and the Himālaya itself, culminating in Mount Everest (29,000 ft. high), and within Nepāl in Kinchinjunga (28,146 ft.). But for purposes of religion and ethnography the country may be divided into three regions: the Tarāi; the valley of Nepāl, with its capital Kātmāndū (*q.v.*); and the mountainous country bordering on Tibet. Owing to the jealously exclusive policy of the Gurkhā rulers we possess less knowledge of Nepāl than of any region on the borders of India, except perhaps the upper course

of the river Brahmaputra, barred by hostile savage tribes.

2. History.—The meaning of the name Nepāl is uncertain, the Brāhman derivation from a saint Niyamapāla, 'observer of vows,' being perhaps an afterthought. The name is identical with that of the Newārs, the oldest known inhabitants of the valley. There is a long series of native chronicles which, like those of Kashmir, embody information of value, but need to be checked by epigraphic and other independent evidence. These have been analyzed by D. Wright (*Hist. of Nepāl*, Cambridge, 1877). In the 4th cent. A.D. a Licchavi dynasty ruled the country, and it was apparently by their aid that Chaudragupta Maurya raised himself to power; it continued autonomous, but under Gupta suzerainty under Samudragupta (V. A. Smith, *Early Hist. of India*³, Oxford, 1914, pp. 279 f., 285, 365).

'Local tradition affirms that long before the time of Samudragupta, in the days of Aśoka, in the 3rd cent. B.C., the valley was under his control, and this tradition is confirmed by the existence at the town of Pātan of monuments attributed to him and his daughter, and by inscriptions which prove that the lowlands at the foot of the hills were an integral part of his empire' (ib. p. 366, and the same writer's *Aśoka*², Oxford, 1900, pp. 77, 81).

The Buddhist pilgrim Hiuen Tsiang (A.D. 629-645) may not have visited the country in person, but he speaks of a king Amsuvarman (Anehu-famo), founder of the Thākuri dynasty, who died about A.D. 642 (S. Beal, *Buddhist Records of the Western World*, London, 1884, i. 80 f.; T. Watters, *On Yuan Chwang's Travels in India*, London, 1904-05, ii. 84). It is not certain whether Harsha (A.D. 612-647) exercised control over the country (Smith, *Early Hist.*³, p. 366). But about the 8th cent. A.D. the period of dependence on Tibet began, and the country had little connexion with India until the Muhammadan conquests led to the emigration of bodies of Hindus, the Gurkhās claiming to be descended from fugitives from Rājputāna after the capture of Chithor by Alā-ud-din Khilji, A.D. 1303 (*ERE* vi. 456). For the blood-stained later history see *IGI* xix. 30 ff.

3. Religion.—Nepāl thus forms the meeting-ground of at least three cultures: the Mongolian stock, including the Newārs, and tribes of Tibetan origin, such as the Kirāntīs of E. Nepāl, more purely Mongoloid and less civilized than the Newārs, the Mirmīs, Lepchās, and Limbūs of the hills adjoining Sikkim and Dārjiling; in the Tarāi are the Thārus and Boksās, akin to the aboriginal population of the Indian plains, probably of the Mon-Khmer races, all now ruled by the Gurkhās or Gurkhās, a mixed race including Mongoloid and Indo-Aryan strains (A. Baines, *Ethnography* [= *GIAP* ii. 5], Strassburg, 1912, p. 136 ff.). The Mongoloid element in the population appears in the temple architecture of the valley, which is of the primitive Chinese type, in which the roof is the main element, the walls being mere screens set between pillars.

'Certain temples and tombs of Jain priests in the South Kanara District on the western coast of the Madras Presidency, built in a style obviously derived from wooden originals, possess a surprising and unexplained resemblance to the buildings of distant Nepāl' (V. A. Smith, *Hist. of Fine Art in India and Ceylon*, Oxford, 1911, p. 45).

The beliefs of the Newārs are animistic with a veneer of Buddhism. The Gurkhā aristocracy, like all recent converts, are devoted followers of Brāhmanical Hinduism, stringently repress cow-killing, and employ Brāhmins as their priests.

(a) *Animism*.—The animistic beliefs current in Nepāl resemble those of the entire Himalayan region. The *deotās*, or hill-spirits, are special objects of worship. The Tibetans worship Mount Everest as the abode of the five celestial nymphs who confer immortality, and the Gosāinthān peak,

which stands due north of the valley, is distinguished for its sanctity; the sacred tusk of Nārāyaṇa, buried amidst its snows, is an object of special worship to pilgrims (L. A. Waddell, *Among the Himalayas*, p. 351 f.; H. A. Oldfield, *Sketches from Nipal*, i. 4). Mountain-passes, probably on account of the rarity of the air, are scenes of spirit-possession, and the spirits are propitiated by the erection of cairns on which offerings are placed (*GB*³, pt. vi., *The Scapegoat*, London, 1913, p. 8 ff.).

At a pass in Sikkim Waddell (p. 115) tells how his men laid down their loads at such a cairn, tore a few rags from their dress, tied them to a twig or stone which they placed on the cairn as an offering, crying out, 'Pray accept our offering! The spirits are victorious! The devils are defeated!' (for this kind of offering see Hartland, *LP*, London, 1894-96, ii. 214 f.).

Springs, and particularly hot springs, are regarded as the work of spirits which cause disease if not conciliated (Waddell, pp. 203, 216). Worship of snakes and cows is common, and we find in Nepāl the curious tabu against the use of milk which prevails widely in E. Asia (*FL* xxiii. [1912] 285 ff.). In connexion with serpent-worship that of the frog may be noted. Waddell (*JA* xxii. [1890] 293 f.) states that among the Newārs of Nepāl the frog is regarded as an amphibious water-deity, subordinate to the *nāga* demigods. The Newārs worship the *nāga*, or dragon, at the festival of the *Nāgpanchamī*, 'Dragon's Fifth,' so called because it is held on the fifth day of the month Bhādon (August-September).

The priest ceremonially washes his face and hands, and makes an offering of food, milk, and water to the *nāga*, with the invocation: 'Hail Paramēśvara (Supreme Lord), Nāga-rāja, and Ye Nine Nāgas! I pray you to receive these offerings and to bless us and our crops!'

With this rite is combined the propitiation of the frog, which is performed in the month of Kārttik (October) at a pool frequented by frogs.

A dole of food is placed in five brazen bowls, and a pile of butter and incense is set alight. Then the priest invokes the frog-spirit: 'Hail Paramēśvara, Bhūmīnātha (Lord of the Earth), I pray thee to receive these our offerings, to send timely rain and bless our crops!'

The rite seems to be a form of magical rain-making.

(b) *Buddhism*.—Buddha was closely connected with Nepāl, having been born in the Sākya territory, at the foot of the Nepāl hills. Aśoka introduced the faith into Nepāl, and by about A.D. 640 it reached Tibet (Waddell, *Buddhism of Tibet*, p. 9). An inscription of the 3rd cent. B.C., discovered at the *stūpa* of Sānehi, gives the legend: 'Of the good man Kassapa-gotta, the teacher of all the Himālaya region' (T. W. Rhys Davids, *Buddhist India*, London, 1903, p. 299 f.). The local traditions in Nepāl indicate that Sankara Aelārya, the prophet of the Neo-Hinduism, who lived about the beginning of the 8th cent., persecuted the Buddhists, and by his magical powers dismissed Sarasvatī, the goddess of eloquence, whom the Buddhists had installed in a jar of water to assist them in the controversy with the Hindu missionary (Wright, p. 118 f.). Buddhism in Nepāl is at present in a degraded condition.

'Buddhism has sadly degenerated from the high standard of doctrine and of discipline which was established by the primitive Buddhist Church in the early ages of its history. Theoretically the religion is unchanged. The Buddhist scriptures now extant in Nipal, and which are still looked on as the only inspired authority on all matters of faith, propound the same orthodox doctrines which were preached by Sakya between two thousand and three thousand years ago; but the Church itself has become corrupt, its discipline is totally destroyed, and its social practices at the present day are in direct defiance both of the letter and spirit of Buddhist law. Its monastic institutions, with their fraternities of learned and pious monks, have long since disappeared; the priesthood has become hereditary in certain families, and the system of caste, which was denounced by Sakya and the early Church as utterly repugnant to their ideas of social equality, has been borrowed from the Hindus, and is now recognized as binding on all classes of Buddhists in the country' (Oldfield, II. 72).

Nepālese Buddhism has absorbed much from the

local animism and Tāntrik Hinduism; prayer has become mechanical, offered by means of praying-wheels and flags inscribed with petitions erected near the temples. Nepāl, both in the valley and in the Tarāi, possesses a great series of Buddhist antiquities, the Lumbinī (q.v.) garden and the remains connected with it, and some of the few extant *stūpas* like those of Sāmbhunāth and Budnāth within a few miles of Kātmāndū. It is much to be desired that the Government should be induced to afford facilities for their examination.

(c) *Hinduism*.—The cult of Śiva is of special importance in Nepāl. Even Buddhists have adopted the symbols of the *liṅga* and the *yonī*, the former being regarded as the lotus in which the spirit of Adibuddha, in the form of flame, was made known to Mañjuśrī and the early Buddhas, the latter representing the sacred spring in which the root of that divine lotus was enshrined (Oldfield, ii. 203). The cult of Śiva in the form of Paśupati, 'lord of animals,' is as popular as in other parts of the Himālaya (E. T. Atkinson, *Gazetteer Himalayan Districts*, Allahābād, 1882-84, ii. 771 ff.). The *Śivarātri*, or night-feast of the god, occurs on the first day of the month Phālguna, in the early spring, when, according to Oldfield (ii. 321 f.), all the Hindu population of the valley, both Gurkhā and Newār, from the Mahārājā and his highest chiefs down to the poorest classes, throng to the shrine of Paśupati within the twenty-four hours during which the festival lasts.

The chief object of worship is the four-faced *liṅga* of Śiva which stands in the principal temple. Prayers and offerings are made to it, and the usual fees are paid to Brāhmins and to the officiating priests. These priests pour water over the *liṅga* as a rain-charm, wash it, and cover it with flowers, after which the officiant, reciting certain incantations, reads out of the scripture the names and qualities of the deity, while the worshippers fling leaves of the *bel*-tree, sacred to this god, over the head of the *liṅga* (ib. ii. 321 f.).

The god is also specially worshipped with his consort in the form of Bhairava and Bhairavi, old gods of the earth. According to the local legend, the four Bhairavis, finding that they could not get blood to drink, as there were no Rājās, resolved to create the Nepāl monarchy (Wright, p. 105). The festival of Śiva in this form is the *Bhairava-jātra*, which is followed by a procession of the *liṅga* accompanied by masked dancers. At the festival in honour of the consort of Śiva, Bhairavi Devī, the image of the goddess is brought to her original home, Devī Ghāt, where buffaloes are sacrificed and their life-blood drunk by the Newār worshippers. The account of the rite, as given by Oldfield (ii. 293 f.), is disgusting. Here the goddess has no regular temple. As a purely local aboriginal deity imported into Hinduism, she is represented only by a pile of stones, walled in temporarily every year to protect the deity from being seen or disturbed by the profane. Śiva at Kirtipur is worshipped in his tiger form as Bāgh Bhairava, a survival of the primitive theriolatry. Brutal animal-sacrifices are also made at the *Dasahra* festival as a method of expelling evil spirits (*FL* xxvi. [1915] 42 ff., 57). Durgā in her more awful form, Chāndesvari, was imported into Nepāl by one of the early Rājās, and placed in the centre of the country as its tutelary deity (Wright, p. 154). On the whole, the Hinduism of Nepāl has assumed a degraded form, and nowhere else in India, except at a few shrines like those of Kālī at Calcutta, Vindhyaśini Devī at Bindhāchal, Devī at Devī Pātan, and in the worship of the village-deities in Madras, does the custom of animal-sacrifice survive in such a brutal form.

LITERATURE.—There is a considerable literature connected with Nepāl, but most of the writers were not permitted to visit any part of the country beyond the capital and its neighbourhood. The most useful books are H. A. Oldfield, *Sketches from Nipal*, London, 1880; D. Wright, *Hist. of Nepāl*, Cambridge, 1877; L. A. Waddell, *Among the Himalayas*, London,

1899, *The Buddhism of Tibet*, do. 1895; B. H. Hodgson, *Essays on the Languages, Literature, and Religion of Nepāl and Tibet*, do. 1874. The following are other authorities: C. Bendall, *A Journey of Literary and Archaeological Research in Nepāl and N. India, 1884-85*, London, 1886; P. Brown, *Picturesque Nepāl*, do. 1912; F. Egerton, *A Winter's Tour in India, with a Visit to the Court of Nepāl*, do. 1852; F. Hamilton (formerly Buchanan), *An Account of the Kingdom of Nepāl*, Edinburgh, 1819; W. Kirkpatrick, *An Account of the Kingdom of Nepāl in 1798*, do. 1811; S. Lévi, *Le Népal: Etude historique d'un royaume hindou*, Paris, 1905; L. Oliphant, *A Journey to Katmandu*, London, 1852; T. Smith, *Five Years' Residence at Nepāl, 1841-45*, do. 1852; R. Temple, *Journals in Hyderabad, Kashmir, Sikim, and Nepāl*, do. 1887.

W. CROOKE.

NEREIDS.—See NATURE (Greek), above, p. 227^a.

NESTORIANISM.—This is the name given to a heresy which divided Christ into two Persons, closely and inseparably joined together, and yet distinct. It became acute in the 5th cent., and is named after Nestorius, bishop of Constantinople A.D. 428-431. Whether Nestorius himself held this view of the Incarnation is a matter of dispute, and we shall have to consider the question in the course of this article.

i. Pre-Nestorian Christology.—After the settlement at Nicea (A.D. 325) of the Arian question with reference to the relation of the Son to the Father, and even while the kindred question of the personality and Godhead of the Holy Ghost was still being discussed, men were groping after true ideas of the Incarnation, and after the true meaning of the words (Jn 1¹⁴): 'The Word became flesh and tabernacled among us' (ἐν ἡμῖν). In other words, after the settlement of questions relating to the Holy Trinity, Christology became the subject that chiefly occupied the minds of Christian theologians. The problem to be solved was, How can Christ be truly God and also truly man?

(a) *Apollinarianism*.—The first detailed solution of the problem was offered by Apollinarius, or (as most Latin writers call him) Apollinaris, the younger, bishop of Laodicea in Syria, who began his theological life as a decided and orthodox opponent of Arianism, but in later years developed the heresy named after him (see art. APOLLINARIANISM). He answered the question by affirming that our Lord's humanity was not perfect. Adopting the Platonic trichotomy of man into body, soul (ψυχή), and spirit (πνεῦμα or νοῦς), as in 1 Th 5²³, he asserted that, while our Lord had a true human body and a true human soul (i.e. that part of man which is common to him and the animals), the Logos or Word occupied in Him the place of the πνεῦμα, which is the highest part of man. This idea is due to a reaction from Arianism (q.v.), and a desire to affirm at once the real divinity of our Lord and His real unity. But an imperfect humanity means an unreal Incarnation; and Apollinarius's teaching was emphatically condemned at the Second General Council, that of Constantinople, A.D. 381 (can. 1; see also Hefele, *Hist. of the Councils*, ii. 348).

(b) *The school of Antioch* in the 4th cent. had a special relation to the teaching of Nestorius. Its tendency was the opposite of that which has just been considered. It was also quite different from that of Alexandria. The Alexandrian teaching dwelt most on the divine side of our Lord, the Antiochene on the human. In the interpretation of the Scriptures, while the Alexandrians revelled in allegory and mystical exegesis, the Antiochenes confined themselves to external facts; they studied the Scriptures from a purely historical point of view, and examined them word by word for the grammatical meaning. Such a method, so much akin to the methods of the present day, has both advantages and disadvantages. The advantages (if we may take as a good example of the school

Theodore, bishop of Mopsuestia, in Cilicia, known by the Nestorians as 'the Interpreter' (on account of his exegetical work) are sound common sense and a rational presentment of the historical position of the author commented on. The disadvantages of Theodore's method, as summed up by H. B. Swete, are:

'Want of insight into the deeper movements of Scriptural thought; a tendency to read his own theology into the words of his author; a lack of spiritual force, an almost entire absence of devotional fervour' (*Patristic Study*, London, 1902, p. 100).

In their Christology the Antiochene writers emphasized our Lord's real humanity, in opposition to Apollinarius. The two authors of this school in the pre-Nestorian period who are most important for our present investigation are Diodorus, bishop of Tarsus, and his pupil, Theodore of Mopsuestia, already mentioned. Both dwell especially on the real humanity of our Lord, but in both there is a tendency, which in Diodorus (to judge by the scanty fragments that remain of his works) was scarcely more than latent, unduly to separate the natures of Christ, and to make of Him two Persons. Theodore goes much farther than his master, and in him has been seen both by ancient and by modern writers the real founder of Nestorianism. This is the view of the contemporary layman, Marius Mercator, to whose curiosity and diligence, when he was staying for the purposes of his business in Constantinople, we owe the preservation, in a Latin version, of several sermons and other writings of Nestorius. Marius emphatically fathers the error on Theodore (*PL* xlviii. 110).

A very brief summary of Theodore's teaching must here suffice (for further particulars see Swete's art. 'Theodorus of Mopsuestia,' in *DCB* iv., esp. p. 944 f.). Theodore affirmed the true humanity of our Lord and its perfect sinlessness; this was due, he said, to His union with the Person of the Divine Word which He had received as a reward for His foreseen sinlessness. The Word dwelt in the man Christ. 'He united the assumed man entirely to Himself and fitted Him to be a partaker with Him of all the honour of which the indwelling Person who is Son by nature partakes.' Theodore rejected the word *ἐνωσις* for the union of God and man in Christ, and used rather *συνάφεια* ('connexion'); he disliked the term *θεοτόκος* (below, §§ 2, 4), but allowed that it might be used in a certain sense. Mary was both *ἀνθρωποτόκος* ('man-bearer') and *θεοτόκος* ('God-bearer'). She was mother of the man, but in that man, when she gave Him birth, there was already the indwelling of God.

Theodore was 'felix opportunitate mortis.' He died in 428, a few months after Nestorius went to Constantinople (below, § 2). Had he lived longer, there can be little doubt that he would have been condemned for the teaching which was in reality his own, though it was popularized by Nestorius and therefore named after him. Theodore's doctrines were formally condemned at the Fifth General Council, held at Constantinople in 553.

It was against such teaching that the Councils of Ephesus and Chalcedon (431 and 451) affirmed that our Lord was one Person only; and the approved doctrine may be summed up in the admirable and careful words of Hooker:

'The Son of God did not assume a man's person unto his own, but a man's nature to his own person' (*Ecclesiastical Polity*, v. 52).

2. Nestorius and the Council of Ephesus.—The present generation has had the opportunity of learning something more of the history and a great deal more of the teaching of Nestorius than its predecessors, owing to recent discoveries and investigations. Before we go farther we may try to estimate the value of our most important, though by no means our most voluminous, authority, the historian Socrates; for from the accounts of the avowed

enemies of Nestorius we shall be inclined to make considerable deductions.

Socrates was a layman of Constantinople, orthodox (for there is no good reason for calling him a Novatian), but not violently opposed to Nestorius, willing to put the best construction on his words, and evidently not at all predisposed to favour Cyril or Alexandrian teaching (*HE* vii. 15, 34). He was specially interested in the affairs of his native city, and a searcher after truth, so that he dwells most on what he himself saw (v. 23). He was disliked good in . . .

On the vation 1 his comparatively brief record of the Nestorian controversy. He wrote in 439. For his conclusions on the subject see below, § 6. It may be added here that Theodoret, bishop of Cyrrhus or Cyrus in Syria, does not bring his *Ecclesiastical History* down to the outbreak of the controversy, but ends it with the death of Theodore of Mopsuestia, although he seems to have written it a good many years later. Probably this omission was made with a purpose, as he was one of those Antiochenes who afterwards took an undecided line, though eventually he agreed to the union. We must also notice that Sozomen, whose *Ecclesiastical History* covers the same period as that of Socrates, does not mention Nestorius except in a very indirect allusion (ix. 1). His silence is instructive, and probably shows that the controversy did not excite quite such a universal interest as one might have supposed. Much of what follows is taken from Socrates.

Nestorius was, as Socrates expressly says (*HE* vii. 29), a native of Germanicia, a city in the east of Cilicia. A Syrian tradition describes him as of Persian origin; but it appears to be due to a desire to connect him with the later 'Nestorians' of the Persian empire; and the historical references of the later Syrian writers are so full of fable and ridiculous statements that it is impossible to put any trust in their unsupported averments. Nestorius became a monk of the monastery of Euprepus, near Antioch, and was famous for his eloquence as a preacher, and, according to some, for the austerity of his life (Socrates, *loc. cit.*; Gennadius, *de Vir. illustr.* 54). The see of Constantinople becoming vacant in December 427, and the ecclesiastics of the city having displayed ambitious rivalry, a bishop was sought for from outside its limits; and, by the influence of the emperor Theodosius II., Nestorius was appointed, and was consecrated on 10th April 428. Theodosius hoped to bring from Antioch a second Chrysostom, whose eloquence would greatly further the cause of religion.

Nestorius's first act, a few days after his consecration, was to make a fierce attack on heresy; he promised the emperor heaven as a recompense, and also assistance in conquering the Persians, if he would purge the earth of heretics. Nestorius immediately proceeded to the destruction of the chapel of the Arians in the city, and persecuted the Novatians, whose bishop Paul was everywhere respected for his piety' (Soc. *loc. cit.*), and the Quartodecimans in Asia, Lydia, and Caria; also the Macedonians or 'Pneumatomachi' (who denied the Godhead of the Holy Ghost), and others. He is with some reason blamed by Socrates as a furious persecutor.

The first outbreak of the Nestorian controversy was due to a presbyter named Anastasius, brought by Nestorius from Antioch (Soc. *HE* vii. 32). He preached in Constantinople against the popular name Theotokos (see below, § 4). The presbyter exclaimed: 'Let no one call Mary Theotokos, for Mary was but a woman, and it is impossible that God should be born of a woman'; and his sermon gave great offence. Thereupon Nestorius delivered a course of sermons supporting Anastasius. Several of these have been preserved by Marius Mercator (above, § 1).

Socrates passes over the events which happened during the next three years. But before the Council of Ephesus (the Third Ecumenical) was held, in 431, Cyril, bishop of Alexandria, entered into controversy with Nestorius because of his teaching. Celestine, bishop of Rome, held a

synod in that city in 430, and the synod declared Nestorius a heretic. Shortly afterwards a synod at Alexandria under Cyril did the same thing. Cyril drew up twelve 'anathematisms' (below, § 5), and Nestorius replied with twelve counter-anathematisms. Finally, the emperor summoned a General Council, to meet at Ephesus on Whitsunday (June 7) 431. In the meantime the bishops of the province of Antioch, whose metropolitan was John, examined Cyril's anathematisms, and found them unsatisfactory. The Antiochenes were by the traditions of their school inclined to favour Nestorius and to oppose Alexandrian teaching. And, whatever was the reason, whether from a desire to oppose Cyril, or from a wish that Nestorius should not be condemned in their presence (for they were a small minority), or, as some say, from accidental causes, they delayed their arrival at Ephesus till 26th or 27th June.

The first to arrive was Nestorius, who came soon after Easter with 'a great crowd of his adherents' (Soc. vii. 34). Cyril arrived just before Pentecost, others a few days later. After waiting more than a fortnight after the day fixed for the Council, and after receiving a friendly letter from John of Antioch and then (as he himself declares) a message requesting him to proceed without him, Cyril held the first meeting of the Council on 22nd June, 198 bishops being present. The letter of the Council to the emperors Theodosius and Valentinian (Mansi, *Sacrorum Conciliorum Collectio*, iv. 1235 ff.) expressly says that John sent before him two bishops, Alexander of Apamea and Alexander of Hierapolis, to tell the Council to go on without him. Nestorius declined to be present at this meeting, or to send any explanations of his teaching. The bishops, after investigating his sermons and writings, on the same day condemned him to deposition. In these proceedings no one appears to any great advantage. Cyril showed himself more of a prosecutor than of a president or judge; and, late as the Antiochenes were, he ought to have waited for them a little longer. Nestorius put himself out of court by his absence and by his unconciliatory and provocative language during the time of waiting; and the excuses offered in his lately-discovered 'Apology' (see below) do not exonerate him. The emperor comes out of the affair very badly, for he openly favoured the accused, just as later he openly favoured Eutyches, whose doctrines were the exact opposite of those of Nestorius; and the imperial commissioner, Candidian, outstepped all propriety in endeavouring to support Nestorius. Equally unsatisfactory was the part played by the Antiochenes, whose tardiness in arriving can with difficulty be believed to have been accidental. When they did arrive, they held a rival Council, attended by a small minority of 43 bishops, and deposed both Cyril and his supporter Memnon, bishop of Ephesus. They did not refer to the case of Nestorius on its merits at all, but only said that Cyril's Council had no right to depose Nestorius before their arrival.

The emperor thereupon showed much vacillation. He ordered the arrest of Nestorius, Cyril, and Memnon alike. But eventually public opinion forced him to release Cyril and Memnon and to banish Nestorius, first to his old monastery, then (at John of Antioch's own request) to Arabia, and finally (perhaps before the last arrangement was carried into effect) to the Oasis (of Ptolemais) in Egypt, where he still remained when Socrates wrote (A.D. 439). The emperor also summoned several bishops of the Ephesine majority to Constantinople to arrange for the filling of the vacant see there, and Maximian succeeded Nestorius. Socrates calls Maximian 'rude in speech' but 'inclined to live a quiet life' (vii. 35). He was

soon after succeeded by Proclus, and under these two peaceful bishops quiet reigned in the capital.

Till a few years ago little of Nestorius's later life was known. But the newly-discovered *Book of Heraclides*, the 'Apology' of Nestorius, shows us his life in exile. It was written in Greek, under the pseudonym of 'Heraclides of Damascus,' by Nestorius after his deposition. There is little doubt that Heraclides is a fictitious personage; and, once we get to the book itself, there is no veiling of the fact that Nestorius is the author; a pseudonym was necessary to prevent the book from being burned unread by those who hated the very name of the writer; for he retained very few friends, even among the Antiochenes, in his later life. The book has been preserved to our own day in a Syriac version, in the library of the E. Syrian (Nestorian) Catholicos, at Qochanes in the mountains of Kurdistan. Only one MS has survived, and that was unknown to European scholars; but it has lately been several times copied, and the book was published in 1910 by P. Bedjan in Syriac and by F. Nau in a French translation of the Syriac. Already, however, J. F. Bethune-Baker, in *Nestorius and his Teaching*, had given copious extracts from it in English. The 'Apology' (which will be cited in this art. as *Heraclides*) begins with a lengthy introduction, in 93 chapters, on heresies, proceeds to a history of the Council of Ephesus, following the order of the acts of that Council, and quotes numerous documents. A valuable appendix deals with events which followed the Council; it mentions the Robber Synod ('Latrocinium') of Ephesus (A.D. 449), and also the 'Tome' of Leo the Great (the *Dogmatic Epistle* to Flavian, bishop of Constantinople, Ep. xxviii., A.D. 449), which Nestorius praises greatly, and looks upon as supporting his own position. Nestorius died probably just before the Fourth Ecumenical Council, which was held at Chalcedon (opposite Constantinople) in 451. The later Monophysite and Nestorian accounts of his death, as one might expect, differ considerably in detail. They are both quite untrustworthy. For the Monophysite account and for authorities for Nestorius's later life see Gibbon, *Decline and Fall*, ch. xlvii. n. 55; but the discovery of *Heraclides* has corrected our previous knowledge on the subject. Cyril had died in 444, some seven years before his antagonist.

The 'Apology' is called in the Syriac the '*Tegurta*' of *Heraclides*, and Bethune-Baker translates this 'The Bazaar of Heraclides,' suggesting that the original Greek had ἐμπορίον. But Nau (p. xviii), with much more probability, urges that the original was *πραγματεία*, which may mean either 'trade' or 'a treatise.' It seems that the Syriac translator blundered, and gave the word the former meaning when he should have given it the latter. That *πραγματεία* meant 'a treatise' in Nestorius's own day is clear from the account in Socrates, who uses this word when he says that Nestorius had very little acquaintance with the 'treatises' (*πραγματείας*) of the ancients. Audishu (Ebedjesus, f. A.D. 1318), the learned Nestorian writer, mentions among Nestorius's writings 'the book of Nestorius.' This favours Nau's argument. For a further confirmation see E. W. Brooks, in *JThSt* xvi. [1915] 263.

After the Council of Ephesus there remained for some time a schism between the Antiochenes and the rest of Christendom. This was less on account of Nestorius—for even Theodoret later on, in his book on heresies (*DCB* iv. 917^b), speaks strongly against him—than because of Cyril's anathematisms, which the Antiochenes greatly resented. Socrates merely mentions the schism (vii. 34), but we have many documents bearing on the subject, and these are collected in Mansi's great work on the councils (vol. v.). Eventually, however, union was restored, largely through the efforts of Paul of Emesa, who acted as intermediary between Antioch and Alexandria. The Antiochenes propounded a perfectly orthodox creed, containing the expression 'Theotokos,' and this was fully accepted by Cyril (for the text see below, § 5); they also agreed to the

condemnation of Nestorius. Cyril, on the other hand, explained (in a letter to Acacius, bishop of Bercea and one of the Antiochene party) the language of his anathematisms in a manner satisfactory to John of Antioch and to most of the bishops of that party (below, § 5). This was in 433. There were, indeed, opponents on both sides. Of Cyril's adherents some, the progenitors of the Monophysites of the next generation, blamed Cyril severely. Of John's adherents some were definitely Nestorian, some (like Theodoret) were still doubtful about Cyril's orthodoxy, even after his explanations; and these all blamed John. But at last all the Antiochenes except fifteen (for whose names see Hefele, iii. 152 f.) agreed to the union, and the dissentients were deprived of their sees. For the after history of Nestorianism see § 8 below.

3. Change of meaning of certain technical words. — In order to understand the doctrines taught by or imputed to Nestorius, it is necessary that we should investigate the meaning of the expressions *substantia*, *οὐσία*, *ὑπόστασις*, *persona*, *πρόσωπον*, and *φύσις*, as used by Christian writers of the pre-Nestorian period. These words, except the last, were during that period chiefly discussed with reference to the Holy Trinity, in consequence of the Arian controversy. But some of them were used in more than one sense, and, as is usually the case in similar circumstances, violent disputes arose, owing to a lack of proper definition, between theologians who meant the same thing, but expressed it in different words. It is the duty of the conscientious historical student to endeavour to get behind words, and to discriminate between the two cases of essential difference between writers who use similar phraseology, and of essential identity between those who use different expressions.

(a) *Substantia* and *οὐσία*. — We need not here consider the pre-Christian use of *οὐσία* (for this see A. Robertson, *Select Writings and Letters of Athanasius* [‘Nicene and post-Nicene Fathers’], Oxford, 1892, p. xxxi f., and T. B. Strong, as below). The word was used by Greek Christian writers, though not quite exclusively (see below), to express that which is common to Father, Son, and Holy Ghost, the divine ‘essence’; and the Latin equivalent was *substantia*. Thus the divine *οὐσία* is spoken of by Justin Martyr (*Dial.* 128) and Clement of Alexandria (*Strom.* ii. 2); and Tertullian (*adv. Prax.* 2) says that Father, Son, and Holy Ghost are ‘*unius substantia*.’ Hence the Nicene Creed affirms that the Son is ‘*homousios*’ (‘of one substance’ or ‘consubstantial’) with the Father; and very shortly afterwards the same expression is used of the Holy Ghost, as in the *Testament of our Lord* (i. 41, c. A.D. 350); and Athanasius’s Council held at Alexandria in 361 (Soe. *HE* iii. 7; Soz. *HE* v. 12), and some versions of the baptismal creed in the *Egyptian Church Order*, in the middle of or early in the 4th cent., speak of ‘the consubstantial Trinity’ (Macleay, *Ancient Church Orders*, Cambridge, 1910, p. 115; another version and the *Ethiopic Church Order* have ‘Trinity equal in Godhead’). It is rather remarkable that the word ‘*homousios*’ is not applied to the Holy Ghost in the enlarged Nicene Creed which we use at the present day (known as the ‘Constantinople Creed’); but it is so applied in the confession of Charisius read at the Council of Ephesus in 431 (Mansi, iv. 1347). The word is an instance of a technical phrase changing its meaning, for in another sense it is said to have been repudiated by the orthodox at Antioch in the 3rd cent., when used by Paul of Samosata (Hefele, i. 123; T. B. Strong, in *JThSt* iii. 292). For a detailed examination of the word ‘substance’ see Strong in *JThSt* ii. 224, iii. 22.

(b) *ὑπόστασις*, *persona*, *πρόσωπον*. — The Church

had some difficulty in fixing on a proper phrase for expressing the distinctions in the Holy Trinity; and all these three words show at different periods considerable variation in meaning. The word *ὑπόστασις* (lit. ‘foundation’ or ‘support’), which, as Socrates tells us (*HE* iii. 7), was not a term approved by Greek grammarians and philosophers, was first used by the Christians in the sense of ‘substance,’ *οὐσία*; this, Socrates says, was the usage of many ‘moderns.’ And this sense of the word is frequent; it is found in He I³ (see Westcott’s note, *Com.*³, London, 1906), also in Gregory Thaumaturgus (quoted by Basil, *Ep.* cex. 5), usually, but not always, in Athanasius (see Robertson, pp. 90, 482), and in the anathema attached to the Nicene Creed: ‘Those who say . . . that [Jesus] is of another hypostasis (ἐξ ἑτέρας ὑποστάσεως) or ousia [than the Father] . . . the Catholic Church anathematizes.’ On this anathema see J. H. Newman’s excursus revised by Robertson (p. 77 ff.); it is disputed whether *ὑπόστασις* and *οὐσία* are here meant to be identical; Newman and Robertson assert the affirmative, the well-known theologian Bishop Bull (1634–1710), following St. Basil, the negative. If, as is probable, the books against Apollinarius contained in the works of Athanasius were written by that Father, he denies the propriety of the expression ‘hypostatic union,’ which became in the 5th cent. the approved method of expressing the union of our Lord’s two natures (see below, § 5). But Athanasius here understands the phrase to mean ‘union of substance’ (see Hefele, iii. 3, and below (c)).

This sense of *ὑπόστασις* gradually died out except among the Nestorians, and the word came to be used to express the distinctions in the Godhead. It would be pure Arianism to speak of ‘three hypostases’ in the Godhead, in the earlier sense of the word; but the sense changed and men came (not without much hesitation) to speak of ‘one ousia, three hypostases’ as denoting the Unity in Trinity. In the 3rd cent. Origen already uses *ὑπόστασις* in this sense, keeping *οὐσία* for ‘substance’ (*c. Cels.* viii. 12, etc.). In the 4th cent. Gregory of Nazianzus (*Orat.* xxi. 35, ‘On the great Athanasius’) says that *οὐσία* denotes the nature (*φύσις*) of the Godhead, *ὑποστάσεις* the ‘properties’ (*ἰδιότητες*) of the Three.

Some of the Greeks, however, used *πρόσωπον*, as the Latins used *persona*, to denote the distinctions in the Godhead. *Persona* properly means ‘an actor’s mask,’ hence ‘a character’ on the stage, and so it is often used of ‘a feigned character.’ But it came to mean ‘an individual,’ ‘a person,’ ‘a personage.’ Similarly *πρόσωπον*, which properly means ‘a face,’ came in classical Greek to mean ‘an actor’s mask,’ and in later Greek ‘a person.’ In a theological sense Tertullian already uses *persona* of the Holy Trinity (*adv. Prax.* 7, 12); and he has been followed by Western theologians to the present day, who have with one consent spoken of ‘*una substantia, tres personae*.’ Some of the Greek writers followed suit and used *πρόσωπα* to denote the ‘persons’ of the Holy Trinity, as Hippolytus early in the 3rd cent. (*c. Har. Nocti.* 7, 14), Basil in the 4th (*loc. cit.*), and others. Thus, in later days *ὑπόστασις* and *πρόσωπον* were used in the same sense, only that the latter was sometimes looked upon with suspicion as being capable of a Sabellian meaning, as if it meant ‘appearance,’ ‘aspect’ only; Sabellius had said that there were three *πρόσωπα* in the Godhead, but he meant that the Son and the Holy Ghost were the Father under different aspects (*c. A.D.* 200). Gregory of Nazianzus, in the 4th cent. (*Orat.* xxxix. 11, ‘On the holy lights’), allows both terms, *ὑπόστασις* and *πρόσωπον*, though he prefers the former.

The use of *ὑπόστασις* in this later sense met with some opposition. It had already caused some discussion between Dionysius of Rome and Dionysius of Alexandria, in the 3rd century (see Westcott, in *DCB* i. 851). At the Council of Sardica (Sofia, the present Bulgarian capital) in 343 (for the date see Hefele, ii. 86) the Western bishops condemned the expression 'three hypostases' as Arian, taking the word as equivalent to 'substance' (Theodoret, *HE* ii. 6). And, still later, Damasus of Rome (c. 370) takes it in the same sense (*ib.* ii. 17). Jerome says (*Ep.* xv. 4, 'ad Damasum') that in Syriac they spoke of three hypostases, but he himself refused to use the expression, as 'hypostasis never means anything but essence.' Gregory of Nazianzus (*Orat.* xxi. 35) says that 'the Italians' introduced the word 'persons' because of the poverty of their language (which prevented them distinguishing *ὑπόστασις* from *οὐσία*) so as to avoid being understood to assert three essences. The Council of Alexandria, held in 361 (see above), determined with much good sense that the word may have either meaning (Hefele, ii. 277); and so Athanasius asserts (*Tom. ad Antioch.* 6).

We are so accustomed to speak of three 'persons' in the Holy Trinity that we are apt to overlook the difficulties presented by the term in the earlier ages. It must not be taken, on the one hand, to mean three separate individuals, as if the Holy Trinity was like three men; nor yet, on the other hand, must it be understood to denote merely three different aspects of the Godhead, as Sabellius taught.

(c) *φύσις* ('nature').—Until the Council of Chalcedon, in 451, the sense of this word was not absolutely fixed. It is used as a somewhat vague equivalent for *οὐσία* in Athanasius, *de Synodis*, 52 (see Robertson, p. 478, note). But two traditional, though somewhat ambiguous, phrases were used by Cyril of Alexandria as from Athanasius. One was *ἑνωσις φύσικῇ* (see Cyril's third anathematism [Hefele, iii. 32]), which, if it meant 'a fusion of the natures,' would be heretical; and the other was 'one incarnate nature of God' or 'of the Word': *μία φύσις τοῦ θεοῦ (λόγου) σαρκαρωμένη* (*ib.* 3, 31, 141 f.). The former phrase, however, says only that the two natures were united, which all allow, and nothing of their being fused (see Cyril's explanation, below, § 5). In the latter phrase *φύσις* is used with an approach to the idea of 'personality'; but the words were at least ambiguous, for they were quoted by Dioscurus at Chalcedon as proving Eutychianism. This sense of *φύσις* happily passed away, or we might have had endless confusion. The phrase was believed by Cyril to have been used by Athanasius ('not two natures, but one incarnate nature of God the Word'); but the book in which it occurs, *de Incarnatione Verbi Dei* (not to be confused with the famous treatise of that name by Athanasius), is really a forgery of the Apollinarian school (Robertson, p. lxxv). From the middle of the 5th cent. *φύσις* was used of the divinity or the humanity of the Lord. He has two natures, divine and human, united but not commingled. The Monophysites and Eutychians in different ways affirmed the fusion of the two, so that they were, or became, one.

For the later Syriac equivalents of some of the above terms see below, § 8.

4. The doctrine of Nestorius examined.—We may now proceed to consider what the doctrine known as 'Nestorianism' is, and whether, as a matter of fact, Nestorius himself taught it. Since the discovery of *Heracleides*, his doctrine has been re-examined by several writers, with the result that, while Bethune-Baker thinks that he ought to have been acquitted, Nan and Bedjan consider that even after his 'Apology' he would have been

rightly condemned. The question is a personal one, concerning Nestorius himself only, but is not of supreme importance. It does not affect the question, which is the really vital one, whether Nestorianism is erroneous.

(a) *What Nestorianism is.*—In order to emphasize the reality of our Lord's manhood, in opposition to Apollinarianism, this doctrine conceives of the Incarnate as uniting in Himself two persons, the Logos and a man, although these two persons were so inseparably united that they might in a sense be deemed one. But, putting aside all technicalities, it fails to affirm, as Pearson admirably puts it (*Expos. of the Creed*, art. iii., p. 293, n. 92), that 'the Son of God, begotten of His Father before all worlds, was incarnate and made man, and . . . that the same only-begotten Son was conceived by the Holy Ghost and born of the Virgin Mary.' Nestorianism in reality denies a true Incarnation just as much as Apollinarianism does.

(b) *What Nestorius did not teach.*—We may clear the way by dismissing a popular charge against him, namely, that he denied that our Lord was God. It was commonly thought that he was in agreement with Paul of Samosata and Photinus. The former, a bishop of Antioch in the middle of the 3rd cent., taught that our Lord was merely man, and 'was not before Mary, but received from her the origin of His being'; and that He pre-existed only in the foreknowledge of God (Athanasius, *de Synodis*, iii. [45]). Photinus, the pupil of Marcellus of Ancyra in the 4th cent., taught much the same doctrine. But this was not Nestorius's teaching, and the idea that it was so is largely due to his unfortunate saying about God and an infant, for which see below (f). Socrates (*HE* vii. 32) says that he had examined Nestorius's writings, and found that he did not hold these opinions; and the extant sermons and fragments, as well as *Heracleides*, fully bear out this verdict.

(c) *The title 'Theotokos' and the communicatio idiomatum.*—There can be little doubt that, though Nestorius did not deny that our Lord was God, yet much confusion was produced by his not being able to distinguish the abstract from the concrete. This inability is shared by most of the Syriac-speaking Christians of the present day, and is found among the Greeks of old time, though in a lesser degree (for *ἄνθρωπος* = 'manhood' see below, (d)). To them the words 'God' and 'Godhead' were often interchangeable; and so 'man,' 'manhood.' This is probably due to a defective sense of personality. A modern E. Syrian, e.g., will often say that 'there is much manhood' in a room when he means that there are many men present. Hence to Nestorius phrases like 'God died' or 'God was born,' which meant that 'He who is God died,' or 'He who is God was born,' implied that the Godhead died and was born. In fact, he often imputed to his opponents the very doctrine which many of them imputed to him, that our Lord owed His origin to His mother. Nestorius had a horror of the method of speech which goes back to the earliest Christian ages (for instances see below), and is called by the Latins *communicatio idiomatum* and by the Greeks *ἀντίθεσις*; by which, because of the unity of our Lord's person, the properties of one of His natures are referred to when a title appropriate to the other nature is being used. When, e.g., Ignatius talks of the 'blood of God,' he means that He who is God shed His blood in His manhood. And so the phrases 'God died,' 'God was born,' however harsh they may sound to a modern ear, were common before Nestorius, as expressing the fact that He who was born of the Virgin Mary and died upon the Cross was truly God. But it would be false to substitute the abstract for the concrete in these phrases, and

say that 'the Godhead died' or 'was born.' The fact that Apollinarius delighted in expressions such as the above was doubtless one element in setting Nestorius against them.

The watchword of the Nestorian controversy was 'Theotokos' (θεοτόκος, 'God-bearer,' Lat. *deipara*). It had been long in use, and was the popular name of the Blessed Mother; and, as we have seen (above, § 2), the prohibition of its use by Nestorius roused the fiercest opposition. It can only mean 'bearer of Him who is God,' and not, as Nestorius supposed, 'bearer of the Godhead.' It enshrined the vitally important doctrine that the same He who was born of Mary was from all eternity God the Son, and not only one who was inseparably connected with Him. It ought to be added that *θεοτόκος* is not designed to honour Mary, but rather to explain the position of her Child. It is perhaps unfortunate that it frequently gave place to the expression 'mother of God' (μήτηρ θεοῦ, 'Dei genetrix'), which has not quite the same connotation, and may be liable to suggest Monophysite ideas, which the original *θεοτόκος* does not do. Cyril himself uses, but very rarely, *μήτηρ θεοῦ* for *θεοτόκος*. It must also be observed that the question is not whether 'Theotokos' is a suitable name to use (on that matter opinion may legitimately vary), but whether the doctrine underlying the title, that He whom the Virgin bore is the same person as the Word of God, is true. The title was approved at the Ecumenical Council of Chalcedon in 451 (Hefele, iii. 347).

Some instances of the *communicatio idiomatum* in very early times may be mentioned. In Ac 31⁶ ('ye killed the Prince of life') we have such an instance: 'the Prince of life' is a title of our Lord's Godhead, but St. Luke is speaking of His death. A striking instance would be Ac 20²⁸ ('the church of God which he purchased with his own blood'), but we are not quite certain of the text; 'God' is a better supported reading than 'the Lord,' but it has been suggested by Hort that originally the text ran 'with the blood of his own Son.' Other early examples are: *Barnabas*, 7 ('the Son of God . . . suffered'); Clement of Rome, *Cor. 2* ('His sufferings'); 'God' having preceded, according to Tertullian, *ad Uxor.* ii. 3 ('blood of God').

The word 'Theotokos' had been used in the 3rd cent. by Origen, who in his commentary on Romans gave an 'ample exposition' of the term (Soc. *HE* vii. 32); by Gregory Thaumaturgus, *Hom.* 1, 'On the Annunciation' (Eng. tr. in 'Ante-Nicene Chr. Lib.' xx. 134 ff.); and by Archelaus of Kashkar, *Disputation with Manes*, 34 (ib. p. 348); in the 4th cent. by Alexander, bishop of Alexandria at the time of the Nleene Council (quoted by Theodore, *HE* i. 3); Eusebius, *Vit. Const.* iii. 43; Athanasius, *Orat. c. Arian.* iv. 32; Basil, *Ep. cecelx.*, 'Of the Holy Trinity'; Gregory of Nazianzus, *Ep. ci.*, 'ad Cleodionum'; and by others.

The title was no real difficulty to the Antiochenes, who recognized its antiquity and its meaning; and it did not stand in the way of union. Even Nestorius, when all went against him (for, as we have seen, the Antiochenes were much less for him than against Cyril) exclaimed: 'Let Mary be called Theotokos if you will, and let all disputing cease' (Soc. *HE* vii. 34). In a Greek fragment quoted by Loofs (*Nestoriana*, p. 353) he is willing to tolerate the term 'as long as the Virgin is not made a goddess'; in a sermon (Loofs, p. 276) he suggests *θεοδόχος* ('one who receives God') rather than *θεοτόκος*. He wished, like Theodore (see above, § 1), to introduce the term *ἀνθρωποτόκος* ('man-bearer') as a complement to *θεοτόκος*, but he preferred *χριστοτόκος* ('Christ-bearer'). Yet up to the end of his life, as we see again and again in *Heraclicides*, he attacked the term *θεοτόκος*. (For two elaborate notes on this term see Pearson, *Expos. of the Creed*, art. iii., p. 318, notes 36, 37.)

(d) *Favourite expressions of Nestorius.* — He always speaks of 'two hypostases' in Christ. It seems fairly clear that he uses the word *ὑπόστασις* in its earlier sense of 'substance,' and that he means by 'two hypostases' our Lord's two natures.

But he causes some confusion by talking of the two hypostases and their two 'characteristics' or 'natures' (*φύσεις*). His persistent refusal to see any other possible sense of *ὑπόστασις*, though another sense had become common long before his day (above, § 3), is a justification of Socrates' opinion (*HE* vii. 32) that he was ignorant (see below, § 6). A little later the Council of Chalcedon fixed the terminology by affirming that in our Lord there was one *ὑπόστασις*, one *πρόσωπον*, two natures, 'without confusion, without change, without rending, without separation' (*ἀσυγχύτως, ἀτρέπτως, ἀδιαίρετως, ἀχωρίστως* [Hefele, iii. 350]).

In many passages of Nestorius 'a man' is used where it is charitable to suppose that 'manhood' is meant (see above (c)). The use of this particular concrete for this particular abstract is found in older writers, such as Athanasius, who uses the phrase 'the Man from Mary' when he is speaking of our Lord's humanity (*Orat. c. Arian.* iv. 35; so i. 45, etc.). Also in the *Exposition of Faith* (*Ἐκθεσις*) Athanasius three times uses the expression *ὁ Κυριακὸς ἄνθρωπος* for 'the Lord's humanity' (also elsewhere); and subsequent writers followed him, Latins translating it by *Homo Dominicus*. But Augustine, who had used this phrase, later disapproved of it (*Retract.* i. xix. 8). Robertson remarks (p. 83) that Athanasius did not employ 'man' for 'manhood' carelessly, nor in an ambiguous context, and that there is no doubt of his meaning. But, had he lived a century later, Athanasius would probably have used different language. In this connexion it should be added that certain NT expressions like 1 Ti 2⁵ ('one mediator . . . [himself] man, Christ Jesus') and 1 Co 15⁴⁷ ('the second man is of heaven') are not relevant to the present subject. In these 'man' is not used for 'mankind.' But it is quite Biblical to speak of our Lord as 'a man' (cf. Jn 8⁴⁰, Ac 2² 17³¹).

The metaphors 'temple,' 'veil,' 'vesture,' and 'instrument' (*ὄργανον*) are very common in Nestorius, as they had been in Theodore of Mopsuestia. In themselves they are unobjectionable; their context must determine whether they are suitable. If it is the 'manhood' that is the temple, or vesture, etc., the phrases are perfectly orthodox. But, if 'a man' is the temple, etc., they may reasonably be objected to as erroneous. A few examples out of a great number are the following: 'Mary did not bear the Godhead but a man (*ἄνθρωπον*) the inseparable instrument of the Divinity' (Loofs, p. 205). 'The manhood (*ἀνθρωπότητα*), the instrument of the Godhead of God the Word' (p. 247). 'The Creature did not bear the Creator, but bore a man (*ἄνθρωπον*), the instrument of [the] Godhead' (p. 252). 'The Lord was clothed with our nature . . . the vesture of [the] Godhead, the inseparable clothing of the divine substance' (p. 293). 'I said that the temple was passible, and not God who quickens the temple which has suffered' (*Heraclicides* [Bedjan, p. 318; Nau, p. 202]).

It is much more difficult to find an orthodox sense for the expression *συνάφεια* ('connexion'), by which the union effected by the Incarnation is expressed by Nestorius and Theodore. This is symptomatic of the whole trend of their teaching, towards the conception of two distinct beings joined together, though joined inseparably. They objected to the expression *ἐνωσις* ('union'), holding that it conveyed the idea of a confusion of the human and divine natures. But the main objection to *συνάφεια* was that it spoke of a conjunction of the Word with a man, not of human nature with the Word.

Nestorius also frequently uses the word *πρόσωπον*. But he uses it very ambiguously. Thus he several times speaks in *Heraclicides* of the *πρόσωπον* of the Godhead and the *πρόσωπον* of the manhood (Bedjan, p. 289; Nau, p. 183, etc.); and so he says in a passage of a sermon which we have only in Latin (Loofs, p. 255): 'Christ took the person

(*personam*) of the nature that was in debt and through it paid the debt as a son of Adam.' He affirms, indeed, one *πρόσωπον* in our Lord, but he frequently appears to conceive of two persons (*πρόσωπα*) united so as to make one person (*Heraclides* [Bedjan, pp. 94, 305, etc.; Nau, pp. 61, 193, etc.]).

It is, however, not so much by his technical terms (even though they show much confusion) that Nestorius must be judged as by the general character of his teaching. Theological terminology was in the process of construction; as we have seen, technical words changed their meaning, and it was an indirect benefit of the early heresies that they forced men to think more clearly and to define their terms. In the matter of technical phraseology we shall do well even to stretch a point in giving Nestorius the benefit of the doubt whenever we are able to do so with a clear conscience. And it must also be remembered that most Christian thinkers of the first few centuries of our era were somewhat vague in their ideas of 'personality.' Even when we have fixed on proper words to express the 'persons' of the Holy Trinity, we still have to find suitable terminology for 'personality' in man, for the word 'person' cannot mean exactly the same thing when we are speaking of the distinctions in the Holy Trinity as when we are speaking of the 'personality' of ourselves or of the Incarnate Lord. We may, therefore, now pass over Nestorius's technical terms and endeavour to estimate the general meaning of his teaching.

(c) *Examples of Nestorius's teaching.*—The counter-anathematisms were directed against those of Cyril, and ascribe to him Apollinarianism pure and simple. But, in doing so, they run to the opposite extreme. The seventh, *e.g.*, when literally translated, runs as follows:

'If any one says that the man who was created of the Virgin and in the Virgin is the Only-begotten who was born from the bosom of the Father before the morning-star (*luciferum*), and does not rather confess that he became partaker of the designation of Only-begotten because of connexion (*unitiōnem*) with him who is naturally the Only-begotten of the Father, and also says that any other than Emmanuel is Jesus, let him be anathema' (see Loofs, p. 214, for the Latin of Marius Mercator, and Hefele, iii. 36, for a rather free English translation).

Some of the other counter-anathematisms are scarcely less 'Nestorian.' Some are ambiguous; others charge Cyril with affirming what he never did affirm. On the other hand, Nestorius rejects an exaggeration of Nestorianism in his 6th anathematism:

'If any one after the Incarnation calls another than Christ the Logos . . . let him be anathema'; but from the rest of this 6th anathematism it is not easy to draw any good sense.

From other writings of Nestorius may be cited a few examples, in addition to those already given. In some Nestorius approaches a position which it is difficult to distinguish from true Nestorianism; in others he approaches orthodox doctrine. Cassian quotes him as saying: 'No one bears one who was before herself' ('*nemo anteriorem se parit*'), and almost the same words (with '*antiquiorem*') occur in his first letter to Pope Celestine (Loofs, pp. 168, 351). On one occasion (*ib.* p. 352), with reference to the name 'Theotokos,' he asks if, because the babe John was filled with the Holy Ghost from his mother's womb, one ought to call Elisabeth 'Pneumatotokos' ('Spirit-bearer')—a question which shows him to have been either a hopelessly confused thinker, or else (if the relation of the Son of Mary to the Logos is to be compared with that of John to the Holy Spirit) a confirmed 'Nestorian.' Another saying (Loofs, p. 292) which is decidedly ambiguous is:

'The same (*ὁ αὐτός*) was both babe and Lord of the babe . . . the same was babe and inhabitant (*οἰκίστης*) of the babe.' The phrases 'Lord of the babe' and 'inhabitant

of the babe' seem to point to two persons, namely 'the Lord' ('the inhabitant') and 'the babe,' even though they be united with 'the same.' In one of his sermons (Loofs, p. 327 f.) Nestorius says:

'The babe that is seen . . . is Son eternal in respect of that which is hidden, Son, Creator (*δημιουργός*) of all . . . For the babe is God in his own right (*αὐτεξούσιος*).'

Here we have a much closer approach to the conception of the single personality of our Lord.

Nestorius repeated Theodore's language about the Logos dwelling in Christ, and about the indwelling being due to God's good pleasure (*εὐδοκία*). He said that he was willing to worship 'him that is borne on account of him that bears' (Bethune-Baker, pp. 44, 93, 153).

In *Heraclides* the language is very diffuse and the arguments often difficult to follow; they are on the whole better balanced than those of his earlier works, though they include much that is ambiguous. The following is a specimen (Bethune-Baker, p. 86):

'He passed through blessed Mary. . . I said that God the Word "passed" and not "was born," because He did not receive a beginning from her. But the two natures being united are one Christ. And He who "was born of the Father as to the divinity," and "from the holy Virgin as to the humanity," is, and is styled, one; for of the two natures there was a union. . . The two natures unconfused I confess to be one Christ.' [He goes on to argue against the name 'Theotokos.']

It must be added that his summary of his own position in *Heraclides* is hopelessly confused (Bedjan, p. 128 f.; Nau, p. 83). It contains a statement of Christ's sinlessness; but it shows all the old inability to see the difference between the abstract and the concrete.

(f) *The saying about God and an infant.*—This saying is so important historically that it must be considered separately. Socrates (*HE* vii. 34) reports Nestorius as saying at Ephesus during the time of waiting for the Antiochenes: 'I would not name him who is two or three months old God' (*ἐγὼ τὸν γενόμενον διμηνῆτον καὶ τριμηνῆτον οὐκ ἂν θεὸν ὀνομάσαιμι*). This saying embittered the people against Nestorius more than any other, and was doubtless one great reason for attributing to him the heresy of Paul of Samosata (see above (b)). Nestorius deals with this saying in *Heraclides*, and either he or his Syriac translator gives another turn to the sentence (Bedjan, p. 202; Nau, p. 121). Here it is made to run: 'I do not say that God is aged two or three months.' In the Acts of the Council of Ephesus we read (Mansi, iv. 1181) that Nestorius was reported to the Council as saying that it is not right concerning God to speak of suckling or birth from the Virgin. 'So also then' (continued the witness Theodotus, who had been his friend) 'he frequently said *διμηνῆτον ἢ τριμηνῆτον μὴ δεῖν λέγεσθαι θεόν*.' The last words, Bethune-Baker remarks (p. 79 n.), would be read by no Greek scholar in any other way than as they are explained in *Heraclides*, *i.e.* 'that God ought not to be called two or three months old.' But he perhaps forgets that, as a matter of fact, Nestorius was not understood in this sense; for there is not the slightest ground for supposing that Socrates wilfully distorted his speech. The Greek-speaking people of the 5th cent. were not 'Greek scholars'—nor was Nestorius. And therefore it is by no means certain that (supposing that the words were exactly as given in the Acts of the Council) Nestorius, when he spoke them, meant what *Heraclides* suggests. For what is the meaning of the phrase in *Heraclides*? The proposition that 'a two or three months' old child is not God' is perfectly intelligible, however erroneous it may be. But there is no satisfactory sense in the phrase 'God is not two or three months old.' No one would dream of affirming that He was. And, if Nestorius

really did mean such a foolish thing by words uttered on the spur of the moment, we cannot conceive why he should have repeated it 'often' (πολλάκις). If 'no Greek scholar' could understand it otherwise, why did it make such a sensation in the Council of Ephesus? The letter of the Council to the emperors (Mansi, iv. 1235 ff.) has the saying thus: ἐγὼ τὸν διμνηραὶον καὶ τριμνηραὶον θεὸν οὐ λέγω, which shows that the Council understood the saying as Socrates did; in this form it can only mean 'I do not call one who is two or three months old God.' Assuredly no one present would have affirmed that 'God was two or three months old.' And, if that were the meaning of the saying, why did not Nestorius explain it at once, when he found what a sensation it caused? Under these circumstances the suspicion arises that in the heat of the moment, and very probably without meaning quite all that he said, Nestorius made the statement attributed to him by Socrates, whether it was in the exact words given in the *History*, or in those given in the Acts of the Council, or in the letter to the emperors; and that on reflexion he made the explanation which is found in *Heraclides*. The explanation has all the appearance of being an after-thought.

5. The solution of the question of the personality of our Lord.—Before we come to a conclusion as to Nestorius's own teaching, let us consider how the question was solved by Cyril and by the Antiochenes, whose united efforts prepared the way for the definitions of the Council of Chalcedon. The creed composed by the Antiochenes, and accepted by Cyril as true, and incorporated by him in his celebrated letter to John of Antioch, written on the conclusion of the union, and known as *Lactentur coeli* (Mansi, v. 301 ff.; for the Greek of the creed see Hefele, iii. 131 n.), is of the greatest importance. It ran as follows:

'We confess therefore our Lord Jesus Christ, the Son of God, the Only-begotten, perfect God and perfect man, of a reasonable soul (ψυχῆς) and body; before the ages begotten of the Father as to the Godhead, but in the last days (born), the same one (ὁ αὐτός), for us and for our salvation, of Mary the Virgin as to the manhood; the same one of one substance with the Father as to the Godhead and of one substance with us as to the manhood. For there has become a union (ἐνωσις) of two natures (φύσεων); wherefore we confess one Christ, one Son, one Lord. According to this thought (ἐνωσις) of the union without mingling (ἀνυγχύτου), we confess the holy Virgin [to be] Theotokos, because God the Word was made flesh (σὰρκωθῆναι) and became incarnate (ἐνανθρωπήσας), and from the very conception united to Himself the temple which He took of her. But we know that the theologians make some of the evangelical and apostolical utterances about the Lord refer in common to the one person (πρόσωπον), and separate others as [referring] to the two natures, and apply those which are divine (θεοπερεῖς) to the Godhead of Christ, but those which are humble [deal with the humiliation] to His manhood.'

Here we have a perfectly orthodox statement of doctrine from the school that was supposed to favour Nestorius. Nothing could be more explicit than its positive affirmation that our Lord is one person, and nothing better than the statement of the distinction of the two natures. If the suspected word 'temple' occurs, the context makes it quite clear that it means 'manhood' and not 'a man.' With the last sentence, which is an addition to the creed as originally compiled, but is included in Cyril's letter to John of Antioch, compare Cyril's fourth anathematism.

Side by side with this confession of faith we may set Cyril's teaching, both as first put out in his anathematism (Hefele, iii. 31 f.) and then as explained by him (*ib.* p. 122). In the second anathematism Cyril speaks of the Word 'hypostatically uniting' Himself with the flesh, i.e. with human nature. In the third he repudiates the word 'conjunction' (συνάφεια) and speaks of a 'conjunction in physical union' (συνδύω τῇ κατ' ἑνὸς φύσεως). It was these last words that especially aroused opposition, though it was a traditional phrase (see

above, § 3 (c)). And Cyril therefore in his explanation asserted that

'Christ had a reasonable human spirit (πνεῦμα), and that no mixing and mingling and no confusion of the natures in Christ had taken place; but, on the contrary, that the Word of God is in His own nature unchangeable and incapable of suffering. But in the flesh one and the same Christ and only-begotten Son of God suffered for us' (translation revised from Hefele, iii. 122).

It is the bright spot in the rather sordid history of the controversy that Cyril and the Antiochenes showed such a spirit of mutual forbearance, and that each endeavoured to understand the real meaning of the other. Yet even modern writers have sarcastically spoken of both John of Antioch and Cyril 'eating their words' and unworthily giving up their opinions. The present writer believes this to be an erroneous view of history; and that John and Cyril had in reality agreed all along in their theology, though they had expressed themselves differently. No historical character has been so variously judged as Cyril.¹ But, with all his faults of impetuosity and temper, he has the merit of having seized the real point of the controversy. When this was once done, it was possible, by explanation of the words used on either side, to arrive at a satisfactory agreement. The crucial point was that it was essential for a true Incarnation that He who was with the Father from all eternity, very God of very God, should be the self-same He who was born of the Virgin, and should not merely have been joined, however inseparably, to the child of the Virgin. It was equally essential that His Godhead and His manhood should not be fused into something else, or confusedly commingled. On these points Cyril and the Antiochenes agreed.

Two methods of expression which affirm that our Lord is a single Person must here be mentioned.

(a) *Impersonality of our Lord's manhood*.—This has been the usual way of expressing the single personality. The personality is said to reside in our Lord's Godhead as pre-existent, and therefore the humanity is said to be impersonal in itself, but personal in Him only (Bethune-Baker, p. 98). This does not mean that the human nature of Christ is in any way imperfect. It is perhaps more accurate to put it, as Bethune-Baker suggests, that our Lord's human nature 'is never impersonal, because it has His personality from the first'; which is another way of stating the same truth. But it would be pure Nestorianism to say that our Lord's manhood had a personality other than that of His Godhead.

(b) *The 'hypostatic union'*.—This phrase has been generally approved as expressing that in our Lord there are two natures united in one hypostasis or person. As we have seen, Cyril uses the expression, and it was used at a synod held under him at Alexandria (Hefele, iii. 29). It is this 'hypostatic union' that is the justification of the mode of expression called *communicatio idiomatum* (above, § 4). But, though the phrase 'hypostatic union' is a valuable one when properly understood, it is doubtless capable of a wrong meaning. It has already been mentioned (above, § 3) that Athanasius (or another writer of his school) repudiated it in the sense of 'union of substance'; and so Nestorius understood it to mean a union which resulted in one nature (Nau, p. xv). Even taking ὑπόστασις in its later sense of 'person,' the phrase might mean 'the uniting of two persons so as to make them one person.' In fact, this is a good instance of a technical term being a good servant but a bad master. We have here also to 'get behind words.'

6. Conclusion from the evidence as to Nestorius

¹ For opposite views of Cyril's character Gibbon and Hefele should be read. But, while both take a decided line, Hefele is impartiality itself as compared with Gibbon.

and Nestorianism.—Very different verdicts have been given, since the discovery of *Heracides*, on the question whether Nestorius was a Nestorian. On the one hand, Bedjan and Nau, the editor and translator of the book, think that, even after the explanations offered in it, Nestorius would have been condemned as heretical.

'We must not forget that the two natures involve with him two distinct hypostases and two persons (prosôpons) united together by simple loan and exchange' (Nau, p. xxviii).

On the other hand, Bethune-Baker, on an examination not only of *Heracides*, but also of the other writings, considers Nestorius orthodox; and, what is rather surprising, seems to think him an able man (pp. 122, 175 ff.):

'The ideas for which Nestorius in common with the whole school of Antioch contended, really won the day'; 'Nestorius himself was sacrificed "to save the face" of the Alexandrines' (p. 207).

The present writer cannot take so rosy a view of the matter as this, and especially dissents from the last three statements. It seems much more in accordance with the evidence to hold that Nestorius sometimes used heretical and sometimes orthodox language. If we may suppose that we have *Heracides* as it left Nestorius's pen, unaltered by the Syriac translator, we have, indeed, a better presentment of doctrine than in some of his other writings, though even in *Heracides* the tendency is heretical, and the expressions, e.g., about two *πρόσωπα* are hard to reconcile with true teaching. On the other hand, we can scarcely, with Nau, adduce the expressions about two hypostases as heretical, as 'hypostasis' is here used in the older sense of 'substance.' And we may hope that, when freed from the temptation that besets an eloquent and popular preacher of saying rather more than on calm reflexion he would have written, and when in seclusion he had more time for thinking out the problem and for writing on it at leisure, Nestorius to a great extent rid himself of his errors. For his heresy, if he was a Nestorian, was due to confusion of thought. We probably cannot come to a better conclusion than that of the contemporary historian, Socrates, who, though he mentioned Nestorius's faults, especially as a persecutor, candidly endeavoured to 'be unbiassed by the criminations of his adversaries' (*HE* vii. 32). Socrates, having perused his writings, 'found him to be an ignorant man'; he 'found that he did not deny Christ's Godhead,' but that he was 'scared at the term Theotokos as though it were a bugbear' (or 'hobgoblin'). This was due, Socrates says, to the fact that, though eloquent, he was not well educated, and did not know the 'ancient expositors.' The conclusion, then, which seems most suitable to the evidence is that, while Nestorius was not a systematic and consistent upholder of what we call 'Nestorianism,' yet he sometimes spoke erroneously; and, even if we give him the benefit of the doubt with regard to technical terms, it is difficult to acquit him altogether of a certain amount of heresy, and of a heresy which is particularly dangerous.

He fully saw the danger of the opposite error, even though it was not as openly expressed as in the immediately succeeding age. But errors are usually the result of reaction from another error; Apollinarianism was a reaction from Arianism, Nestorianism from Apollinarianism, as afterwards Eutychianism was a reaction from Nestorianism. It is not always easy to hit the golden mean between two doctrinal extremes. Nestorius could see no mean between his teaching and that of Apollinarius, and, as a consequence, he also, like Apollinarius, tended to destroy the Incarnation, though in an opposite manner. But he was a foolish and obstinate man, who did not see the outcome of his own teaching. Had he explained it as Cyril and the

Antiochenes explained theirs, his future would have been a happier one. As it was, he who began by persecuting heretics was himself persecuted as a heretic till the day of his death.

7. Writings of Nestorius.—(a) The following works of Nestorius are now extant: *The Book of Heracides*, preserved in Syriac (see § 2 above); the *Counter-anathematisms*, in reply to Cyril, preserved in a Lat. tr. by Marius Mercator (Loofs, p. 211); a Greek homily, *On the High-Priesthood of our Lord*, preserved among the sermons of Chrysostom (Loofs, p. 230); three Greek homilies, *On the Temptation* (Nau, p. 335), also preserved in a Syr. tr. (Marius Mercator translated portions of these into Lat., and the fragments are extant; parts of these homilies have been made up into a single homily attributed to Chrysostom); *Letters* (some in Greek) to Cyril, Celestine, Celestius the Pelagian, John of Antioch, the emperor Theodosius, and others (Loofs, p. 165 ff.); Nau also gives (p. 370) two versions of a letter to the people of Constantinople, which Loofs (p. 202) looks upon as 'doubtless unauthentic'; *Sermons*, chiefly in a Lat. tr. by Marius Mercator, but also in fragments quoted by Cyril of Alexandria and in the Acts of the Council of Ephesus, or elsewhere (Loofs, p. 225 ff.); fragments of the *Theopaschites* (Loofs, p. 208) and the *Tragedy* (Loofs, p. 208), for which see below (c).

(b) *Probably unauthentic works.*—The *Liturgy of Nestorius*, still used by the E. Syrian or Nestorian Christians, is almost certainly not the work of that writer. It is not a complete liturgy, but an Anaphora only, borrowing the first part of the service, and also the conclusion, from the older *Liturgy of the Apostles Addai and Mari*, which is the principal liturgy used by the E. Syrians. It is not of the type of liturgy with which Nestorius was familiar either at Antioch or at Constantinople, but is of the E. Syrian family, though it is influenced to some extent by the Byzantine rite. It was probably composed by an E. Syrian who had a Constantinople liturgy before him, and may be dated, in its original form, some time before Narsai, i.e. before the end of the 5th century.

Besides the sermons mentioned above, P. Batiffol has suggested that 62 homilies preserved among the works of various orthodox writers are in reality the work of Nestorius (*RB* ix. [1900] 329). They are thought to show the style and manner of thought of that writer. But, as Bethune-Baker remarks (p. 102 f.), theological language was more fluid in the East than in the West in the earlier ages; and therefore it does not follow that, because in a sermon we find a somewhat unusual phrase which was used by Nestorius, the sermon must be attributed to him. Batiffol's suggestion has not been very favourably received. On the general question of assigning the authorship of sermons, it may be remarked that there is nothing strange if one of Nestorius's own sermons has been attributed to a preacher like Chrysostom, and preserved among his works. They were both of the Antiochene school of thought, and all Antiochenes had much in common in the way of literary style and line of reasoning; besides, the worst heretic (and we need not think worse of Nestorius than that he was a very confused thinker) does not always preach heresy.

In addition to the above works there are extant *Twelve Syriac Anathematisms*, given in Syr. and Lat. by Aesemani (*Bibl. Orient.* iii. ii. 199-202) and in Lat. by Loofs (p. 220). But these are of very doubtful authenticity.

(c) *Old lists of Nestorius's works.*—Gennadius, who continued Jerome's *Lives of Illustrious Men* after his death, says that Nestorius wrote many treatises on various questions while still in Antioch, and that these were already tainted with his error. After he went to Constantinople, he wrote a *Work on the Incarnation*, on 62 passages of the Scriptures (Gennadius, *de Vir. illustr.* 64). These works of Nestorius are not now extant.

The Syriac translator of *Heracides* says that both *Teôpaschîgôs* (= *Theopaschites*) and the *Tragedy* were written as an apology against those who blamed Nestorius for having demanded a council. 'Theopaschites' is a name which had already been used, if by Gregory of Nazianzus (R. F. Oxford, 1879-1901, ii. 4367); in the 6th cent. it was applied to the Monophysites in connexion with the addition to the Trisagion of the words 'One of the Trinity was crucified' (Hefele, iii. 457 f.). It was somewhat like the older nickname 'Patripassiane,' which denoted those who were said to hold that the Father suffered.

In Audishu's list of Nestorius's writings are given: the *Tragedy*, *Heracides*, a *Letter to Cosmas* (not extant), the *Liturgy of Nestorius* (see above), a book of *Letters*, and a book of *Homilies and Sermons* (Bethune-Baker, p. 20).

8. The later Nestorians.—(a) *Within the Roman empire.*—It has already been stated (above, § 2) that the Antiochenes were doctrinally divided among themselves. After the general acceptance of the union arranged by John and Cyril some of the bishops finally refused to assent to it, and, openly siding with Nestorius, were deprived of their sees. Several of them seem to have travelled eastwards, no doubt taking with them those of their priests and deacons who supported them, and reinforced the E. Syrian Church (see below). Whatever view we take of Nestorius's own teach-

ing, some of these Antiochene extremists were thoroughgoing 'Nestorians,' and it is to them that the E. Syrian Church owed its knowledge of the controversy. Yet for a considerable time Nestorianism retained some footing in the Roman empire itself; e.g., Cosmas Indicopleustes, the well-known traveller and geographical writer, who lived in Egypt, and published his books in 547, is said to have been one of its adherents (Gibbon, *Decline and Fall*, ch. xlvii. n. 116; *DCB* iv. 32^b).

(b) *In the Persian empire.*—The 'East Syrian' Church, or, as it proudly calls itself, 'the Church of the East,' had existed, in all probability, from the Apostolic Age; but, it being the Church of the Persian empire, its members were a good deal cut off from their brethren who were subject to the Roman emperor, and the separation ever tended to increase. It was fostered by the civil authorities for political purposes. Yet it is somewhat surprising to learn that the E. Syrians knew nothing officially of the Council of Nicea till 410. Similarly, they did not hear of the Christological controversies of the Roman empire until they were practically decided there. The dissentient Antiochenes would not give them a favourable account of Cyril and of the proceedings at the First Council of Ephesus, and to this day they hold that Nestorius was unjustly condemned, and reckon him, with Diodorus and Theodore, among the 'Greek doctors' whom they commemorate on the fifth Friday after Epiphany. They bear witness to the absence of personal connexion between Nestorius and their Church by not including him among the 'Syrian doctors,' i.e. those of the 'Church of the East.' They accepted the 'Tome' of Leo and the decrees of the Council of Chalcedon as part of their *Sunhaddhus*, or book of canon law; and their final separation from the Orthodox did not take place till about the time of the conquest of the Persian empire by the Muhammadans in the 7th century.

Their missions in the whole continent of Asia were extensive; the foundation of the old Church in India, that of the 'Christians of St. Thomas' in Malabar, was due to them, and is attested by Cosmas Indicopleustes in the 6th cent. (*DCB* i. 693^a); a monument at Si-ngan-fu in China still bears witness to their activity in that country; and their evangelistic zeal gave rise to the story of Prester John. But this Church which spread all over Asia is now reduced to the 'shadow of a shade,' and finds its home, to the number of 100,000 souls or more, in the mountains of Kurdistan, and in the neighbouring plains of Adharbaijan in Persia and of N. Mesopotamia in Asiatic Turkey.

The great school of the Nestorians was at Edessa, or Ur-hai. After the death of Rabbulas, Cyril's great supporter, Ibas succeeded as bishop of that city, and fostered Nestorian teaching. But they were finally driven out of Edessa in 489 by the emperor Zeno, and they then established their school at Nisibis.

(c) *Do the E. Syrians hold Nestorian doctrine?*—This is not an easy question to answer fully; there is, however, no necessary connexion between it and that already considered, whether Nestorians was a Nestorian. There can be no doubt that some of the E. Syrian writers have used decidedly Nestorian language. Yet on the whole it is remarkable how free their liturgical and synodical language, in particular, is from it. There is, however, a phrase to which they cling tenaciously, and which must be considered. They affirm that in Christ there are two *kyānē*, two *qnūmē*, one *paršūpā* (the Syriac words are given as pronounced by them, though the plural termination is often -i rather than -ē). The first of these terms, *kyānā*, is φύσις, 'nature'; the second, *qnūmā*, is ὑπόστασις; the third is πρῶτον transcribed. It seems

clear that, like Nestorius, the E. Syrian Christians take ὑπόστασις in its oldest sense of 'substance,' and so they talk of the *qnūmā* of the Godhead and the *qnūmā* of the manhood. If we may acquit Nestorius, when he spoke of 'two hypostases,' of meaning by that term two persons, we may certainly also acquit the E. Syrians of doing so. They try to make a distinction between *kyānā* and *qnūmā*, when speaking of our Lord, but really they mean much the same thing by both words. We may notice that both they and their neighbours, the Monophysites or W. Syrians (known as 'Jacobites'), speak of the three *qnūmē* in the Holy Trinity, not of three *paršūpē*. We see, therefore, here some inconsistency. For a very careful discussion of these and other Syriac technical terms see the appendix (by another pen) to Bethune-Baker's *Nestorius and his Teaching* (p. 212 ff.). It is very generally agreed that, whatever vitality 'Nestorianism' may have had in the past in the E. Syrian writers, it is now entirely dead among these Christians. It is an example of their confusion of thought that in the oath taken by their bishops they affirm that Christ has one will, one power, and is confessed in two *kyānē*, two *qnūmē*, and one 'paršūpā of filiation' (the last is a very common phrase in their writers). But Monothelism was the very opposite error to Nestorianism (Nau, p. xii).

LITERATURE.—Socrates Scholasticus, *HE* vii. 20-35 (Eng. tr. in *Nicene and Post-Nicene Fathers*, Oxford, 1891); J. D. Mansi, *Sacrorum Conciliorum nova et amplissima Collectio*, Florence, 1750-63 (includes the collections of Labbé, Cossart, and others), iv. and v.; C. J. Hefele, *Hist. of the Councils of*, iii.; F. Nau, *Nestorius*, tr., Paris, 1910;, 1910; J. F. Bethune-Baker, *Nestorius and his Teaching*, Cambridge, 1908; F. and his Place in the History of Christian Doctrine, Cambridge, 1914; E. Gibbon, *Decline and Fall of the Roman Empire*, London, 1776-83 (many subsequent edd.), ch. xlvii.; J. C. Robertson, *Hist. of the Christian Church*, do. 1875, ii.; G. T. Stokes, art. Budge, *The Book of Governors; the Historia Monastica of Thomas of Marga*, Syr. text and Eng. tr., 2 vols., London, 1893 (some valuable biographies); A. J. Maclean and W. H. Browne, *The Catholics of the East and his People*, do. 1892; W. A. Wigram, *Intro. to the Hist. of the Assyrian Church, 100-610 A.D.*, do. 1910 (a history of the Nestorians); G. P. Badger, *The Nestorians and their Rituals*, 2 vols., do. 1852. A. J. MACLEAN.

NĒTHĪNĪM (NĒTHŪNĪM).—According to the theory of the Priestly Code (P), Nu 33^a 813-19 (cf. also 18^b), the Levites were given (*nĕthūnīm*) unto Aaron and his sons in behalf of the children of Israel, 'to do the service of the tabernacle.' They were a wave-offering given to Jahweh in place of the first-born, a gift to Aaron and his sons from among the children of Israel 'to do the service of the tent of meeting.' So, in the Greek Ezra (1 Es 12) they are called *hierodouloi* (q.v.), or temple servants, which is elsewhere in this book, as in Josephus, the translation of *nĕthūnīm*. This theory does not, however, conform with the earlier

¹ As our present Hebrew text reads, they were *nĕthūnīm*, which the translators render 'wholly given,' or 'utterly given.' Probably (see Batten, *ICC*, 'Ezra and Nehemiah,' p. 83) we should read *nĕthūnīm* *nĕthūnīm*, i.e. they were *Nethinim* given unto Aaron and his sons. *Nĕthūnīm* and *nĕthūnīm* are, in fact, merely differentiations of one and the same word and are confused with one another (cf. Ezr 8:17). It is worthy of note how large a number of the Levitical names, especially in the later books, are compounds or derivatives of *nāthan*, 'give.'

practice. As late as the Exile the Levites are priests. In the reform of Josiah (623 B.C.) every Levite was recognized as a priest, having potentially the right to serve as such in the Jerusalem Temple (so the book of Deuteronomy). At this time and earlier the *hierodouloi*, who performed the menial or non-priestly service of the Temple, were frequently, if not generally, foreign slaves, given for this purpose (*nēthānim*), or the descendants of such slaves—precisely the same use which we find in the temples of other countries, both earlier and later, as in Babylonia and Greece, and even in the Muhammadan shrine at Mecca. From analogy we should suppose that this would have been the case; that it was so up to and including the time of Nehemiah is clear from the testimony of the Bible.

According to Nu 31³⁰, out of all booty of war, including slaves, a certain proportion was to be given to the priests and Levites—which is really a record in legislative form of an ancient fact and right. A case of this in actual practice, referred to in the story of the conquest of Canaan under Joshua, is that of the Gibeonites, made 'hewers of wood and drawers of water for the house of God' (Jos 9²⁷⁻²⁷; cf. also 1 K 9²⁰). According to the book of Ezra, this practice, for the Jerusalem Temple, dated back to David, the Nethinim of his day being descendants of the slaves 'whom David and the princes had given for the service of the Levites' (8²⁰). Among the Nethinim of that period are noted specifically, also, descendants of slaves given by Solomon (Ezr 2²⁵). These Temple slaves were, as a rule, foreigners, captives taken in war, and in the first generation presumably uncircumcised heathen. Hence Ezekiel's protest: 'No foreigner, uncircumcised in heart and uncircumcised in flesh, shall enter into my sanctuary' (44⁹).¹ He proposes that instead of these foreign slaves the Levitical priests of the high places shall be made *nēthānim*, ministers of the sanctuary. This rule, however, was not adopted, at least in this form, at that date, and, after the return from the Exile we still find the non-Levitical Nethinim, descendants of former Temple slaves, servants of the sanctuary. It is from the post-Exilic writings that we obtain our fullest notices of these Nethinim, and in the books of Ezra and Nehemiah we first find, in fact, the word *nēthānim* used as a *terminus technicus*.² Here, also, we have the first distinct and clear mention of the method and organization of the Temple service, and of the titles of the Temple servants and officials. Of these there are five distinct classes mentioned: priests, Levites, singers,³ porters, and Nethinim. In the list of those returning from the Exile (Ezr 2⁴³⁻⁷⁰, 1 Es 5²⁹⁻⁴¹, Neh 7⁴¹⁻⁶⁰) 35 to 41 families of Nethinim are mentioned, with an additional 10 families of 'sons of the slaves of Solomon.' The whole number of Nethinim, according to all these lists, was 392 individuals. The inclusion of the 'sons of the slaves of Solomon' in this total is an evidence, it may be said in passing, of their constituting part of the Nethinim, in connexion with whom they are mentioned in all places where the name occurs. The names in these lists

¹ Zec 14² There shall be no more a Canaanite in the house of Jahweh. This is commonly understood, however, not to refer to Canaanites in a racial or religious sense, Canaan meaning 'merchant' or 'pedlar.'

² The word occurs sixteen times in these two books (once as *nēthūnim*); elsewhere in the Bible only in 1 Ch 9², and perhaps in the two passages in Numbers already cited.

³ Among the singers there were included, apparently, women as well as men (cf. Ex 15²⁰, Ps 68²⁵). In the salary lists from the temple of En-il at Nippur we have also both men and women among what are evidently the Nethinim of that temple. Among those included in the lists of temple employees there are singers, gatekeepers, shepherds, grinders, weavers, temple servants, etc. Incidental evidence of forced labour is furnished by the note against some names, indicating that at that time those persons were not on hand, having run away (A. T. Clay, *Bab. Ex. of Univ. of Penn.* xiv.).

are very largely foreign, including Edomite, Assyrian, and especially Aramæan elements, and many of them do not occur elsewhere—incidental evidence of the non-Israelite origin of the Nethinim.

In the account of Ezra's return (Ezr 8¹⁷⁻²⁵) we are told that from Ahava on the Euphrates he sends to Iddo, the head-man of Casiphia, to obtain Levites and Nethinim, of whom there was a lack in the returning caravan, and receives in return 38 Levites and 220 Nethinim. In Neh 3²⁶,³¹ we are told that the Nethinim lived in the Ophel, and that the house of the Nethinim was 'opposite the gate of the muster.' In 11²¹ we are again informed that the Nethinim dwell in the Ophel, and that Ziha and Gishpa (Hasupha?) are their chiefs. In Neh 11⁸ we learn that they have possessions among the cities of Judah, like the priests and Levites, and in 10³⁸ they, with the Levites, porters, and singers, are among the covenanters, who 'entered into a curse, and into an oath, to walk in God's law.' Like the priests and Levites, they were free from taxes (Ezr 7²⁴).

From all this it would appear that before the Exile the Nethinim had ceased to be foreigners and had become a part of the Jewish people, so firmly attached to the Temple that the Exile could not break that attachment, so that a goodly number of them, when the opportunity was given, returned to their ancestral occupation of the service of the Temple. Evidently they were by this time regarded as an integral part of Israel, and as such they had their inheritance like the rest among the cities of Judah. It is clear that they must have been well organized for the fulfilment of their functions before the Exile, and that organization was handed down and became the basis for the later organization in 'families,' with two head-men, those in service quartered in a house especially assigned for that purpose in the Ophel, the rest living in their possessions among the cities of Judah. It also appears that they considerably outnumbered the Levites.

In the book of Chronicles the Nethinim are mentioned only once—1 Ch 9²,* a passage which is really taken from the list in Neh 11³⁻¹⁹ and should be regarded as a citation of an earlier source. With this exception there are no Nethinim¹ in Chronicles. They disappear entirely, as do also the singers and the porters, all of them being now included in the Levites, to whom are assigned all the functions heretofore performed by them. So far as the functions of the Nethinim are concerned, this is explicitly stated at a later date, about the commencement of the Christian era, by Philo in his *de Præmiis Sacerdotum*, 6, where he says that the sweeping and cleaning of the Temple were done by the Levites.

The protest of Ezekiel, to which attention has already been called, was the basis of the theory of the Priestly Code, as expressed in Numbers, which was finally put in practice at the time of the Chronicler, not by the elimination from the Temple of the descendants of the slaves, but by their amalgamation with the Levites, with the prohibition presumably for the future of the admission of any foreign slaves.

We may then sum up the history of the origin and development of the Nethinim as follows. From the outset there were attached to Israelite temples, to perform various services, slaves, either bought with money, or foreigners, captives of war; and indeed, in the case of captives taken in war, a certain portion was always assigned to the service

* The Peshitto Syriac here renders Nethinim by 'sojourners,' in Neh 10 and 11 by 'slaves,' in Ezr 8²⁰ by 'men.'

¹ 1 Ch 6 seems to show this amalgamation. Here the Levites are divided into three tribes, among whom are included specifically the singers; and the Levites are described as Nethinim, given for all 'services of the tabernacle.'

recognizes that certain reciprocal rights and duties exist between warring Powers and States which elect to remain at peace. In the first case the rules laid down owe their existence to the gradually increasing power of commerce; in the second instance we find that modern reform is due not to the self-interest of nations and individuals, but to purely humanitarian and ethical considerations, which themselves are the fruit of a higher civilization and the slow growth of moral sentiment.

The whole law of neutrality is based upon the principle that peace is the normal state of civilized mankind, that war is an interruption of this condition. In early times this was far from being the case; indeed, it was war that was the rule and peace the exception. And until the end of the 18th cent. belligerent States were so much more powerful than neutrals that their right to violate territory, to interfere with commerce, to do, in fact, as they pleased, was practically unquestioned. The ethics of war consisted for them in considerations simply of military advantage. How was victory to be attained most speedily and cheaply? How was defeat to be made crushing and permanent? These principles operated with peculiar severity upon neutral countries. But the military power of neutrals cannot now be disregarded, and belligerents must respect their rights at the risk of increasing the number of their enemies. To this extent the power to dictate terms on matters affecting neutrals has changed hands.

The position of a neutral during war is held to be the same as it was before hostilities began—free, that is, from all restraint—except with regard to the observance of certain rules which are regarded as binding upon all civilized nations. Two clear principles underlie those rules: (1) neutrals must be absolutely impartial; (2) belligerents must show absolute respect for the sovereignty of neutrals. This impartiality on the part of neutrals had to be secured at one time by special treaty. But the feeling gained ground that neutrality ought to mean one thing or another, and that on the outbreak of war every nation ought to make a clear choice between openly engaging in war and standing out of it altogether—the decision taken being, of course, subject to future re-consideration. Even after this new point of view prevailed, however, there was for a long time an exception in favour of defensive alliances. A State could preserve its so-called neutrality, while giving assistance previously promised to one of the belligerents, without, as would now be the case, being held a party to the war.

The rights and obligations which are set forth in the law of neutrality are (1) those between belligerent States and neutral States, and (2) those between belligerent States and neutral individuals. The duties of neutral States are to act towards belligerents with impartiality and to acquiesce in the exercise on the part of either belligerent of his right to punish neutral merchantmen for breach of blockade and carriage of contraband. The duties of a belligerent are to respect the sanctity of neutral territory, to act towards neutrals with impartiality, and to refrain from suppressing their intercourse and especially their commerce with the enemy. A neutral State must not assist either belligerent with men, money, or the necessities of warfare. It may not allow forces of either belligerent to pass through its territory or the agent of either to levy troops or fit out warlike expeditions thereon. When by any fault or accident it has failed to preserve an honest neutrality, it is obligatory on a neutral Government to make suitable reparation at the risk of being involved in the hostilities. A neutral Power incurs no responsibility if it allows its nationals to leave neutral

territory to enlist in the services of a belligerent. Nor is it bound to prevent its nationals from trading in contraband with a belligerent, but such trade is subject to the belligerent's rights of capture.

The obligation on a belligerent to respect the sanctity of neutral territory implies that his land forces may not enter the country of a neutral, and that he may not carry on hostilities in its waters. In technical language, he may not use its land and waters as a base of operations. When he has failed to obey regulations of a fair and legitimate kind which a State has made for the preservation of its neutrality, he must offer all reparation in his power. It is the modern practice of nations to allow the ordinary commerce of neutral individuals to proceed unmolested, subject to certain restrictions and under rules which may be regarded as having been fixed by the Declaration of Paris in 1856. These rules are: 'A neutral flag covers enemy's goods with the exception of contraband of war' and 'Neutral goods, with the exception of contraband of war, are not liable to capture under an enemy's flag.' It is the desire of the neutral to continue his trade as far as possible uninterrupted by the war; it is the aim of the belligerent to prevent commodities of all kinds from reaching the enemy, and any settlement of the question of what trade may be legitimately conducted by neutrals is in effect a compromise between their interests and those of the belligerents. Certain goods may be carried by a neutral to a belligerent only at the risk of capture, these being known as contraband of trade, and it is the practice of a belligerent at the beginning of a war to publish a list of what he intends to treat as contraband. All other goods, in the absence of a blockade, may be freely carried between neutrals and belligerents. Articles of contraband are primarily and ordinarily those used for military purposes in time of war. Articles which may be and are used for purposes of war or peace, according to circumstances, are classed as conditional contraband. It is obviously in the interest of neutrals to restrict the list of contraband within the narrowest limits, whereas a belligerent seeks to widen the scope of the term to his own advantage, so that disputes as to what should or should not be considered contraband are of frequent occurrence. Absolute contraband can be captured by a belligerent on its way to enemy territory and confiscated. But, if consigned by one neutral to another, it is not liable to capture, unless it can be shown that it is intended ultimately to reach a belligerent country. This is known as the doctrine of continuous voyage. Conditional contraband may only be captured if it is consigned to a belligerent Government, or its agent, or to the armed forces of the belligerent. This rule, however, has recently been held inapplicable to modern conditions, and the distinction between absolute and conditional contraband has been practically obliterated.

If a neutral intends to run a blockade, he does so at the risk of the loss of his ship. If he performs what is called unneutral service—i.e. if he carries officials in the service of one of the belligerents or important dispatches belonging to a belligerent, or if he conveys signals for the benefit of either party, or aids with auxiliary coal, repair, supply, or similar ships—he is liable to be treated as a belligerent.

There are certain States, persons, places, and even things which have been made permanently neutral, or, in technical phrase, have been neutralized. The ordinary State may be neutral, and remain neutral or not, as it pleases. But States like Belgium and Switzerland have not this freedom of choice. By international agreement they

of the priests of the sanctuaries. As in the case of other sanctuaries, so also in Jerusalem, from David's time onwards, slaves were assigned from among the captives taken in war for the service of the sanctuary, and in post-Exilic times there still existed a special subdivision of these Nethinim, or slaves of the sanctuary, claiming to be descendants of those given at the organization of the Temple services under Solomon.

The priests of the Jerusalem Temple, as of the other sanctuaries, were Levites, and all Levites were priests performing the priestly functions. The other functions of the sanctuary were performed by the slaves given for this purpose. These functions were divided, so far as our information goes, into three main parts; singing, guarding the gates and performing the service of porters, and the more menial functions, such as cleaning. It was to those performing the latter functions that the title Nethinim was given. Originally the slaves assigned to these various functions, being presumably largely foreign captives, were heathen and sometimes uncircumcised. They themselves, however, or their descendants, continuing in the service of the Temple, became in time circumcised Israelites. At the same time, their ranks would seem to have been recruited from time to time by foreign captives; hence the protest of Ezekiel, referred to above, against uncircumcised foreigners serving in the Temple.

With the overthrow of the high places and the concentration of worship at Jerusalem, in 623 B.C., it became necessary to provide for all Levitical priests at that Temple. Had they become priests there, its priestly sacrificial staff would have been inordinately increased; hence the priests of that Temple resisted this reform for the sake of their own prerogatives and perquisites. The Reformation, however, marks a very distinct step in exclusivism—the separation of the Jewish people from the outside world, and of their sacred worship and its service from all outside contact.

The protest of Ezekiel, himself a priest of the Temple, and his proposition to have all Temple service performed by Levites, are evidence of the existence among the priests of the intent to preserve priestly functions and prerogatives exclusively for the descendants of the priests of the Jerusalem Temple. Hence the rejection of the claims of Levites from other sanctuaries to act as priests in their Temple. It is also evidence of a spirit of religious exclusivism, which would shut out foreigners from the nation, and particularly from the sacred religion of the nation, as represented in the Temple functions. 'Let us get rid of the foreigners and utilize these Levites for the service of the Temple heretofore performed by them. The Levites deserve to be so treated as a punishment for their idolatry in the past.'

In principle this point of view was made effective in the Priestly Code, which did not, however, become the law of the Jews or of the Temple until long after the return from the Exile. To this extent, however, Ezekiel's point of view seems to have become at once effective, that, with the return from the Exile, only those counted as Jews were allowed to serve in the Temple, circumcised men of the Jewish religion. Such the porters, the singers, and the Nethinim had become, and with the restoration of the Temple after the Exile they resumed their old functions. The number of so-called Levites who returned was very small in relation to the number of these three classes of Temple servants.

Precisely what the function of the Levites now was it is difficult to determine. Theoretically they seem to be distinguished from the priests on the one hand and from the porters, singers, and Nethinim

on the other. The tendency was, on the one side, to push down the Levites, by making them inferior to the priests, and, on the other, to exalt the Temple servants by bringing them to an equality with the Levites. The distinction of priests, Levites, porters, singers, and Nethinim is established for the time of Nehemiah (c. 440 B.C.) and of Ezra (c. 380 B.C.). The Priestly Code, promulgated at the latter period, abolishes the distinction between those rendering any service below that of the priesthood in the Temple. They are all alike to be regarded as Nethinim, given to God for the Temple service, and, accordingly, in the records of the Chronicler (c. 300 B.C.) we find the old distinctions done away with. There are now only priests and Levites. This process seems to have been a gradual one, and affected first the singers. So in certain remodelled portions of Nehemiah (11¹⁶⁻¹⁹, 22¹, 12⁸¹, 24¹, 27-29) the musicians are already regarded as Levites. This is true throughout Chronicles, and here indeed they not only no longer rank below Levites, but they are the highest class of Levites. By the time of Agrippa II. (A.D. 50) this attitude of exaltation of the singers at the expense of the Levites in general reached a climax, so that at that time the singers became a separate class, entitled to wear linen robes like the priests (Jos. Ant. xx. ix. 6).

Door-keepers were the next to be included as Levites, as shown by 1 Ch 9²⁶ 15¹⁸, 23¹, 23³⁻⁵, and Nethinim the last. With the admission of the latter, all are alike; Levites are Nethinim, and Nethinim are Levites.

There is no mention in the NT of singers, porters, or Nethinim, as distinct from Levites. At that time, apparently, all Temple functions, outside of the sacrificial ones, were performed by those who were called Levites, i.e. the descendants of the ancient Levitical priests of the high places, and of the slaves attached at various times to the Temple by purchase or by capture for the performance of the various other functions, as Philo also testifies.

The Talmud, by its references, shows that Nethinim did not exist in the Talmudic period, but it also shows that the Talmudic interpreters were conscious of the foreign origin of the Nethinim, mentioned in the Biblical books. Accordingly in the Talmud Nethinim are classed with, or even placed below, bastards, and their descendants for all time forbidden to marry with Israelites (Yeb. ii. 4, viii. 3, Kid. viii. 8, Yer. Hor. iii. 5, and Yer. Yeb. viii. 5).

JOHN P. PETERS.

NEUTRALITY.—The term *neutrales*, or 'neutral,' as technically applied to States and persons, is not older than the 15th cent., its equivalent in classical Latin being *medii* or *medii amici*. The subject of neutrality is one of the most important in the code of rules which regulate the intercourse of nations, and it includes not only principles and practices which are as old as international law, but also elements of the most recent date. The law of neutrality is new in so far as it deals with the relations between belligerent States and the individual citizens of neutral States, whose interest it is to continue their commercial pursuits unhindered by the war. It is new in so far as it

recognizes that certain reciprocal rights and duties exist between warring Powers and States which elect to remain at peace. In the first case the rules laid down owe their existence to the gradually increasing power of commerce; in the second instance we find that modern reform is due not to the self-interest of nations and individuals, but to purely humanitarian and ethical considerations, which themselves are the fruit of a higher civilization and the slow growth of moral sentiment.

The whole law of neutrality is based upon the principle that peace is the normal state of civilized mankind, that war is an interruption of this condition. In early times this was far from being the case; indeed, it was war that was the rule and peace the exception. And until the end of the 18th cent. belligerent States were so much more powerful than neutrals that their right to violate territory, to interfere with commerce, to do, in fact, as they pleased, was practically unquestioned. The ethics of war consisted for them in considerations simply of military advantage. How was victory to be attained most speedily and cheaply? How was defeat to be made crushing and permanent? These principles operated with peculiar severity upon neutral countries. But the military power of neutrals cannot now be disregarded, and belligerents must respect their rights at the risk of increasing the number of their enemies. To this extent the power to dictate terms on matters affecting neutrals has changed hands.

The position of a neutral during war is held to be the same as it was before hostilities began—free, that is, from all restraint—except with regard to the observance of certain rules which are regarded as binding upon all civilized nations. Two clear principles underlie those rules: (1) neutrals must be absolutely impartial; (2) belligerents must show absolute respect for the sovereignty of neutrals. This impartiality on the part of neutrals had to be secured at one time by special treaty. But the feeling gained ground that neutrality ought to mean one thing or another, and that on the outbreak of war every nation ought to make a clear choice between openly engaging in war and standing out of it altogether—the decision taken being, of course, subject to future re-consideration. Even after this new point of view prevailed, however, there was for a long time an exception in favour of defensive alliances. A State could preserve its so-called neutrality, while giving assistance previously promised to one of the belligerents, without, as would now be the case, being held a party to the war.

The rights and obligations which are set forth in the law of neutrality are (1) those between belligerent States and neutral States, and (2) those between belligerent States and neutral individuals. The duties of neutral States are to act towards belligerents with impartiality and to acquiesce in the exercise on the part of either belligerent of his right to punish neutral merchantmen for breach of blockade and carriage of contraband. The duties of a belligerent are to respect the sanctity of neutral territory, to act towards neutrals with impartiality, and to refrain from suppressing their intercourse and especially their commerce with the enemy. A neutral State must not assist either belligerent with men, money, or the necessities of warfare. It may not allow forces of either belligerent to pass through its territory or the agent of either to levy troops or fit out warlike expeditions thereon. When by any fault or accident it has failed to preserve an honest neutrality, it is obligatory on a neutral Government to make suitable reparation at the risk of being involved in the hostilities. A neutral Power incurs no responsibility if it allows its nationals to leave neutral

territory to enlist in the services of a belligerent. Nor is it bound to prevent its nationals from trading in contraband with a belligerent, but such trade is subject to the belligerent's rights of capture.

The obligation on a belligerent to respect the sanctity of neutral territory implies that his land forces may not enter the country of a neutral, and that he may not carry on hostilities in its waters. In technical language, he may not use its land and waters as a base of operations. When he has failed to obey regulations of a fair and legitimate kind which a State has made for the preservation of its neutrality, he must offer all reparation in his power. It is the modern practice of nations to allow the ordinary commerce of neutral individuals to proceed unmolested, subject to certain restrictions and under rules which may be regarded as having been fixed by the Declaration of Paris in 1856. These rules are: 'A neutral flag covers enemy's goods with the exception of contraband of war' and 'Neutral goods, with the exception of contraband of war, are not liable to capture under an enemy's flag.' It is the desire of the neutral to continue his trade as far as possible uninterrupted by the war; it is the aim of the belligerent to prevent commodities of all kinds from reaching the enemy, and any settlement of the question of what trade may be legitimately conducted by neutrals is in effect a compromise between their interests and those of the belligerents. Certain goods may be carried by a neutral to a belligerent only at the risk of capture, these being known as contraband of trade, and it is the practice of a belligerent at the beginning of a war to publish a list of what he intends to treat as contraband. All other goods, in the absence of a blockade, may be freely carried between neutrals and belligerents. Articles of contraband are primarily and ordinarily those used for military purposes in time of war. Articles which may be and are used for purposes of war or peace, according to circumstances, are classed as conditional contraband. It is obviously in the interest of neutrals to restrict the list of contraband within the narrowest limits, whereas a belligerent seeks to widen the scope of the term to his own advantage, so that disputes as to what should or should not be considered contraband are of frequent occurrence. Absolute contraband can be captured by a belligerent on its way to enemy territory and confiscated. But, if consigned by one neutral to another, it is not liable to capture, unless it can be shown that it is intended ultimately to reach a belligerent country. This is known as the doctrine of continuous voyage. Conditional contraband may only be captured if it is consigned to a belligerent Government, or its agent, or to the armed forces of the belligerent. This rule, however, has recently been held inapplicable to modern conditions, and the distinction between absolute and conditional contraband has been practically obliterated.

If a neutral intends to run a blockade, he does so at the risk of the loss of his ship. If he performs what is called unneutral service—i.e. if he carries officials in the service of one of the belligerents or important dispatches belonging to a belligerent, or if he conveys signals for the benefit of either party, or aids with auxiliary coal, repair, supply, or similar ships—he is liable to be treated as a belligerent.

There are certain States, persons, places, and even things which have been made permanently neutral, or, in technical phrase, have been neutralized. The ordinary State may be neutral, and remain neutral or not, as it pleases. But States like Belgium and Switzerland have not this freedom of choice. By international agreement they

have bound themselves to refrain from engaging in war unless in strict self-defence, and, so long as they observe this agreement, the guaranteeing Powers undertake to protect them from attack. Thus the invasion of Belgium in 1914 by Germany, one of the guaranteeing Powers, was the immediate cause of the participation of Britain in the European War. The province of Savoy, the grand duchy of Luxemburg, and the Suez Canal occupy a position similar to that of Switzerland. The persons of nurses, doctors, and chaplains attending to the sick during war have also by convention acquired a neutral character.

LITERATURE.—A fuller discussion of the principles outlined above will be found in T. J. Lawrence, *Principles of International Law*, London, 1910, and similar text-books. The reader should also consult T. E. Holland, *Studies in International Law*, Oxford, 1893, ch. xiv.; L. Oppenheim, *International Law*, London, 1906, deals exhaustively with the subject.

M. CAMPBELL SMITH.

NEW BIRTH.—See REGENERATION, TRANS-MIGRATION.

NEW BRITAIN AND NEW IRELAND.—

These are the two largest islands of an archipelago, lying north-east of New Guinea, which also includes New Hanover, the Duke of York group, Vuatom, and many other islands. The group is mainly of volcanic origin, and has several active volcanoes. Large regions are still wholly unexplored, especially in the interior and on the south coast of New Britain. The regions about which most is known are the Gazelle Peninsula at the north-eastern extremity of New Britain, the Duke of York group, and the southern half of New Ireland.

1. Population.—The islands are inhabited by a population bearing a general resemblance to other Melanesians, but probably showing less variation than in most other parts of Melanesia, the more negroid characters of this people predominating especially in the Gazelle Peninsula.

2. Language.—Most of the languages spoken in the archipelago belong to the Melanesian family, but several peoples are known to speak languages resembling the Papuan languages of New Guinea, and more will probably be found in the unexplored parts of New Britain. The best known of the peoples who speak these non-Melanesian languages are the Baining, who occupy the hills in the interior of the Gazelle Peninsula, and the Sulka, living to the south of the isthmus of this peninsula. Neither people differs physically from its neighbors who speak Melanesian languages, though striking differences of culture accompany the difference of language.

3. Social organization and secret societies.—Two chief forms of social organization are known: the dual organization with matrilineal descent, and the totemic clan-organization, probably with matrilineal descent also. The dual organization occurs in the Gazelle Peninsula, the north coast of New Britain, the Duke of York group, and the greater part of the southern half of New Ireland, while the totemic organization is found in the northern half of New Ireland and New Hanover, and in a somewhat different form on the south-eastern coast of New Ireland. These two regions will be spoken of in this article as the dual and totemic regions respectively.

The moieties of the dual region are in most parts named after birds, and the attitude of the people towards the object connected with their moiety resembles that usually associated with totemism. In the Duke of York Islands the animals connected with the moieties are insects, and the respect shown to these animals is even greater than is usual in Melanesian totemism; if one is found dead, it is buried with the same honours as a human being.

The moieties have a number of subdivisions, which are probably local groups. In the totemic region the totems are usually birds.

Hereditary chieftainship with patrilineal succession is probably present in the totemic region, at the southern end of New Ireland, and in the north-western part of New Britain. In some parts of the Gazelle Peninsula two kinds of chief are distinguished—one whose business it is to look after the shell-money, while the other or others lead in war—but both offices may be combined in the same person. When these dignities are hereditary, they pass to the brother or sister's son.

In other parts of the Gazelle Peninsula, and probably elsewhere, authority depends chiefly on wealth and position in the organizations known as the *Dukduk* and *Ingiel*, especially the former. These resemble the secret societies of other parts of Melanesia. The *Dukduk* is the more recent, at any rate in the Duke of York Islands and New Britain. It is said to have come to them from the southern part of New Ireland, where it has now almost disappeared. It has two sections called *Dukduk* and *Tubuan*, represented in the rites by men wearing different forms of conical head-dress. The *Tubuan* is always in existence and is called the mother of the *Dukduk*, which 'comes to life' annually and dies again later in the year. The cult of the dead, which is the motive of similar societies in other parts of Melanesia, is not obvious in the ritual of the *Dukduk*, and there is reason to suppose that this ritual may have been derived in part from a cult of the sun. The *Dukduk* is an organization whose members exert great powers over the rest of the community, from whom they are able to extort money and other goods by a process of terrorization and blackmail. Rank within the organization probably depends chiefly on wealth.

The other secret organization, the *Ingiel*, is more clearly connected with a cult of the dead. Stone images, which represent dead ancestors in human or animal form, are prominent in its ritual. Within the *Ingiel* is another organization, entered by a special process of initiation, which is devoted to practices of the kind usually called magical. Their special feature is that members learn how to project some part of themselves, called *magit*, into the form of an animal or of some other human being. The *magit* brings about the effect which the worker of the spell desires—usually the injury of some other person. In another branch of the *Ingiel* men learn how to protect themselves from the harmful action of the *magit* of others.

Another feature of the *Ingiel* is the practice of a rite in which new members are initiated on the top of a high canoe-shaped platform erected on a tree set in the ground with its roots upwards. The initiates are submitted to certain ordeals, and those who fail to retain a proper instructor who tells them how to behave run the risk of becoming transformed into beings, called *tutana vurakit*, who live for ever as wild men of the woods.

Dances in which enormous masks are worn or carried take place among the Baining, but there do not appear to be any definite organizations corresponding to the *Dukduk* and *Ingiel*.

4. Disposal of the dead.—There is much variety in the disposal of the dead. In the dual region interment is the most general mode. In the Duke of York Islands the bodies of influential men are either thrown into the sea or exposed on platforms, usually in canoes. One feature of this region is the use of the upright position of the dead body. Bodies thrown into the sea are weighted so that they will take this attitude, and occasionally the body of a chief may be interred in this position. In the totemic region the most usual method is cremation, but the dead may be placed

on platforms or may be either interred or burned in the sitting position. In one region of New Ireland the dead are packed in chalk in the sitting position and preserved under the roof of the house in which the survivors live.

The people of New Britain who speak non-Melanesian languages dispose of their dead in distinctive ways. The Sulka bury them in the sitting position, but with the upper part of the body above the ground and covered with a tower-like structure. The Baining inter the dead body, but take no special precautions to prevent its being devoured by pigs or dogs; and, associated with this absence of care for the body, there is said to be no belief in a life after death. The other people of the Gazelle Peninsula believe in homes of the dead in the east. One of these, called Tingenatabaran, reserved for those who have acquired large quantities of shell-money, has an abundance of all that the Melanesian desires, while those who have not acquired sufficient wealth pass to a comfortless existence in a place called Yakupia.

Though the skulls of the dead are sometimes preserved and are the object of ceremonial, there is no regular cult of dead ancestors apart from the *Inqiet* and *Dukduk*. The ghosts of the dead, called *tabaran*, are greatly feared, being supposed to have a harmful influence on the living, but we do not know of offerings and prayers to these beings such as form a prominent part of the religious ceremonial of many other parts of Melanesia.

5. Supernatural beings.—There are beliefs in several kinds of spiritual beings, some of whom are beneficent and others injurious to man. We do not know of any being who can be regarded as a supreme deity except in New Ireland, in the central part of which there is a belief in a good being who made the sky, the earth, and its people. This being is called *hintubuhet*, a word which means 'female ancestor,' and is also used for the birds and other sacred objects connected with the moieties of the dual organization. The *hintubuhet*, who is believed to have created the world, is not, however, supposed to take any special interest in her handiwork. Men have no duties towards her; they neither propitiate nor pray to her, and she neither punishes nor rewards.

A class of beings in whose beneficence towards mankind the people of New Britain believe is called *inal* or *pepe*. These beings live in banyan trees; they are not birds, though they resemble them in having wings. They send men into conditions of trance, in which they acquire new knowledge, or into states of ecstasy so that they are able to perform acts of which they are quite incapable in their ordinary condition. In the trances men learn new songs, dances, and love-charms, are taught how to make certain ornaments, and attain other desirable knowledge, but they are never taught any measures by which they can harm their fellows. Initiation into the cult of the *inal* also assists in the attainment of happiness in the life after death. The knowledge how to become possessed by the *inal* is obtained through a process of initiation by, and payment to, those who already possess the knowledge. If in his trance a man learns a new dance or song which appeals to others, he can sell it, the cult thus becoming a source of profit. It is a question, however, whether this economical aspect of the belief is not relatively recent.

Another class of supernatural beings, called *kaia* in the Gazelle Peninsula and *tadar* in the central part of New Ireland, occupies a more prominent place in the minds of the people. These beings have a local character and are greatly feared by all except the people of the districts which they inhabit, to whom they act as protectors, thus

forming a kind of guardian-spirit. It is believed that any intrusion on the domain of a *kaia* or the taking of fruits or other objects by strangers is resented by this being, who thus protects property and preserves the produce of the district for its inhabitants. The most important of the *kaia* are gigantic creatures with the bodies or tails of snakes and the bearded faces of men. They have companions who are believed to be harmful to those who offend the *kaia*. The most important of these companions are dogs with hanging ears and other characters which distinguish them from the Melanesian dog of the present time. Other companions of the *kaia* are pigs, fowls, lizards, snakes, ants, and other animals, many of which are naturally harmful to mankind. The *kaia* not only is able to bring disease upon individual persons, but also may punish a whole community by causing earthquakes, volcanic eruptions, thunder-storms, floods, pestilence, or famine.

There are beliefs in several other supernatural beings which take a less important place in the lives of the people than that of the *tabaran* and *kaia*, or *tadar*. Female beings are believed to inhabit hollows in rocks or trees, from which they come forth in the dusk and entice men, who suffer in consequence from painful diseases of the sexual organs. Dwarfs with long beards and of enormous strength are said to uproot trees from the ground and bear them to their dwellings. Wild men, who have only two teeth and long tufts of hair growing from forehead, neck, and sides, are believed to be derived from the unborn children of women who die during pregnancy.

The people of the west coast of New Ireland believe in men with long hair, in others with a face at the back as well as in front of the head, in others with enormous ears, and in another with one arm of the ordinary length and the other 50 to 80 yards long, with which he seizes canoes which venture within its reach. Still another being belongs to a river which disappears under ground to reappear again at the spot where the spirit is believed to dwell.

All these beings are thought to be still alive, though some of them are never seen by mortal eye. Stories are also told of men of old time who no longer exist. Prominent among these are two men connected with the moieties of the dual system of whom numerous stories are told, all of which illustrate the superior ability and wisdom of one and the stupidity and ignorance of the other.

6. Sun-worship.—In one district of the island of Vuatom there is a definite cult of the sun, the rites of which take place at the southern solstice, and there is some reason to suppose that a cult of the sun may underlie certain features of the ceremonial of the *Dukduk*. The sun is sacred to one of the moieties in the central part of New Ireland, and in the northern part of New Ireland an object representing the sun is burned after it has been the subject of rites.

7. Circumcision.—Circumcision is practised by the Sulka and in Rook Island, lying between New Britain and New Guinea, while the operation of incision occurs at the north-east end of New Britain. In Rook Island the operation takes place in a club-house and is followed by a long period of seclusion.

8. Money.—The sacred character of money, of which there are definite signs elsewhere in Melanesia, comes out very strongly in New Britain, in one part of which the shell-money is called *tambu*—a word which has the general meaning of 'sacred.' This money takes a very prominent place in the ritual both of the *Dukduk* and of the ceremonies following death.

9. Drums.—Two kinds of 'drum' are used—the form more properly called a gong and the drum proper, the sound of which is produced by striking a membrane. It is the gong that is used especially in sacred rites, while the drum proper is used in connexion with dances of a more secular character. The instrument used to make the mysterious sound of the secret rites is the bull-roarer, and the shell-conch is also prominent in these rites.

10. Betel.—Betel-chewing, in which a mixture of areca-nut, betel-leaf, and lime is used, is a general custom, and some or all of the constituents of the mixture are used in magical and religious rites.

11. Art.—The decorative art of the dual region is characterized by the presence of spirals, while that of the totemic region takes the form of highly-complicated carvings, the general motive of which is the representation of a struggle between birds who act as the guardians of mankind and evil beings represented by snakes. In this region bisexual images are made about the meaning of which we have at present no information.

W. H. R. RIVERS.

NEW CALEDONIA.—This island, which forms the south-western extremity of Melanesia, is inhabited by a people who resemble other Melanesians in showing a mixture of two main types, one Negro and the other resembling the Polynesian. There is much linguistic diversity, but little is known about the character of the languages. All those recorded belong to the Melanesian family, though of an aberrant kind.

1. Social organization.—The social organization varies in different parts of the island. An exogamous clan-organization, in some cases on a local basis, appears to be general, but there is no evidence of any dual system. In some parts the clans are named after ancestors, and elsewhere they appear to be totemic, each clan being associated with an animal which may not be eaten and is regarded as a father. The members of certain social groups are believed to be able to promote the growth of plants, and this power is associated with a tabu on the use of the plants as food, but we do not know whether these social groups have other totemic characters. Wherever we learn its nature, descent is patrilineal, and inheritance also follows this mode of transmission. The cross-cousin marriage is practised, and there is definite avoidance between brother and sister. The relation between a man and his sister's son, so frequent in Melanesia, takes in this island the special form that a man who sees the blood of his nephew thereby obtains extensive rights over his property.

Hereditary chieftainship with succession in the male line is found, and there is some evidence for the presence of the distinction between sacred and secular chiefs. The sacred chief is highly honoured and is said to be regarded as a divinity.

2. Religious beliefs.—There is no evidence of any belief in a supreme deity, but there is a belief in several sacred beings with special names who preside over the home of the dead or are believed to live on mountains. There is little doubt, how-

ever, that, as in other parts of Melanesia, the essential element in the religion of the people is the cult of dead ancestors. Offerings are made to the skulls of dead relatives, and certain men are believed to be able to summon the ghosts of dead chiefs and obtain from them information about the future.

Masks are worn on certain occasions, as in the rites which follow death and after the operation of incision, but we have no evidence that they are connected with such definite organizations as are present in other parts of Melanesia.

There is a definite cult of the sun in which the tombs of ancestors are visited and fires are lighted on 'altars' on the tops of mountains. Rites are performed both at sunrise and at sunset. There is evidence that chiefs are especially associated with the sun, for, when a chief is dead, the people say, 'The sun has set.'

There is a belief in a snake-like being inhabiting a cave, and there seem to be other signs of a cult of serpents, although there are no snakes on the island.

3. Disposal of the dead.—There is much variety in the modes of disposal of the bodies of the dead. In one method of frequent occurrence the body is buried in the squatting position with the head above the ground so that the skull can be removed and preserved, this taking place six months after death in the case of a chief. The teeth may be extracted as relics, and the teeth of women may be sown in order to promote the growth of crops. The dead are sometimes interred in the extended position, as a special mark of honour. They are also mummified, especially among the chiefs of the northern part of the island. In some cases in which the body is preserved caves are used as funerary chambers, but more frequently the body, with the legs folded on the trunk, is placed on a platform in a banyan or other kind of tree. This method, which is said to be ancient, is now in vogue chiefly in the interior of the island. The dead are believed to go to a place at the bottom of the sea, whose chief is represented with rocks in the place of the lower part of the body and with trees growing from the upper part.

4. Culture.—The people are agricultural and practise terrace-cultivation and irrigation on a large scale. There are rites connected with first-fruits, the first yams being eaten by the chiefs. We know little of the nature of the rites performed to promote the growth of vegetation, but, as in other parts of Melanesia, stones are used in them.

A special feature of the material culture is the presence of the round house, often with an image in human form at the summit of the conical roof. The rectangular house also occurs, but the circular form is the more frequent and is used for the club-houses and for the houses of chiefs, as well as for those of the general population.

The people practise incision, the use of the pudendal sheath, tattooing, deformation of the head, piercing and distension of the ear-lobe, and use shell-money and wooden gongs. The human motive is prominent in the decorative art, and the human figure is sometimes represented with a protruding tongue.

A feature of the culture of New Caledonia which distinguishes it from other parts of S. Melanesia is the prominence of the cult of the sun, and this cult is associated with many customs which accompany it in other parts of the world.¹ A few features of culture, such as the use of nephrite and the protruded tongue in the decorative art, suggest a relation with New Zealand.

NEW CHURCH.—See SWEDENBORG.

NEW DISPENSATION.—The Church of the New Dispensation was the name given by Keshab Chandra Sen to the section of the Brāhma Samāj which remained faithful to him after the schism of 1878. The publication of Sāstri's *History of the Brahmo Samāj* and other fresh material makes it desirable to give here a rather fuller account of the New Dispensation than that which appears in art. BRĀHMA SAMĀJ (vol. ii. p. 820). For the historical connexion readers will refer to that article.

The subject is one of considerable interest; for what Keshab attempted to do was to create a religion which should be the final religion for all men, and should stand in living relations with all foregoing religions. Madame Blavatsky attempted something of the same kind but on other lines in India about the same time.

The great secession took place in 1878, and it left Keshab with a very seriously diminished following. The New Dispensation was not announced, however, until Jan. 1880, and its significance was not clearly and fully unfolded until Jan. 1881, only three years before his death. At the anniversary meetings held then Keshab appeared on the platform under a bright red banner, on which were inscribed the title Naba Bidhān (i.e. Nava Vidhāna, 'New Dispensation') and an extraordinary symbol, made up of the Śaiva trident, the Vaiṣṇava *khuntī*, the Christian cross, and the Muhammadan crescent. On the table beside him lay the Scriptures of the four great religions, Hinduism, Buddhism, Muhammadanism, and Christianity. In a sermon he expounded the New Dispensation, declaring that it was a revelation from God, that in it all religions were harmonized, and that he and his missionaries were the apostles of this new divine message. At the evening service the Hindu ceremony named *ārati*, the waving of lights before an image, was introduced in a modified form as a significant feature of the system.

The chief conceptions of the new position are that in the New Dispensation all religions are harmonized, and are so set forth as to become available as spiritual food for the members. The new system is a revelation from God; and it is therefore the duty of all men, of whatever race or religion, to accept it, and to find within its organization their spiritual home. It was spoken of as a far larger and more serious thing than the old Brāhmaism; and all Brāhmas who refused to accept it were condemned as unbelievers and enemies of God. The revelation had been sent by God, the Divine Mother, to Keshab; and, though he disclaimed the title of prophet, he frankly claimed authority in the New Dispensation. He frequently issued in the name of God proclamations in which he denounced in vehement terms the men who had left him. In full confidence in these new ideas he went on to introduce into the thought and ritual of the New Dispensation fragments of Hindu and Christian belief and practice.

The central conception of the New Dispensation has three sources—Keshab's belief in his own perpetual inspiration, the Christian doctrine of dispensations, and Rāmākṛṣṇa Paramahansa's doctrine, that all religions are true.

It is abundantly clear that Rāmākṛṣṇa exercised a very powerful influence over Keshab's mind. For many years he was a strict theist; but he made the acquaintance of Rāmākṛṣṇa about 1875, and from 1878 onwards one can trace a new attitude

to Hinduism in his teaching; finally there emerged in the year 1881 the definite statement, 'All the established religions of the world are true.' A friend of Rāmākṛṣṇa had a symbolical picture painted which represents Rāmākṛṣṇa teaching Keshab this doctrine. A Christian church, a Muhammadan mosque, and a Hindu temple occupy the background. In front of the church stand Keshab and Rāmākṛṣṇa, the former carrying the banner of the New Dispensation, the latter calling Keshab's attention to a group of figures which fill the rest of the foreground. They are men of many religions, each carrying a symbol of his faith, and in the centre of the group are Christ and Chaitanya dancing a religious dance together.

While Keshab's teaching and religious practice were undergoing this very remarkable change, another most interesting revolution was taking place in his mind. From the beginning of his theistic life he had been much more under Christian influence than any earlier Brāhma had been. He not only recognized the value of Christ's ethical and social principles, but lived in the inspiration of His character and followed Him with tender love and adoring enthusiasm. He was a strict theist, yet his religious life was rooted in Christ. But during the period when he developed his New Dispensation theory he was driven onward by his personal experience to give a more adequate account of the person of Christ, and finally reached the position that He was the Logos, the Son of God. He also accepted the doctrine of the Trinity. Yet he continued to teach the New Dispensation theory to the end. He was not a systematic thinker.

Keshab's personal power, the extreme brilliance of his teaching, and the faithful toil of a large number of missionaries combined to secure considerable success for a few years; but the leader died in Jan. 1884, and the final outcome of the undigested eclecticism of his new system was precisely what one would expect it would be: the Church of the New Dispensation broke up into sections, and even into fragments, which have never been again united.

NEWFOUNDLAND.—See BEOTHUKS.

NEW GUINEA.—It is impossible in a short article to deal adequately with the religions of the various peoples of so large an island as New Guinea, and it is difficult to make satisfactory generalizations, as very few groups of people have been carefully studied, and even about these our information is rarely complete. The inhabitants of New Guinea are of mixed origin and have been subject to various cultural influences coming in from the east, north, and west. The main racial elements are Negrito, Papuan, and Melanesian, with intermixture in places with peoples from the E. Indian archipelago. It is quite possible that there are or were more than one variety of Negrito in New Guinea. The only true Pygmies are the Tapiro, whose appearance and material culture have been described by A. F. R. Wollaston (*Pygmies and Papuans*, London, 1912) and C. G. Rawling (*The Land of the New Guinea Pygmies*, do. 1913), and the Pēsēchēm (*Nova Guinea*, vii. [1915] 145, 233); of their social and religious life we know nothing. With a perceptible Negrito strain are the Kama-weka mountain tribes behind Mekco, British New Guinea (*JRAI* xxxix. [1909] 329), the Mafulu (R.

W. Williamson, *The Mafulu Mountain People of British New Guinea*, London, 1912), the people of the Goliath mountains, Netherlands New Guinea, and of the Torricelli mountains, German New Guinea, and the Kai, German New Guinea; traces of the Pygmy stock also occur elsewhere (cf. Haddon, in Wollaston, p. 303 ff.; O. Schlaginhaufen, 'Über die Pygmäenfrage in Neu-Guinea,' in *Festschr. der Dozenten der Univ. Zürich*, Zürich, 1914). Of these the Mafulu and Kai alone have been studied; the Mafulu are mixed with Papuan and Melanesian elements, and their customs and beliefs betray this mixture, there being no socio-religious customs which we can refer with probability to the Negrito element. Owing to the spread of various cultures it is difficult at the present stage of our knowledge to determine what elements belong to the different strata, and lack of space prevents a discussion of these problems. A few indications will, however, be attempted. A geographical arrangement has been adopted as being the most satisfactory, beginning with the south-west and continuing along the southern, eastern, northern, and north-western areas, for the reason that the presumably purest Papuan peoples will be treated first, then the predominating Papuo-Melanesians, and finally those peoples who have been directly affected by influences from the E. Indian archipelago.

The Kaia-kaia, or Tugeri, at Merauke (about 140° 23' E., 8° 28' S.) are inveterate head-hunters. All the men sleep in a few men's houses at each end of a village, and there is a bachelors' club-house outside the village; no one may enter the house of the opposite sex. There is a complicated patrilineal exogamous totemic system, in which plants are combined with animals into main and subsidiary groups. Several villages assemble at initiation, bull-roarers are employed, and there are many dances in which masks are worn and animals represented. The bull-roarer is anthropomorphized as Sosom, a mythical monster in the bush, who at the annual festival at the beginning of the south-east monsoon devours the novices but brings them back to life; it is not known to be used anywhere else in Netherlands New Guinea. The youths receive a new name but are not circumcised (R. Pösch, *SWAW* exv. [1906] i. 899 ff.; *ZE* xxxix. [1907] 392; *Geog. Journ.* xxx. [1907] 616; the system of age-grades is described by H. Nollen, *Anthropos*, iv. [1909] 553).

The Toro, who live up the Bensbach River, have totems which descend in the male line; probably they, like the natives of the Morehead River, use their bull-roarers in initiation ceremonies (C. G. Seligmann and W. M. Strong, *Geog. Journ.* xxvii. [1906] 229).

The Dungenwab of the Wäsi Küsa believe that ghosts of men, dogs, and pigs, but not of cassowaries, go into the sky. Grave-offerings are made (*Ann. Rep. Brit. New Guinea*, 1895-96, p. 44).

Chalmers says that the Bugilai (near the coast about 142° 20' E.) practise totemism, have an initiation ceremony, believe in a great spirit, Kaka, and that ghosts (spirits?) are everywhere. The ghost (*yedö*) goes right away to Bëmor in the west (*JAI* xxxiii. [1903] 109).

The Masingara, behind Mawata, have a crocodile-cult. At large hunting ceremonies men dance round two effigies of crocodiles, one of which represents Nugu, whom B. A. Hely describes as their deity (he is also represented in human form), libations of kava are made to them, and they are greased with pig's fat (*Ann. Rep. Brit. New Guinea*, 1894-95, p. 45).

The bush people up the Binaturi River employ carved wooden figures (*udo*) in the ceremonies connected with the planting of bananas. The

figures are anointed with oil, food is heaped in front of them, and there is dancing (MS).

The islanders of Torres Straits are Papuans, but the western islanders speak an Australoid language, while the eastern islanders speak a Papuan language. There was a large variety of natural and worked stones and carved wooden figures which were supposed to ensure good crops and influence animals and the elements. In Mabuiag wooden human effigies (*madub*) were said to become animated and go round the gardens swinging bull-roarers to make plants grow. Perhaps in all cases sacred words were employed. Many belonged to definite families or to the heirs of definite localities, but certain stones, shrines, or rituals belonged to larger groups. Offerings were made to some of them. Masked dances to increase the food-supply were common. Typical totemism occurred in the west, but had disappeared in the east. Omens were obtained from birds and other sources, and in Mer the ghost of a recently deceased man usually appeared in the form of some animal, that of a woman as a flying animal. Skull-divination was common. A distinction was made at all events by the western islanders between a ghost, *mari*, of a recently deceased person and its later stage, *markai*; the former was feared, but the latter was friendly. The dead were buried in an extended position. There were numerous funeral ceremonies, the most elaborate being that at which several ghosts were dispatched finally to their island home in the west. Certain men in Mabuiag were friends of the ghosts and possessed the gift of ghost-divination. There are slight traces of a former manes- or ancestor-cult, but ancestors were not apotheosized. A high code of morals was inculcated at very important initiation ceremonies, at which seclusion was practised and the lads were terrorized. Ghosts resented wrong done to their children; otherwise morality derived neither sanction nor support from non-human influences. Tales were told of heroes who introduced new foods or a new technique, or instructed people in new ceremonies; some of these came from New Guinea. Kwoiam, the warrior-hero of Mabuiag, was of Australian origin; two emblems made by him were called *augud* (the name for a totem), and were associated with the dual organization. In Muralug Kwoiam was regarded as an *augud*. A family of mythical brothers came from New Guinea first to certain western islands, and then two went to Mer. At Yam two of the brothers became identified with totems, and were prayed to as *augud*; they were represented by turtle-shell images of a crocodile and a hammer-headed shark, under each of which was a stone in which the spirit of the *augud* resided; the cult at these complicated shrines was essentially a war-cult. In Mer the hero-cult took the form of a secret society or religious fraternity of the usual W. Pacific type, which did not develop into a war-cult, but took upon itself disciplinary functions. The sacred men connected with it attained considerable power, which they frequently used for their private ends, and were on the way to become priests. The hero-cults were not an evolution from totemism. A transformation of totemism had certainly occurred, but by a grafting of a new cult upon an old. Nor is there any suspicion that the heroes of the cults were locally developed ancestors, though they may have arisen in this way in their original country. Unless the heroes of the cults be regarded as gods, it can be stated definitely that the Torres Straits islanders had no deities, and certainly they had no conception of a supreme god (A. C. Haddon, 'The Religion of the Torres Straits Islanders,' *Anthrop. Essays presented to E. B. Tylor*, Oxford, 1907, p. 175 ff.; *Rep. Camb. Exped. Torres Straits*, v., vi.).

The natives of Kiwai island and Mawata on the coast to the west are practically the same people. Patrilineal totemism was first noted among the western Papuans by the present writer in 1888 and by E. Beardmore in 1889 (*JAI* xix. [1890] 297 ff., 459 ff.). B. A. Hely (*Ann. Rep. Brit. New Guinea*, 1898, p. 134) gives an account of totemism at Kiwai and Mawata, which is reprinted in the *Rep. Camb. Exped. Torres Straits*, v. 187 ff. (cf. A. C. Haddon, *Head-hunters, Black, White, and Brown*, London, 1901, p. 101 ff.). On Kiwai initiation (*moguru*) takes place at the beginning of the yam season. On hearing the bull-roarer, all the uninitiated have to leave the village, in order to see the wooden effigies Kurumi, Uruparu, and Paroniti. Large feasts have to be prepared, and, when they are shown, fire is showered on the lads. Various immoral practices are indulged in. Only those who have passed through all the stages of initiation may drink kava (*gumada*).¹ The effigies are used when they are going to fight or when there is sickness; smaller ones are employed as charms (J. Chalmers, *JAI* xxxiii. [1903] 119). The young men are hardened by fighting among themselves with burning torches, which they place previously for a moment on wooden human figures (*mimia*) which are arranged down the sides of the men's house (G. Landtman, MS). Bull-roarers are swung to ensure good garden crops, and wooden images of nude women make sago abundant. Both of these enter into the initiation ceremonies; the latter were described as 'God belong *moguru*,' and one name for a bull-roarer is 'mother of yams.' A wooden image of a man (*uvio moguru* or *oraoradubu*) is used at initiation; he makes everything grow, and presents of food are made to him when the planting season arrives. He is always consulted before fighting, and presents are given him to secure success in getting heads. In cases of sickness offerings are made, and he is prayed to as follows: 'Oh, Uvio, finish the sickness of our dear one, and give life' (Chalmers, MS, quoted in Haddon, p. 107). For further information on totemism, etc., at Mawata see Seligmann, quoted by Frazer, *Totemism and Exogamy*, ii. 29-34. Landtman (*Festschrift tillegnad Edward Westermarck*, Helsingfors, 1912, p. 59 ff.) has given a good account of the wanderings of the dead in the folk-lore of the Kiwai-speaking Papuans.

The legendary Sido of Kiwai opened the road to Adiri, or Woibu, the land of the dead, a country in the western sea. His was the first death, which was also a murder. His ghost was mischievous during his wanderings, and after various adventures reached the barren Adiri. Here he married the daughter of a man also called Adiri, and, as there were no houses, gardens, fires, or proper food, he introduced them. All mortals follow Sido's road, but may do so in the guise of animals. Some people who have died a violent death remain on the spot for a long time, and their ghosts are much feared. Some ghosts go underground. Ghosts can return to earth; some are malevolent, others are quite friendly and helpful; presents of food are often deposited at places which they frequent and a request is made, but there is no regular or continuous cult. In building a man's house various objects, such as thorny bushes, parts of spiders, bats, etc., are placed in the holes for the piles and in various parts of the structure for the purpose of closing the road to Adiri and preventing men from becoming ill or being killed. They have reference to similar objects which barred the road that Sido took.

Magico-religious ideas enter into all their practical life.

The Kabiri, or Girara, who live north of the estuary of the Fly, are head-hunters, chew kava, and have five patrilineal totems. They pay great attention to human heads, and probably have a manes-cult. At their principal ceremony, *moi-inta*, three large named wooden effigies of croco-

diles are exhibited, masks are worn, marriages are celebrated, and youths are initiated. The boy to be initiated is previously hidden and at the ceremony is placed in the jaws of one of the crocodiles (W. N. Beaver, *Ann. Rep. Papua*, 1911-12, p. 11; A. P. Lyons, *ib.* 1913-14, p. 100).

The tribes in the deltas of the Turama, Omati, and Kikori are allied, but very little is known about them. Each village has at least one *dubu-daimu*, or house for the married men, with a number of shrines which consist of a perforated board (*agibi*) on which is carved a human face, and to the hooks of which numerous skulls are suspended; in front of the carving is a shelf supporting the skulls. The skulls are those of enemies or of victims who have been sacrificed when a war canoe is made or a *dubu-daimu* erected, their bodies having been boiled and eaten. There are similar but much smaller carvings (*marubu*), from which birds' heads are suspended. An *agibi* probably belongs to a family or clan. Male and female effigies are carved to represent dead people, and are connected with some form of ancestor-cult, as also are probably boards or tablets carved with human designs (MS). One ceremony is described by H. J. Ryan (*Ann. Rep. Papua*, 1913, p. 76).

Namau is the coastal district from Era Bay to the Alele mouth of the Purari River. The people are lusty head-hunters and cannibals. The club-houses (*ravi*) are especially fine, and formerly contained large numbers of skulls of enemies and victims; in a screened-off portion at the end are eight to ten basket-work monsters with four legs and great gaping jaws; these *kopiravi*, or *kai-ia-imunu* ('sky *imunu*'), have names. Before going out to kill any one, the men consult the spirit of the *kopiravi*; it comes out of the *ravi* and causes the canoe to rock if the expedition is to be successful. The present writer was informed that the dead bodies of victims were thrust inside the *kopiravi* and left there all night while the men danced in the front part of the *ravi*. Next morning the bodies were cut up with bull-roarers (of which numbers are kept under the *kopiravi*), and then cooked and eaten. A human victim, a cassowary, and a pig have to be sacrificed when a canoe is completed. The skulls of their own dead are kept in the houses. Totemism existed, but is now breaking up. According to Holmes, the conception of *imunu*, 'the life principle,' runs through all their religion; masks are *imunu*. The carved tablets (*koe*) which occur in such numbers in the shrines in the *ravi* seem to be personal *imunu*; it would seem that they are ancestral tablets, and, if the bull-roarers represent ancestral ghosts, the tablets may be hypertrophied bull-roarers; one name for the bull-roarer is *imunu viki*, 'crying *imunu*.' Holmes is now studying these people, who seem to be remotely related to the Elema tribes, but the *kopiravi*-cult is peculiar to them, and their religion seems to be a combination of head-hunting, cannibalism, and a manes- or ancestor-cult; the *kopiravi* may prove, however, to be effigies of spirits who may be regarded as gods. Chalmers first described the *kanibus*, as he calls them (*Pioneering in New Guinea*, London, 1887, pp. 63-66; cf. J. H. P. Murray, *Papua, or British New Guinea*, do. 1912, p. 178, pl. on 219).

Elema is the coastal district between the Alele mouth of the Purari in the west and Cape Possession in the east. Apparently all the tribes have migrated towards the coast, the original home of the 'Ipi' tribes being on the south side of the mountain range near the east bank of the upper Purari. The initiation of a youth is all-important, since it is on the performance of the instructions which he received as an initiate that the social and moral welfare of the tribe depends, and great

¹ The distribution of kava-drinking has an important cultural significance. It occurs in New Guinea at Astrolabe Bay, Fischhafen district, Fly estuary district, inland from Mawata, at Merauke, and perhaps on the upper reaches of the Fly (cf. Haddon, 'Kava-drinking in New Guinea,' *Man*, Oct. 1916).

reticence is observed about the proceedings. The various stages are marked by feasts, at which pigs always figure.

The first stage is when the boy is about eight years of age, two or three years prior to his entering the *eravo* (cluh-houso) for seclusion; he is then formally taken into the *eravo* and greeted with the noise of bull-roarers (*tiparu*), which he sees for the first time; one is placed on his chest, and he is severely beaten. Bull-roarers are swung day and night till the feast is over. After the lad has entered the *eravo* for his period of seclusion, the clan feast of Kovave is held. Ten days previously a large number of young men wearing Kovave masks announce that Kovave is about to visit the village; they are the sacred messengers of the mountain-god, as is proved by the fact that they do not walk on the soles of their feet. Every night bull-roarers are swung, and all women and children keep indoors. On the great day large quantities of food and pigs are taken to a tabued spot in the bush for Kovave to the accompaniment of the beating of drums and blowing of conchs, and at nightfall the novices are marched there. In the dark a feigned gruff voice assures them that Kovave is speaking to them. He promises to be their friend as long as they observe all tribal and clan duties, obligations, and secrets; otherwise they will be punished with disease and death. Unexpectedly a Kovave mask is placed on each boy's head amid a loud buzzing of bull-roarers; he is then beaten, and all are marched back to the *eravo*. The feast is partaken of by the initiated members of a given clan, not by the tribe. The lads remain in well-guarded seclusion in the *eravo*; they must not be exposed to the rays of the sun lest they suffer thereby, nor do any heavy manual work lest their physical development be hindered, and they must have no dealings with females. When allowed to go outside they are encased in plaited palm-leaves and must maintain silence. There are food-tabus, and during seclusion they are instructed in all matters pertaining to tabu. They are taught that the tribe must take the first place in all their actions, and whatever serves the highest interest of the tribe is justifiable; everything that is, or can be, must be subordinated to the pursuit of obtaining the fittest; this idea is dominant till death. The next stage of initiation is one of greater liberty, but still subject to strict surveillance. The final stage is the *semese*, or warrior festival, which is of tribal significance, and in which large masks are employed. First of all, numerous pigs are killed, accompanied with great noise. Four men wearing Kovave masks arrive from a hill village and receive presents of pigs. In the evening there is a procession of symbolic masked figures from the *eravo*, followed by most of the villagers. The novices and recent initiates man a scaffolding in front of the *eravo* and welcome the effigies with song; armed men in front of the effigies fire arrows at the *eravo*, and dancing is kept up all night. At daybreak there is another procession of human-face masks and totem effigies. The festivities last as long as the food holds out. Only the initiated may eat pig-flesh; others must eat dog-flesh. At the last procession there is no dancing, and all the masks are then burned. The festival has a religious significance to the native mind more profound than it can express to an alien mind; at it friend and foe meet in peace on common ground, all anxious to do honour to their ancestors, from whom come all temporal blessings. The period of seclusion is now terminated, and the initiate can marry and take his place in the social life of his community. The final degree of initiation is the *makaikara*, 'sea' ceremony, which may be clan or tribal; totemic decoration is employed, but no masks. The chief addresses the people, and then shouts to Kalapo, the god of the sea, acknowledging the indebtedness of his tribe to him, invokes him to continue his protection of their crops and to give them a plentiful supply of fish, and reminds him that the present festivities are in his honour. The clan *makaikara*, though impressive, is less elaborate.

The religious ideas resolve themselves into reverence for certain objects, a belief in the existence of ghosts, and the worship of gods. The name for ancestors is practically the same term (*ualare*) by which all sacred objects are designated. Certain animals are *ualare*, and, as these were never injured or eaten by the ancestors, so their descendants hold them sacred; or they may be natural objects or phenomena. (1) All tribal *ualare* are regarded as deities who in the long ago temporarily assumed human form when they became the ancestors of the respective tribes and at the same time appropriated certain areas for their posterity, which they furnished with vegetable food. Some of the immediate descendants of the original ancestor are credited with his supernatural attributes. These *ualare*-deities are kind and beneficent, and are angered only after much provocation from the tribes, not by individual wrong-doing. There are two of them; the one associated with the sea is occasionally malevolent. It is strange that the inland tribes also have the same ideas. (2) Clan *ualare*-deities are ancestors who acquired their

powers from the father (or from the mother—in the latter case descent is matrilineal), who created himself from a natural object or is a nature-deity. (3) Individual *ualare*, unlike the others, are not inherited. A personal *ualare* may be that of either parent or of the person after whom a man is named, or the result of a dream. Every man of legitimate birth has two *ualare*, such as a bird, a dog, a pig, a wallaby, or a tree, and a fish; rarely a man may have two trees or only one *ualare*, as women have. A man should not injure or eat his *ualare*; he fasts and mourns as for a relative when one is killed, and he wears parts of it as personal adornment—which no others may do. It is quite evident that the *ualare* was originally a totem, but the totemic idea has been greatly extended through ancient contact with another cult. Holmes believes that the Naman of the Purari delta and the Elema tribes used to be closely allied, and that the former have a purer and more elaborate totemic cult.

The future of ghosts (*ove*) depends upon the death which the individuals have died. Ghosts of warriors go to the residence in the sky of Hiovaki, the god of war, but can roam about their old surroundings. Those that have died a natural death go to their respective places when assured that all mourning ceremonies have been duly observed. Those that have died a violent death roam about constantly and are malicious. Spirits (*harisu*) are classified as good or bad, and have their respective spheres of action, and thus may be termed gods. The great good god is Harisu; Harohoha is his messenger, and he communicates through sorcerers. The pageant of the warriors' festival represents all the totems (*ualare*), ghosts (*ove*), and gods (*harisu*), but effigies are not made of Harisu and Harohoha. *Ualare* created the visible world and nearly all the animals and foods. Kivovia created sago, areca palms, and other good things, his son created dogs, and Ruapu the pig. As Harisu is the supreme god of all the minor gods who work for the welfare of mankind, so Karisu is the supreme god of the minor malignant deities. Kovave, the mountain-god, holds the fate of travellers; Hiovaki, the war-god, dwells in the sky; Oalea, a malignant god resident on Yule island, is the god of *tiparu*, the bull-roarer. Saukoro is an evilly-disposed god who dwells in hollow trees. The kindly minor deities seem concerned only with the protection of foods and receive propitiatory worship; thus the gods of bananas are besought to protect bananas from the ravages of birds, and the gods of winds and the sea are invoked before a voyage. Every family of living things from man downwards has its special god or guardian spirit for whom awe is felt (Holmes, *JAI* xxxii. [1902] 418, xxxiii. 125, *Man*, 1905, pp. 2, 17, and MS). Chalmers says that the only guardian spirits of the Toaripi are those of father and mother, and to them they appeal in distress or want by land or sea (probably this statement requires modification), and that in times of great sickness they expel the evil spirits of sickness from the village with great noise and the throwing of firebrands (*JAI* xxvii. [1897] 334). He says elsewhere that the Toaripi ('Motumotu') believe in a great spirit called Saukoni, who is vindictive, steals native food, and kills people. Semese, his two sons, the sun, moon, stones, rocks, and mountains are worshipped; in a small degree they worship dead warriors long after they have gone. Hiovaki Semese, a spirit in the heavens, made the land and sea; to him they pray for goodness and strength in fighting; his sons are Hiovaki and Mial. Ghosts are like men; they live in Lavau in the west. All animals and objects have a spiritual part for the use of ghosts. At Perau, Vailala River, Chalmers saw two wooden idols.

Epe and Kivava, and a large stone 'Ravai' to which offerings are made, and they are appealed to in cases of sickness, 'seeing that Kanitu, the Great Spirit, is represented in them. . . . At Elema the Great Spirit is "Kanitu," at Namau, "Kanibu"' (*Pioneering*, pp. 168-174, 84). Tabu on garden produce is enforced by masked men, *harihu* ('spirits'), whose office is hereditary. Chalmers calls the mask *oioi* (*JAI* xxvii. 329); this custom has spread to certain Roro-speaking tribes, where it is known as *kaivakuku* (C. G. Seligmann, *The Melanesians*, Cambridge, 1910, pp. 299, 300); it also occurs at Hisiu, Redscar Bay (*Ann. Rep. Brit. New Guinea*, 1901, p. 2).

The Mambule (Mafulu) are an admittedly mixed people of Pygmy (Negrito) -Papuan descent and probably influenced by Melanesian culture. They inhabit the upper waters of the Angabunga (St. Joseph River), but they have affinities with the inhabitants of the Chirima affluent of the Mambare on the north-eastern side of the Main range, and it is possible that they have trading relations with the natives of the Waria River. There is no totemism, but there are clans and clan villages which are grouped into communities, each community being for many purposes a composite whole. The villages of one clan have a common chief and club-house (*emone*). Descent is definitely patrilineal. There is a ceremony at the assumption of the perineal band by boys and girls at which the decorated child stands on a dead pig bought from the family by an outsider. Only people from other communities take part in the dance. This ceremony is frequently performed at the 'big feast.' Later there is a purification ceremony. There is no seclusion of boys or girls at any time, no initiation ceremony, wearing of masks, or use of bull-roarers. A similar ceremony takes place before boys and girls may enter the *emone* (but after a girl has received the perineal band she may not enter the *emone*), and also to confer the right to beat a drum and to dance. When a person is dying, a woman gives a heavy blow on the side of the head, and pronounces the patient dead, and all the people shout to drive away the ghost. The body is wrapped in leaves and bark, doubled up in a crouching position, and placed on its back, in a grave in the open village enclosure. Every one shouts to frighten the ghost away, the grave is filled up, and the funeral is over. A mother often amputates the end of a finger for a child. Two or three days later a feast is held, all bring spears, and a ceremony something like the 'big feast' takes place. The killing of the pigs finally propitiates or drives away the ghost. Then wild pigs are caught, killed, and eaten, and the village is swept by way of purification. A chief's funeral is attended with more ceremonial; the wrapped-up body is placed in an open rude wooden box either supported on poles or placed in the fork of a *gabi* fig-tree. In the case of a chief all except two men watchers leave the village for two or three weeks; then they return, kill wild pigs, and sweep the village.

The 'big feast' is held in a particular village at intervals of about fifteen or twenty years, and requires a very long preparation.

Usually a new *emone* is built, and also new houses, view platforms, and sheds for guests. Composite high posts are erected, on which food and skulls are placed, and round the central space slender poles connected by a cord are put up, on which food is displayed. If one does not already exist, they build a box-shaped wooden burial platform on high poles containing the skull and bones of a chief, and others are added to it. Three trees are erected in the centre of the village. The ceremony is very impressive. Two women guests with pigs' tusks in their mouths rush round the enclosure brandishing spears, and strike at the chief's *emone*. Male guests brandish spears, also in silence, and knock down the trees. Other guests perambulate the enclosure. The chief of the clan cuts down the burial platform, which is not rebuilt. Food is distri-

buted to the most important men, and the real dance is performed only by some of the guest men, who wear skulls and bones in addition to feather head-dresses and carry drums and weapons. Various smaller ceremonies then take place. There is next a general distribution of food among guests. It may take a week before the village pigs are collected. These are killed by a professional on the spot where the burial platform stood, and placed in a line. Bones are dipped in the bleeding mouths of the pigs, and the skulls and other bones anointed with them and then hung up. When the feast is over, all bones are removed from the posts and are never used again ceremonially. Some may be hung up in the *emone*, or put in a box in a tree, or otherwise disposed of. After the guests have gone, wild pigs are killed on the site of the burial platform and eaten by the villagers. The bulk of the villagers then leave the village for about six months to make new gardens.

There is no belief in a universal god, but a general belief in a mysterious personage, Tsidibe, who has immense power and once passed through the country from east to west, traces of his passage being seen in strange rocks and stones. He taught the people all their customs, dances, and manufactures, and finally reached the land of the white man; hence his superior culture. He is essentially a beneficent being, but he has no cult. At death the ghost leaves the body and goes to the tops of the mountains, where it exists for ever; it becomes the sunlight on the ground in the forests, or, if that of an elderly person, it becomes a fungus. The food of all ghosts is the ghostly elements of native food. There is no reincarnation. A few special trees and creepers (the *gabi* is one) imply the presence of a spirit. All ghosts and spirits that never had a bodily form are evilly-disposed, and are associated with those who practise magic (Williamson, *The Mafulu*).

The Kuni are a Melanesian-speaking people living between the Mafulu and the Roro, south of the middle waters of the Angabunga. The soul is a spiritual being reproducing the shape of the body and is manifested in the breath; there are no moral ideas connected with it; the object of ritual practices is to avoid earthly evil or, more rarely, to secure some advantage. The ghost stays near the village to see that all ceremonies are performed and terrify neglectful relatives, or to communicate with the living. After some time it leaves the village and goes into a lonely part of the mountains. There is no judgment after death; all ghosts are in a state of discomfort and cold. The dead are buried, and sometimes the village is abandoned. A small feast is held when the bones are exhumed; the skull is usually hung in the club-house (*kufu*) or in the dwelling-house, generally with the tibiae and radii, which at great dances are painted red and held in the hand; the mandible is detached and decorated, but is taken out only on great occasions. Other bones are worn by the widow. At great dances the skull and bones of some great ancestor may be worn, though the feast is not given in his honour. At the great feast in honour of the dead, 'objects of abstinence' are washed in the blood of a pig reared by the family concerned. The dead are invoked to send good hunting and fishing, and for this reason ancestors' names are remembered. There is no trace of a supreme spirit or creator, but there are various spirits which produce earthquakes, cause mists to rise, frighten people in the bush, and so forth; these are not ghosts but true spirits. They have definite abodes, generally under great stones; certain women have converse with them. Besides these there are the *ivikála*, who are known to the Mkeo and Roro and to two other (Papuan-speaking) peoples. They are merged with the animal, tree, stone, etc., which they occupy. Their only cult is in the avoidance of uttering their name, though this rule is readily broken if things go wrong. When the *ivikála* is a tribal one, it must not be killed or injured. Every group of villages, or even a single village, has its special *ivikála*. Sometimes an

ivikala is attached to any spot like a rock or hole, and people must be silent in its proximity; some are wild dogs or reptiles inhabiting villages. Their origin is ascribed to Oveloa, who also caused men to arise from the bowels of the earth. Allied to these are the spirits of stone dishes of unknown origin. Finally, there are *káfu*, any object which a given sub-tribe, village, family, or even individual, has chosen as a witness of the truth of a statement. That of the sub-tribes is inherited; sometimes the family or individual one is chosen, but the personal *káfu* does not affect that of the village or sub-tribe. *Káfu* demands silence on its name; it is insulted by being named in its presence or outside its territory. *Káfu* may be a relic of totemism, since certain sub-tribes are often called by its name. The use of *káfu* to affirm the truth of a statement seems Papuan in origin, like that of *ivikala*, and has not yet been traced to the coast (V. M. Egidí, *Anthropos*, viii. [1913] 202).

Very little can be said about the religion of the western Papuo-Melanesians, who extend from Cape Possession to Mullins Harbour. In the most westerly tribes, the Roro and Mekeo, traces of totemism seem to persist in the badges (*oava*) of the exogamous patrilineal clans; there are club-houses analogous to those of the Elema but without ritual objects, and there are no initiation ceremonies.

A different cultural element is marked by the open ceremonial platforms (*dubu*) which are found among the Motu and allied tribes who extend from Redscar Bay to Kapakapa, being best developed among the Sinaugolo, etc., some distance inland from Kapakapa. These people state that they came with a *dubu* post from Mt. Tabogoro, a spur of the main range. The *tabu* is a very important feast in which the whole countryside participates; generally a new *dubu* is built for it; unmarried girls dance on a special platform. The *dubu* has a close association with ghosts, who visit it at feasts to eat the shadow of the food. There were no skull trophies in this area.

The district from Hood Peninsula to Aroma is characterized by steeple-houses (*koge*), on which or on platforms skulls were hung, and probably ghosts were connected with them. The house may decay, and then its platform serves as a *dubu*, on which at the *kapa* feast recently tattooed nubile girls mount, doff their petticoats, and are anointed with oil. The girls cut up yams and pelt the crowd with areca nuts, and drums are beaten by women on the *dubu*. It is solely a women's ceremony, one object of which is to bring good luck to the gardens (R. E. Guise, *JAI* xxviii. [1899] 214; Haddon, *Head-hunters*, p. 217).

There is a general uniformity in the religious beliefs of all these people. The Roro dead are buried with the head towards the rising sun, but on Yule Island with the feet towards Mt. Yule. The ghosts frequent the villages; if they desert them, there will be no luck, but they may send bad luck in hunting or fishing if annoyed, and they are then conjured out of the village. They reside in the bush behind Cape Possession; on their way they are intercepted by an evil spirit like fire, who asks if their ears and nose have been pierced and how death occurred (Seligmann, pp. 275, 303, 310). Koita ghosts (*sua*) go to a mountain, Idu, their legendary home, whence they quickly return with other ghosts to carry away the *sua* of objects which the dead man cared for in this life. They live for a long time, but gradually weaken and cease to exist as they are forgotten on earth. They frequently return to the village, showing little benevolence, but punishing any neglect of funeral rites or infringement of tribal custom. Only the Sinaugolo invoke their ancestors. Every-

where there are malicious spirits, most of whom inhabit definite areas. All the heavenly bodies are more or less venerated; people 'yell' only for the new moon at Port Moresby (*ib.* pp. 183-193).

The Northern Massim of the Trobriands, Woodlarks, etc., have been strongly influenced from the east; they are not cannibals, and have a royal family in each district or island. The following account of the Trobriands may be taken as typical. There is a system of linked totems for each of the four clans: a bird is of supreme importance, with which are linked a four-footed vertebrate, a fish, and a plant, and various less important birds. There is no snake-totem. There is no physical or psychical resemblance to the totem, nor is it omen-giving. The usual tabus are more or less in force, but a man may fight another with the same totem. The clans are matrilineal, but the father's totem is regarded, and marriage is not permitted into the father's clan. The dead are buried; after some time the skeleton is exhumed, and a chief's skull is made into a lime-pot by his children, which they and the widows may use. When certain relatives of a dead chief die, an arm bone is removed and made into a lime-spatula; other bones may be worn. The ghosts of the Trobriand islanders go to Tuma, a small island to the north-west, where they descend to the under world presided over by Topileta, a gigantic tattooed man; he causes earthquakes, and, when he becomes old, makes medicine which restores to youth himself, his wife, and his children. Opinion is divided as to whether pigs, dogs, and all birds have a soul as well as men. The breath accompanies the ghost to Tuma, and possibly the shadow. The soul can leave the body without death ensuing. Ghosts visit a feast held ten months after death, and food is sometimes specially cooked for them at this feast, but they are not summoned to it. The four clans were sent to the upper world at Tuma by Topileta, as people increased too rapidly; each ancestor came with his totem-animals. The earlier people built houses and made gardens, but had no yams and apparently no pottery; Topileta told the clans to bring these (*ib.* pp. 7, 677-691, 719, 733-735).

The conditions at Milne Bay somewhat resemble those of Bartle Bay, but there are no initiation ceremonies for boys or girls. The corpse is placed in a squatting position in a grave, which is roofed over with planks and earth; it faces east, otherwise the ghost would not be able to reach the other world. Funeral feasts take place monthly for about a year; at the last great feast all the man's pigs must be killed and his coco-nut trees knocked down, and all tabus end. Before this feast (which may serve for several deaths) new houses must be built, a number of pigs are killed, and food is piled on a special platform. The assembled friends have a sham fight, and food is distributed; there is a good deal of dancing, but not on the platform. The coiffure of the dead man, which was cut off and retained by his brother, is presented to the maternal uncle of the dead man along with a pig; the coiffure is burned and the pig singed, and the dead man is now completely finished with. The ghost (*arugo*) goes to Hiyooya, the other world under the sea at the head of Milne Bay, which is presided over by Tumudurere, who, like his wife and children, is white-skinned and smooth-haired; he never existed on earth as a man. Many people assert that they can go to and return from Hiyooya, but, if they ate food there, they would never return. Cannibalism was largely due to revenge; the victim was dragged to the stone circle of the clan, burned to death, and eaten partly inside partly outside the circle. No one eats his own killing; a killer or captor is under food and other restrictions for a month (*ib.* pp. 404, 609, 620, 632, 655).

Thanks to Newton, Seligmann, Stone-Wigg, and others, we have good ethnological data concerning the natives of Bartle Bay on the south shore of Goodenough Bay. The people are included by Seligmann among the Southern Massim group of the Papuo-Melanesians; they have exogamous clans which take their names from real or hypothetical bush settlements or stocks. Each clan has one or more totems, *bariawa*—a term used for anything that is out of the ordinary run of experience, such as supernatural beings or white men. The totem is regarded as the ancestor of the family, and is not eaten. They are matrilineal, but youths may elect to join the father's clan; they do not marry into the father's clan, and as a rule children may not eat their father's totem. Certain clans have a stone totem which gives strength in war, and near it skulls of enemies are placed. Totems are sometimes regarded as omen-giving. Totemism has a wide sociological effect. Thus the Boianai and tribes farther west know nothing of the *walaga* feast and take no part in it, while the shore people from Wedau eastwards do; yet totemism brings all these peoples into close relationship (H. Newton, *In Far New Guinea*, London, 1914, p. 163). Chiefs possess considerable influence and power; in addition there are departmental experts in beneficent magic; both offices are hereditary and are often combined in the same person. Of equal extension with totemism is the *kimta* bond, which includes all individuals of the same sex and of approximately the same age. Initiation, which is said to have been instituted by a superhuman being, formerly took place about every three or four years; it is now held at longer intervals.

The boys live in a special hut apart from the village for four to six months; they work in the gardens or on the seashore, and are instructed by the old men; there are food and sexual tabus; the food is cooked by their mothers in special small pots, but no one eats the food prepared by his own mother. The day before the end of their seclusion they hunt with the men. Next day they wear a new belt, and a comb for the first time.

Formerly girls were secluded at puberty in a house for one to three months, and abstained from all flesh food. A dead man is buried by his clan on his side with his head (Wedau) or feet (Wamira) in the direction from which his ancestors originally came when led by the totem; upright stones are sometimes placed at the head of the grave. Each clan, group, or settlement has its own grave, so that graves are frequently reopened; bones are not kept in the houses. At Gelaria the corpse is carried to the grave with flexed limbs so as to form a compact bundle; a chief is buried in a squatting position, but a commoner is laid on his side; in either case he faces the direction whence his clan came. Most frequently disease and death are caused by a 'sending' projected from the body of a sorcerer or witch. It is thought of as leading a separate life after the death of the persons in whom it is normally immanent. After a woman's death the 'sending' (called *labuni* at Gelaria) may pass to her daughter or go with her ghost (*aru*) to the other world (it is evidently analogous to the 'soul-stuff' of the Kai). Any woman who has had children may command a *labuni*, and she is employed by any one. Disease is produced by various objects, human bones being most potent, but only the spiritual portion enters the victim. Knots are tied by specialists in the hair as a preventive against charms, and things are tied round ankles, knees, and wrists so as to block the entrance of spirits into the body. The ghost after death 'goes to Maraiya in the south-east, "where is the Lord of the dead Tannrari (for Wedau) who prepares the place for each and assigns to each his place"' (Newton, in Seligmann, p. 657); but Newton also says that the ghost wanders around the familiar

places for some time after death; but about Wedau and Wamira, when the death-feasts are finished, it goes to a valley east of Cape Frere, the entrance to the other world being through a hole in the ground (*In Far New Guinea*, p. 219f.). The skin of ghosts is white; the life there resembles that here; those who are wealthy here are so there; they may fight among themselves, and whoever is killed is dead for ever. Spirits wander about at will, but usually favour certain places, as a rule dark uncanny spots. The only good that spirits do is to make strangers fear to intrude, as they are jealous of them. Some spirits do not injure men, others are ghouls; none are good. Incantations are a very prominent feature of native life. Every person, food, animal, occupation, and amusement has its *pari*; these must be used or results cannot be looked for. They are not addressed to any person or spirit; some can be bought from their owners, but not those which are hereditary, and bestowed on the possessor a distinct office (M. J. Stone-Wigg, *The Papuans*, Melbourne, 1912, p. 26). In Goodenough Bay a child's spirit does not enter him until he gains intelligence, and the right sort of spirit has to be got into the child and the wrong one kept out by means of special charms and exorcisms. Some say that he has an uninstructed vaporous soul which is in danger of being lost; therefore, when a baby is carried along a path for the first time, the father walks behind and throws down bundles of leaves so that the child's spirit may not lose the path or the child would never be able to speak (*ib.* p. 28). The ghost, *konaga*, dies after an ill-defined period, becomes a spirit, goes into the sea, and feeds on the foam. There it remains for ever (*ib.* p. 27).

The *walaga* feast is the cult of the mango, and is the most important ceremony in the Bartle Bay district, bringing together from a great distance even hostile communities. The name is derived from the great dancing platform built for the occasion.

The headman of the clan giving the feast selects a young wild mango-tree, and he and the men who help him to clear the ground round it are holy; they may not drink or touch water nor eat boiled food or mangoes; these fasting men live in a special house (*potuma*). A temporary village is built round the platform in the bush. The platform is prepared and erected by the fasting men with the aid of the charms of all the medicine-men from the neighbouring mountains, who also extract the *aru* (ghost) of any dead man that may happen to be present in the post (from one a human bone was said to have been extracted). They carry the ghost away and release it in the bush.¹ The tree is carefully cut down by the fasting men with a special stone adze (iron should never be used), and all chips, etc., are caught on new mats. With great ceremony and care the tree is wrapped in the mats with the chips and fallen leaves, carried to the *potuma*, and later tied to the central pole of the platform; no part of it may ever touch the ground. Things belonging to a dead man may be hung on the pole above the tree. Guests arrive bringing pigs. If one brings five pigs, this is called a mango, and a small mango-tree is cut down. Dancing and singing continue all night. At daylight the pigs are killed, being speared as slowly as possible so that the maximum amount of squealing takes place. The mango-tree must hear their cries, smell the burning fat, and know that blood has been poured out. Otherwise the crops will fail, the fruit-trees be barren, the pigs will not be productive, and even women will fail to bear children (Stone-Wigg, p. 32). After the distribution of food the guests disperse. The following day the mango-sapling is taken down, wrapped up in mats, and hung in the roof of the *potuma*. After an interval of many months it is removed and carried with great ceremony to the centre of the temporary village. A certain man cuts green mangoes in pieces and puts them in the mouths of the fasting men, who chew and spit the fragments in the direction of the setting sun so that 'the sun should carry the mango bits over the whole country and every one should know.' A piece of the tree is cut off and burned with the chips, etc. The mango-tree is again wrapped up and carried to the house of the head man. It is brought out and exhibited at intervals, and a piece broken off and burned on each occasion till it is totally destroyed. Then this community may have a new *walaga*, but another community may have a *walaga* in the meantime.

The significance of this ceremony is not yet fully

¹ To the east of Bartle Bay bull-roarers, used at no other time, are said to be swung by the fasting men all the time the posts are being stepped.

understood; in some ill-defined way it is associated with the ghosts of the dead.

'It seems that in some way the *walaga* is specially the finale for all death feasts, and the idea is that the spirits of the dead should be gratified by knowing that all duties have been performed. If not, they would take revenge . . . yet the spirits of the dead do not seem to be present' (Newton, in Seligmann, p. 651).

Stone-Wigg relates that a long time ago, when human victims were offered, Dabedabe was born; all his brothers and sisters were pigs; he persuaded people to substitute pigs for human victims. Since his death his spirit can be passed by ceremonies and incantations into a mango-tree selected for the purpose. It is by no means evident why a mango-tree should be sacred, for, though mangoes are a common food and much liked, they are not sacred in any way or connected with garden magic. There may have been some connexion between this ceremony and the *barlum* and allied feasts, but, if so, the *walaga* has been subject to other cultural influences; that this is probable is indicated by the frequent occurrence of stone monuments in this part of Goodenough Bay. These consist of stone circles and lines of stones; the former were mainly the meeting-place of the old men, which no woman might approach. Some at Wamira were certainly used during cannibal feasts. The body was cut up in the circle, washed at the shore, and cooked and eaten in the circle. At Wedau the stone circles do not seem to have had much significance, and cannibal feasts were not held in them. In all the villages are stones which are revered and may not be moved. In the Boianai villages many are carved; their presence ensures success to all garden work, a plentiful supply of food, and happiness to the people. No one knows their origin. Stones in and near houses have an influence on life, health, and prosperity (Seligmann, pp. 451, 465 ff.).

There is an overlapping of Papuan and Melanesian peoples at Cape Nelson. The Kworafi, or Korapi, have patrilineal totemism (Pösch, *ZE* xxxix. 389); they are the southernmost representatives of the Papuan-speaking Binandeli ('Orokaiva'), who extend thence to the Mamba River and some 20 to 30 miles inland (Murray, *Papua, or British New Guinea*, pp. 98, 108). The Kubiri are also totemic, but a departure from typical totemism is shown by W. M. Strong's statement, 'The crocodile is a totem and its intercession is sought by placing food in the rivers for it to eat' (*ap.* Seligmann, p. 744).

The cult of a mythical snake, Baigona, which is supposed to live on Keroro (Mt. Victory), has recently spread to the coast, mainly to the west and especially up the rivers of the Kumusi and Mambare Divisions. The authorized practitioners, *baigona*, claim to have control of rain, practise massage, employ two drugs, and regulate the affairs of the natives; snakes and certain reptiles may not be killed (*Ann. Rep. Papua*, 1911, p. 139, 1912, pp. 14, 129, 134, 1913, p. 152; Murray, p. 38). Sir William Macgregor says:

'In many places no native will kill a snake. Evidently snake cult is an ancient form of veneration and worship connected with ancestors over a large area of British New Guinea' (*Ann. Rep. Brit. New Guinea*, 1893, p. 47).

The *thaw* ceremony is common to the Koko of the Yodda valley of the head waters of the Mamba River and neighbouring tribes of the Kumusi watershed, Orokaiva mountains, and almost to the coast.

The ceremony takes place at considerable intervals, and boys and girls are initiated at the same time, having been previously secluded in houses built for them in the bush. During the preparations trees are pulled down by the hunters of wild pigs, and bull-roarers are swung, and the children are told that this is the work of ghosts. Visitors attend from far and near. On the night of the ceremony all lights are put out, and the men, wearing huge head-dresses of feathers and frames of pigs' teeth over their faces, enter the village square and kneel in front of the large central scaffolding. The candidates are brought in from the bush with yells and shrieks, men seize the lads, run up and down the village with them, and throw them on the scaffolding,

the women following with waving spears, and all uttering cries and yells. The boys try to climb up the scaffolding, but are repeatedly hauled down. Sometimes a man will rush at the boys, swinging his clubs and shouting, 'I am the ghost.' Among other tortures the boys are drenched with cold water. Towards the end of the night the girls are put through a similar performance, though they are treated much less roughly. Immediately after daybreak boys and girls are completely covered with hoods of bark-cloth. The boys are told to turn their backs, and the men pull down trees with lianas, which is said to have been done by the ghosts. After this bull-roarers are brought out for the first time, and the lads are told that the ghosts are present. The men shout, 'Do not kill my child!' and utter the names of the ghosts, who apparently are dead ancestors. The hoods are next drawn off and the bull-roarers are shown and explained to the initiates. The bull-roarers are taken into the bush, and pigs and other food brought into the village; after the feast the guests disperse. The initiates return to the initiation houses in the bush, where they must remain in close confinement for a month; large smoky fires are kept burning under the floor to make them sweat profusely; they are not permitted to talk much, and then only in a low voice. Should a boy happen to drop taro through the floor, he would be killed (the mother would know of the death only when the lads returned home, and she would not be permitted to make any comment). Instruction is given of a moral nature and relating to the ordinary occupations of life.

It is stated that one-holed flutes are played by the girls (?) in the bush after their initiation. They are blown in pairs, a long one about 5 ft. in length and a shorter one.¹ Extreme care is taken of the bull-roarers; should one break and a chip strike any one, that person, when next he goes hunting or fighting, will be wounded in the spot where he was struck by the bull-roarer; among the tribes on the lower Kumusi, if a bull-roarer strikes any one, he will die. It is strongly impressed on all the uninitiated that the noise made by the bull-roarers is really emitted by a ghost (E. W. P. Chinnery and W. N. Beaver, *JRAI* xlv. [1915] 69 ff.). According to Murray (p. 105), the Koko and allied tribes are cannibals and physically of the mountain type; they differ in appearance and language from the Binandeli-speaking natives of the plain. Chinnery and Beaver say that they differ very little from the rest of the 'Orokaiva' tribes of the Kumusi Division.

The *balum*-cult has been described by Lehner for the Bukaua, who live on the north coast of Huon Gulf, and by Schellong and Zahn for the Jabim about Finschhafen, whose area adjoins that of the Bukaua. They are closely allied Melanesian-speaking tribes. Among the Bukaua the term *balum* includes: (1) the secret cult of an uncanny being to whom are attributed geographical catastrophes, and who personified is regarded as the ancestor of a village kin called after it, women being told that it is a greedy monster and must be bought off by fat pigs; (2) the bull-roarer, which produces the voice of the spirit; and (3) the ghosts of those who have been long dead.

(1) The *balum* circumcision feast is held at intervals of ten to eighteen years in the country of the Bukaua and Jabim, and between times among the hinterland Kai and the Tami islanders. The preparations are lengthy, as great numbers of people come from far and near to the feast.

The special house (*lum*) for the candidates is erected in the village, which the women have to leave (the Jabim build it in the bush); dogs' and pigs' blood and chips of various woods are placed in the holes for the posts. Boys in the *lum* have to abstain from certain food for three to five months and spend their time making mats and flutes. On the day of circumcision with great noise and swinging of bull-roarers the boys are conducted to the *balum* hut; this is a long gradually decreasing hut, the roof-pole of which is a complete areca-palm, the roots representing the head and hair of the *balum* monster and the crown of leaves its tail; the jaws are closed with mats on which a grotesque face is painted. Each boy is struck on the crown and under the chin with a bull-roarer to make him keep silence before the uninitiated, talk sense, show hospitality, act properly, etc. As the boys are dragged into the hut, men squatting on each side emit growls, and in this way the boys are swallowed

¹ Similar flutes have been seen at Sangara, near Mt. Lamington, and on the Upper Waria, where they are regarded as intensely sacred and on no account to be seen by women and children.

by a roaring monster. The circumcision is accompanied by the booming of bull-roarers and the noise of bamboo flutes. Here the boys remain for two or three months in total seclusion from women; they amuse themselves by playing flutes, and are instructed in tribal and personal conduct by the old men. Among the Jabim, when the women return to the village, the boys go to large huts in the bush for about three months, play flutes, and do plait-work and carving; they must not be seen by women, who sound bamboo slit gongs to warn the boys of their approach (O. Schellong, *AE* ii. [1889] 158).

(2) There are various kinds of bull-roarers (*balum*), some being wonderfully decorated. Some at least of the designs are symbolic and convey warnings or illustrate certain aspects of the cult. They are divided into 'ruling' and 'serving'; each village clan has one of the former and several of the latter. Ruling bull-roarers bear the names of prominent dead men whose characteristics they recall; they are carefully handed down through generations; the name is often used as a war-cry, in pig-catching, in the girls' ceremony, etc. Less respected but also guarded from women's sight are the serving bull-roarers, which also are named after the dead but concern only their descendants. A third class are those bull-roarers with a high tone; they are the wives of the first class. Very small bull-roarers are worn as ornaments by the chief men at the *balum* feast.

(3) There is a belief in a soul (*katu*), which is a sort of independent spiritual principle that can leave the body, as in sleep, and to which clairvoyance is attributed. At death the *katu* become ghosts (*ngalau*), which at any time may assume any form and behave as if alive; finally, they become *balum*, which mostly have hostile relations with the living, but may be pacified by offerings. These natives feel beset by the *balum*, and their whole life is dominated by the fear of them. The *balum* cult thus combines the initiation of the youth into the society of the adult men with the recognition of his kinship with the dead, his death to the old order and new birth into a higher social status being symbolized by his being swallowed by a monster who is the ancestor of the village kin. The prominence and symbolism of the bull-roarer are very noticeable features in the cult, and the playing of flutes by the initiates is also noteworthy. These are of two kinds, which are spoken of as husband and wife, and must not be seen and should not be heard by women. The dead are buried, but respected persons may be mummified, and the skull and some bones may be kept for some time. Every dead Jabim man of repute has a bull-roarer buried with him. Ghosts are not always harmful but may help the living, especially in gardening and hunting, and for this purpose offerings of food are made to them. There are traces of totemism among the Jabim and Bukaua. Certain families believe that some animal was formerly among their kindred, and they reverence it on that account; if it was a pig, e.g., they avoid pork; or they may spare the crocodile because their tribal ancestress gave birth to one together with their ancestors. The Jabim and Bubui folk believe that any one having an animal relative on the mother's side is changed into that animal after death; if another man kills such an animal, its human relatives must avenge it by fighting him in pretence, and must give a funeral feast in its honour. Closely akin to totemism is the watchword of each village clan, which, if an animal, is generally the same as the totem; protest is made if it is killed, and compensation may even be demanded (*ib.* p. 145; K. Vetter, quoted by Krieger, *Neu-Guinea*, p. 183; H. Zahn, in Neuhauss, *Deutsch Neu-Guinea*, iii. 287; S. Lechner, *ib.* p. 395).

The Tami islanders to the north of Huon Gulf are much purer Melanesians than their neighbours on the mainland, and in their ceremonies they employ masks which elsewhere are met with only

west of Cape König Wilhelm. Men have two souls, both resident in the abdomen. The 'long soul' wanders when a man sleeps, and is tantamount to our consciousness. At death it immediately leaves the body, appears to relatives, and goes to Magilep in N.W. New Britain (whence a migration probably took place to Tami). The 'short soul' at first remains near the body, and then goes underground to Lamboam, but returns to frighten the sorcerer who caused the death. After two or three years there is a great feast and dance, at which numerous ghosts enjoy the 'soul' of the good things. They recognize two kinds of supernatural beings—*buwin* and *kani*. The *buwin* are spirits who live on an uninhabited island; they have a fish body and human head, but are invisible. Epidemics and earthquakes are ascribed to them. They are not worshipped except in the event of a great epidemic, when a miserable pig or dog is sacrificed. One of these spirits is Anuto, a good being, who created the sky, earth, and mankind. He sits on the earth and holds up the sky with his head. Apparently no regard is paid to him except that at feasts or markets the first portion is offered to him and put in a basket to the east. Anuto eats the soul of the offering; the people eat the rest. Bamler compares him with the Jabim 'Anuto,' Siassi 'Anutnat,' and the South Sea 'Atua,' god. The sun and moon were formerly addressed as 'lord.' The *kani* is the *balum* of the mainland, and comprises the spirit invoked at circumcision (under this head belong the mask-spirits called *tago* on Tami and Siassi and at Magilep, and the wooden masks [*ngaboyo*] of Rook Island). The *kani*, which is represented by the bull-roarer, is described as a dragon invisible to women and is spoken of as 'lord.' This cult is the only public religious ceremony, and the Tami say that it was forced on them by the mainlanders, apparently about 150 years ago, before which time circumcision was not practised. They say that it spread to Siassi and Rook Island and to Magilep. Details of the *kani* festival are essentially similar to those of the *balum* festival. The oldest religious stratum appears to be that of the *tago*, who were created with their respective families or clans, those of the oldest families being most respected. Some of the *tago*, who are addressed as 'lord,' are said to live in holes in the island, but others come from other islands. *Tago* are represented by masks which are kept in a hut in the bush where women and children may not go. When men dressed in the *tago* masks appear, a tabu is placed on all coconuts for one year, during which time there must be peace; this happens about every ten or twelve years (G. Bamler, in Neuhauss, iii. 489).

The Kai are a people of mixed Pygmy and Papuan descent, who speak a Papuan language and inhabit the Rawlinson and Sattelberg ranges north of Huon Gulf. They may be regarded as very primitive, and, as they have been carefully investigated by Keysser, they form a good basis for comparison with other peoples. A long hut, which tapers away behind, is built for the circumcision festival in the jungle, and no woman may go near it. It represents Ngosa ('grandfather'), a monster who swallows the novice. In it are kept bull-roarers (*ngosa*), which are employed in the ceremony; only the old men have access to them. The Kai are very religious, their whole thought and conduct being influenced by animism. Everything has a soul-stuff completely permeating it; a shaving of wood has the soul-stuff of the tree, a stone that of the parent rock; so also a man's nails, hair, etc., that of the man. A man's glance, voice, and even his name also contain his soul-stuff; thus the names of people long dead are still potent in charms. The powers or qualities of a person or thing belong

also to his soul-stuff, and may be transmitted by contact with or without the agency of words of charming—e.g., yam or taro stones with which shoots are touched before planting out, or the bone of the forearm of a dead hunter. The soul-stuff can be isolated or withdrawn. There is a mutual attraction between allied soul-stuffs; thus a white leaf of the size and form of the egg of a megapod will guide the Kai in his search for eggs in the bush. Whatever befalls the soul-stuff is undergone by its owner as well. These animistic ideas affect their whole life; thus certain foods must be avoided by parents. They are further exemplified in love-charms and in the agricultural charms which are employed at every stage from the clearing of the ground to the harvest. Certain games assist the growth of crops: swinging and playing cat's cradle help yams to grow; top-spinning helps taro; and stories of the earliest times are generally told by a few of the older men, but the narration ceases when sowing is over and the plants begin to shoot. The soul-stuff and the body thrive or perish together, but the soul persists after death and is just like the original man. This ghost has in its turn soul-stuff, for ghost sorcerers of the other world can bewitch other ghosts through their soul-stuff, and the death of the ghost follows. A further degradation results; the ghost sinks to an animal, and finally to an insect; with the death of the insect the soul-metamorphosis ends. The death sorcerers, who form a sort of small caste, work by means of something connected with the victim which contains his soul-stuff, but wounds and sickness may be caused by ghosts and spirits—indeed, the first suspicion falls on them. There is great dread of the ghost which has left the body when the man is dead, those of fierce warlike men being most feared, since the character of the man is perpetuated in his ghost (the ghost of a thief will go on thieving). Property, trees, etc., are destroyed at a death in order that the ghost may have these things in the spirit land. A bamboo is placed in the grave to connect the corpse with the upper world, so that the ghost may have easy access to the body. In return for benefits received in the form of little offerings of cooked taro or crabs, the ghost furthers crops and is expected to send good luck in hunting, especially if he was a good hunter when on earth. The ghost takes only the soul-stuff of the offering; the material part may be eaten by the people. If things go very wrong, the ghost is blamed, his grave is knocked about, or he may even be driven away by pouring a pungent juice down the tube at the head end of the grave. The ghost of a slain person is particularly feared, and pursues those carrying weapons smeared with his blood so as to recover his soul-stuff; thus gory weapons are left outside the village for some time till the ghosts have regained their soul-stuff and are then carefully washed before being brought into the village. After the decomposition of the body, the ghost journeys to the world beyond, the entrance to which is the ghost cavern west of the Sattelberg. Ghosts are received by Tulumeng, the stern ruler, who accords a place to each according to whether he was slain or bewitched; every one must have the lobes of the ears and the septum of the nose bored. The life beyond is much the same as on earth. Ghosts have powers beyond those of men, which become accessible to men by means of the names of ghosts or by fetishes which act as vehicles of their soul-stuff; those of the newly departed are helpful to agriculture and hunting. There are various male and female spirits who are invoked to make plants grow or guard the crops, when catching birds, eels, pigs, etc., before fighting, or for other reasons. There is a creator Malengfung who has no practical effect on life; after making

the world he put in it the demi-gods, or *nemu*; he also made a giant, 'old Panggu,' who, like himself, is partly flesh and blood and partly rock. The *nemu* made men, discovered edible fruits, first planted gardens and made houses, and death came through them. Finally they turned into animals or blocks of stone, being destroyed by a great flood. Calling the *nemu*, to whom field produce is traced, to memory helps its growth. The forces of nature are personified and are placated or even defied. There is no idea of relationship with animals and no totemism (C. Keysser, in Neuhauss, iii. 3 ff.).

At the Papuan villages of Sialum and Kwamkwam in the neighbourhood of Cape König Wilhelm (6° 8' S. lat.) there is no deity who must be worshipped. Offerings are made to ghosts at burial to keep away from the village and bring no misfortune on it, and when beginning tillage to keep away harmful influences and protect from pigs and grasshoppers. Offerings are made to the ghosts of dogs and pigs whose death cannot be accounted for. The *nai*, or ghosts of men who have died far from home, are the only friendly spirits; they warn people of danger and foretell events. The only spirit-cult is *mate*, but the people will tell nothing about it for fear of the inlanders who are the real owners of *mate*. The cult seems to be much the same as the *balum*-cult, but the associated circumcision is falling into disuse. A number of spirits are included under *mate*, chiefly the ghosts of ancestors and of the recently dead; of the rest nothing is known. There are various spirits who are mainly malevolent. Nemunemu created the sky and earth (this is now the name for white men). The creators of the world were two brothers; the elder made the mainland and gave his people the bow and stone club, the younger made the islands and the sea, and instructed his people in making spears and burning lime for betel-chewing; the differences in language are also due to them (Stolz, in Neuhauss, iii. 245).

Most of the information from Astrolabe Bay has been obtained at the Papuan village of Bogadjim; all the other coast villages except Bongo are Melanesian-speaking. The corpse is exposed on a framework on which food is hung; that of a man is painted white and red and crowned with red hibiscus flowers by members of the *asa* society. After a few hours burial takes place with grave-gifts; if not buried, the ghost wanders about seeking its old home. The village of ghosts is not located; its inhabitants are still interested in earthly affairs. The ghosts of those slain in battle go to another place and are still more terrifying; they prowl about the village as long as they are unavenged. The song of the *kiru* bird is thought to be the voices of the dead, and it is a good omen if it is heard when making magic in the gardens to get a good crop. The dead help their relatives and are invoked on all sorts of occasions. Great wooden images, apparently of especially honoured dead, are made in Bongu and widely exported. Every few years a feast is held in their honour, which women may not share; if the image fails to help suppliants, it may be set aside. Other spirits are the embodiment of hostile forces of nature, smallpox, spring tides, bad Europeans, etc. There is no idea of a creator. The whole world—mountains, valleys, water, trees—is animated. The existence of totemism is doubtful. The *asa*- or *ai*-cult centres in a poor sort of house in the jungle which contains wooden masks and the ritual musical instruments, *asa*-flutes, etc. Nothing is known about the initiation ceremonies, which take place about every ten or fifteen years, but Biro (*Eth. Sam. Ung. Nat. Mus.* iii. 183) says that they are just the same as the *balum* at Finschhafen;

circumcision then takes place and bull-roarers are used. Bull-roarers, which differ from those of Huon Gulf, are of varied form and decoration; unperforated ones are in common use as love-charms, and are given by the girls to young men. These and other ritual objects are figured by Semayer. Biro states that the *asa*-house was formerly the only place for practising ancestor-cult, initiation ceremonies of youths, and the sacred dances, but that latterly, though not from European influence, *asa*-houses are neglected, being replaced by the men's house (B. Hagen, *Unter den Papuas*, Wiesbaden, 1899; W. Semayer, 'Beschr. Cat. L. Biro,' *Eth. Sam. Ung. Nat. Mus.* iii. [1901] 181-196).

The Monumbo are a Papuan-speaking people living about Potsdamhafen (145° E. long.). They do not believe in a supreme being, or moral good and evil, or recompense hereafter. Ghosts are supposed to live like mortals, and are invoked and prayed to. Images (*dva*) are made of every dead tribesman, as any ghost may do harm if left loose; they are not merely memorials of the dead, but residences of the ghost. Offerings of food are made to them to secure their help, but they are scolded if it is withheld; in time they pass into oblivion. When ghosts have grown old, they die and are changed into animals and plants (white ants, a kind of pig, the *barimbar*-tree, etc.). There is great fear of magic, and many ceremonial tabus are observed. There is a myth of a creator Ombéraman, who was killed by a woman and her parthenogenetic sons; she told her two sons to kill her, and from her and from her blood mankind appeared, but previously she instructed them in making houses, pottery, masks, etc. There are two kinds of dances, 'mask-dances' and 'people-dances.' In the former there is great diversity in the masks; the masked figures represent *murup* who inhabit the primeval forests of the Ramu and Augusta River valleys; women and children may not approach or the *murup* will kill them. Not only are the masks called *murup*, but the name is also given to the long bamboo flutes, women being told that their noise is the cry of the *murup* monster; the flutes are kept in the men's houses carefully concealed from the uninitiated; they are blown on the completion of a chief's house, at initiation of youths, and after burial of the male dead. The dancing lasts for one week, but very few men join in it though crowds of both sexes attend. There are six kinds of mask: three are imitations of the dog, kangaroo, and cassowary, three imitate higher beings who may be connected with the flute *murup*; both groups are treated as mysteries and are all called *murup*, but have proper names besides. The second group was borrowed a long time ago from the Koranduku to the west. Masks, flutes, and small mask-like amulets are provided with a soul by special consecration by fumigation. As having a soul, they are revered, sacrificed and prayed to, and treated as patron spirits. They are expected to give fine weather or a safe journey, and to reveal in dreams if fish are in the net or an enemy is lurking. Special masks and flutes belong to each patrilineal clan. The head of the clan that provides a feast arranges matters, but works in a friendly way with other chiefs; his wife may enter the men's enclosure and see the flutes, and all the men present have intercourse with her. From a rite that takes place it would seem that the flute has some connexion with procreation (F. Vormann, *Anthropos*, v. [1910] 407, vi. [1911] 411). Pösch says that totemism does not occur, but there appear to be survivals; he also states that the songs, dances, and ceremonies of the Monumbo came from the low country between the Ramu and the Sëpik (*Mitt. der anth. Gesellsch. in Wien*, xxv. [1895] 235; *ZE* xxxix. 334).

Up the Sëpik (Kaiserin-Augusta River) are wonderful houses containing slit gongs, ceremonial flutes, numerous skulls, carved figures, dance-masks, etc., but we have no information as to the cult. On the lower river flutes (*murup*) are kept in men's houses with bull-roarers. Head-hunting prevails on the river and in the neighbourhood; at Watam on the coast, Pösch says, skulls must 'take part' in pig feasts (*Globus*, xciii. [1908] 171). Enemies' heads are kept in the men's house. Reche considers that head-hunting is connected with manism, especially a skull-cult; one tries to get the skull (the seat of the soul) of an enemy into one's power so as to secure its help for oneself and withdraw it from the enemy (Neuhauss, i. 58, 235; O. Reche, *Der Kaiserin-Augusta-Fluss*, Hamburg, 1913, pp. 356-398). Von Luschan describes several wooden images which he calls 'ancestor figures' from the mouth of the Ramu, about 4° S. lat. (in Krieger, p. 498). They are of an entirely different type from the Geelvink Bay *korwar*, but nothing was then known about them. Vormann was told that the images from the mouths of the Ramu and Sëpik have the same significance as among the Monumbo. They are, as P. W. Schmidt points out, images of the dead and not ancestor figures (*Globus*, lxxxiv. [1903] 111); food is offered and appeals for help are made to them (Reche, p. 358). Reche suggests that the faces and heads on weapons, shields, canoes, etc., up the Sëpik have a similar meaning, and are, in fact, representations of dead persons or of their ghosts (p. 360 f.).

Neuhauss (i. 412) records the only clear case of totemism in 'German New Guinea.' Around Dallmannhafen and on the neighbouring islands exogamous tree-totemism is wide-spread; there are the usual tabus. If danger is averted or a special piece of good fortune happens, a man utters the name of his totem tree. The tree is that man's good spirit. There are also animal totems. Neuhauss refers to an ancient totem tree on Seleu, Berlinhafen; all the people would die if it were destroyed.

Among the littoral Melanesian-speaking peoples in the neighbourhood of Berlinhafen, and on the neighbouring islands, the dead are buried in a coffin made of areca-palm wood, but the bones are exhumed in December after two or three years with great ceremony for men, the grave being opened when the sun is at the zenith, and the skull and a thigh-bone of a man are kept in the club-house (*alot*) of that division of the village; in the case of other people they are kept in the house or thrown away in a charnel spot, but various bones are kept to be worn. There is a dim idea of reward and punishment for ghosts, and a sort of metamorphosis into fish or pigs. The memory of the dead is often celebrated, and by means of their bones they are invoked to calm a wind, etc. On certain days at the beginning of spring graves are tidied up to bring good luck on sea and in trade, as neglect would bring great misfortune. Sickness is produced by ghosts, who are exorcised. On Tumleo Island a ghost goes underground and has to pay a spirit in order to cross a ladder over a great piece of water; then it goes by canoe to a great river on the mainland, where there are three subterranean cities of the dead. There are good female spirits (*tapum*) who bring good luck and protection to those who honour them and good fortune in hunting; they are so numerous that in Tumleo each village has several, and in Sapi each family has one. The cult consists of keeping the spirit-house (*parak*) clean, and in it are held special feasts with drum-beating and the playing of water-flutes. Women and children may not enter or listen to the music, as the spirit is unfriendly to women, who have to provide it with abundant food. The *tapum*

are the parthenogenetic progeny of a spirit, Mok-rakun, who, owing to a flood on the mainland, drifted to Tumleo; she was discovered by the women, but the men appropriated her and built a *parak* for her. The *parak* is a highly ornamented two-storeyed house which contains the slit drums and water-flutes. The *parak* is where spirits, and the *alol* where ghosts, are revered. The spirit- and club-houses are repaired and a festival held before the south-east monsoon begins, this being the trading season. Festivals are held in these houses after successful hunting or fishing. There are various evil spirits that infest many places (M. J. Erdweg, *Mitt. der anth. Gesellsch. in Wien*, xxxii. [1902] 274 ff.; and cf. R. Parkinson, *AE* xiii. [1900] 35, 41 ff.). Biro calls the *parak* 'karowara,' and states that in one at Tarawaj against the wall were red human and animal images of various sizes and also little images leaning against coco-nut shells; before some of them food was placed. Several of these images are figured; he terms them 'Ahnenfigürchen' (J. Janko, 'Beschr. Cat. L. Biro, *Eth. Sam. Ung. Nat. Mus.* i. [1899] 45 ff.). On Ali Island curious bored stones are used in sorcery, and on Meta Island, Dallmannshafen, a bored stone is kept which is believed to ensure an abundant catch of fish (Parkinson, p. 44).

As regards Humboldt Bay, which is the western limit of the occurrence of the slit gong, Van der Sande states that the people are entirely impregnated with religion. He received the impression that they believe the universe to be ruled by supernatural powers which are feared, and that all feasts have a religious character in so far as they take the place of prayers and ward off evil. Feasts in commemoration of the dead take place in the 'temple' (*kärëwäri*, which seems also to be the name of the spirit associated with it). This building contains the sacred drums and flutes; these are always blown two at a time; it is a religious act and indicates that the spirit is hungry and the women have to prepare food for the inhabitants of the temple (*Nova Guinea*, iii. 287 f., 294-297).

De Clercq and Schmeltz state that east of Cape D'Urville the greatest festivals take place in large buildings, *ruma* (*roemah*) *kärëwäri*, in which men call upon the ghosts of their forefathers to ward off harm from those going on a journey, and feasts are celebrated on starting for or returning from a fight. Especially are they connected with shark-fishing, with which the whole life of the men is bound up; these ceremonies take place only during the west monsoon or fishing season (*Ethnographische Beschrijving*, p. 180).

The coastal people of the Mamberamo (137° 50' E. long.) mostly migrated from the northern islands of Geelvink Bay. They are very intelligent and energetic, and are head-hunters; they speak a Melanesian language. Totemism of a kind is practised. Representations of the totem animals are tattooed on both sexes; these animals were in early times brothers of the men. The good principle is the full moon; they pray when she rises for good things; the dead go to her husband and sit with him in a squatting posture as a sign of most blessed repose. Ghosts trouble themselves little about the living, but blood-revenge must not be neglected. The dead are placed in little boats on a decorated high framework, the skull being eventually kept in a little hut in the forest. Squatting wooden figures (*korwar*) are made, into which the ghost enters at times and announces its will to descendants and foretells the future. The July full moon is the time of the moon's wedding; she is then very gracious; at the great festival then held amulets are consecrated. The principle of evil is a spirit, Sinompi (Suangir in the west), who sits under the roots of pandanus-trees and

howls; if any one is ill, a picture of Sinompi is tattooed on the chest, or in some places he is sacrificed to. There was an old culture-hero who gave laws and founded the men's houses; his laws were disobeyed and he vanished, but he will return some day and everything will be renewed; therefore he is called Manseren koreri, i.e. the god at whose return everything will cast its skin (Moszkowski, *ZE* xliii. 322-329). The inland tribes of the Mamberamo are of a different stock and apparently speak a Papuan language. A flood myth is current among them. They have a great initiation festival.

On the day before it is held women and children leave the village, the novices are taken into the men's house and are said to be blind, and the sacred bamboo flute is sounded (no woman may see or hear it or the Mamberamo would again overflow the land and kill all living beings). The novices' eyes are opened when they hear the flute and they now recognize the sanctity of the men's house.

A similar festival is held by all the tribes up to the Central mountains. The dead are exposed on high platforms in the forest; the people fear the ghosts, and a village is abandoned after a death. They believe all nature to be animate: if it thunders, the mountain is angry; when a man is drowned, the river is angry (*ib.* pp. 340-342).

In the Geelvink Bay district a manes-cult based mainly on fear of the ghosts is very evident. Dead infants are placed in baskets and slung on a tree so that Narwur and Imgiar—male and female spirits who live in the evening mist of the forest and kill babies because they love them and wish to have them near—may take them and spare the other children. The other dead are buried. In some parts, as in S. Japen (Jobi), corpses are mummified, kept in the house, and later removed to hollow trees. Some believe that the soul has its seat in the blood and that the ghost goes to the bottom of the sea. After death the ghost abides by the corpse and is buried with it. A small wooden image is made and taken to the grave; the ghost passes into it, and is supposed to remain there so long as satisfactory answers can be obtained from it; should the answers be unsatisfactory, it is believed that the ghost has deserted the image, and it is thrown away as useless. These *korwar*, or *karwar*, are kept in the houses or taken on sea voyages, and are consulted on all important occasions. An offering is placed before the *korwar*, which is either held in the hands or placed on the ground. The ghost is supposed to pass from the image to the suppliant, who thus becomes inspired. The mere presence of such images benefits the sick, though they may not be the ancestors of the patient (various authors quoted by Frazer, *Belief in Immortality*, i. 307-313). *Korwar* are generally made of persons who have died at home, but can be made for others, in which case the ghost is called to the village by setting fire to a great tree. The skulls of very important men or warriors sometimes form the head of the *korwar* that represents them; but on Ron Island such images are made of all first-born children who are about twelve years of age or more; they are consulted as oracles (de Clercq, p. 632). Van der Sande (p. 302) says that the *korwar* are found only in coastal villages and as far east as Liki (Kumamba Islands), but he is evidently referring to the characteristic squatting Geelvink Bay images, since analogous images spoken of as ancestor images are found about the mouths of the Sepik and Ramu Rivers (4° S. lat.), and in the Arfak mountains and elsewhere in the north-west. The distribution of the various kinds of *korwar* is given by Serurier (*Tijdschr. voor Indische Taal-, Land- en Volkenkunde*, xl. [Batavia, 1898] 287). The men's house or 'temple' (*rum sëräm*) is adorned with carvings of human beings and crocodiles; little more is known about them than that the young men sleep there. Van der

Sande equates them with the *kārēvāri* of Humboldt Bay district and the *parak* of Berlinhafen, but points out that the cult has diminished (p. 302). At Doré and Mansinam women holding *korwar* dance to drum-beating until they fall into a trance. Other 'Malay' customs occur there, such as the use of the soul-house, with a bird brooding over it, whither a woman's soul can repair when she goes on a journey for the first time (Moszkowski, p. 326). In Geelvink Bay the moon is believed to be inhabited by a woman who weaves; she is invoked before going on trading journeys. There is excitement over the new moon. Thunder and lightning are stated at Doré to be due to evil spirits; men swear by the sky. A sort of dualism occurs in Manuval, the evil spirit of night, and Narvoje, a good spirit living in the mist; there are also a creator and numerous bad spirits who cause thunder and lightning, storms, and all kinds of harm (J. L. van Hasselt, quoted by Krieger, p. 405).

The Windessi of the west coast of Geelvink Bay generally place their dead on a platform, often on an islet, and omens are taken. After a year the feast of the dead takes place, at which *korwar* are made, into the head of which the real skull may be inserted. The feast lasts for two days, accompanied by dancing and singing, but not by drum- or gong-beating. If in the meantime they kill some one who is reputed to be an incarnate evil spirit (who presumably caused the death of their relative), they do not carve a *korwar*, but make marks on the skull of the murdered man, and have instrumental music. The living have two souls; when a woman dies, both of them go down into the nether world, but, when a man dies, one of his souls goes below, the other passing into a living man (rarely a woman), who thereby becomes a medicine-man and has powers to heal the sick (J. L. D. van der Roest, quoted by Frazer, *Belief in Immortality*, i. 318). In Windessi, Biak, and other islands the bodies of enemies are thrown into the forest; later their skulls are preserved. Fellow-tribesmen are exposed on coral islets (Moszkowski, p. 325).

In the Arfak mountains the dead are mummified by being smoked in a hut. On the highest mountains dried mummies are placed in hollow trees (Moszkowski, p. 325). De Clercq could find no trace of a worship of gods among the coastal tribes of the islands of Waigiu, Salwatti, Misol, etc., but they keep in their houses *karwar* and miniature houses of the dead, at which men only may make the daily offering of sago. In the chief's house are shrines for the ghosts of all the persons who have died in the village. The mountain tribes, however, believe that the ghosts dwell in branches of trees, to which they attach food and strips of white and red cotton. The people of the 'Negeu Negorijen' make male and female *karwar*, in which the ghosts of their ancestors are supposed to reside. These afford protection to the households, and food is set beside them at festivals (de Clercq, p. 205). The Seget Sélé at the extreme westerly point of New Guinea bury their dead in the islet of Lago and erect little houses for their ghosts in the jungle, which are never entered (*ib.* p. 211). Wooden images of the distinguished dead are made in MacCluer Gulf; at Sekar similar *korwar* protect property, and one ancestor figure, Aerfanas, makes girls pregnant (H. Külin, quoted by Krieger, p. 402 f.); in the same place small bowls (called *kararasa* after the ghosts of ancestors who are believed to lodge in them) are hung up in the houses, and on special occasions food is placed in them (de Clercq, p. 462). In the islets of the Angunung district in the south of MacCluer Gulf corpses are placed in hollows in the rocks, which are adorned with pictographs (*ib.* fig. p. 459).

The Papuans of the Mimika River either bury their dead in a shallow grave or place the body in a coffin supported on trestles; occasionally the corpse is just placed on a platform. Only the skull is eventually retained and kept in the house. There is a belief in ghosts. The first peal of thunder in the day is greeted with a long tremulous shout, as is the rare whistle of a certain bird; in a bad thunderstorm the ground is beaten and sticks waved with shouting. The first sight of the new moon is greeted with a sort of bark (Wollaston, pp. 131, 132, 136-140). A 'form of prayer' by wailing is practised during the performance of any risky deed, at the ceremonial slaughter of a pig, and even at the setting of the sun. There are carved figures of men in some villages, for which, however, no respect is shown (Rawling, pp. 135-139, 224).

Wollaston refers to a pig festival, attended by visitors from distant parts, in which women draped in leaves drove two boars into the jungle. The men formed a hollow square in the village; the women driving the boars returned to the village, and, as the boars were being bound, the women set up a great wailing and plastered themselves with mud. The boars were clubbed to death on a large sloping platform, and, when they were dead, the women threw themselves on the dead bodies, wailing loudly. The men also wailed. After the mud had been washed off, playing took place; the women and girls chased the men into the river and beat them without retaliation. A child had its ears pierced on this occasion (pp. 134-136).

No explanation of the ceremony was obtained but it appears to be a variant of the great periodic festivals of the eastern coastal districts.

General observations.—A few generalizations on the religions of New Guinea may now be made. Everywhere man is believed to possess a soul which leaves the body at death, and may then be termed a ghost. The ghost remains for some time in the neighbourhood of the corpse, and, although it may go to an underground world or to some island, it frequently revisits its former home, partly to be revenged on the sorcerer who compassed the death of its body, partly to be assured that the funeral rites are duly performed. If this is the case, it is pleased and may be helpful; otherwise it is malicious, and it may show displeasure if its children are molested or tribal customs neglected. After a long interval an elaborate festival is held, and the ghost is finally dismissed to the other world. During all this time offerings are made to the ghost and it may be prayed to for help; for this purpose the skull is frequently kept and often other bones as well, as the ghost retains connexion with them. The final ceremony is all-important, though the period which elapses before it is variable. It is often the occasion of initiation ceremonies, the idea seeming to be that, as the ghosts, at all events of the recently dead, are present, it is a convenient opportunity to socialize them with those who are being admitted into tribal life. The bull-roarer seems in many tribes to be associated with ghosts, often indeed to be their representative, which may explain its very constant use in initiation ceremonies. The carved tablets or boards which are so constantly found in the 'club-houses' are connected with a manes- or ancestor-cult, as are also masks; but these in some instances may represent spirits that never were men and whom it is permissible to speak of as gods. The employment of masks, however, is limited, and evidently belongs to a distinct culture.

As the ghosts are often invoked to make the gardens or plantations fruitful, so the occasion of the final funeral feast may be taken as a special opportunity for securing their aid. The initiation ceremonies are not merely the promotion of status of the novitiates, but also their introduction to sexual life. Usually the puberty ceremonies of both sexes are distinct, but they may be combined. The relation between human reproduction and the

fruitfulness of the soil is frequently recognized. Thus we find that the 'great festival' is of complex origin and import, and it is not surprising that one or other aspect is predominant in different localities. It is probable that its components were perfectly distinct rites connected severally with puberty, death, and horticulture. That such syncretism does take place is proved by the fact that the occasion of the great feast is taken by the Mafulu to perform minor social rites, such as nose-boring, etc. The various developments that may occur will depend upon the social organization of the people, the different cultural influences that have come in from outside, and other circumstances, among which must be reckoned migration. If the migration has been gradual, a connexion may be retained with the parent stock, or at all events the differentiation may not be great, as among the Elema tribes, but, if the migration has been from afar, as among the Motu, a great obliteration may be expected.

Totemism has a discontinuous distribution, but there is no evidence as to whether it was at one time universal; in some places there are what appear to be vestiges, and in others totemism has been modified by later influences. For more detailed information Frazer's *Totemism and Exogamy* (ii. 1-62, iv. 276-286) may be consulted.

Head-hunting is wide-spread, though not universal; it, too, is the criterion of a cultural drift. Often a victim must be offered at the consecration of a new club-house or for 'bleeding' a war canoe. The *kopiravi*-cult of the Purari delta and the *agibi*-cult farther west are special developments of head-hunting, which at present cannot be linked with other phases of the custom. Cannibalism is frequently associated with head-hunting; sometimes it is of a very mild order, being a form of contagious magic; often it is a solemn act of revenge; in some cases human flesh is eaten for pleasure.

The rich religious life of many of the tribes of the Papuan Gulf seems to find a parallel among the peoples up the Sëpik, judging from their paraphernalia, although we do not know anything about their religion. It seems probable that there has been a migration southward from the Sëpik, which introduced among other things men's houses and the use of masks eventually as far south as Torres Straits, thus complicating the more aboriginal culture which, we may assume, the less influenced Papuans possessed. The Papuan substratum probably extended all over New Guinea, and in some cases has remained relatively pure even at points along the coast. There is abundant linguistic, cultural, and other evidence of several migrations from Melanesia in the south-east and east. The total absence of masks south of 9° S. lat. and the almost co-extensive absence of the bull-roarer are significant. Noteworthy, too, are the apparently weak religious sentiment of the W. Papuo-Melanesians and the stone erections of many of the S. Massim. The employment of sacred flutes among the inland tribes of the Mamba and Waria, from Huon Gulf to Humboldt Bay, and on the Sëpik and Mamberamo Rivers, indicates a definite cultural influence with which may be associated the distribution of slit gongs and spirit-houses from Humboldt Bay to Berlinhafen and up the Sëpik. The prevalence of various kinds of *korwar* from the Mamberamo to MacCluer Gulf is significant; their distribution indicates more than one cultural drift from Indonesia.

A manes-cult is practically universal, though in places it seems to be feebly developed. Frequently the bull-roarer is definitely associated with this cult, as are also masks and ceremonial tablets on which human faces are carved. In the Papuan

Gulf, according to Holmes, ancestors seem to have been promoted into distinct gods. Culture heroes are frequently recognized, and there is a tendency to apotheosize them when they come from elsewhere. The absence of a priesthood has prevented the systemization of religion.

NEW HEBRIDES.—This archipelago in the western Pacific Ocean consists of a fairly compact mass of islands in its northern and central parts, tailing off to the south into the more widely separated islands of Eromanga, Tanna, Anaiteum, Aniwa, and Futuna. The term 'New Hebrides' is often used to include the Banks and Torres Islands lying to the north.

With the exception of the Torres group, all the islands are volcanic and are very fertile and not specially unhealthy. The chief foods are the yam, taro, bread-fruit, banana, and coco-nut, together with fish, and on festive occasions pork and fowls. The population has decreased very greatly, partly owing to the introduction of European diseases, alcohol, and firearms, but probably in still greater measure owing to artificial restriction of the birth-rate. In some parts the decrease has now been stayed and families have become larger, especially where missionary influence is strong.

1. *Somatology*.—The inhabitants of the New Hebrides are examples of the Oceanic variety of the Negro, but there is very great variety of physical type. In some places, such as parts of Lepers' Island (Oba) and Ambrini, the people are much lighter than the average in colour, and nowhere are they so dark as in some of the northern islands of Melanesia. There is also great variety in stature. The people of the interior of Espiritu Santo (commonly called Santo) are so small (3 ft. 6 in. to 4 ft. in height) that they may properly be called Pygmies, and there are indications of a similar population elsewhere. There is more constancy in the nature of the hair, which is nearly always frizzly and black, but examples of curly or wavy hair are occasionally to be observed. The great variety of population has probably arisen through the fusion of several light-coloured and wavy- or straight-haired immigrant peoples with an indigenous Negro or Nigritic population. In some places the physical characters of the people may have been influenced by later settlements of Polynesians, but the cultural resemblance to Polynesia has probably arisen more through the settlements of the wanderers who originally peopled Polynesia than through the later arrival of Polynesian castaways and migrants.

2. *Language*.—Two families of language are spoken in the New Hebrides—Melanesian and Polynesian. The Polynesian languages are spoken only in certain small islands in the southern and central parts of the group, viz. Aniwa, Futuna, Vila (or Fila), Meli, and the western part of Mac. The presence of Polynesian languages in these islands is probably due to the relatively recent

settlement of small bodies of Polynesians who perhaps reached the islands as castaways, and, blending with the earlier Melanesian population, succeeded in introducing their language. The Melanesian languages which are spoken in every other part of the group show very great variety in vocabulary and phonetic character, the differences in grammatical structure being smaller or at any rate less obvious. In vocabulary and phonetics the differences may be very great, especially aberrant examples being found at Hog Harbour in the north-eastern part of Santo, at South-west Bay in Malekula, and in Ambrim and Epi. The languages of the southern islands differ considerably from the rest, the language of Anaiteum departing more widely than the others from the usual Melanesian character. Variations may be found quite close to one another, and an island less than a mile in length may show two or three dialectical variations.

There is no close correlation between language and physical character. The people of the islands where Polynesian languages are spoken differ little from their Melanesian-speaking neighbours, and the speakers of anomalous Melanesian languages may conform closely to the prevailing physical type. Thus, in Santo the people of Hog Harbour who are anomalous in language are not so in physical appearance, while their Pygmy neighbours speak a language conforming closely to the general Melanesian type.

3. Social organization. — Four chief types of organization can be distinguished: (a) the dual organization with matrilineal descent; (b) the totemic clan-organization; (c) a clan system dependent on locality with local exogamy; and (d) a system in which there is no clan-organization, in which marriage is regulated by kinship.

(a) The dual organization with matrilineal descent is found in the purest form at Hog Harbour at the north-eastern part of Santo. Immediately north of this the moieties are subdivided into sections, and this is also the case in the northern part of Pentecost, the eastern side of Oba, the north-western part of Santo, and the Banks Islands. In parts of Santo the dual organization is fused with a totemic system to produce a highly complex organization.

(b) The totemic system is found in its purest form in Sandwich Island (Fate) and the adjacent islands, such as Nguna, Vila, and Meli. The people of these islands are organized in a number of matrilineal clans, each associated with a plant or animal, the former being the more numerous. The condition would be one of typical totemism if there were not an almost complete absence of the tabus on the use of animal or plant which are usually associated with totemism. The totemism of Santo is still more anomalous. The sub-groups of the moieties of the dual organization are associated with plants or animals, and a person belongs to the clan of his mother, but every person includes in his or her personal name the name of the totem of his or her father. Thus, a man whose father belongs to the kava (*ae*) clan and his mother to the coco-nut (*olo*) clan will belong to the *olo*, but will have the word *ae* as a prefix to his personal name.

(c) The organization with local exogamy is found in Ambrim, in some parts of Malekula, and in the small islands (Vao, Atelin, Wala, etc.) on the north-eastern shores of that island. Since a man belongs to the locality of his father, the condition is patrilineal.

(d) The fourth kind of organization, in which marriage is regulated by kinship, is found in Tangoa and Eraki, small islands at the southern end of Santo, and in several villages on Santo. It is also present in Malo and Tituba, and in the

western part of Lepers' Island (Oba). It may also be present in the group of small islands lying between Sandwich Island and Epi, often called the Shepherd Islands. At present we have no definite knowledge concerning the social organization of the islands from Eromanga southwards.

Some of the islands, such as Ambrim, are highly communistic, and the whole group seems to present various intermediate stages between communistic and individual ownership of property. In most parts chieftainship in the strict sense cannot be said to exist, but is replaced by the status which accompanies high rank in the organizations known as the *Mangge*, *Sukwe*, etc. (see below). Chieftainship, however, is present in the southern islands and probably in the group of islands lying between Sandwich Island and Epi. Wife purchase is general throughout the islands, but in some parts is accompanied by a condition in which the young women are monopolized by the old men, the young men having to be content with widows. Probably as the result of this social condition, there are a number of peculiar forms of marriage, such as marriage with the daughter's daughter of the brother, with the daughter of the sister's son, the wife of the father's father and of the mother's brother. These marriages occur especially in the northern part of the group, while the region south of Epi, with the exception of the Fate group and the small islands between Sandwich Island and Epi, is characterized by the presence of the cross-cousin marriage (*ERE* viii. 425 f.). A limited form of this marriage occurs also at Hog Harbour and on the east coast of Malekula.

The chief objects used in the purchase of wives are pigs, and these animals also form the chief medium of exchange and payment in other transactions. In the New Hebrides mats form a kind of money. In the Banks Islands shell-money is the chief currency, and in the Torres Islands arrows and pigs' jaw-bones.

The organizations to be described in the next section take a very important place in social life, and there is hardly a branch of social organization upon which they do not exercise a profound effect.

4. Religion. — In most of the islands there is a belief in a being who is usually supposed to have created man and to take an interest in his welfare. In Ambrim this being is called Taktak, in the northern part of Malekula Tagar, in Atchin Tahar, in Oba Tagaro, in Malo Tokotitai, in Tangoa Soketatai, in different parts of Santo Totetara and Yetar, while in the southern islands he is known by some form of the Polynesian Maui-tikitiki, viz. Moitikitiki in Anaiteum and Tanna and Amoshikishiki in Futuna. Though these beings correspond in many ways with our idea of 'god,' they are not the object of any special cult, and the people seem to attach little, if any, importance to the possibility of their intervention in human affairs. In some places they are connected with the sun and moon. In Atchin Tahar represents both sun and moon. At Nogugu, in Santo, Totetara is believed to dwell beyond the setting sun, and the people of Tangoa occasionally throw food towards Mata ni alo, 'the eye of the sun,' asking it to take the offering to Soketatai. The worship of sun and moon is said to have been present in the southern islands, and representations of sun and moon have been found carved on rocks in Anaiteum.

Beliefs and practices connected with such beings as Soketatai are, however, of very little importance beside the cult of the dead, and especially of dead ancestors, which is the central feature of the religion of the New Hebrides. The belief in the influence of the dead upon the living inspires much of the religious ceremonial, and in some if not all, of the islands the cult of dead ancestors forms part

of an elaborate organization called the *Mangge* in Ambrim, *Mangki*, *Mengge*, or *Maki* in Malekula and the adjacent islands, and *Mwele* or some form of the word *Supwe* (*Supkwe* or *Sukwe*) in Santo and the Banks Islands. This cult certainly extended as far south as Sandwich Island (Fate), and was probably present in the southern islands. The practice of the cult is closely associated with the representative of the Melanesian club-house called *gamal*, *khamali*, etc. Though we have as yet no definite evidence of the presence of the whole cult in the southern islands, the club-house which accompanies it elsewhere is certainly present, and the people use kava, which is associated throughout this part of Melanesia with the cult practised in the club-house.

In the Banks Islands the organization has two distinct sections—the *Supkwe* proper and the *Tamate*, or 'ghost' secret societies. In the New Hebrides these two sections are combined in one cult, which has little of the secret character of the 'ghost' societies of the Banks. All the organizations consist of a number of grades, and men rise in rank and social estimation by passing from grade to grade, making payments on each occasion to those who are already members; the payments consist of pigs in the New Hebrides and of shell money in the Banks Islands. A member of the organization may eat only food cooked at his own fire or at the fire of a member of his own rank; this makes the institution resemble the caste of India, which has led European settlers in the New Hebrides to speak of the whole organization as 'caste.'

The chief features of the ceremonial of the *Mangge* of Ambrim are the killing of pigs, the assumption of a new name by the initiate, and the making of a new fire. The leading feature of the higher ranks is the setting up of an image in human form, in which it is believed that the ghost of the father's father comes to reside and care for the welfare of his descendant who is taking the new rank. The image is covered by a house or some structure representing a house.

In other islands—Santo, Malo, and Malekula—an important feature of the ritual is the erection of dolmen-like structures consisting of a table-stone resting on stone supports, upon which a new member stands when he is killing a pig. Nearly everywhere the banyan tree forms a striking object in the places where the ceremonies are held.

Wooden gongs, often called drums, are used in all forms of the organization to give special signals so that all shall know the nature of any ceremony which is about to be performed. In Ambrim and Malekula and in many of the islands to the south as far as Fate the gongs are set upright in the ground and are adorned with representations of the human form. In Santo they are little ornamented and lie on the ground. The shell-conch is also prominent in the ritual, being blown in some islands whenever a boar passes from one person to another. Only the flesh of male pigs may be eaten by those who belong to the organization, and in many islands especial importance is attached to pigs believed to be hermaphrodite.

A prominent difference between the organizations of Santo on the one hand and Malekula and Ambrim on the other is that in Santo more importance is attached to the number of pigs killed. In some parts of Santo a man may have to kill more than a thousand pigs, the number accumulating from the time when he took his first step. In Malekula and Ambrim, on the other hand, more importance is attached to the kind of pig, especially to the degree of curvature of its tusks. In Ambrim only a few pigs are killed, though many pass from the new to an old member in payment for the various objects used in the ritual.

The connexion of the organization with ancestor-cult is especially obvious in Ambrim. Elsewhere the religious character of the institution has often fallen into the background, while the economical aspect has become especially important. This importance has arisen out of two factors: (1) the payments made by new members to old have produced a complicated system of vested interests, a man in a grade receiving from new members a return for the payments that he had himself made in order to reach his present rank; (2) the other mode is by the connexion of the organizations with the practice of tabu. In some islands, such as Ambrim, membership of the organization is the chief means by which a man can reserve property for his own use, and in Ambrim the power of tabu is definitely associated with the ancestor-cult, any infraction being punished by the ghostly ancestors of the tabuer, who inflict some form of illness on the offender.

In Ambrim the rites following death are almost an exact replica of the proceedings when the dead man took his last step in the *Mangge*, and this connexion between the ancestor-cult and the death-rites is probably present in Malekula. The chief mode of treatment of the body of the dead which is associated with the *Mangge* and allied cults is interment in the extended position, often in the house or club-house. In some places only the head is interred, while the body is kept on a platform, and this practice appears to be the representative of an older mode of disposal in which the bodies of the dead were placed on platforms, sometimes in the branches of a banyan tree. This mode of disposal is still practised in some parts of Santo. In one district of South-west Bay in Malekula the bodies of important men are dried over a fire on a frame-work inside the house. After a time the bones are thrown away except the skull, which is taken to the club-house. It is covered with plaster and made to resemble the dead man as much as possible. It is then fixed to an artificial body, which is decorated with all the insignia proper to his rank in the *Mengge*. Under certain conditions in Ambrim the dead may be interred in the upright or sitting position, and the sitting position is the rule in the interment of old men in Vao and Atchin, and appears to have been habitual among the now extinct Bushmen of Fate. In some of the southern islands, such as Anaiteum, dead commoners were thrown into the sea, while chiefs were interred.

Everywhere in the New Hebrides the dead are believed to pass to some place at a distance from their home in life. The people of Ambrim and of some parts of Malekula are believed to go to the great volcano in Ambrim, and those of the southern part of Malekula to South-west Bay. The people of Malo and Tangoa go to a place in Santo, those of Nogugu on the west coast of Santo to a cave at the northern point (Cape Cumberland) of the western side of Big Bay, and those of Hog Harbour to two mountains on the eastern shore of Big Bay. The people of Fate and other central islands usually pass to some small island, reef, or point of land in the vicinity. The dead of Atchin are said by the old men to go to Tahar (see p. 353^b), this belief co-existing with that in the passage to Ambrim.

The journey of the dead to their future home may be accompanied by various trials, and success in reaching it does not depend on the possession of moral qualities as we understand them, but rather on such features as membership of the *Mangge* and similar organizations, the knowledge of certain songs, tattooing, and the boring of ears or nose. The dead of the small islands lying north-east of Malekula succeed in reaching their home in Ambrim only by the gift of the pigs killed in their funeral rites to a being called Lesausan in Atchin.

and Lehettheth in Vao, whom they meet on the way. At Hog Harbour those who are killed in war go to one mountain and those who have died from disease to another.

The *Mangge* and similar organizations are very far from exhausting the ceremonial of the New Hebrides. In Ambrim the bull-roarer is swung after the death of a man who has learned with special ceremonial how to use it in life. This ceremony and one called *rom*, in which masks are worn, are probably survivals of an older cult allied to that of the *Tamate* societies of the Banks Islands, which existed in the island before the introduction of the *Mangge*. The bull-roarer is said to have passed to Ambrim and Malekula from Epi; it is used as a toy in parts of Santo.

The operation of incision, a variety of cirencision (*ERE* iii. 660), is practised in Malekula, Ambrim, the southern part of Pentecost, Epi, Eromanga, Tanna, and probably Anaiteum, and true circumcision occurs in the northern part of Malekula. In each case the operation is accompanied by prolonged ceremonial, in which boys undergo a period of seclusion, with features suggesting the representation of death which are also present in the proceedings of the *Tamate* societies of the Banks Islands. In Ambrim incision certainly belongs to a stratum of culture older than the *Mangge*. The practice is associated with a special form of dress, the pudendal sheath, either in a simple form in Ambrim and parts of Malekula, or greatly exaggerated in size in other parts of Malekula and in the southern islands. The operation and mode of dress are very closely associated; where one occurs, the other is always found. Though the customs of boring the ears and nose have an influence upon the fate of a man after his death, the boring does not seem to be accompanied by any special ceremonial.

Another mutilation—knocking out the upper incisor teeth of women—is practised at Hog Harbour, in South-west Bay, and in a district in the middle of the east coast of Malekula. At South-west Bay the operation is performed with ceremonies resembling those accompanying incision. Deformation of the head is performed in the southern part of Malekula and in the adjacent Maskelyne Islands.

Prolonged and important ceremonies are performed in connexion with the making of new canoes and gongs. In some islands the ceremony of making the wooden gongs forms part of the ceremonial of the *Mangki* or *Maki*, but in Ambrim it is wholly distinct, though the gongs when made are used in the ritual of the *Mangge*. The canoe ceremonies were performed only in the case of the large canoes used for going to other islands, and are now performed when the people have bought large boats of the European pattern. In Ambrim the ceremonial has much in common with that performed when making a new gong.

We do not know of any special ceremonial accompanying other manufactures. Pottery is made by women on the west coast of Santo and was formerly made in many other parts of the group, but the manufacture does not seem to have had a ceremonial character, and, beyond the killing of pigs, we have at present no knowledge of religious ceremonial accompanying house-building or the making of weapons or other objects.

5. Magic.—Various kinds of magic are practised in the New Hebrides, but apparently play a less prominent part in the lives of the people than in the Banks and Torres Islands. In these islands the people chiefly fear the magical powers of members of their own community, and in the Banks Islands associations have come into existence for mutual protection in this respect. In the New

Hebrides magic is also practised within the community, but in some islands the people fear chiefly the magic of their neighbours, and especially do the people of the coast fear those who dwell in the bush. Magical powers are widely ascribed to the people of Ambrim, who in their turn dread the magic of the inhabitants of certain parts of Malekula.

In the Banks Islands magical powers are believed to be derived from spirits (*vui*) whose efficacy depends on an attribute called *mana* (*ERE* viii. 375 f.). We have no evidence at present that similar spirits are supposed to produce magical effects in the New Hebrides, and, though the word *mana* exists with other meanings, we do not know of the presence of the beliefs which this term connotes in the Banks Islands.

LITERATURE.—R. H. Codrington, *The Melanesians*, Oxford, 1891; F. Speiser, *Two Years with the Natives in the Western Pacific*, London, 1918; W. H. R. Rivers, *The Hist. of Melanesian Society*, Cambridge, 1914; W. Gunn, *The Gospel in Futuna*, London, 1914. The foregoing article is based chiefly on recent work by J. W. Layard and the writer, the record of which has not yet been published. W. H. R. RIVERS.

NEWMAN.—John Henry Newman was born in London on 21st Feb. 1801. His father's family has been said to be of partly Jewish descent, but there is no evidence for the assertion. His mother's family, Fourdrinier by name, was descended from French Huguenots who left France on the revocation of the Edict of Nantes. Her influence, her fervent if somewhat narrow piety, was largely responsible in his childhood for the formation of that intense conviction of the reality of the spiritual world which is his distinguishing characteristic. As a boy he was already a mystic, and at fifteen he underwent the experience known in Evangelical circles as conversion. In 1808 he was sent to a private school at Ealing, where he remained until he went up to Trinity College, Oxford, in June 1817. A year later he was elected to a scholarship, and took his B.A. degree in 1821, although, owing to nervous exhaustion from overwork, with a less brilliant place in the class-list than was expected. His real powers were known, however, and recognized in 1822 by his election to a fellowship at Oriel. This college, although a small one, had taken the lead in the intellectual revival of the early 19th cent. at Oxford, and to be chosen a member of that brilliant society was to win the blue ribbon of Oxford scholarship.

At first the influence of his new associates, with Whately as the dominant force among them, seemed likely to lead him in quite a different direction from that which he afterwards took. They 'called everything into question; they appealed to first principles, and disallowed authority as a judge in matters intellectual' (Ward, *Life of Newman*, i. 37). The abiding result of this intercourse was his liberation from the narrow, almost Calvinistic, theology of his youth, and that breadth of sympathy which marked his later writings. In 1824 he took orders in the Church of England, and was appointed to the curacy of St. Clement's Oxford, a parish almost entirely inhabited by the poor. On his appointment in 1826 to a tutorship at Oriel, which, unlike the preceding generation of tutors, he regarded as involving a definite responsibility for the souls of his pupils, he resigned his curacy; and in 1828 he was named vicar of St. Mary's, the university church. In the latter year his friendship with Hurrell Froude brought him into relation with Keble; and little by little he began to value more highly the ancient traditional element in religion, and to study with avidity the writings of the early Christian Fathers. He began to think that he had overvalued the function of the mere intellect in matters of religion, and to

dread the liberalism which characterized the keenest thinkers of the day both at Oxford and at Cambridge. It is curious to find that his first notable stand on public questions was his opposition in 1829 to Sir Robert Peel's re-election as member of parliament for the university because of his proposing Catholic emancipation—an opposition based, however, not upon Newman's prejudices (at that time very real) against the Roman Catholic system, but on his conviction that the measure was an outgrowth of the indifference of the day. This does not mean that he ever became, or could have become, a blind reactionary—he had much sympathy, for instance, with Roman Catholics of the type of Montalembert in France; but this whole aspect of his life is best summed up in the words which he spoke fifty years later on his reception into the College of Cardinals.

'And, I rejoice to say to one great mischief I have from the first opposed myself. For thirty, forty, fifty years I have resisted to the best of my powers the spirit of Liberalism in religion . . . the doctrine that there is no positive truth in religion, but that one creed is as good as another. . . . It is inconsistent with any recognition of any religion, as true. It teaches that all are to be tolerated, for all are matters of opinion. Revealed religion is not a truth, but a sentiment and a taste; not an objective fact, not miraculous; and it is the right of each individual to make it say just what strikes his fancy' (Ward, ii. 460).

After finishing his first serious piece of historical study, *The Ariens of the Fourth Century*, in 1832, he set out for rest and refreshment, in company with Hurrell Froude, on his memorable Mediterranean journey, during which he came in contact for the first time with the Roman Catholic system in actual operation, and was nearly dying of a fever in Sicily. He told his servant that he did not think he should die, for he believed that God had a work for him to do. The same sense of a divine guidance is expressed in the hymn, 'Lead, kindly Light,' which he wrote while becalmed in an orange-boat off the coast of Sicily on his homeward way from Naples to Marseilles.

He reached England at a time critical for the Established Church. Ten Irish bishoprics had been suppressed, and disestablishment seemed among the possibilities. Froude, Keble, and Palmer had already resolved to 'write and associate in defence of the Church,' and on 14th July 1833 Keble preached in St. Mary's his famous sermon on 'National Apostasy,' from which the formal beginning of the Oxford Movement was dated. Newman threw himself heartily into their plans, and in December the *Tracts for the Times* (1833-41) began—pamphlets of varying size, but of uniformly academic rather than popular tone, intended to vindicate the continuity of the Church of England and the integrity of the Prayer Book. Presently he reached the height of his influence; in the Oxford of 1838 he was the central figure, and every one bears witness to the marvellous effect of his sermons in St. Mary's. One testimony may be quoted from a Scottish Presbyterian:

'To call these sermons eloquent would be no word for them; high poems they rather were, as of an inspired singer, or the outpourings of a prophet, rapt yet self-possessed. And the tone of voice in which they were spoken, once you grew accustomed to it, sounded like a fine strain of unearthly music. Through the silence of that high Gothic building the words fell on the ear like the measured drippings of water in some vast dim cave. After hearing these sermons you might come away still not believing the tenets peculiar to the High Church system; but you would be harder than most men, if you did not feel more than ever ashamed of coarseness, selfishness, worldliness, if you did not feel the things of faith brought closer to the soul' (J. O. Shairp, essay on 'John Keble,' in *Studies in Poetry and Philosophy*, Edinburgh, 1863, p. 278).

But presently arose the doubts as to his position which were to make the next five years a time of torture to him. His studies (1839) in the history of the Monophysite controversy, followed by the impression of the other parallel in the Donatist schism and St. Augustine's classic words, 'Securus judicat orbis terrarum,' set him thinking whether

a local, a national, Church cut off from antiquity on the one side and on the other from the majority of Christians in the present day could indeed be the body of Christ. He managed to put the doubts away from him; but, in his own phrase, 'he who has seen a ghost can never be as though he had not seen it,' and they were bound to recur. In 1841 he published the famous Tract xc., 'On Reserve in Communicating Religious Knowledge,' in which he tried to prove that the XXXIX. Articles need not bear the anti-Roman sense popularly attributed to them. It caused intense excitement and was condemned by a number of bishops, in order to emphasize the Protestant character of the Church of England. In April 1842 Newman took up his abode in the row of simple cottages at Littlemore, a few miles out of Oxford, which he had prepared with a view to the foundation of a quasi-monastic community. He resigned the vicarage of St. Mary's in September 1843. 'From the end of 1844,' he writes, 'I was on my deathbed as regarded my membership in the Anglican Church.' Yet, until he was sure, he felt bound not to unsettle others, and withdrew himself more and more into solitude, giving himself to uninterrupted prayer and study. In March 1845 he resigned his fellowship, and on 9th October he was received into the Roman Catholic communion by Father Dominic, an Italian Passionist who was travelling in England.

In the following year he went to Rome and made some studies there, and was ordained priest on 30th May 1847. After considerable weighing of what his future work should be, he joined the Congregation of the Oratory, founded by St. Philip Neri in the 16th cent., and more loosely organized than the old monastic orders. The plan of a new Oratorian house in England, the first there, was approved by the pope. It was established at Edgbaston, a suburb of Birmingham, in January 1848, with Newman as superior; and this was his home for the rest of his life, except for the Irish interlude. In 1850 he gave some notable lectures in London on 'Certain Difficulties felt by Anglicans,' and a few months later another series on 'The Present Position of Catholics in England,' the best written, in his own opinion, of all his works. In one of these, delivered in the Corn Exchange, Birmingham, he exposed in very plain language the abominable vices of an apostate Italian friar named Achilli, who had been lecturing against the Church (the passage is given in full in Ward, i. 279). Following closely an article by Cardinal Wiseman in the *Dublin Review* of July 1850, he detailed the scandalous career of Achilli, who brought an action for libel against him. It proved very difficult to get from Italy the necessary witnesses; the jury was prejudiced by the violent anti-Roman feeling of the days of the 'Papal Aggression'; and Newman was found guilty and sentenced to a fine of £100, which, as well as the enormous expenses of the trial, was at once paid by popular subscription. In a leading article the *Times*, which then spoke the sober mind of England, called the proceedings 'indecorous in their nature, unsatisfactory in their result, and little calculated to increase the respect of the people for the administration of justice or the estimation by foreign nations of the English name and character.'

In 1852, at the first synod of the restored hierarchy, he preached the magnificent sermon on 'The Second Spring' which Macaulay is said to have known by heart. Before this he had been asked to take the rectorship of a Roman Catholic university to be established in Dublin, but he was not actually installed until February 1854. The story is too long to tell in detail of how misunderstandings and apparent lack of support from some of the Irish bishops made his position anything

but comfortable (see his own account published after his death under the title of *My Campaign in Ireland*, and Ward, i. chs. xi., xii.); but he was never at home in his new surroundings, and at the end of 1858 he resigned his office and went back with relief to the quiet life of the Oratory.

The next five years were years of discouragement and apparent failure. Singularly enough, it was a bitter and unscrupulous attack upon him that led to his restoration to a wide popularity not only among the members of his own Church, but in the English world at large. In a review of Froude's *History of England* (*Macmillan's Magazine*, Jan. 1864) Charles Kingsley wrote:

'Truth for its own sake has never been a virtue with the Roman clergy. Father Newman informs us that it need not be, and on the whole ought not to be;—that cunning is the weapon which Heaven has given to the Saints wherewith to withstand the brute male force of the wicked world which marries and is given in marriage. Whether his notion he doctrinally correct or not, it is at least historically so.'

Newman might possibly have let the thing pass, 'grave and gratuitous slander' as he called it in his initial demand on the publishers for reparation, if it had touched himself alone. But he felt that the honour of the whole Roman Catholic priesthood was at stake; and when, in answer to his request for substantiation, Kingsley was able to give but one reference, and that from a sermon preached in St. Mary's while Newman was still an Anglican, the matter could not be allowed to rest. Yet the only apology that he offered, printed in the following number of the magazine, was merely conventional and did not touch the real point at issue; and in a pamphlet entitled *What, then, does Dr. Newman mean?* he actually deepened the offensiveness of his original charge. Newman came to the conclusion that the only way to vindicate himself completely was to do what was extremely distasteful to his sensitive and retiring disposition—to give a minute history of all the mental processes which had led him to his change of allegiance. In seven parts, at intervals of a week, he published the *Apologia pro Vita Sua*, which, written as it was at high speed and under the pressure of conflict, has been often called the greatest piece of autobiographical writing in the English language.

'Not the letters of Pascal, nor those of Junius, won more instant success. The *Apologia*, as it was given to the world Thursday after Thursday, appeared in all hands, was read in clubs, in drawing-rooms, by clerks on the top of omnibuses, in railway trains, and one had almost said, in pulpits, for everywhere its author was discussed, his pathetic or striking sentences quoted, his English more than ever admired' (Barry, *Cardinal Newman*, p. 123).

Abundant testimony to the convincing effect of Newman's defence might be collected from many people absolutely at variance with his religious beliefs. Richard Holt Hutton, editor of the *Spectator*, a Liberal in politics and, until late in life, a Unitarian in religion, a known admirer of Kingsley, put forth strongly in more than one article that 'the whole justice of the matter seems to us on Dr. Newman's side'; and Frederic Harrison, in a sketch of Kingsley's whole work and influence (*Studies in Early Victorian Literature*, London, 1895, p. 180), declines even to speak of 'his miserable duel with Cardinal Newman, wherein he was so shamefully worsted.'

Apart from the *Apologia*, the most interesting activity of the sixties in Newman's life was the attempt to establish a centre of Roman Catholic life and teaching in his still-loved Oxford. The scheme was opposed by Manning and others, and ultimately abandoned—though since Newman's death the principle for which he contended has been fully recognized. The details of this controversy may be seen at length in Ward's *Life*, chs. xxi., xxiv. f., and in Purcell, *Life of Cardinal Manning*, ii. ch. xiii. f. In 1866 he began to make

notes for the work which he regarded as one of his most important, the *Essay in Aid of a Grammar of Assent*. The next four years were largely occupied with serious thought and correspondence touching the apparently approaching definition of papal infallibility at the Vatican Council of 1870. He found in the utterances of the *Dublin Review* and the *Univers*—strongly Ultramontane—exaggeration and party spirit which seemed to him unhappy in tendency and likely to lead to portentous evils.

'Newman's great fear, in the years 1866-70, during which the proposed definition was canvassed, seems to have been that by its terms it might appear to the world at large to sanction such excesses as those of M. Louis Veuillot [editor of the *Univers*], novelties which were at variance with traditional Catholic theology' (Ward, ii. 239 f.).

In 1868 the pope, after having his works examined and approved by official theologians, directed that he should be asked to help in preparing the material for the Council, which not only was a testimony to his orthodoxy, but gave him a definite standing when he was impelled to discuss the important question at issue. He declined to attend in person the theological conferences in Rome, but did his best to assist by correspondence such bishops as wished his advice. His fears were not allayed until the definition was actually made. His objection was not so much to the making of a definition as to the sort of definition which he felt was likely to be passed, in haste and under partisan pressure. When he saw the actual text of the decree, he was satisfied with its moderation.

'So far, indeed, as doctrine was concerned, no more was defined than he himself had always held. The old Ultramontanism of which Archbishop Sibour and Montalembert had been staunch defenders became a doctrine of faith. The Ultramontanism of the *Univers* received no countenance in the text of the definition. . . . The tendency towards excessive centralisation which he deplored was not a matter of doctrine but of policy' (Ward, ii. 307 f.).

He had said of the *Grammar of Assent*, which appeared early in 1870, that he expected it to be his last work; and in a memorandum of 14th Oct. 1874 spoke of 'my habit, or even nature, of not writing and publishing without a call' (Ward, ii. 400). Only a month later such a call came to him in a bitter attack, first in a magazine article and then in a pamphlet, by Gladstone, upon *The Vatican Decrees in their Bearing on Civil Allegiance*. It was thought by not a few that the statesman was irritated by the defeat, through the influence of the Irish bishops, of his Irish University Bill of 1873; at any rate, he came out with the statement that 'Rome had substituted for the proud boast of *semper eadem* a policy of violence and change in faith,' and that since the events of 1870 'no one can become her convert without renouncing his mental and moral freedom, and placing his civil loyalty and duty at the mercy of another.' In a brilliant pamphlet, entitled *A Letter to the Duke of Norfolk* (the leading Roman Catholic layman in England), Newman refuted Gladstone's charge, taking occasion at the same time to disown some of those exaggerated conceptions of the pope's position which he had deprecated before the Council.

In 1877 his old college at Oxford, Trinity, made him an honorary fellow, and in the following February invited him to pay a visit, of which Lord Bryce records:

'... to see younger people so many eventful years, sit as a youth, the voice so often heard in St. Mary's retaining, faint though it had grown, the sweet modulations Oxford knew so well, and the aged face worn deep with the lines of thought, struggle, and sorrow' (Ward, ii. 430).

But a greater honour was in store for him. Leo XIII., who had become pope in April 1878, signified in the following March his intention of conferring a cardinal's hat upon the venerable English

Oratorian; the actual creation took place in the consistory of 12th May, and was made more welcome by the permission, not granted to a cardinal who was only a priest since the time of de Bérulle, superior of the French Oratory, in the 17th cent., to continue his residence in England. His health grew increasingly feeble with advancing years, though to the last he endeavoured to be always working for the cause to which he had given his life. He died on 11th August 1890, and was buried at Rednal, under a stone engraved at his own desire with the words 'Ex umbris et imaginibus in veritatem'—words recalling the spirit of his best-known utterance, the appeal of the hymn written nearly sixty years before to the 'kindly Light' to lead him through all darkness and danger safely home.

During the years since his moving voice fell silent his influence has been perpetuated by the manifold appeal of his writings. Testimony to the unsurpassed excellence of his prose style—'common English made perfect,' as Barry calls it; 'not so much the expression of a thought as the thought taking shape in a perfectly pure medium of language' (A. C. Benson, *The Upton Letters*², London, 1906, p. 26)—might be collected from many good judges who have again no sympathy with his theology, as widely divergent from it, in fact, as R. H. Hutton and W. E. Henley, who says of Thackeray (*Views and Reviews*, London, 1908, i. 18), 'Setting aside Cardinal Newman's, the style he wrote is certainly less open to criticism than that of any other modern Englishman.' One of the most penetrating judgments is that of William Vaughan Moody:

'Newman's prose style at its best is characterized by an obtrusive distinction, and by a kind of aerial transparency in comparison with which even Arnold's prose appears slightly dense. Although Arnold's meaning is always perfectly clear, it reaches us, so to speak, through a resisting medium; we are conscious of his manner. Newman, it may almost be said, has no manner, or at least his manner is so completely one with his matter that it passes unobserved; his words convey his meaning as ether conveys light. If Arnold is as clear as crystal, Newman is as clear as mountain air. This quality of style, by virtue of which it incorporates itself in meaning and becomes, as it were, invisible, is the highest attainable quality; and Newman, in certain passages especially of his *Apologia* and his *Idea of a University*, has perhaps come nearer than any prose writer of his century to the type of perfect prose' (*Hist. of English Literature*, New York, 1902, p. 342).

Of all his thirty-six volumes, that in which these qualities are best exemplified on a subject of general interest is probably *The Idea of a University Defined and Illustrated* (1873), in which—again side by side with Matthew Arnold—he pleads for a broad general culture against the aggressive utilitarianism of the day, and exhibits the serene Oxford suavity in its most charming form. But greatest in substantive importance (unless the *Essay on Development* may be thought to rival it), although, because of the concentrated attention which it requires, never likely to be popular, is the *Essay in Aid of a Grammar of Assent*. Again and again he had justified in his *University Sermons*, preached before his conversion, as Hutton points out,

'the potent implicit reason of man against the fruitless and formal explicit reason,' shown 'how much more powerful was the combination of humility, trust, imagination, feeling, perception in apprehending the revealed mind and will of God, than the didactic and formal proofs to which the popular religious appeals of our day usually have recourse' (*Criticisms on Contemporary Thought and Thinkers*, London, 1894, ii. 276).

For years he had wished to write something which should deal with the relations of faith and reason in such a way as to answer the difficulties of modern sceptics, of which he had naturally a more vivid realization than most of his fellow-Catholics. Twenty years earlier he had complained that the Italian theologians 'know nothing at all of heretics as realities' (Ward, i. 247); and he had been seeking a key to their situation, which,

as mentioned above, he thought he had discovered in 1866 in the idea 'that certitude is a form of assent, and that to treat of the psychology of assent as distinguished from inference' was the way to reach his aim. The book is too long and too closely reasoned to be analyzed here; its value is its keen insight into certain mental processes which are deeply rooted in the experience of mankind, though their importance is not as a rule fully realized, which account for and justify beliefs not to be adequately proved by explicit logical arguments. It was a bold experiment; where scientific theology had tended to use the deductive method exclusively, the *Grammar*, with its minute psychological observation, was a step in the direction of employing the Baconian method.

'How man ought to arrive at certitude has been the subject of many an ambitious treatise. How, in concrete matters, he does arrive at it, was Newman's concern' (Barry, p. 148).

The *Essay on the Development of Christian Doctrine*, most of which he had written before his conversion as an intellectual exercise for himself, evidences his growing conviction that the Roman Catholic belief of the 19th cent. was substantially the same as that of the apostles, only more explicitly defined and amplified. Its main contention may be most simply understood by recalling the use of the word 'development' in photography, where the chemical process is unable to bring out anything that was not originally imprinted on the plate by the sun's rays, yet the outline only at last becomes clearly visible. To some thinkers of the present day the enforcement of this idea, which anticipated so curiously in the ecclesiastical field much that Darwin was to suggest in the realm of biology, seems Newman's most important contribution to religious thought; and certain Modernists, especially in France, have attempted to claim him as in sympathy with their position. He was, indeed, one with them in his anxiety to show the reasonableness of his faith to the modern non-Catholic world, whose peculiar difficulties he understood so well; and they might gladly quote such phrases as these, detached from their context:

'Old principles reappear under new forms. [The living idea] changes in order to remain the same. In a higher world it is otherwise, but here below to live is to change and to be perfect is to have changed often' (*The Development of Christian Doctrine*, pt. i. ch. i. sect. i. [ed. 1878, p. 40]).

But the context and the attitude of humble submission to authority which characterized Newman's forty-five years as a Roman Catholic tell a different story; and the lecture entitled 'A Form of Infidelity of the Day,' delivered in 1854 (*Idea of a University*⁴, London, 1875, pp. 381-404), distinctly condemns, in an almost prophetic manner, the special temper of mind which was to be known half a century later by the name of Modernism (*q.v.*).

His genius did not find full development in the realm of fiction, although his two attempts in this field—*Callista* (1856), a tale showing the influence of Christianity on the educated world of the first Christian centuries, and *Loss and Gain* (1847), a novel full of interest for its vivid picture of the Oxford of the Movement—have many exquisite passages. The greater part of his poetry belongs to the early days, and is marked by the austere sobriety of *The Christian Year*. What was written later shows the same progress as is apparent from his Anglican to his Roman Catholic sermons—a greater intensity and fervour, life and colour. One poem stands out as unique in beauty and force. *The Dream of Gerontius* (1865), describing in dramatic form the death of a Christian and what follows it, written at a time when he was often meditating upon the expected approach of his own death, has a soaring splendour of imagination which induces a modern non-Catholic critic (W. J. Dawson, *Makers of English Prose*, p. 296) to

reckon it 'one of the great poems of the world, in spirit and substance akin to Goethe's *Faust* and Dante's trilogy, in depth of spiritual insight and emotion superior to the former and the equal of the latter.'

The same writer goes on to call it 'the most characteristic fruit of Newman's genius. For by birth and training, by temperament and life, Newman was essentially a religious genius, a prophet to whom doors of vision stood wide where other men saw only impenetrable darkness; yet so sensitively sympathetic, that he knew the weight of darkness which crushed others, although he never once succumbed to it. And it is by virtue of this temperament and genius that he will always be reckoned the greatest religious writer whom England has produced—perhaps also the greatest since Augustine and Aquinas.'

LITERATURE.—Newman's *Works* are published in 36 vols., London, 1868-81. The final authority on his biography is the *Life* by Wilfrid Ward, 2 vols., do. 1912. There is a valuable monograph by William Barry², do. 1904, and other brief *Lives* by W. Lockhart, do. 1891; R. H. Hutton, do. 1891; Wilfrid Meynell, do., n.d. [1887]. Inestimable in their wealth of detail on the Anglican period are his *Letters and Correspondence*, ed. Anne Mozley, 2 vols., do. 1891; see also *Contributions chiefly to the Early History of Cardinal Newman*, by his brother F. W. Newman, do. 1891. Other works which may be consulted are E. S. Purcell, *Life of Cardinal Manning*, 2 vols., do. 1895; H. P. Liddon, *Life of Edward Bouverie Pusey*, 4 vols., do. 1893-97; T. Mozley, *Reminiscences, chiefly of Oriel College and the Oxford Movement*, 2 vols., do. 1882; *Letters of the Rev. J. B. Mozley*, ed. Anne Mozley, do. 1885; J. T. Coleridge, *Memoir of John Keble*, do. 1869; Walter Lock, *John Keble*, do. 1893; R. W. Church, *The Oxford Movement*, do. 1891; *Occasional Papers*, do. 1897; C. Kegan Paul, *Biographical Sketches*, do. 1883; E. A. Abbott, *The Anglican Career of Cardinal Newman*, 2 vols., do. 1892; R. H. Hutton, *Essays on some Modern Guides of English Thought in Matters of Faith*, do. 1887; J. A. Froude, *Short Studies on Great Subjects*, iv., do. 1883; John Morley, *Miscellanies*, 4th ser., do. 1903; Aldan Gasquet, *Lord Acton and his Circle*, do. 1906; Percy Fitzgerald, *Fifty Years of Catholic Life and Social Progress*, 2 vols., do. 1901; *Letters of Archbishop Ullathorne*, do. 1892; W. Sanday, *England's Debt to Newman*, do. 1892; C. Sarolea, *Cardinal Newman and his Influence on Religious Life and Thought*, do. 1908; P. Thureau-Dangin, *La Renaissance catholique: Newman et le mouvement d'Oxford*, Paris, 1899; Henri Brémond, *Newman: Le Développement du dogme chrétien, Psychologie de la Foi, Essai de biographie psychologique*, 3 vols., do. 1905-06, Eng. tr., *The Mystery of Newman*, London, 1907; W. J. Williams, *Newman, Pascal, Loisy, and the Catholic Church*, do. 1906; L. E. Gates, *Three Studies in Literature*, New York, 1899; W. J. Dawson, *Makers of English Prose*, do. 1906. Joseph Rickaby has published an *Index to the Works of John Henry Cardinal Newman*, London, 1914.

NEW MOON.—See CALENDAR.

NEW TESTAMENT.—See BIBLE.

NEW TESTAMENT IN MUHAMMADANISM.—See OLD AND NEW TESTAMENTS IN MUHAMMADANISM.

NEW THOUGHT.—New Thought, sometimes known as 'progressive philosophy,' has been defined as 'the latest product of growing mind' (C. D. Larson, *Eternal Progress Magazine*, Feb. 1912, p. 13), and as 'an attitude of mind and not a cult' (W. W. Atkinson, in the *New Thought Magazine*). Neither definition is complete.

1. Principles.—Some of the underlying principles of New Thought are the following: the existence of an omnipresent God—a God immanent in nature; universal life, intelligence, and energy, underlying and pervading the universe, finding expression in every created entity, colouring the rose, moulding the leaf, painting the sunset, clothing the grass with beauty, teaching the bird its song, reaching its culmination in man and revealing to him his own individuality and the consciousness of his own divine soul; the reign of universal law—the law of cause and effect; and that this law is as inexorable in the mental and spiritual world as in the physical universe; that thoughts are forces, and under this law every thought planted in the subconscious is expressed in the life and personality of the individual; 'whatsoever a man soweth, that shall he also reap' (Gal 6); the identity of the individual

or human soul with the universal or divine Soul, and hence the continuity of the soul after the change which we call death; the brotherhood of man as the true foundation of every human relationship; that truth is the only foundation for religion and for ethical or moral growth; that evolution is God's method of creation, and that man is the result of evolutionary processes.

2. Religion or philosophy.—A religion or philosophy founded on these principles cannot harmonize with many of the Christian dogmas. New Thought excludes such doctrines as the duality of man and God, miracles in the accepted sense, the vicarious atonement, the forgiveness of sins, and priestly mediation. It seeks to interpret the world and nature as science has recorded them, but also to convey their finer and esoteric meanings to the human understanding. The fundamental purpose of religion and science is the same—namely, the discovery of truth. No conflict ever existed between true religion and real science; the only conflict was between contending dogmatists. Truth does not produce conflict.

New Thought holds that mind is the dominant power in man, and that his life and personality are the sum total of his thoughts. It would employ the laws of modern psychology in the mental development of man and the creation of proper mental states for bodily health, intellectual and moral efficiency. It lays emphasis on the value of constructive thinking. Thought is the helmsman that every man obeys. Thought determines character; thought is character. The conscious mind supplies ideals; the subconscious brings them into expression. Every thought sent forth attracts like thoughts, whether good or bad; this law is as certain as the law of gravitation.

It sees every man as a divine soul, hence it recognizes limitless possibilities within him. The purpose of true religion is to call the divine qualities of man into expression. It advocates a religion for to-day, and recognizes character as the only asset that man can carry into another state of existence. It sees in God and man the same attributes; otherwise man could form no comprehension of God. 'Man is a microcosm of God.' Accepting the fundamental unity of creation, it recognizes a kinship between man and every created entity, and that unity as the only foundation for the brotherhood of man. When the conception of this unity embraces our whole being, then and then only are we free.

Realizing God as omnipresent, indwelling in man, it finds no place for intermediaries. If God is indwelling in man, there is no occasion for a vicarious atonement to restore His lost relationship. Man's only separation was in thought, only an illusion of theology, an invention of the Church to make a place for intermediaries. Man having his origin in the lowest forms of animal life, his course has been steadily upward, until he now stands at the summit of creation, capable of abstract thought, conscious of his own divine qualities. His only fall was upward.

'If the sole Divinity of Jesus is denied, the Divinity of all men is affirmed' (S. D. Kirkham, *Ministry of Beauty*). While the Christian religion would bring God down to man, New Thought would lift man up to God, i.e. to the consciousness of his own divinity.

As the Christian creeds—Roman Catholic, Greek Catholic, and all the Protestant branches—rest on the allegory of Eden related in Genesis, they must either stand or fall by the construction which their theology has placed thereon. It is inconceivable that God would condemn the race for one act of their common ancestor, when that act was a step upward in the evolution of man—an effort to rise

above the animal and become man. According to Gn 3^d, the serpent said to Eve: 'God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as God, knowing good and evil.' Was it wrong for man to become wise? According to theology, God put a ban on knowledge and wisdom, and manifested intense jealousy over man becoming like Himself. To-day we would not seriously regard a religion that did not urge man to become like God.

Adam and Eve ate and they became wise; they knew good and evil. Was there a penalty? Yes; every progressive step has its penalty. Adam and Eve as animals were happy only as the animal is happy. They had only physical desires; no worries fretted their lives; they could not sin; they were strangers to remorse. As man and woman, knowing good and evil, they could sin; they could feel the sting of remorse, and must thereafter pay the penalties of sin.

New Thought is not a system of thought, for, when thought is moulded into a system, it ceases to grow, and is not therefore new. The term can be employed only to convey the idea of growing thought. Man applies thought to the truths that enter into his consciousness, he gains new and enlarged conceptions, his mind expands, and his resultant thought is new. Every religion or philosophy is the product of human thought. When mind develops and expands, religions and philosophies must likewise expand. Unless a religion or philosophy is based on universal principles, when mind expands beyond its circle, it must fall. When so based, mind cannot pass its boundaries, however far it may soar, for thought cannot transcend infinity. Here is the test between temporal and enduring religions. Until the world worships a universal God, we can never have a universal religion; we can never have a universal religion so long as we worship a distant God. Until we have a universal religion, we can never have universal peace or the brotherhood of man.

The greatest gift from God to man is a growing mind. Were our ideas fixed and changeless, life would become intolerable. It is the new conception that thrills the soul and broadens the understanding. In the search for truth each discovery becomes a cause, a starting-point for the discovery of more truth. The discovery of every law of nature is a forerunner of a more universal law. Each step towards the infinite reveals new light. Our last thought may be our best, but not our ultimate, thought.

Science in its broadest aspect is a search for the knowledge of God. Because its fundamental idea is a search for truth success has rewarded its efforts. To gain higher conceptions of the basic laws of the universe is the real work of man. As man grows into a closer intimacy with nature, he enters a richer field of experience, he gains a wider spiritual vision, he realizes his oneness with universal life. New Thought means spiritual and mental growth, constant and eternal progress. Recognizing divine qualities in man, it sets no bounds to the soul's progress.

New Thought does not teach the moral depravity of man. Such thoughts demoralize and weaken the individual. What we sow in the subconscious is reproduced in the life expression and personality. Modern psychology is believed to be rapidly undermining many theological fallacies. Miracles in the accepted sense New Thought does not conceive as possible in a universe of law. The only miracles are phenomena not understood, but nevertheless the result of law. It applies the pragmatic test to every religion and philosophy. Are you true? What do you give to man to carry to his daily tasks?

New Thought is not favourably impressed with the idea of a special revelation through a book or certain favoured individuals. Men of this age, becoming more and more intellectual and discriminating, will not accept a revealed religion from a book whose authorship and date of production are unknown, according to the voice of modern scholarship. God never spake to man, but through man, for man is a part of God. Through man He finds expression as He does in the rose and bird, only in the rose and bird He manifests in lower octaves. The essence of the soul, as of the universe, is unity. The book of Nature is always an open volume, and from its pages we may read God's thoughts and secrets. He whose ear is attuned to Nature constantly hears her divine and peaceful melodies. The rocks and trees and running brooks teach profounder lessons than were ever read in books or taught by man to man. In the book of Nature we catch glimpses of eternal beauty, harmony, infinite power, universal order, abiding and constant love.

New Thought is a progressive idealism, viewing the visible universe as the expression of cosmic mind and all created entities as the result of divine ideals. The starting-point of all things is in thought-images; mind expresses itself in matter. Absolute idealism or Christian Science denies the existence of matter, holding that nothing exists but the ideal. Here is the line of divergence between the two philosophies. The idealism of New Thought is progressive, because all healthful ideals change as man gains new visions of the truth.

New Thought proclaims a robust individualism. The individual is the unit from which all greatness springs. Man is great only as he is individualistic, only as he follows his own path. The individual ranks above all institutions. All masters of thought have taught this truth. Human thought created every institution, and no institution is greater than its creator. Jesus spoke to individuals and not to institutions; neither did He found an institution.

New Thought recognizes no authority save the voice of the soul speaking to each individual. Every soul can interpret aright the oracles of truth. The assumption of authority, it is held, marks the decline of religion and stifles every spiritual impulse. When man has found the light within, he consults no authority how he shall worship God. As the adherents of New Thought conceive of God as omnipresent and hence indwelling in man, their idea of prayer differs from that of those who hold the dualistic conception. The dualist prays to an absentee God, the others to the God within. True prayer is not debasing the soul in the presence of divinity; it is lifting the soul up; it is bringing the conscious mind into touch with the universal mind; it is lifting the soul into an atmosphere where one feels the glow, the beauty, and harmony of the divine presence, and the play of vibrations from the source of eternal truth.

New Thought presents two ideas as supremely fundamental and important in man's development: (1) that he is a divine soul, and hence has within himself unlimited potentialities, slumbering perhaps and waiting to be called into expression; and (2) that he is under the dominion of universal law—the law of cause and effect; that he is punished by every wrong and rewarded by every virtue. Until we grasp the true significance of these truths, we shall never find a true religion or the pathway of spiritual progress. This philosophy conceives of evil as only a misdirected energy. All forces are good; only as they are misdirected do they produce harm. Evil has been unduly exalted and good unreasonably minimized. The Church

created an imaginary Satan, and at the same time emphasized man's weakness and inability to resist him. True teaching exalts the good and replaces negative with constructive thoughts. To teach man to come into the conscious realization of the divinity within, the unity of God and man, so that out of the sublimity of his own soul he can say with the Gentle Seer of Galilee, 'The Father and I are One,' is the supreme voice and meaning of New Thought.

NICARAGUANS.—See CENTRAL AMERICA, MEXICANS.

NICOBARS.—I. The country and the people. —The Nicobars are a group of nineteen islands in the Bay of Bengal, twelve of which are inhabited, at the southern extremity of the long string of islands, stretching between Burma and Sumatra, usually called the Andamans and Nicobars (see ANDAMANS). The name implies 'the land of the naked,' by which the islands have been known to travel and commerce for many centuries, as they lie in the direct sea route from west to east. The people are not, however, really naked, though they wear very little clothing owing to the heat of the climate.

The Nicobarese are not divisible into tribes, and what differences are observable among the inhabitants of the several islands may be safely referred to habitat and the physical difficulties of communication between the islands.

By language, physique, and tradition they belong, no doubt, to the general Indo-Chinese race of the Farthest East, and came into their present home long ago from the south-east corner of Asia. Throughout the ages, from the days of the geographer Ptolemy onwards, they have been known for the same characteristics—want of clothing in the men, short petticoats for the women, possession of coco-nuts, betel, and ambergris, manufactures in cane and bamboo, eagerness to trade for iron with passing vessels, communication with strangers by canoes, isolation from the world except for passing ships—that is, as having the same civilization and the same habits as distinguish them at the present day. In this view a study of them is of great ethnological value, as, owing to their consistent isolation from the earliest times, it must be to their habits that we should look for an explanation of those of the great general group of mankind to which they belong. The same observation is true of their speech, which clearly belongs to that group of tongues now represented by the Mon language of Pegu and Annam and the Khmer language of Cambodia among civilized peoples and by the dialects of a number of uncivilized tribes in the Malay Peninsula and Indo-China. The isolation of the speakers of the Nicobarese dialects, and the small admixture of foreign tongues to be found in them, render them a probably true basis for the philology of the Indo-Chinese family of languages.

The Nicobarese are not savages, and apparently have not been so at any time in the long period during which they have been reported on by Indian, Greek, Arab, and Chinese traders. They are a fine, strong race with idle habits, as they live in what is to them a land of plenty with a hot enervating climate. Their great standby is the coco-nut, which supplies food and drink and many other wants both of themselves and of their domestic animals, and, by means of trade and barter, every

foreign luxury that they desire, including rice, cotton clothing, and metal ornaments. Though they will not cultivate rice because they can import it, they are capable fruit gardeners. They are well housed, and their villages are carefully arranged and often kept extraordinarily clean. They can manufacture, in wood, iron, cane, and pottery, most of the articles which they require for domestic use, importing the rest, and they are good canoe-builders. They have a definite system of trade, both internal and external, though they do not use money, but employ coco-nuts as their currency, in the use of which they have created for themselves a ready and quick-witted method of valuation. Everything is estimated in pairs of coco-nuts, even foreign money, and, with the aid of an ingenious and intelligent system of reckoning by scores, they can count and tally accurately up to very large numbers. They reckon time by the moon (lunar months) and by the monsoon or half-yearly season, never by the year, with considerable accuracy by means of intercalary nights and rough calendars notched on wood. The distances between the islands have made them study the stars and winds to a limited extent, and turned them into experts in the feeling of direction, and, as among other Far Eastern peoples, the points of the compass are thoroughly understood and constantly in mind. They are natural linguists, and pick up readily, in 'pigeon' fashion, any tongue that they come across in business or trade. In this way they got on formerly in Portuguese, Danish, German, and English, and in early times in Malay and Chinese. Nowadays English, Burmese, Hindustani, and some Tamil are their chief foreign acquirements. Their own language, though unwritten, is a remarkable product of the human mind. It is a highly developed analytical language with a strong resemblance in grammatical structure to English. It bears every sign of a very long continuous growth both of syntax and of etymology, and is clearly the outcome of a strong intelligence constantly applied in its development. The last observation sums up the mental powers of the Nicobarese. Though arrested as to development in the stage of half-civilization, they are up to that point a clearly intelligent people.

Taken as a whole, the Nicobarese, though for a long time they were callous wreckers and pirates and then very cruel, and though they show great want of feeling in their 'devil murders'—a form of public execution of undesirables—are a quiet, good-natured, inoffensive people, honest, truthful, friendly, helpful, polite, extremely hospitable towards each other, and not quarrelsome. By inclination they are friendly and hospitable towards and not dangerous to foreigners, though in places suspicious of them, and then surly. They are kindly to children, the aged, and those in trouble, even when foreigners, respectful and kindly to women, the wife being a help, not a slave, and deferential towards elders. They are conservative and bound down by custom in all things, though capable of change of habits on occasion.

The Nicobarese are given to drink from home-made coco-nut toddy and any foreign liquor that they can get. Their great pastime is feasting, not only on every 'religious' pretext that presents itself, but also by way of family conviviality. They are musical, and sing clearly and well in unison. The social emotions are highly developed, and domestic trouble will on occasion lead to suicide. The family system is patriarchal, and what government exists is extremely democratic in character. They are kept perpetually poor by the custom of destroying all personally acquired property at death and dividing equally all real property among sons, daughters getting a share on marriage. Girls are

free to marry whom they wish, subject to such pressure as the possession of means on the part of suitors naturally produces.

2. Religion.—(a) *Historical aspect.*—It will be observed that the study of the religion of such a people as this, small though their numbers may be—only some 6500—is something more than merely interesting, as it may lead to an explanation of much that is to be found in the customs and ideas of their congeners on the neighbouring continent, and of the more numerous and civilized islanders of the Malay Archipelago, who have long been subjected to a close contact with the outer world.

Especially will the study be found informing, because, unlike the case of the Andamans, there is as long a history of European occupation, chiefly by missionaries, as exists of any other land in the Eastern seas. In the 16th cent. came the Portuguese. French Jesuits were there in the 17th and early 18th centuries. In the latter half of the 18th cent. Protestant Danes from Tranquebar tried their influence on the people by means of a Moravian (Herrnhuter) mission, which lasted after a fashion till 1834. Then French Jesuits succeeded again, only to disappear in 1846. These missionary efforts were accompanied by attempts, all more or less feeble, to colonize the islands by Frenchmen, Danes, and Austrians, until the advent of English power in the islands for political reasons in 1869. The climate is a fatal one for Europeans, and every one of the pre-British efforts, missionary or political, failed miserably. Indeed, the long story of the European attempts to colonize and evangelize such a land as the Nicobars is a record of the extreme of useless suffering that merely well-intentioned enthusiasm and heroism can inflict if they be not combined with practical knowledge and a proper equipment. Beyond leaving behind it a valuable and continuous series of records of all kinds about the country and the people, a few religious terms of European origin, such as *pater* for sorcerer, and *Deos* (also *Reos*) for God, already degraded, as *Deuse*, into a plainly anthropomorphic chief of the spirits to be feared, a few personal names of Christian origin, and a folk-tale here and there saturated with European ideas, all the missionary effort of 300 years has had no effect whatever on the religion of this old and most conservative people. One of the most noteworthy facts about them is that, in spite of everything, their religion has remained the same throughout the ages.

(b) *Animistic form.*—The indigenous religion of this semi-civilized people is an undisguised animism, and all their very frequent and elaborate ceremonies and festivals are aimed at exorcizing and scaring spirits—'devils,' as they have learned to call them from the missionaries, the term 'devil' being often quaintly transferred from the spirit itself to the spirit-scarer. Fear of spirits and ghosts (*iwi*) is the guide to all ceremonies, and the life of the people is very largely taken up with spirit-scaring and spirit-controlling ceremonies and feasts of all kinds. They are usually held at night, and, whether directly religious or merely convivial, seem all to have an origin in the overmastering fear of spirits that possesses the Nicobarese. It has so far proved ineradicable, and all the Christian missionary effort so long applied has had no appreciable effect on it. The one outcome of the religion of political import is the ceremonial murder of one of themselves for grave offences against the community—e.g., for murder, habitual theft, or public annoyance. Such an offender is regarded as 'possessed,' and is by a sort of lynch law formally put to death with great cruelty. This, the 'devil murder' of the Nicobars, is now being gradually put down.

Witches and, of course, witch-finders abound. It follows that the mind of the Nicobarese is largely occupied with superstitions, which extend to the ancestors, the sun, and the moon. The funeral ceremonies show that human shadows are the visible signs of the spirits of the living, and on Car Nicobar there is a special ceremony for 'feeding shadows.' Every one's fortune and sickness are spirit-caused or witch-caused, and the remedy in every case is special exorcism by means of the *menlūana* (shaman, or doctor-priest), or by general exorcism performed privately. Of the latter class of remedy is a libation poured out always before

drinking and at spirit-feasts. Lucky and unlucky actions and conditions abound, of which a quaint instance may be quoted: it is lucky to get a pregnant woman and her husband to plant seed in a garden. Uneven numbers are unlucky, and no others are allowed at funerals.

3. Religious influence.—(a) *On art.*—The superstitions and animistic beliefs of the Nicobarese explain a good many articles to be seen prominently in their houses and villages. Such are the *henta*, which consist of paintings, sketches punctured on areca-nut spathe screens, or carvings on boards. They represent all sorts of objects, such as huts, trees, birds, domestic animals, men and women, ships and canoes, crocodiles and fish, including the merman and mermaid, sun, moon, and so on. *Deuse*, i.e. God, in the degraded form of a chief of the spirits, is frequently represented in some of the islands as a man in quaint European garb, with a wine-glass in his hand, surrounded by various weapons, implements, or articles in daily use, including a mat, a table, chairs, decanters, watch, telescope, and boatswain's whistle. All this shows that the people regard him as a European spirit embodied in a ship's captain, the most powerful human being of their acquaintance. The object of the *henta* is to gratify the good spirits (*iwi-kā*) and frighten away the bad spirits ('devils,' *iwi-pot*).

A development of the *henta* is the *kareau*, the most prominent object in many Nicobarese houses. This is a human figure in a threatening attitude, often of life size and armed with a spear, which is made in times of sickness under the orders of a *menlūana*, with the object of discovering or frightening away the bad spirits that have caused the sickness. If the patient recovers, the image is regarded with favour, and retained for future services: if he dies, it is thrown into the jungle. Other common carvings are a ladder (*halak*) for the use of the *menlūana*'s spirit, to climb up and discover whether the spirit of sickness is in the air, and a canoe or ship to enable his spirit to search for the evil one among neighbouring villages or islands. Similarly fish, birds, animals, sometimes with human faces, are carved in order to invoke the assistance and good will of their spirits in helping the *menlūana* to discover the whereabouts of offending spirits, and so to alarm them that they will not repeat their visits.

(b) *On festivals.*—The spirit-feast is a family (including the friends) general exorcism with the aid of the *menlūana*, rubbed over with oil, his face painted red, and worked up to an ecstasy by drink and his mysteries. His business is to catch the *iwi*, or spirit of harm, after a struggle, and put it into a small decorated model of a boat, which is towed far out to sea. In cases where spirits have caused sickness, or where they might damage a new hut, they are caught and put out to sea in special cages placed on special rafts. This apparently harmless ceremony leads, however, to the most serious, and in some cases comic, quarrels of the people. Should the raft land at a coast village, the spirit of evil is transferred thereto, and at once a sudden attack is organized on the offending and unsuspecting village that has let it loose. This attack is ceremonial in its nature, though severe, and must be conducted with special quarter-staves until some heads and limbs are broken, when both sides fraternize and wind up with a joint jollification.

(c) *On customs.*—In fact, the main-spring of all the religious ceremonies of the Nicobarese is the controlling or scaring of spirits. They pass their lives in dread of the spirits, chiefly of the dead, and the effort to overcome them is seen most clearly in the various ceremonies connected with death. The customs in the northern and southern islands are distinct, but everywhere extravagant grief is displayed at all deaths for fear of angering the ghosts. Everywhere funeral ceremonies are prolonged and elaborate, but all are for the one end of rendering the ghosts harmless, and preventing them from leaving the grave. In the south after

some time the *lanēatla* feast is held, when the skeleton is exhumed, thoroughly cleaned, and re-interred. In the north this feast is represented by the ceremony of disinterment of all the recently dead at the same time, and the disposal of their bones in a communal ossuary. Both these ceremonies have the object of making the ghosts harmless—in the one case by depriving the bodies of all their flesh, and in the other by mixing them all up together. As with the primitive Andamanese, it is the recently dead who can do most harm to the living. For the disposal of the bodies of highly revered personages there are special ceremonies everywhere. This is interesting as a distinctly Indo-Chinese custom.

(d) *Tabu*.—Connected with the death ceremonies especially there is a wide custom of tabu, which may be light or serious in its consequences, as it is a sort of privately imposed self-denying ordinance as to what shall be tabued from use in the way of food or drink. In the case of those entitled *saōkkua* ('dainty', 'fastidious') it amounts to an embryonic asceticism. There is, of course, a great deal of pretence about observing self-imposed but highly inconvenient funeral tabus, and many amusing stories are told of the ways and means adopted of avoiding them. Once the idea was started, however, tabu has been extended in all directions, until it has affected the form of huts in villages, and confined certain industries to localities, such as the making of pottery to Chowra Island, shell-lime to certain other islands, and fish traps to Nancowry Harbour in the rainy season. It has greatly affected the nomenclature of the people, as the names of the dead may not be used again by relatives and friends for a whole generation, and, since personal names are always words in common use in the language, these words are also avoided—so much so, indeed, as to affect the dialects of villages from time to time.

(e) *Priests and novices*.—The *menlūana* is a shaman or doctor-priest of the sort that is common to many half-civilized peoples, but there is an interesting variety of him at Car Nicobar in the *māfai*, or novice, the name actually meaning one undergoing sacerdotal instruction. Any one who feels himself inspired may become a *māfai*, but he does not necessarily pass on to the stage of *menlūana*. The ordinary cause of becoming a *māfai* is recovery from severe illness, and the life is that of comfortable, well-fed idleness—a condition which has caused imposture in some cases. The use of the *māfai* to the public is to cure the sick by touch. It need hardly be said that in the circumstances the medicine of the Nicobarese is almost wholly exorcism and belongs to the domain of superstition. The Nicobarese 'doctor' cures by a spiritual fight with the spirit which has possessed the sick man, and includes conjuring tricks in his practice, in order to press damaging articles, like pigs' teeth, stones, etc., out of the patient's body. There is no idea of surgery.

4. Folk-tales.—Tales of origin—in this case from a man and a dog—and the like, told in a jerky, disjointed fashion, the Nicobarese share with many parts of the civilized and semi-civilized world. Chowra Island is their holy land, the cradle of the race where the men are all wizards—a belief that the inhabitants thereof have turned to good account for keeping the control of the internal trade chiefly in their own hands. But one must be careful with Nicobarese folk-tales, as the people have proved themselves to be receptive of foreign stories and to be fond of repeating them in a purely native dress (see *Census of India, 1901, iii., Report, 'The Andaman and Nicobar Islands,' p. 230*). Hence the presence in some of their tales of creatures which are not indigenous in the

islands, and hence also the practically certain missionary origin of the tale of the Creation prevalent in Great Nicobar, in which Deuse (God) appears with Eve and her birth, the forbidden fruit, and the temptation.

LITERATURE.—This is largely mixed up with that of the Andamans (see ANDAMANS), but the following works may be separately consulted with profit, especially as many of them contain valuable bibliographical notices in several languages: R. C. Temple, *Census of India, 1901, iii.*, 'The Andaman and Nicobar Islands,' Calcutta, 1903, 191 xix. 59 ff., republished, 1909, in *Provincial Series*, 'Andaman and Nicobar Islands,' *Gazetteer* 1908, 'Andaman and Nicobar Islands'; *Selections from the Records of the Government of India*, no. lxxvii. Calcutta, 1870 (valuable bibliography); F. A. de Roepstorff, *Vocabulary of the Dialects spoken in the Nicobar and Andaman Islands*, do. 1875 (references French, Danish, German), *Dict. of the Nancowry Dialect*, do. 1884 (references to Danish works).

All the above are Government of India publications. See also W. Dampier, *New Voyage round the World*, London, 1697; E. Renaudot, *Ancient Accounts of India and China by two Mohammedan Travellers*, do. 1733; *Lettres Édiifiantes*, xi., Toulouse, 1810; F. Maurer, *Die Nikobaren*, Berlin, 1867 (valuable bibliography, English, Danish, German, from 1799 to 1863); E. H. Man, *Nicobar Voc.*, London, 1888, *Dict. of the Central Nicobarese Language*, do. 1889.

There are also references in H. Yule, *The Book of Marco Polo*, London, 1871, and in I-Tsing, *Travels*, ed. E. Chavannes, Paris, 1894, and J. Takakusu, Oxford, 1896. Articles will be found in *JRAI*, those by E. H. Man being very valuable; in *Asiatic Researches*, by N. Fontana, iii. [1802], G. Hamilton, ii. [1801]; in *JASE*, 1870, by de Roepstorff; in *JA*, many by E. H. Man and R. C. Temple; in *Journ. Ind. Archipelago*, by Chopard, iii. [1844]; in *Journ Philol. S.*, by A. J. Ellis, 1882; in *JRAS*, Straits Branch, by C. O. Blagden. There is a valuable article by W. Svoboda, in *AE* v. [1893] 186 ff., 'Bewohner des Nikobaren-Archipels,' with coloured plates and a good Continental bibliography.

R. C. TEMPLE.

NICOLAITANS.—This is the name given to a sect mentioned in Scripture only in Rev 2¹⁵; but the Jezebel of Thyatira was probably a woman of influence within the party, and the paragraph 2¹⁵⁻²⁹ throws light upon their tenets and practices. Outside of Scripture are several allusions, lacking in definiteness and leaving many questions unanswered. Irenæus (*adv. Hær.* i. 26) reproduces the description of the Apocalypse, and seems to have had no other source of information, but in iii. 11 he adds that the Nicolaitans anticipated Cerinthus and were therefore to be classed as a 'vulsio (ἀπομαρμα) ejus quae falso eognominatur scientia.' Clement of Alexandria (*Strom.* ii. 20, iii. 4) refers to the sect as immoral, and quotes a tradition as to its origin, which is adopted by Eusebius (*HE* iii. 29) without any suggestion of the existence of other accounts. Tertullian (*adv. Marc.* i. 29) makes similar charges of self-indulgence and lustfulness; but his language elsewhere (*de Præse. Hær.* 33) suggests that the Nicolaitans had ceased to exist as a separate sect, while the name served as a convenient description of the morals of some of the Gnostics (cf. 'sunt et nunc alii Nicolaitae; Caiana haeresis dicitur'). Such other early evidence as is extant is obviously, or even confessedly, based upon what has already been cited; and the most likely explanation is the existence of two entirely independent sects or groups—the Nicolaitans of the Apocalypse, struggling unsuccessfully for a hold in the important centre of Ephesus (Rev 2¹⁵), but flourishing in the comparative security of Pergamum, the ancient official capital of the province, and Thyatira (Rev 2^{15, 20, 21}), and a later libertine Gnostic sect, which at the beginning of the 3rd cent. either justified some of its practices by an appeal to the teaching ascribed to Nicolaus or because of those practices attracted the condemnation associated with his name.

1. Origin of the name.—There are several theories as to the origin of the title, but not one of them is free from difficulty.

(1) The earliest and earliest derives the name from that of the deacon 'Nicolas a proselyte of Antioch' (Ac 6⁵), about whom nothing is certainly known, the numerous legends having arisen in the endeavour to explain his assumed relation to the sect.

Clement of Alexandria (*Strom.* iii. 41.) preserves a story to the effect that the deacon was reproved by the apostles for the jealousy with which he watched over his beautiful wife, whereupon he offered to give her over (*ἐνέπεφεν*) to any one of them who wished to marry her, and himself lived afterwards blamelessly. The deacon is further quoted as using the phrase *δὲν παραχρησθαι τῇ ἀρσῇ*, and the ambiguity of *παραχρησθαι* was the cause of misunderstanding. Nicolas used the word in the sense of despising or ill-using (Herod. i. 108, viii. 20, though with a different construction; cf. J. Ast. *Apol.* i. 49); but the sense of misusing by indulgence (Arist. *ap. Plut.* ii. 527 A; Philo, ii. 61) was assumed by an Antinomian party in the Church, who proceeded to claim the deacon's sanction and to shelter themselves under his name. Epiphanius (*adv. Hæc.* i. 25) gives the story another turn, and represents Nicolas as separating from his wife in obedience to the counsels of perfection, but afterwards as breaking down his purpose and returning to her again. This conduct he is implied to have justified by easy principles, and thus he 'occasioned the foundation of the sect of the Nicolaitans.' But not only is Epiphanius a rather late witness; his account is discredited by his evident disposition to disparage marriage. He reads the sentiments of his own day into the practice of a much earlier age. On the whole, whatever testimony there is is distinctly in favour of the deacon. Eusebius and Hippolytus are not independent, and have no original information on the subject, and Theodoret (*Hæc. Fab.* iii. 1) professedly follows Clement, who defends Nicolas from the charges to which his assumed followers were open, thereby discrediting his own theory of the origin of their name. Twice in the 'long' recension of the Ignatian *Epistles* the Nicolaitan is qualified as *ψευδώνυμος* (*Trall.* 11, and *Philad.* 6), and the term may have been borrowed from *Apost. Const.* vi. 8. Thus in all probability the assumed connexion of the sect with the deacon is but another instance of the tendency to fasten upon an 'apostolic man' as the originator of every early movement and even as the founder of any important heresy; but, whilst that tendency may throw some light upon the views put forth by Clement and Epiphanius, it does not explain the occurrence of the word in the Apocalypse.

(2) Even less can be said in support of the theory that Nicolas is a translation or transliteration of Balaam. It is true that the Apocalypse is allegorical; but the appetite of its author for symbol was not without limit, and he is not likely to have tried to bewilder his readers with a hopeless puzzle in etymology. The name of Balaam was already current as typical of certain false views and immoral practices (2 P 2⁵, Jude 11, *Pirge Abboth*, v. 28 f.); and in Rev 21⁴ a comparison is instituted between the effects of his teaching and that of the Nicolaitans, but there is no suggestion that the two words are themselves identical in meaning. Every attempt to show that *Νικόλαος* is a real equivalent to *בַּלְאָם* has failed, and the phrasing of the verses does not warrant the supposition that etymological identity was imagined.

(3) Another Nicolas than the deacon must in consequence be sought as the founder of the immoral party at Pergamum. The name was not uncommon, and exact identification is not at present possible. According to pseudo-Dorotheus, there was a Nicolas, bishop of Samaria, who fell into heresy and evil ways under the influence of Simon Magus, and he may have given his name to the sect; but pseudo-Dorotheus is not only a late witness, but for other reasons somewhat untrustworthy. The same may be said of pseudo-Abdias, who in his *Acta Apost.* introduces us to another Nicolas, who is alleged to have been converted in his old age, after a life of indulgence, through the persuasion of the apostle Andrew. Had this man professed Christianity before his conversion, the circumstances would have been in fair agreement with the conditions as set forth in the Apocalypse. The rise of a noxious party in a district within reach of the scene of the traditional labours of Andrew would be explained, together with the speedy disappearance of that party as a separate Antinomian sect. But in the absence of better or confirmatory evidence all that can be said with confidence is that this Nicolas is the sort of man required, and that to him or to a namesake of similar character may be ascribed the mischief wrought in the northern and neighbouring cities of Pergamum and Thyatira, and suppressed with difficulty but with success in the church of Ephesus.

2. Tenets and practices.—Concerning the beliefs and usages of these original Nicolaitans there is no other direct evidence than is contained in the letters to Pergamum and Thyatira. That resolves itself practically into two statements, as to the meaning of which the context is more significant than are parallel phrases in different connexions.

(1) The one is the explicit comparison with the teaching of Balaam (Rev 21⁴) in the two particulars of sanctioning and even recommending fornication and compromise with idolatry, with a view 'to cast a stumbling-block before the children of Israel,' to frustrate their right endeavours, and by guile to bring about their fall. Certain means, in themselves bad, were deliberately selected for the accomplishment of an inhuman and entirely immoral purpose. The specific references are to such verses as Nu 31¹⁶ 25¹⁻²; and, though the story of Balaam,

as we now have it, has been compiled from several sources, and extracts from JE and from P are woven into it without complete success in unifying the tradition, the writer of the Apocalypse would not be perplexed by any such complications, and his thought is sufficiently clear. Balaam, a recognized prophet or soothsayer, a man not without some knowledge of and reverence for Jahweh, counsels Balak to seduce Israel from its allegiance to Jahweh, and thereby from the enjoyment of His protection, by alluring the people into the immoralities associated with the Moabitic or Midianitish nature-worship. Similarly the Nicolaitans must be considered as loosely connected with Christian organizations of their day, and as seeking to undermine the godliness of the people by beguiling them into complicity with idolatry and into a practical disregard of the sinfulness of sins of the flesh. Self-deceived like Balaam, they glossed over obvious wickedness and so dressed it up as to make it pass off more easily with their consciences (cf. J. Butler, *Works*, ed. W. E. Gladstone, Oxford, 1896, ii., *Sermons*, p. 131, § 12); and hence the allusion involves the charge of a deliberate attempt to impose upon themselves and others in moral matters that were confessedly of the first importance. That such was their leading characteristic appears also from the changed imagery of the message to the neighbouring church.

(2) The second statement is implied in this message to Thyatira, where it is evident that the difficulty was the same, though the OT parallel was found in the case of Jezebel (Rev 2², 1 K 21²⁵), possibly because some female in the church had joined the movement and become the head and front of the offence. The evil that was violently opposed at Ephesus (Rev 2²) was tolerated with inadequate opposition at Pergamum (21⁴), but at Thyatira does not seem even to have been interfered with (2²). The district was and continued to be notorious for its prophetesses, Oriental and Montanist; and it is easy to imagine that some Christian woman of influence became affected by the spirit of the place, claimed for herself the gift of prophecy, and proceeded to use it in the promulgation of views elsewhere known as Nicolaitan. The new feature in the description of those views is the claim to superior knowledge, a natural adjunct to the faith of a party led by a professed prophetess—a claim to know 'the deep things of Satan' (2²). It is very unlikely that any traces of incipient Gnosticism in a technical sense are to be found in that phrase, or anything beyond the pretension to esoteric and privileged knowledge characteristic of every exclusive group. 'Deep things' is an easy expression for any pretender to special intuition to use, and entirely neutral in regard to the implication of Gnostic attachments. St. Paul uses it (1 Co 2¹⁰) of the inscrutable regions where God's plans for mankind are framed, and in the singular for the central riches of the wisdom and love of God (Ro 11²⁵, Eph 3^{1st}). Man's heart also has a depth (Jth 8¹⁴) that cannot easily be sounded, and in nature are recesses into which none but divine thought can penetrate. The figure is early and common, confined to no class or sect, but the heritage of every tongue, and from its use alone there is no need to infer any leaning towards Gnosticism. The qualifying phrase 'of Satan' is not without perplexity. It can hardly be taken literally as implying that the Nicolaitans themselves claimed a special knowledge of the things of Satan. Accordingly Hort (cf. *Com. in loc.*) is disposed to alter the generally accepted punctuation, and to connect 'as they say' with the words that follow, as though the Nicolaitan teachers professed to impose no superfluous burden, a contemptuous reference to the Jerusalem decree (Ac 15²⁸) being implied by the

appropriation of the obnoxious term *βάρος*, which, however, Hort regards as merely a coincidence. If the ordinary punctuation be preferred, the genitive must be taken as the writer's own characterization of the 'deep things'; and by describing them as 'of Satan' he referred simply to their mischievous and evil quality or to Satanic influence as the only influence powerful enough to enable a man to justify sin to his own conscience, and did not closely relate them with the abominations of the local Ophitic worship. That the last-named was his purpose has been inferred from the parallel between this phrase and the allusion to 'Satan's throne' in the message to Pergamum (Rev 2¹³). It is true that Pergamum was a centre in Asia of the worship of Asclepius, whose symbol was a serpent (Paus. II. xxvii.), which in the Apocalypse is the symbol of Satan (12⁹). Jewish story explains sufficiently the association of the serpent with the tempter (Gn 3; cf. Rev 12⁹). At the same time, though the worship of Asclepius was in part the worship of evil, the serpent seems to have been connected with it as a symbol of wisdom and renovation; and there was certainly no reason for singling it out from other Greek or mixed cults for special condemnation. To attribute anything to Satan is in reality one of our writer's favourite phrases of opprobrium, and it is rare that anything more specific is suggested by it. The hostile Jews at Smyrna (Rev 2⁹) and at Philadelphia (3⁹) are 'a synagogue of Satan,' where the controlling thought in the ascription of the name seems to be the paternity of the sin of lying (cf. Jn 8⁴⁴). Similarly the party in the Asiatic churches was deceived and self-deceived, and therefore might be conceived as under the immediate influence of Satan. They boasted of their knowledge of deep things, but were actually misled into wrong and vicious conclusions, as though under the direct guidance of Satan. They asserted as Christian freedom a personal right which really meant self-indulgence and sin; and the moral confusion might justly be ascribed to the author of all confusion. That the phrase contains a veiled allusion to the local Ophitic mysteries, to the gross rites of the aboriginal paganism, or even to the worship of the emperor (which, however, seems to have been introduced into Pergamum as early as A.D. 29; cf. Swete on Rev 2¹³), is an unnecessary suggestion, recondite and unconvincing.

3. Alleged relation to apostolic teaching.—The theory that identifies the Nicolaitans with the followers of St. Paul rests upon an unsubstantial basis, constructed chiefly of a few forced parallels in phraseology. The leaders of the group in Ephesus called themselves apostles (Rev 2²), and one of them in Thyatira may have called herself a prophetess (2²⁰), just as St. Paul occasionally laid stress on his apostleship, and perhaps also implicitly claimed the gift of prophecy. The distinction between the Jew by race and the Jew by spiritual descent is common to both sides, though St. Paul uses less vigorous language and is sparing of denunciation. 'The deep things of God' (1 Co 2¹⁰) and 'the deep things of Satan' (Rev 2²⁴) are related expressions, but the relation is not that of affiliation in phrase so much as that of independent appropriation of a common and current figure. Against the Nicolaitans and their allies the principal charge was that they taught 'to eat things sacrificed to idols, and to commit fornication' (2^{14, 20}). A passage in St. Paul's writings where fornication is authorized has yet to be found, and even his teaching about sacrificial feasts is closely guarded (1 Co 8^{4ff}). Hence altogether the explanation of the Nicolaitans as a Pauline group is quite inadmissible. Their tenets and practices were generally such as he either wholly rejected or in one case cautiously

permitted in the interest of Christian freedom. And, just as the theory that Revelation was designed to be a polemic against Pauline Christianity has failed to establish itself as a whole, the included plea of the Pauline attachments of the Nicolaitans proves without recommendation in fact or even in probable conjecture.

In reality St. Paul, though more given than St. John to compromise on non-essentials, would have opposed the Nicolaitans with equal or greater vehemence. His own principle, indicated in Gal 5⁶ and illustrated in detail elsewhere in his letters (cf. 1 Co 8¹³), was to contend for whatever was central in belief or fundamental in practice, and to allow considerable latitude in regard to whatever did not really matter; but, as soon as anything indifferent was exalted to the rank of the indispensable, it met with stern opposition. Christian liberty was to be maintained against both legal bondage and moral laxity; and yet the Christian 'under law to Christ' (1 Co 9²¹) must be guilty of no offence against Him or His disciples, while admitting no rival. In the conflict with Græco-Roman civilization a practical difficulty continually arose in deciding how far professed Christians could or should comply with the social usages of their neighbourhood. The public festivals in the Ionian cities were the joy and pride of the citizens, and the private clubs or guilds met often in sacred buildings and interspersed sacrificial rites in their formal meals. The question was as to what concessions were legitimate or in the interest of the spread of the Christian religion and the protection of its professors from national suspicion. The Nicolaitans were the extreme party who disregarded all the safeguards with which St. Paul had invested the law of compromise, and pleaded for a suicidal blending of Christian beliefs with idolatrous worship, of theoretical Christian morals with sexual practice of the most immoral kind. St. Paul had seen the possibility of these developments in his day, and would not have considered St. John's denunciation of them as unnecessary or too strong.

4. Later sects of Nicolaitans.—The original sect of the Nicolaitans was not long-lived (Ens. HE iii. 29), though, as has been seen, it attracted the attention of several of the Fathers, who speculated as to its origin and the personality of its founder. But the name, sometimes merely as a term of abuse, has been attached to several later groups without implying any dependence upon one another or upon the sectaries in Asia Minor. There is evidence at the beginning of the 3rd cent. of the existence of a Gnostic sect of immoral habits, called therefore Nicolaitans (Epiph. Her. xxv.; see also pseudo-Tert. *adv. om.* Her. I, and Hipp. Her. vii. 24). They shared in the worship of the great Mother-goddess, the goddess of heaven, and in the unbridled prostitution associated therewith; and, though their special object appears to have been to prevent the sexual propagation of mankind and the consequent perpetuation of evil, their cult might fitly be described as a mixture of idolatry and fornication. In the disputes as to the celibacy of the clergy again the term was applied to the married priests by the opponents of clerical marriage. It appears to have been first used in this connexion by Cardinal Humbert (*Cont. Nicetam*, 25), who described the 'Nicolaitan heresy' as consisting in the justification of clerical marriage; and in that sense it obtained official recognition in the canons of the Council of Piacenza (March 1095). Again, among some of the tendencies that preceded the organization of the Friends, the word occurs curiously to denote those who upheld creeds and outward ordinances, and exalted the authority of the written word above that of personal intuition (see C. Burrage, *The Early English Dissenters*,

Clement of Alexandria (*Strom.* iii. 41.) preserves a story to the effect that the deacon was reproved by the apostles for the jealousy with which he watched over his beautiful wife, whereupon he offered to give her over (*ἐνέριπεν*) to any one of them who wished to marry her, and himself lived afterwards blamelessly. The deacon is further quoted as using the phrase *δὲν παραχρησθαι τῇ σαρκί*, and the ambiguity of *παραχρησθαι* was the cause of misunderstanding. Nicolas used the word in the sense of despising or ill-using (*Herod.* i. 108, viii. 20, though with a different construction; cf. *Just. Apol.* i. 49); but the sense of misusing by indulgence (*Arist. ap. Plut.* ii. 527 A; *Philo.* ii. 61) was assumed by an Antinomian party in the Church, who proceeded to claim the deacon's sanction and to shelter themselves under his name. Epiphanius (*adv. Hæc.* i. 25) gives the story another turn, and represents Nicolas as separating from his wife in obedience to the counsels of perfection, but afterwards as breaking down his purpose and returning to her again. This conduct he is implied to have justified by easy principles, and thus he 'occasioned the foundation of the sect of the Nicolaitans.' But not only is Epiphanius a rather late witness; his account is discredited by his evident disposition to disparage marriage. He reads the sentiments of his own day into the practice of a much earlier age. On the whole, whatever testimony there is is distinctly in favour of the deacon. Eusebius and Hippolytus are not independent, and have no original information on the subject, and Theodoret (*Hæc. Fab.* iii. 1) professedly follows Clement, who defends Nicolas from the charges to which his assumed followers were open, thereby discrediting his own theory of the origin of their name. Twice in the 'long' recension of the Ignatian *Epistles* the Nicolaitan is qualified as *ψευδώνυμος* (*Trall.* 11, and *Philad.* 8), and the term may have been borrowed from *Apost. Const.* vi. 8. Thus in all probability the assumed connexion of the sect with the deacon is but another instance of the tendency to fasten upon an 'apostolic man' as the originator of every early movement and even as the founder of any important heresy; but, whilst that tendency may throw some light upon the views put forth by Clement and Epiphanius, it does not explain the occurrence of the word in the Apocalypse.

(2) Even less can be said in support of the theory that Nicolas is a translation or transliteration of Balaam. It is true that the Apocalypse is allegorical; but the appetite of its author for symbol was not without limit, and he is not likely to have tried to bewilder his readers with a hopeless puzzle in etymology. The name of Balaam was already current as typical of certain false views and immoral practices (2 P 21⁶, Jude 11, *Pirge Abôth*, v. 28 f.); and in Rev 21^{4c} a comparison is instituted between the effects of his teaching and that of the Nicolaitans, but there is no suggestion that the two words are themselves identical in meaning. Every attempt to show that *Νικόλαος* is a real equivalent to *בְּאַלְמַלְכָּא* has failed, and the phrasing of the verses does not warrant the supposition that etymological identity was imagined.

(3) Another Nicolas than the deacon must in consequence be sought as the founder of the immoral party at Pergamum. The name was not uncommon, and exact identification is not at present possible. According to pseudo-Dorotheus, there was a Nicolas, bishop of Samaria, who fell into heresy and evil ways under the influence of Simon Magus, and he may have given his name to the sect; but pseudo-Dorotheus is not only a late witness, but for other reasons somewhat untrustworthy. The same may be said of pseudo-Abdias, who in his *Acta Apost. Apoc.* introduces us to another Nicolas, who is alleged to have been converted in his old age, after a life of indulgence, through the persuasion of the apostle Andrew. Had this man professed Christianity before his conversion, the circumstances would have been in fair agreement with the conditions as set forth in the Apocalypse. The rise of a noxious party in a district within reach of the scene of the traditional labours of Andrew would be explained, together with the speedy disappearance of that party as a separate Antinomian sect. But in the absence of better or confirmatory evidence all that can be said with confidence is that this Nicolas is the sort of man required, and that to him or to a namesake of similar character may be ascribed the mischief wrought in the northern and neighbouring cities of Pergamum and Thyatira, and suppressed with difficulty but with success in the church of Ephesus.

2. Tenets and practices.—Concerning the beliefs and usages of these original Nicolaitans there is no other direct evidence than is contained in the letters to Pergamum and Thyatira. That resolves itself practically into two statements, as to the meaning of which the context is more significant than are parallel phrases in different connexions.

(1) The one is the explicit comparison with the teaching of Balaam (Rev 21^{4c}) in the two particulars of sanctioning and even recommending fornication and compromise with idolatry, with a view 'to cast a stumbling-block before the children of Israel,' to frustrate their right endeavours, and by guile to bring about their fall. Certain means, in themselves bad, were deliberately selected for the accomplishment of an inhuman and entirely immoral purpose. The specific references are to such verses as Nu 31¹⁶ 25¹⁻²; and, though the story of Balaam,

as we now have it, has been compiled from several sources, and extracts from JE and from P are woven into it without complete success in unifying the tradition, the writer of the Apocalypse would not be perplexed by any such complications, and his thought is sufficiently clear. Balaam, a recognized prophet or soothsayer, a man not without some knowledge of and reverence for Jahweh, counsels Balak to seduce Israel from its allegiance to Jahweh, and thereby from the enjoyment of His protection, by alluring the people into the immoralities associated with the Moabitic or Midianitish nature-worship. Similarly the Nicolaitans must be considered as loosely connected with Christian organizations of their day, and as seeking to undermine the godliness of the people by beguiling them into complicity with idolatry and into a practical disregard of the sinfulness of sins of the flesh. Self-deceived like Balaam, they glossed over obvious wickedness and so dressed it up as to make it pass off more easily with their consciences (cf. J. Butler, *Works*, ed. W. E. Gladstone, Oxford, 1896, ii., *Sermons*, p. 131, § 12); and hence the allusion involves the charge of a deliberate attempt to impose upon themselves and others in moral matters that were confessedly of the first importance. That such was their leading characteristic appears also from the changed imagery of the message to the neighbouring church.

(2) The second statement is implied in this message to Thyatira, where it is evident that the difficulty was the same, though the OT parallel was found in the case of Jezebel (Rev 2²⁰, 1 K 21²⁵), possibly because some female in the church had joined the movement and become the head and front of the offence. The evil that was violently opposed at Ephesus (Rev 2⁹) was tolerated with inadequate opposition at Pergamum (21^{4c}), but at Thyatira does not seem even to have been interfered with (2²⁰). The district was and continued to be notorious for its prophetesses, Oriental and Montanist; and it is easy to imagine that some Christian woman of influence became affected by the spirit of the place, claimed for herself the gift of prophecy, and proceeded to use it in the promulgation of views elsewhere known as Nicolaitan. The new feature in the description of those views is the claim to superior knowledge, a natural adjunct to the faith of a party led by a professed prophetess—a claim to know 'the deep things of Satan' (2²⁴). It is very unlikely that any traces of incipient Gnosticism in a technical sense are to be found in that phrase, or anything beyond the pretension to esoteric and privileged knowledge characteristic of every exclusive group. 'Deep things' is an easy expression for any pretender to special intuition to use, and entirely neutral in regard to the implication of Gnostic attachments. St. Paul uses it (1 Co 2¹⁰) of the inscrutable regions where God's plans for mankind are framed, and in the singular for the central riches of the wisdom and love of God (Ro 11³³, Eph 3^{18c}). Man's heart also has a depth (Jth 8⁴) that cannot easily be sounded, and in nature are recesses into which none but divine thought can penetrate. The figure is early and common, confined to no class or sect, but the heritage of every tongue, and from its use alone there is no need to infer any leaning towards Gnosticism. The qualifying phrase 'of Satan' is not without perplexity. It can hardly be taken literally as implying that the Nicolaitans themselves claimed a special knowledge of the things of Satan. Accordingly Hort (cf. *Com. in loc.*) is disposed to alter the generally accepted punctuation, and to connect 'as they say' with the words that follow, as though the Nicolaitan teachers professed to impose no superfluous burden, a contemptuous reference to the Jerusalem decree (Ac 15²³) being implied by the

appropriation of the obnoxious term *βάρος*, which, however, Hort regards as merely a coincidence. If the ordinary punctuation be preferred, the genitive must be taken as the writer's own characterization of the 'deep things'; and by describing them as 'of Satan' he referred simply to their mischievous and evil quality or to Satanic influence as the only influence powerful enough to enable a man to justify sin to his own conscience, and did not closely relate them with the abominations of the local Ophitic worship. That the last-named was his purpose has been inferred from the parallel between this phrase and the allusion to 'Satan's throne' in the message to Pergamum (Rev 2¹³). It is true that Pergamum was a centre in Asia of the worship of Asclepius, whose symbol was a serpent (Paus. II. xxvii.), which in the Apocalypse is the symbol of Satan (12⁹). Jewish story explains sufficiently the association of the serpent with the tempter (Gn 3; cf. Rev 12⁹). At the same time, though the worship of Asclepius was in part the worship of evil, the serpent seems to have been connected with it as a symbol of wisdom and renovation; and there was certainly no reason for singling it out from other Greek or mixed cults for special condemnation. To attribute anything to Satan is in reality one of our writer's favourite phrases of opprobrium, and it is rare that anything more specific is suggested by it. The hostile Jews at Smyrna (Rev 2⁹) and at Philadelphia (3⁹) are 'a synagogue of Satan,' where the controlling thought in the ascription of the name seems to be the paternity of the sin of lying (cf. Jn 8⁴⁴). Similarly the party in the Asiatic churches was deceived and self-deceived, and therefore might be conceived as under the immediate influence of Satan. They boasted of their knowledge of deep things, but were actually misled into wrong and vicious conclusions, as though under the direct guidance of Satan. They asserted as Christian freedom a personal right which really meant self-indulgence and sin; and the moral confusion might justly be ascribed to the author of all confusion. That the phrase contains a veiled allusion to the local Ophitic mysteries, to the gross rites of the aboriginal paganism, or even to the worship of the emperor (which, however, seems to have been introduced into Pergamum as early as A.D. 29; cf. Swete on Rev 2¹³), is an unnecessary suggestion, recalcitrant and unconvincing.

3. Alleged relation to apostolic teaching.—The theory that identifies the Nicolaitans with the followers of St. Paul rests upon an unsubstantial basis, constructed chiefly of a few forced parallels in phraseology. The leaders of the group in Ephesus called themselves apostles (Rev 2²), and one of them in Thyatira may have called herself a prophetess (2²⁰), just as St. Paul occasionally laid stress on his apostleship, and perhaps also implicitly claimed the gift of prophecy. The distinction between the Jew by race and the Jew by spiritual descent is common to both sides, though St. Paul uses less vigorous language and is sparing of denunciation. 'The deep things of God' (1 Co 2¹⁰) and 'the deep things of Satan' (Rev 2²⁴) are related expressions, but the relation is not that of affiliation in phrase so much as that of independent appropriation of a common and current figure. Against the Nicolaitans and their allies the principal charge was that they taught 'to eat things sacrificed to idols, and to commit fornication' (21¹⁴⁻²⁰). A passage in St. Paul's writings where fornication is authorized has yet to be found, and even his teaching about sacrificial feasts is closely guarded (1 Co 8⁴⁻⁷). Hence altogether the explanation of the Nicolaitans as a Pauline group is quite inadmissible. Their tenets and practices were generally such as he either wholly rejected or in one case cautiously

permitted in the interest of Christian freedom. And, just as the theory that Revelation was designed to be a polemic against Pauline Christianity has failed to establish itself as a whole, the included plea of the Pauline attachments of the Nicolaitans proves without recommendation in fact or even in probable conjecture.

In reality St. Paul, though more given than St. John to compromise on non-essentials, would have opposed the Nicolaitans with equal or greater vehemence. His own principle, indicated in Gal 5⁶ and illustrated in detail elsewhere in his letters (cf. 1 Co 8¹³), was to contend for whatever was central in belief or fundamental in practice, and to allow considerable latitude in regard to whatever did not really matter; but, as soon as anything indifferent was exalted to the rank of the indispensable, it met with stern opposition. Christian liberty was to be maintained against both legal bondage and moral laxity; and yet the Christian 'under law to Christ' (1 Co 9²¹) must be guilty of no offence against Him or His disciples, while admitting no rival. In the conflict with Græco-Roman civilization a practical difficulty continually arose in deciding how far professed Christians could or should comply with the social usages of their neighbourhood. The public festivals in the Ionian cities were the joy and pride of the citizens, and the private clubs or gilds met often in sacred buildings and interspersed sacrificial rites in their formal meals. The question was as to what concessions were legitimate or in the interest of the spread of the Christian religion and the protection of its professors from national suspicion. The Nicolaitans were the extreme party who disregarded all the safeguards with which St. Paul had invested the law of compromise, and pleaded for a suicidal blending of Christian beliefs with idolatrous worship, of theoretical Christian morals with sexual practice of the most immoral kind. St. Paul had seen the possibility of these developments in his day, and would not have considered St. John's denunciation of them as unnecessary or too strong.

4. Later sects of Nicolaitans.—The original sect of the Nicolaitans was not long-lived (Eus. *HE* iii. 29), though, as has been seen, it attracted the attention of several of the Fathers, who speculated as to its origin and the personality of its founder. But the name, sometimes merely as a term of abuse, has been attached to several later groups without implying any dependence upon one another or upon the sectaries in Asia Minor. There is evidence at the beginning of the 3rd cent. of the existence of a Gnostic sect of immoral habits, called therefore Nicolaitans (Epiph. *Hær.* xxv.; see also pseudo-Tert. *adv. omn. Hær.* 1, and Hipp. *Hær.* vii. 24). They shared in the worship of the great Mother-goddess, the goddess of heaven, and in the unbridled prostitution associated therewith; and, though their special object appears to have been to prevent the sexual propagation of mankind and the consequent perpetuation of evil, their cult might fitly be described as a mixture of idolatry and fornication. In the disputes as to the celibacy of the clergy again the term was applied to the married priests by the opponents of clerical marriage. It appears to have been first used in this connexion by Cardinal Humbert (*Cont. Nicetam*, 25), who described the 'Nicolaitan heresy' as consisting in the justification of clerical marriage; and in that sense it obtained official recognition in the canons of the Council of Piacenza (March 1095). Again, among some of the tendencies that preceded the organization of the Friends, the word occurs curiously to denote those who upheld creeds and outward ordinances, and exalted the authority of the written word above that of personal intuition (see C. Burrage, *The Early English Dissenters*,

Cambridge, 1912, i. 217 ff.). It was a usage begotten of the desire for a word of reproach rather than in the workings of the instinct for historical continuity; and in this case, as in the others, the passage in the Apocalypse may have suggested the term but has no real light cast upon it.

LITERATURE.—The Patristic references, which are really the only original authorities, are given in the text. Among the commentaries on Revelation, H. B. Swete (*The Apocalypse of St. John*, London, 1906, esp. p. lxxiff.) and F. J. A. Hort (*The Apocalypse of St. John*, 1-3, do. 1908) may be consulted with advantage. See also W. M. Ramsay, *The Letters to the Seven Churches*, do. 1904, esp. p. 299 ff., and A. V. Green, *The Ephesian Canonical Writings*, do. 1910, esp. p. 180 ff.

R. W. MOSS.

NIETZSCHE.—I. Life.—Friedrich Nietzsche, philosopher, poet, mystic, and prophet, was born on 15th Oct. 1844, at Röcken, near Lützen, in the Prussian province of Saxony. There is some reason to believe that he was of remote Polish descent; this always gave him much satisfaction, and he was pleased when living in Italy to be mistaken for a Pole. On the paternal side he came, like Emerson, of a line of ministers, and his mother was a minister's daughter; it was a significant origin for one who remained throughout life a preacher, though not of the gospel that he had been taught. He came on both sides of healthy and long-lived families. His father, however, a man of sensitive temperament and poetic mind, died at the age of thirty-five as a result, apparently, of injury to the head from a fall; his mother, a woman of much beauty and vitality, with a rebelliously high spirit, resembled Goethe's mother in temperament, and was of the same age of eighteen at her distinguished son's birth. After the father's death the family removed to Naumburg. Here the child, who grew tall and strong, though only beginning to talk at the age of two and a half years, was surrounded by exclusively feminine influences. He was a quiet, refined, and well-behaved boy, with fair hair and grave dark eyes, very truthful and very polite, though possessing a passionate temper which he early learned to control, with no liking for rough games or coarse amusements, and a taste for poetry and music. At school young Nietzsche was one of the best pupils—serious, reserved, pious, and fond of the Bible, called by his schoolfellows, over whom he exerted much influence, 'the little minister'; he excelled in all subjects except mathematics and athletics, and was especially devoted to the classics; at the same time he became a brilliant extemporizer on the piano. At the age of sixteen he obtained a scholarship which enabled him to enter the Pforta School, not far from Naumburg; this is a kind of Public School, of exclusive character, and with a very high level of discipline and scholarship.

In 1861 young Nietzsche received his first Communion, and, when he left Pforta to proceed to Bonn University, he obtained a certificate of good conduct and industry and special excellence in the subjects of Religion, German, and Latin. At Bonn he entered the faculties of Theology and Philology, but, led by his Hellenic tastes, he more and more concentrated on philology, which, also, he felt to be a needed discipline to his own temperament. Ritschl and Jahn were his teachers. When a quarrel arose between these two philologists, and the former went to Leipzig University, Nietzsche followed his beloved teacher, who had a high regard for the young student's qualities and scholarship. At Leipzig he took the chief part in founding and carrying on a Philologists' Club, occupied himself with important investigations into the history and sources of the writings of Theognis, Suidas, and Diogenes Laertius, and formed many valuable friendships, especially with

Rohde and Gersdorff. His friends were always men of noble character and tastes akin to his own; throughout life he cherished high ideals of friendship, but his few attractions towards women were superficial and fleeting. While a student, he by chance became acquainted with the works of Schopenhauer; he had long felt intense admiration for the works of Wagner (to whom he was not personally introduced until 1868); Schopenhauer and Wagner became the two chief influences on his life and thought, and he began to lose his Christian faith, although then, and long after, he displayed no aggressive opposition to Christianity, remaining, in his own words, 'a reverent animal.' At the same time he endeavoured to take part in the beer-drinking and duel-fighting life of the students' clubs, but these attempts speedily ended in failure; he took the unusual step of severing himself from his club, and throughout life experienced nothing but loathing for the 'beer-materialism' and related accompaniments of the ordinary German's intellectual life. Goethe's *Conversations with Eckermann*—'the best German book there is,' he declared—became and always remained with him a profound influence, and the same may be said of Emerson; he looked upon Emerson as a kind of elder brother, and throughout the whole of his active life some volume of Emerson's *Essays* always accompanied his wanderings. His chief early interests and influences were, however, Hellenism, Schopenhauer, and Wagner. Later the last two influences were left behind, though he always recognized the great importance of both, and Rome became more to him than Greece; but the early attraction of Hellenism, and the sound philological training of Pforta, made him a philologist.

In 1869, at the early age of twenty-four, and largely through the influence of Ritschl, Nietzsche was elected Professor of Classical Philology in the University of Basel, and he occupied this position for ten years. He was a careful and conscientious teacher, devoting himself more especially to his best students; there were not many, however, who attended his courses, and even these decreased in number as his unconventional opinions discredited him among orthodox professional philologists. The year after his appointment to Basel the Franco-Prussian War broke out. Nietzsche was still patriotic; he had gone through his military training, as a student, in the artillery, and he wished to take part in this war; that was not, however, possible in any active military capacity, as he had been obliged to become a naturalized Swiss citizen; he, accordingly, after a course of training, joined an ambulance corps and engaged in nursing the wounded outside the walls of Metz. He had been occupied in this work for only a few weeks when a severe attack of dysentery and diphtheria compelled him to abandon it, but this brief contact with the suffering and misery of war produced such an effect on his sensitive and sympathetic nature that for some years after he was scarcely able to speak of his experiences.

This episode in Nietzsche's life was memorable for more than one reason. In the first place we may date his ill-health from it. He had been a robust and healthy youth, though rather troubled by his eyes. From now on he became liable to frequent and severe attacks of eye-trouble, migraine, and sleeplessness, as well as to stomach troubles. In the second place, this was the period when he was actively engaged in working out the conceptions embodied in his first book, *The Birth of Tragedy* (*Die Geburt der Tragödie*). Although this book sprang out of Hellenic studies, it was clearly not the work of a scientific philologist, but of a poet and artist. The philologists shook their

heads over it when they were not actively hostile; a few enthusiastic friends took Nietzsche's side, and a furious Teutonic controversy, in which the author himself played no part, raged round the book. This was the first of a considerable series of books which continued to appear until in 1889 Nietzsche's brain suddenly gave way. In 1879 his health compelled him to resign his professorship; he was granted a pension which with small private means enabled him to wander about Europe in the search for a climate favourable to his health; but he always lived in an extremely simple manner and well within his small income. Most often he was in Genoa and the Riviera or in the Engadine. His friendship with Wagner, the most significant episode in his life, had come to an end at the first great Wagner festival at Bayreuth in 1876. There were numerous subsequent friendships with men and women, but these often ended in misunderstanding and rupture; Nietzsche's high-strung temperament and exalted ideals of friendship evidently rendered him a difficult friend, though, while absolutely independent in abstract matters, he was easily influenced in personal and practical matters. He inspired esteem, almost veneration, in the common people among whom he lived, and towards whom he was always sympathetic, more in Italy, however, than in Germany, although he considered that Socialistic Labour leaders were ruining the cheerful and contented spirit of the people by inspiring them with new needs and new hatreds, while at the same time they had not the courage to attack alcohol, which, in his eyes, was the worst of all the people's enemies. His Genoa landlady many years afterwards talked of his friendliness and sympathy, and used to call him 'il santo'; his early friend, Rohde, the distinguished Hellenist, similarly remarked of him that he was 'a disguised saint.'

During the years that followed his departure from Basel until his mind finally gave way, nearly all Nietzsche's books were written and published, as his health permitted, although they attracted little or no attention. All his later books he had to publish at his own expense, and of one of these, of which he had forty copies printed for friends, he found occasion to give away only seven. There was never any real and lasting improvement in his health; he continued to suffer severely from eye-strain, headache, sleeplessness, and stomach troubles, as well as mental overstrain, for which he found only the dangerous relief of an excessive use of drugs, especially chloral. There was never, however, any definite mental trouble; his books showed, in an ever-increasing degree, a peculiar intellectual irritability, self-centred and egoistic, but were never the work of a madman; his letters also, except in the last few days before the final breakdown, were entirely sane. His acquaintances and the guests at the *pensions* at which he stayed, up to the last, perceived nothing morbid or peculiar about him, and always found him cheerful, equable, and sympathetic. He was always considerate for others, and an invalid English lady who knew him latterly tells how solicitous he was that she should not read his books. Early in 1888 he received the first signs of European recognition in the appreciation of the two chief European critics of the day, H. A. Taine and G. Brandes, both of whom entered into correspondence with him. But in January 1889 at Turin he was suddenly found in a state of complete insanity, and from that moment he never wrote a line. The precise form of his insanity has been much debated; the doctors called it 'atypical paralysis,' which is vague. P. J. Möbius (in *Über das Pathologische bei Nietzsche*, Wiesbaden, 1902) regarded it as general paralysis of the insane. This seems very doubtful, and is founded chiefly on a

statement which has since been withdrawn. Hubert Norman, in a careful study of the case (*Journal of Mental Science*, Jan. 1915), concludes that he suffered from maniacal depressive insanity, alternating, with apparently normal intervals, between mental excitement and mental depression; we have to remember, however, that his friends and acquaintances saw nothing of this excitement and depression, while his sister also emphasizes his equable cheerfulness. Nietzsche's case is perhaps fresh evidence that even in insanity genius fails to follow the ordinary rules. In any case Nietzsche's life henceforth became almost vegetative, on the mental level of a child's. H. Lichtenberger, who saw him in 1898, refers to his magnificent brows and the eyes which seemed to direct their light inward, remarking that the spectacle was inexpressibly sad, yet beautiful and peaceful. He was tenderly cared for by his mother and his devoted sister and biographer, Frau Förster-Nietzsche. He died at Weimar on 25th Aug. 1900.

2. Works.—J. Burckhardt, the historian of civilization, who was a sympathetic colleague of Nietzsche's at Basel, said of him as early as 1869, 'Nietzsche is as much an artist as a scholar.' This became clearly visible a few years later (1871) in Nietzsche's first book, *The Birth of Tragedy*. The book is permeated by enthusiastic admiration for Wagner and infused with the spirit of poetry; it is not a work of scientific scholarship. But, while stating here his conception of the Apollonian and Dionysian spirits, and setting out his dream of an ideal state of human life in which culture would be one with nature, he also helped to make clear a deeper view of the Greek spirit than that hitherto prevailing, which regarded it as a spirit of superficial cheerfulness. Intemperance, wildness, the Asiatic spirit, seemed to Nietzsche to lie at the root of the Greek soul; it was in his struggle with these tendencies that the Greek revealed his special characteristics. Here, at the outset, we find the insistence on suffering as the condition of vital development which never forsook Nietzsche. His next book, published in 1873-76, *Unseasonable Considerations* (*Unzeitgemässe Betrachtungen*), is made up of a series of elaborate and important essays. One deals with Wagner in Bayreuth, and was the first attempt, still probably the ablest and most eloquent, to place the composer's claims on the highest ground. Another discussed the use and abuse of history, and severely criticized the German tendency to exaggerate the importance of history in culture. In yet another of these essays, on Schopenhauer as educator, Nietzsche set forth the fine influence which, he conceived, Schopenhauer might exert on his readers; much as Nietzsche's estimate of Schopenhauer sank, he always regarded the statement of the case in this essay as fundamental, Schopenhauer's liberating influence being independent of Schopenhauer's doctrines, and most of what was said of it here applying equally to Nietzsche's own influence. A very significant revelation of Nietzsche's attitude towards life was contained in the essay on D. F. Strauss, the author of the *Life of Jesus* and *The Old Faith and the New*, which had just then appeared. Strauss was one of the founders of modern Prussianism and a typical champion of German culture. To Nietzsche he represented the new spirit of Germany created by the Franco-Prussian War, in its worst manifestations. It was as such that he assailed Strauss, with no personal animus, and, when the old man, very shortly after, died, Nietzsche was deeply grieved lest he might possibly have embittered his last days. The war, Nietzsche felt, had created an attitude of paltry self-complacency in Germany and introduced a false ideal of culture. In attack-

Cambridge, 1912, i. 217 ff.). It was a usage begotten of the desire for a word of reproach rather than in the workings of the instinct for historical continuity; and in this case, as in the others, the passage in the Apocalypse may have suggested the term but has no real light cast upon it.

LITERATURE.—The Patristic references, which are really the only original authorities, are given in the text. Among the commentaries on Revelation, H. B. Swete (*The Apocalypse of St. John*, London, 1908, esp. p. lxxii ff.) and F. J. A. Hort (*The Apocalypse of St. John*, 1-3, do. 1903) may be consulted with advantage. See also W. M. Ramsay, *The Letters to the Seven Churches*, do. 1904, esp. p. 299 ff., and A. V. Green, *The Ephesian Canonical Writings*, do. 1910, esp. p. 180 ff.

R. W. Moss.

NIETZSCHE.—**r. Life.**—Friedrich Nietzsche, philosopher, poet, mystic, and prophet, was born on 15th Oct. 1844, at Röcken, near Lützen, in the Prussian province of Saxony. There is some reason to believe that he was of remote Polish descent; this always gave him much satisfaction, and he was pleased when living in Italy to be mistaken for a Pole. On the paternal side he came, like Emerson, of a line of ministers, and his mother was a minister's daughter; it was a significant origin for one who remained throughout life a preacher, though not of the gospel that he had been taught. He came on both sides of healthy and long-lived families. His father, however, a man of sensitive temperament and poetic mind, died at the age of thirty-five as a result, apparently, of injury to the head from a fall; his mother, a woman of much beauty and vitality, with a rebelliously high spirit, resembled Goethe's mother in temperament, and was of the same age of eighteen at her distinguished son's birth. After the father's death the family removed to Naumburg. Here the child, who grew tall and strong, though only beginning to talk at the age of two and a half years, was surrounded by exclusively feminine influences. He was a quiet, refined, and well-behaved boy, with fair hair and grave dark eyes, very truthful and very polite, though possessing a passionate temper which he early learned to control, with no liking for rough games or coarse amusements, and a taste for poetry and music. At school young Nietzsche was one of the best pupils—serious, reserved, pious, and fond of the Bible, called by his schoolfellows, over whom he exerted much influence, 'the little minister'; he excelled in all subjects except mathematics and athletics, and was especially devoted to the classics; at the same time he became a brilliant extemporizer on the piano. At the age of sixteen he obtained a scholarship which enabled him to enter the Pforta School, not far from Naumburg; this is a kind of Public School, of exclusive character, and with a very high level of discipline and scholarship.

In 1861 young Nietzsche received his first Communion, and, when he left Pforta to proceed to Bonn University, he obtained a certificate of good conduct and industry and special excellence in the subjects of Religion, German, and Latin. At Bonn he entered the faculties of Theology and Philology, but, led by his Hellenic tastes, he more and more concentrated on philology, which, also, he felt to be a needed discipline to his own temperament. Ritschl and Jahn were his teachers. When a quarrel arose between these two philologists, and the former went to Leipzig University, Nietzsche followed his beloved teacher, who had a high regard for the young student's qualities and scholarship. At Leipzig he took the chief part in founding and carrying on a Philologists' Club, occupied himself with important investigations into the history and sources of the writings of Theognis, Suidas, and Diogenes Laertius, and formed many valuable friendships, especially with

Rohde and Gersdorff. His friends were always men of noble character and tastes akin to his own; throughout life he cherished high ideals of friendship, but his few attractions towards women were superficial and fleeting. While a student, he by chance became acquainted with the works of Schopenhauer; he had long felt intense admiration for the works of Wagner (to whom he was not personally introduced until 1868); Schopenhauer and Wagner became the two chief influences on his life and thought, and he began to lose his Christian faith, although then, and long after, he displayed no aggressive opposition to Christianity, remaining, in his own words, 'a reverent animal.' At the same time he endeavoured to take part in the beer-drinking and duel-fighting life of the students' clubs, but these attempts speedily ended in failure; he took the unusual step of severing himself from his club, and throughout life experienced nothing but loathing for the 'beer-materialism' and related accompaniments of the ordinary German's intellectual life. Goethe's *Conversations with Eckermann*—'the best German book there is,' he declared—became and always remained with him a profound influence, and the same may be said of Emerson; he looked upon Emerson as a kind of elder brother, and throughout the whole of his active life some volume of Emerson's *Essays* always accompanied his wanderings. His chief early interests and influences were, however, Hellenism, Schopenhauer, and Wagner. Later the last two influences were left behind, though he always recognized the great importance of both, and Rome became more to him than Greece; but the early attraction of Hellenism, and the sound philological training of Pforta, made him a philologist.

In 1869, at the early age of twenty-four, and largely through the influence of Ritschl, Nietzsche was elected Professor of Classical Philology in the University of Basel, and he occupied this position for ten years. He was a careful and conscientious teacher, devoting himself more especially to his best students; there were not many, however, who attended his courses, and even these decreased in number as his unconventional opinions discredited him among orthodox professional philologists. The year after his appointment to Basel the Franco-Prussian War broke out. Nietzsche was still patriotic; he had gone through his military training, as a student, in the artillery, and he wished to take part in this war; that was not, however, possible in any active military capacity, as he had been obliged to become a naturalized Swiss citizen; he, accordingly, after a course of training, joined an ambulance corps and engaged in nursing the wounded outside the walls of Metz. He had been occupied in this work for only a few weeks when a severe attack of dysentery and diphtheria compelled him to abandon it, but this brief contact with the suffering and misery of war produced such an effect on his sensitive and sympathetic nature that for some years after he was scarcely able to speak of his experiences.

This episode in Nietzsche's life was memorable for more than one reason. In the first place we may date his ill-health from it. He had been a robust and healthy youth, though rather troubled by his eyes. From now on he became liable to frequent and severe attacks of eye-trouble, migraine, and sleeplessness, as well as to stomach troubles. In the second place, this was the period when he was actively engaged in working out the conceptions embodied in his first book, *The Birth of Tragedy* (*Die Geburt der Tragödie*). Although this book sprang out of Hellenic studies, it was clearly not the work of a scientific philologist, but of a poet and artist. The philologists shook their

heads over it when they were not actively hostile; a few enthusiastic friends took Nietzsche's side, and a furious Teutonic controversy, in which the author himself played no part, raged round the book. This was the first of a considerable series of books which continued to appear until in 1889 Nietzsche's brain suddenly gave way. In 1879 his health compelled him to resign his professorship; he was granted a pension which with small private means enabled him to wander about Europe in the search for a climate favourable to his health; but he always lived in an extremely simple manner and well within his small income. Most often he was in Genoa and the Riviera or in the Engadine. His friendship with Wagner, the most significant episode in his life, had come to an end at the first great Wagner festival at Bayreuth in 1876. There were numerous subsequent friendships with men and women, but these often ended in misunderstanding and rupture; Nietzsche's high-strung temperament and exalted ideals of friendship evidently rendered him a difficult friend, though, while absolutely independent in abstract matters, he was easily influenced in personal and practical matters. He inspired esteem, almost veneration, in the common people among whom he lived, and towards whom he was always sympathetic, more in Italy, however, than in Germany, although he considered that Socialistic Labour leaders were ruining the cheerful and contented spirit of the people by inspiring them with new needs and new hatreds, while at the same time they had not the courage to attack alcohol, which, in his eyes, was the worst of all the people's enemies. His Genoa landlady many years afterwards talked of his friendliness and sympathy, and used to call him 'il santo'; his early friend, Rohde, the distinguished Hellenist, similarly remarked of him that he was 'a disguised saint.'

During the years that followed his departure from Basel until his mind finally gave way, nearly all Nietzsche's books were written and published, as his health permitted, although they attracted little or no attention. All his later books he had to publish at his own expense, and of one of these, of which he had forty copies printed for friends, he found occasion to give away only seven. There was never any real and lasting improvement in his health; he continued to suffer severely from eye-strain, headache, sleeplessness, and stomach troubles, as well as mental overstrain, for which he found only the dangerous relief of an excessive use of drugs, especially chloral. There was never, however, any definite mental trouble; his books showed, in an ever-increasing degree, a peculiar intellectual irritability, self-centred and egotistic, but were never the work of a madman; his letters also, except in the last few days before the final breakdown, were entirely sane. His acquaintances and the guests at the *pensions* at which he stayed, up to the last, perceived nothing morbid or peculiar about him, and always found him cheerful, equable, and sympathetic. He was always considerate for others, and an invalid English lady who knew him latterly tells how solicitous he was that she should not read his books. Early in 1888 he received the first signs of European recognition in the appreciation of the two chief European critics of the day, H. A. Taine and G. Brandes, both of whom entered into correspondence with him. But in January 1889 at Turin he was suddenly found in a state of complete insanity, and from that moment he never wrote a line. The precise form of his insanity has been much debated; the doctors called it 'atypical paralysis,' which is vague. P. J. Möbius (in *Über das Pathologische bei Nietzsche*, Wiesbaden, 1902) regarded it as general paralysis of the insane. This seems very doubtful, and is founded chiefly on a

statement which has since been withdrawn. Hubert Norman, in a careful study of the case (*Journal of Mental Science*, Jan. 1915), concludes that he suffered from maniacal depressive insanity, alternating, with apparently normal intervals, between mental excitement and mental depression; we have to remember, however, that his friends and acquaintances saw nothing of this excitement and depression, while his sister also emphasizes his equable cheerfulness. Nietzsche's case is perhaps fresh evidence that even in insanity genius fails to follow the ordinary rules. In any case Nietzsche's life henceforth became almost vegetative, on the mental level of a child's. H. Lichtenberger, who saw him in 1898, refers to his magnificent brows and the eyes which seemed to direct their light inward, remarking that the spectacle was inexpressibly sad, yet beautiful and peaceful. He was tenderly cared for by his mother and his devoted sister and biographer, Frau Förster-Nietzsche. He died at Weimar on 25th Aug. 1900.

2. Works.—J. Burckhardt, the historian of civilization, who was a sympathetic colleague of Nietzsche's at Basel, said of him as early as 1869, 'Nietzsche is as much an artist as a scholar.' This became clearly visible a few years later (1871) in Nietzsche's first book, *The Birth of Tragedy*. The book is permeated by enthusiastic admiration for Wagner and infused with the spirit of poetry; it is not a work of scientific scholarship. But, while stating here his conception of the Apollonian and Dionysian spirits, and setting out his dream of an ideal state of human life in which culture would be one with nature, he also helped to make clear a deeper view of the Greek spirit than that hitherto prevailing, which regarded it as a spirit of superficial cheerfulness. Intemperance, wildness, the Asiatic spirit, seemed to Nietzsche to lie at the root of the Greek soul; it was in his struggle with these tendencies that the Greek revealed his special characteristics. Here, at the outset, we find the insistence on suffering as the condition of vital development which never forsook Nietzsche. His next book, published in 1873-76, *Unseasonable Considerations (Unzeitgemässe Betrachtungen)*, is made up of a series of elaborate and important essays. One deals with Wagner in Bayreuth, and was the first attempt, still probably the ablest and most eloquent, to place the composer's claims on the highest ground. Another discussed the use and abuse of history, and severely criticized the German tendency to exaggerate the importance of history in culture. In yet another of these essays, on Schopenhauer as educator, Nietzsche set forth the fine influence which, he conceived, Schopenhauer might exert on his readers; much as Nietzsche's estimate of Schopenhauer sank, he always regarded the statement of the case in this essay as fundamental, Schopenhauer's liberating influence being independent of Schopenhauer's doctrines, and most of what was said of it here applying equally to Nietzsche's own influence. A very significant revelation of Nietzsche's attitude towards life was contained in the essay on D. F. Strauss, the author of the *Life of Jesus* and *The Old Faith and the New*, which had just then appeared. Strauss was one of the founders of modern Prussianism and a typical champion of German culture. To Nietzsche he represented the new spirit of Germany created by the Franco-Prussian War, in its worst manifestations. It was as such that he assailed Strauss, with no personal animus, and, when the old man, very shortly after, died, Nietzsche was deeply grieved lest he might possibly have embittered his last days. The war, Nietzsche felt, had created an attitude of paltry self-complacency in Germany and introduced a false ideal of culture. In attack-

ing Strauss, he was attacking, and not for the last time, German 'culture,' and setting forth his own ideal of culture as 'unity of artistic style in every expression of a people's life'; at this time, and always, he regarded the French as the supreme representatives of true culture.

Human, all-too-Human (*Menschliches, Allzumenschliches*), which is transitional in character, was published in 1878. In this 'Book for Free Spirits' Nietzsche finally abandoned the method of essays carefully elaborated with a due regard to literary conventions, and adopted the more free, aphoristic, and fragmentary method which afterwards he always preferred; it suited his direct and personal way of approaching problems, and it doubtless suited also the limited energies which bad health placed at his disposal. *The Dawn of Day* (*Morgenröthe*), which completely reveals Nietzsche's characteristics, was published in 1881, and was followed by *The Gay Science* (*Die fröhliche Wissenschaft*), published in 1882, and *Beyond Good and Evil* (*Jenseits von Gut und Böse*), published in 1886; these books all belong to the same class and possess considerable resemblance in substance and method. For many readers they include most that is precious in Nietzsche's work. They represent him in his central and most mature period; they range freely over a vast field; they are full of the most penetrating criticism and insight into the deepest questions of life and thought and art; they are for the most part free from the unbalanced extravagances and the reckless over-emphasis which we so often find in his later work. Before this series of works came to an end, Nietzsche had already begun the most famous of his books, *Thus spake Zarathustra* (*Also sprach Zarathustra*, 1883-91). Its first origin was at Sils Maria in 1881. It consists of four parts, each part written with great rapidity, usually in about ten days, although the parts were separated by long intervals. Zoroaster had always been a favourite figure of Nietzsche's, embodying some of the ideas to which he was most attracted, and it was therefore natural that he should give this traditionally imposing name to his typical Superman. It is easy to understand the position which *Zarathustra* has attained; it has a certain kind of unity since it is written around a single figure and throughout in the lofty rhythmic style which we commonly regard as Biblical; it is moreover, all are agreed, magnificently written; it contains pictures and passages of a highly impressive character. Many, however, will agree with so competent a critic as Brandes that it has been over-rated, being too monotonous and lacking in imaginative invention. When we read it carefully, we are made to feel that its imposing surface frequently covers no great depth of thought or truth of insight; it sometimes seems simply a marvellous *tour de force*. Nietzsche was not, however, entirely wrong in attaching so much importance to his *Zarathustra*. Apart from its rare beauty, it possesses a certain coherence as a narrative of the passage of the Superman, Nietzsche's perfected human being, through life, and a record in brilliant imagery of his attitude towards the difficulties of life. We may regard it as Nietzsche's *Pilgrim's Progress*. *The Genealogy of Morals* (*Zur Genealogie der Moral*, 1887), largely dealing with Christian and traditional morality, the ascetic ideal, and the analysis of the conscience, may be said to form the transition to the last group of Nietzsche's writings. This group includes *The Case of Wagner* (*Der Fall Wagner*, 1888), attacking Wagner's music which he had in early life so enthusiastically admired, *The Twilight of the Idols* (*Götzendämmerung*, 1889), *Nietzsche contra Wagner*, and *Antichrist* (both first published in the collected edition of his works), while *Ecce Homo*,

also written at the end of this period, was not published until 1908; it is the most egoistic, it might be said, arrogant, of all Nietzsche's writings, but of much biographical value. *The Will to Power* (*Der Will zur Macht*), remarkable but often imperfect and obscure fragments of what was meant to be an extensive and important work, was also published posthumously. All these later writings after *Zarathustra*, and to some extent including *Zarathustra*, show a frequent tendency to self-assertion, unrestraint, over-emphasis, and extravagance—all of which are absent from the earlier writings—and they are chiefly responsible for the various common misunderstandings of Nietzsche's attitude and opinions. In these last writings, brilliant as they may be, he too often forgot his own wise saying that 'a spirit who is sure of himself speaks softly.' It may be added that Nietzsche wrote some notable poems (*Gedichte und Sprüche*) published in 1898, and also composed music, which has been variously judged.

3. Place and influence.—(a) *Nietzsche's ideas and originality*.—Nietzsche is frequently termed a philosopher, but, in the proper sense of that term, he was something less and something more than a philosopher. He may have recognized this himself in his tendency to avoid the term 'philosophy' and to speak, in preference, of the 're-valuation of values.' Philosophy to him was simply a perpetual criticism of thought and life. Of coherent and consistent system he had almost nothing, much less even than Schopenhauer, from whom his own thinking started, so far as it was in any sense philosophic, and one feels that the attraction of Schopenhauer for him lay in the earlier master's constant appeal to the concrete and practical problems of living, in the beauty of his style, and in the fact that (as Nietzsche has expressed it) the value of the stones he builded with is so much greater than that of the edifice itself. Nietzsche never completed any systematic statement of his philosophical system, the book in which he proposed to do this, *The Will to Power*, remaining merely a series of fragments, comparable to his other books of the same period. Nor is it possible to arrange Nietzsche's leading ideas into any harmonious whole. A. Fouillée, an accomplished philosophic thinker not altogether hostile to Nietzsche, has analyzed his conceptions at length with much care, and finds that they finally fall into a 'dust of antinomies'; he denied authority and yet the Superman constituted an authority; he denied absolute truth and yet proclaimed the transvaluation of truth; he affirmed egoism and yet presented a self-abnegating law of life; he glorified the passions and yet declared the supreme necessity of austere self-discipline. Moreover, when we coldly investigate Nietzsche's favourite and persistent conceptions, we can scarcely attribute to them any great fruitfulness, originality, or even precision. Let us, for instance, examine the conception of the Superman with which in popular opinion Nietzsche's name is especially associated. He used the word *Uebermensch* first at the age of seventeen, applying it to Byron's heroes, and later to Shakespeare's; as a more abstracted conception, it is probably due, as Brandes has suggested, to Renan (a writer with whom he was not in sympathy), who, in 1871, in the discouragement caused by the Franco-Prussian War, tentatively put forward the view (in a dialogue called 'Rêves' of his *Dialogues philosophiques*) that 'the goal of humanity is the production of great men for the domination of mankind; Renan had specially referred to Germany as offering the most favourable soil for this, as he regarded it, deplorable consummation. When Nietzsche began to use the term seriously, it was rarely or never biologically, as denoting a higher

species developed in the Darwinian way, for he regarded Darwinism as an unproved hypothesis, though he accepted evolution and esteemed Darwin. He was acquainted with Galton's work, and it is possible to use many of his sayings concerning the Superman in the eugenic sense, but it is difficult to say how far he so intended them and impossible to regard him as a pioneer of eugenics. More and more, as he spoke of Supermen and declared that 'the goal of mankind is in its great Exemplars,' he simply had in mind men of genius of the type of Cæsar, Napoleon, and Goethe. However vaguely suggestive in the mouth of the artist and the poet, the term 'Superman' was of no precise philosophic or scientific significance. Much the same may be said of another favourite conception of Nietzsche, that of 'eternal recurrence.' It came to him in 1881, when he was planning *Zarathustra*, and he regarded it as the fundamental underlying doctrine of that work, 'the highest formula of affirmation that can possibly be achieved.' It seems to have been a revivification of the old Pythagorean idea, stimulated by reading Helmholtz, Riemann, and the earlier writings of Wundt. It can scarcely be said, however, that Nietzsche made any fruitful use of this ancient and outworn formula, however suggestive he may personally have found it; it is, indeed, an idea which, it has been said, seems to place man in the position of a squirrel in a cage, endlessly turning round himself. We may note that all Nietzsche's persistently iterated formulas belong to the last ten years of his active life, when we may find reason to believe that his mental grip was no longer so close as before nor his insight so penetrating. It is not in such formulas that his originality lies, but rather in the personality of the man, in his direct and sincere attitude towards life and thought, his acutely sensitive receptivity to the influences of his time, and his intense energy in reacting to them vitally.

(b) *His ethical attitude.*—It was inevitable that a man of this temper should sooner or later become profoundly interested in moral problems. In Nietzsche's case this interest was rather late. His instinctive moral seriousness, that of the unspoilt 'child of the Manse,' only gradually became self-conscious and aggressive under the influence of his intellectual development. *The Dawn of Day* is the first of his thoroughly unconventional ethical writings, and it was only about this time that he began to call himself an 'immoralist.' 'I like not those coquettish bugs,' Nietzsche once wrote, 'with an insatiable ambition to smell of the Infinite, until eventually the Infinite smells of them.' It is an illuminating remark, and enables us to understand why it is that many readers of Nietzsche have failed to realize that it was not the Infinite that he was assailing but merely the bugs. Nietzsche himself sometimes opened the path to misapprehension. He is not to be classed with the adepts of paradox, but the epithet 'immoralist' was merely a paradoxical way of declaring his growing alienation from the traditional morality of his time; we must bear in mind the point on which he so often insisted, that every innovator in morals, like Jesus and like Socrates, is regarded as 'immoral.' The 'immoralist' was intensely absorbed in questions of morality, and, not only so, but in actual practice, he was, from first to last, himself strictly moral, even in a rare degree, from the standpoint of the very morality, that of traditional Christianity, which in theory he condemned. He fully accepted the foundations of morality, the binding nature of duty, the supremacy of the will. Yet he was entirely opposed to what he considered the 'Christian-democratic' ideals of selflessness, humility, renunciation, and the sacrifice of the strong to the weak. The clue

to the development of his moral conceptions lay in his own intensely sensitive and sympathetic nature, rendered hyperæsthetic by the strain of his physical disorders. The 'hardness' which he preached was the shield that he himself needed against the arrows of the world. It was on this personal basis that Nietzsche's restless intellect wrought concordant ethical conceptions and images.

'My brother,' wrote Frau Förster-Nietzsche, 'was not at all suited to the role of a warrior "whose paradise is in the shadow of his sword." He could fight an impersonal type, but when the type appeared embodied in a sensitive human form, he suffered from his own blows even more than the enemy he assailed. "I was not made to hate," he would say.'

When we come upon passages glorifying war in *Zarathustra* and the later writings (they are never found in the earlier books), we must read them in the light of what we otherwise know concerning Nietzsche's attitude towards war. He had had actual experience of only one war (in 1870), and that had not only left in him an impression of horror, but had convinced him that the effects of war are disastrous even on the victors. He never advocated any particular war, least of all for the aggrandizement of Germany (he scoffed at the cry 'Deutschland über Alles!') and wished to be a 'good European' rather than a good German; he disapproved of militarism and standing armies, and loathed the conception of the State which it is the object of militarism to magnify. The idea of combat and war has, however, always been idealized in Germany, even by philosophers and moralists, and it is not unnatural that Nietzsche should have adopted it. The apostle of the most peaceable of religions exhorts the disciple to 'fight the good fight,' and Nietzsche, not unreasonably, believed that struggle, self-discipline, and suffering are necessary for moral development, in accordance with his favourite motto, 'Virescit volnere virtus.'

These are the considerations that we must bear in mind when reading some of Nietzsche's utterances on sympathy and pity. It must be added that those utterances, especially when detached from his later and more extravagant writings, often present an altogether misleading view of their writer's attitude. To reach a saner view a wide and impartial collation of passages is necessary; this has been carefully made by W. M. Salter ('The Philosopher of "The Will to Power,"' i. Nietzsche on Love and Pity, *HJ* xiii. [1914] 102 ff.), and shows that Nietzsche, far from condemning pity *per se*, merely desires a revision of the things deserving pity, and is prepared to expend pity on that pity which fails to see the need of suffering and sacrifice in life.

At the same time, while setting in a clear light the source and the nature of Nietzsche's attitude towards current morals, we must not disguise the radical opposition presented in many respects by his own moral ideas. Our morality, as Nietzsche saw it, has been largely moulded by Christianity reinforced by modern democratic social developments, and these influences have been predominantly altruistic, subordinating the duties which regard self to the duties which regard others, and placing the interests of the whole unconditionally over the interests of the individual. Now Nietzsche, as witnessed by his ever growing admiration for the Romans, to whose temperament Stoicism was so well adapted, was by his classical training a pagan, by his intellectual distinction an aristocrat, and by his fundamental genius an individualist, for whom morality was always an individual matter to be achieved by combat, self-discipline, and pain. St. Bernard, it is true, used the same moral methods; but, while Bernard used them to impress on men that they are but sacks of dung and the food of worms, Nietzsche would use them to train men in

At the Council of Tonrs (May 1163) the point was debated at length; but it would appear that no formal decision was taken. It is of interest to note that the pontiff presiding at this Council was none other than Alexander III., who, as we have mentioned, had some twenty years before, as a private doctor, maintained this very opinion. In the following year (1164) a great assembly of theologians was held at Sens, at which the pope was again present. Here he issued a prohibition against 'omnes tropes et indisciplinatas quaestiones in theologia'; and he ordered the bishop of Paris to see that these discussions should cease. Again in 1170 (2nd June) he wrote to the bishops of Bourges, Rheims, Tours, and Rouen, commanding them not to permit the error 'quod Christus secundum quod homo non est aliquid' (Jaffé, *Regesta Pontificum Romanorum*, Leipzig, 1888, 11809). Another letter of the same year (18th May 1170), to the bishop of Paris, bids him convoke his suffragans in order that a final stop should be put to the propagation of the opinion (Jaffé, 11806). A still more important step was taken in 1177. On 18th Feb. of that year the pope wrote a letter to William, archbishop of Rheims, in which the doctrine is condemned under pain of anathema (*Corpus iuris canonici: Dccr. Greg.* v. 7. 7; Denzinger-Bannwart, *Enchiridion*¹, no. 393). There can be no doubt that the *Eulogium* of John of Cornwall contributed to bring about this result. That work, as J. de Ghellinck shows, appeared between 1175 and 1177; and it is a direct appeal to the pope to pronounce a definite condemnation. Among the controversial writings of the period it takes a high place, alike for the moderation of its tone and for its clear and ample demonstration that the doctrine which it attacks is altogether inconsistent with orthodox belief. It is, however, noteworthy that the author himself falls into error in supposing that the first and not the second of the views as to the Incarnation mentioned by Peter Lombard is that which expresses the revealed doctrine.

The pope was now so convinced of the need of strong measures that at the Lateran Council of 1179 he proposed to procure the condemnation of Nihilianism by a formal conciliar decree. He was, however, deterred by the opposition of several of the cardinals and by the vigorous protests of Adam, bishop of St. Asaph (*D.V.B.* i. 75). After this date the doctrine seems to have ceased to exercise any noticeable influence.

NIHILISM.—See **ANARCHY**, **SOCIALISM**.

NIHILISM (Buddhist).—Buddhism, as known to the Brāhman authors, *i.e.* Buddhism of the Great Vehicle, has been strongly criticized by them as nihilistic (*cf. vaināśika*). The extreme Vedāntist (Sāṅkara's school), who held the doctrine of illusion (*māyāvāda*), was charged with the same crime and styled a pseudo-Buddhist.¹ Both indictments are justified, and there is no doubt

¹ See T. Aufrecht, *Cat. of Sanskrit MSS Bibl. Bodleiana*, Oxford, 1884, p. 14.

that the 'absolute truth' (*paramārthasatya*) of the extreme Buddhist and of the extreme Vedāntist is an unqualified negation of the world of appearances, a negation of existence (*samsāra*). The two nihilisms—nihilistic nihilism of the Buddhists; there is nothing; and monistic nihilism of the Vedānta: there is being alone—differ so little that a book could be written illustrating the position of the Vedānta with phrases and stanzas borrowed from Buddhist works (*Gauḍapāḍakārikā*).¹ The only difference between the two systems is that the Vedānta recognizes an unqualified being—in fact, its denial of existence has its source in its belief in being—whereas Buddhism, from the very beginning, had denied being and then went so far as to deny existence. It was very easy to make a place in Buddhism for the Vedāntic affirmation, and some Buddhists did not fail to proclaim that voidness is the very nature and essence of things.² Voidness hitherto has been understood as their character, as it is said: 'Form (*rūpa*) is void, because it is void or without any reality, not owing to Voidness.'³ Thus was evolved a curious aspect of the pantheistic theory, very like Vedānta and probably largely indebted to it.

But, to be fair, one must consider the problem from another point of view, and it will appear that neither Vedānta nor Buddhism is nihilistic. Like Sāṅkara and Māyāvādin philosophers, the neo-Buddhist doctors of nihilism loudly claim to be firm supporters, and the only firm supporters, of morality, religion, realistic philosophy. While they are proud of being Śūnyatāvādin, they fiercely disclaim to be Nāstika (see art. MATERIALISM [Indian]) or Vaināśika.

They are very good when they criticize the position of their opponents, believers in reality. There is no life or existence if there is no change; and there cannot be change if there is being. What exists (*sat*) must be instantaneous (*kṣaṇika*).⁴ And the generation of instantaneous things in succession is incomprehensible and impossible.

But they were also well aware of the conspicuous target that their absolute (*pāramārthika*) dogmas offered to their adversaries. Nāgārjuna, their chief, if not first, exponent, has put the objection in the plainest possible language.⁵ The old Buddhist (Little Vehicle) is introduced to point out that, if everything is void, nothing will remain of the old Buddhist fabric. The stone on which Buddhism is strongly built is the truth of suffering: Buddha taught a path leading to the deliverance from suffering, and the neo-Buddhist denies the existence, not only of the sufferer, as Buddha himself did, but of suffering too. Buddha contrasted existence (*samsāra*) and liberation from existence (*nirvāṇa*), desire (*kṛśa*) and absence of desire (*vyavadāna*), while Nāgārjuna maintains that beings are 'in Nirvāṇa' (*nirvṛta*) from the beginning. Buddha did not believe that there is an ego who practises the rules and follows the Path, but he was an indefatigable preacher of 'act and fruit,' while his modern disciple, Nāgārjuna, the so-called 'Buddha without marks' (*alakṣana*), endeavours to show that act is void.

The answer of Nāgārjuna is to the point. To begin with, the cardinal principle of Buddha is that one must rely on truth—on reasoning. That is the refuge, not the authority of any one. Where there is disagreement between the Buddha's sayings and the dicta of reason, we have to look

¹ See *JRAS*, 1910, p. 123 ff.

² See D. T. Suzuki, *Outlines of Mahāyāna Buddhism*, London, 1907.

³ *Prajñāpāramitā*, *passim* (see *Aṣṭasāhasrikā prajñāpāramitā*, *Bibl. Indica*, Calcutta, 1898).

⁵ *Mūlamadhyama*, p. 475 ff.

on these sayings as provisional—expressions for the convenience of hearers, not true expressions of Buddha's mind.¹ So much for the charge of heresy. And it is evident that the old philosophy—negation of an ego, belief in the existence of *dharma*s (see PHILOSOPHY [Buddhist])—does not bear criticism (*vichāra-asāha*). All the common notions—cause, act, fruit, etc.—which Buddha admitted so far, because his disciples were not ripe for the truth ('I do not disagree with the world' [*lokena sārādhā na vivādāmi*]), are contradictory. Nāgārjuna is subtle—more subtle than solid—in finding 'antinomies.' The doctrine of voidness, therefore, is the true word of Buddha.

It remains only to make sure that this unqualified nihilism of the 'pure reason' does not weaken the old positions of Buddhism, does not 'destroy' the common notions of everyday and of religious life. Buddhists and Indians do not object to any metaphysical theory, and one is often astonished at the marvellous freedom of their most orthodox writers. They have often been praised by Europeans for their so-called free thinking. But this freedom has its limits, and sometimes very narrow ones. In the present case it is all-important for a Buddhist that the holy Path should remain safe. It is safe in the town of Voidness, and, to tell the truth, the Path can be followed only by a believer in voidness.

The aim of the Path is deliverance from suffering; i.e. deliverance from existence. The Path, therefore, is the suppression of desire. And, although the old Buddhists failed to realize this psychological fact, there cannot be cessation of desire as long as there remains in the mind any idea of pleasure, pain, or existence. The Buddhist of the Little Vehicle strives for liberation, without knowing that this very endeavour is framed with desire; therefore the saint of the old pattern, the *arhat*, when he dies, has not really done what is to be done, has not practised the true *brahmacharya*, and he will live again. To be qualified for liberation, one must know that there is neither *samsāra* nor *nirvāṇa*, neither Buddha, liberated, nor candidate for liberation.

We should rejoice that, if things are void of any real existence and like a dream, mirage, or magical creation, there cannot be any order and consequence in the coming and going on of these things; that, therefore, the means leading to liberation from desire are of no avail. There is no reason why these dream-like illusions should not continue to deceive us. They are without cause; therefore there is no means of stopping them. But Nāgārjuna does not believe that void things are going on without order and consequences: the various magical contrivances depend, as a matter of fact, on various formulæ. It is true that causation, motion, and knowledge do not support criticism; but criticism does not destroy the indisputable fact that everything is happening as if there were causation, motion, knowledge. Everything is absurd in the nightmare which we are dreaming; but, while we have first to know that this is an absurd nightmare, in order to obtain a reasonable sleep, we have also to understand the rules that govern its *processus*. It is an absurd nightmare; that is the absolute truth. It is going on because we cling to it, because we find pleasure in it, because we are feeding it—absurd and unreal as it is—by absurd and unreal affections or dislikes; such is the experimental truth. Nāgārjuna does not 'destroy' the experimental truth; he emphasizes, on the contrary, this fundamental point that, unless we manage void and illusory things according to the rules that govern their *processus*, it will be

impossible to reach the other side of illusion. This system may not bear criticism; but it is nevertheless an honest and able attempt to cook the last fruit of nihilism—negation of suffering and of liberation—evolved from the old nihilistic seed sown by Buddha himself, in the most orthodox juice (*rasa*) of the Good Law, the juice of suffering and liberation.

NIMĀVATS.—The Nimāvats are a Vaiṣṇavite sect of considerable influence in the north of India. They are especially numerous in Bengal, in and around the home of their founder Nimbārka at Vyṇḍavana, near Mathurā, in the Moughyr district in the north of the province. His father's name is given as Jagannātha; and, according to some authorities, he spent a considerable part of his life in Bellary, in the province of Madras. Nimbārka is said to have derived his name from a miracle which he performed on the occasion of the unexpected appearance of a Bairāgin ascetic at his house late in the evening, demanding food. His visitor was under a vow not to eat after sundown. Nimbārka, therefore, not to fail in hospitality, caught the sun in a *nīm*-tree, and delayed its setting until his guest had satisfied his hunger. The founder is believed to have been an incarnation of the sun-god, or of Sudarśana, the discus of Viṣṇu or Kṛṣṇa, itself a solar symbol; and the *nīm*-tree is universally associated with solar worship. His date has not been certainly determined; probably he lived and taught in the early part of the 12th cent.; and by some he has been identified with Bhāskaraśāhārya, who at that time studied and wrote on mathematics and astronomy.¹

The community or sect founded by Nimbārka is known as the Sanaka or Sanakādi-saṃpradāya, the latter term denoting the organized system or 'church' of Sanaka and his successors. Sanaka is described as the predecessor of Nimbārka in the second generation of teachers, and the inspired source of the knowledge which had been communicated to him immediately by the 'divine lord' (Bhagavat). The members of the community direct their chief worship to Kṛṣṇa and his spouse Rādhā. They wear on the forehead as a caste-mark two perpendicular lines of white clay (*gopī-chandana*) with a central black spot, and carry a rosary and necklace of the sacred *tulasī* wood. Many of them are wandering *sannyāsins*; others marry and fulfil the duties of ordinary citizens and householders.

Nimbārka wrote a commentary on the *Brahma-sūtras*, which in its turn formed the text of commentaries by his followers and successors. A knowledge of the doctrines which he taught, however, is obtained chiefly from a brief dogmatic treatise of which he was the author, known as the *Siddhāntaratna*, or *Daśaśloki*, consisting of ten stanzas, whence the latter name is derived. His teaching was based upon that of Rāmānuja, from whom he was not far removed in time, which he extended and developed in the direction of assigning a quasi-independent position to the individual soul (*jīva*) and to the inanimate universe. This qualified individualism, however, is not to be understood as though these two can or do maintain an existence distinct or separate from Brahma. They are essentially and permanently one with that which is all and in all. The system of Nimbārka, therefore, secures in form at least the monistic position.

¹ C. M. Duff, *The Chronology of India*, London, 1899, p. 139, with references; Monier-Williams, *Brahmanism and Hindūism*, p. 146 f.

¹ L. de la Vallée Poussin, *Bouddhisme*, Paris, 1909, p. 130 ff.

Jiva and the world are distinct from Brabma only in the sense that they are developed or evolved from his qualities, force, or *śakti*, so as to constitute the universe of animate and inanimate forms. They exist in him in a subtle (*sūkṣma*) guise, which in the world of phenomena takes on a gross (*sthūla*) body, yet remaining essentially united to him, with no detached being or life. Nimbārka's teaching, therefore, combines a modified pluralism with the Vedāntic monism. Equally also with Rāmānuja he emphasized the importance and need of *bhakti*. The grace of Brahma is for all who are in need and who seek him with devotion and faith. This is the only way of salvation by submission to the will of Kṛṣṇa, and trust in his mercy; at the feet of the one god all should offer worship and devotion, and thus alone can they obtain deliverance from distress and the darkness of ignorance and sin.

Like other Indian teachers, Nimbārka distinguished two classes of souls: those already emancipated and those yet in bondage. For the devotee who sought emancipation it was essential to obtain a knowledge of five things: (1) the nature of the object of worship, defined as *sacchidānanda*, 'reality,' 'thought,' 'bliss'; (2) the nature of the worshipper; (3) the results to be anticipated of the divine grace, explained as devotion, self-surrender, supreme affection, etc.; (4) the bliss produced by true *bhakti*; (5) hindrances to union with God. Instances of the last are idolatrous worship, disregard of the divine commands, etc. Inanimate objects also are of three kinds: (1) those that owe their origin to *prakṛti*; (2) those that do not originate from *prakṛti*; (3) time. The *jīva* finds its true nature and destiny when by the grace of God the hold of *prakṛti* is relaxed, and final and complete separation achieved.

Thus the followers of Nimbārka have inherited and maintain theoretically a doctrine of compromise, to satisfy, on the one hand, the evidence or apparent evidence of the reality of the visible universe and of the individual soul, and, on the other, not entirely to break with the Vedāntic doctrine of absolute unity (*advaita*). Of the history of the sect since its foundation little or nothing is known. Its members are said to have suffered much persecution at the hands of the Jains and others, and at one time the sect almost ceased to exist. No effort seems to be made to propagate their distinctive teaching, nor are they actively hostile to other forms of belief.

A. S. GEDEN.

NINOMIYA SONTOKU. — I. Life. — Ninomiya Sontoku, the peasant sage of Japan, was born near Odawara in 1787, and died in 1856. When he was twelve years of age, his father died, leaving him to support the family. He had little opportunity for study, but so intense was his thirst for knowledge that he carried his Confucian Classics wherever he went, and would read as he walked, or would keep his book open near him as he worked, that he might catch frequent glimpses of its pages. When he was sixteen years of age, his mother died, and the family was broken up. Ninomiya went to live with his uncle Mampai, a sordid old man, who grudged him the oil he used when poring over his books at night. So the boy found a tract of deserted land, and planted it with rice-plants which the farmers had discarded. Thus he was able to supply his own oil for study. Even this did not appease his uncle, who considered study a shameful waste of time and oil, so he strictly forbade him to study at night. Then Ninomiya rose

as soon as the day began to dawn, and pursued his studies before his uncle was awake. For lack of paper and ink he practised writing in the sand. He continued to cultivate his tract of waste land, saving the money each year until he was able to redeem his father's estate. These early experiences proved to be stepping-stones to his great life-work.

A man named Hattori, a clansman of the lord of Odawara, hearing how Ninomiya had redeemed his father's estate, and being himself in great financial difficulties, urged Ninomiya again and again to come and help him to save his estate. Finally Ninomiya yielded, on condition that Hattori should strictly follow directions. The family were not allowed to wear silk or to indulge in any needless luxury. He made them live so well within their means that each year there was a surplus. The result was that in five years prosperity was restored to the estate of Hattori. Not only were all debts paid, but there was money in hand, which Hattori offered to Ninomiya. Ninomiya refused any reward for himself, but divided a portion among the servants who had been his loyal helpers.

The next appeal for help came from the lord of Odawara, who had heard of the great good accomplished on his clansman Hattori's estate. Sakuramachi, in Shimotsuke province, was once very prosperous, producing 20,000 bushels of rice annually and supporting over 400 homes. It had gradually declined until it produced less than 4000 bushels of rice, and the people were correspondingly degraded.

Ninomiya first made a thorough examination of existing conditions. Then, to the lord of Odawara's surprise, he refused all offers of money to carry on the work. His plan was to make the people work out their own redemption. He himself sold out all that he had, and went with his family to reside in Sakuramachi. The first few years brought little but discouragement. All his efforts seemed unavailing. Indolence, gambling, drunkenness, and vice continued to flourish. Suddenly Ninomiya disappeared, and the people, alarmed lest he had deserted their cause, made a search for him, and found him at the Narita temple, where he had spent twenty-one days in fasting and prayers for his people. They were so impressed by his devotion and self-sacrifice that they promised him their diligent support if he would but return to their village. During the next five years unprecedented prosperity crowned their efforts. At the end of that time, when the famine of the seventh year of the Tempō era (1836) occurred, the people of Sakuramachi were able to assist the neighbouring districts with food and money. The storehouses were opened, and from March to May they fed over 40,000 persons. In addition Ninomiya loaned about \$3000 to the people without interest.

After the death of the lord of Odawara he was employed by the Tokugawa government in A.D. 1842. It was his custom to begin his work in the most promising village or district and gradually to work out from there. He praised and encouraged the industrious ones, and patiently taught the unworthy. Wherever he went, he preached the duty of man, emphasizing filial piety, honesty, righteousness, and brotherly love. He gave homes to the homeless, loaned money without interest to those who were in debt, advising them to write the amount of their indebtedness above their god-shelf, that they might be reminded of it daily as they performed their devotions. He supplied farm implements until the people were able to buy for themselves, and taught by example and precept the importance and dignity of honest toil and mutual helpfulness. Thus he spent his life, until

he was over seventy years of age, bringing hope and cheer to the people of Japan.

2. Teaching.—Ninomiya's teaching centred in the idea of gratitude to heaven, earth, and man for blessings received—to heaven for the light of the sun and moon, for growth and decay; to earth for the trees, grain, birds, animals, and fish; to man for his various offices and labours. Hence the first principle of conduct is to make suitable return for these blessings. The manner in which such return can be made is set forth in Ninomiya's teaching known as 'Hotoku.'

The society of 'Hotoku' was organized by his disciples. The members of the society are expected to conduct their lives in such a way as to bring prosperity to themselves and to their country. By their conduct they must show their gratitude for all the blessings that they have received from the gods, the emperor, and their ancestors. They must be industrious, and live so within their income that they will have a surplus, which may be used to develop waste places or new industries. 'Hotoku' is not a religion, but it tries to put the best elements in Shintoism, Confucianism, and Buddhism into practice, laying great stress on national spirit.

The society has two funds: one is made up of voluntary offerings from the members, known as 'foundation money,' and may be used for current expenses, public works, encouraging new industries, relieving distress, or rewarding good deeds; the second is made up of the surplus funds of the members, known as 'good seed money.' This fund may be loaned to the members or to other worthy persons without interest, on a vote of the society. Ninomiya condemned the taking of interest, because heaven does not demand interest on her blessings. The borrower is expected to return the loan in ten annual payments, and then in the eleventh year to bring an extra payment as a thank-offering for the benefits which he has received from the society.

The central idea of Ninomiya's method was to have a yearly surplus. He said that it was in that way that the earliest ancestors of Japan opened up the country and redeemed waste places. The same method would reclaim any number of deserted plains, and rescue any number of people from poverty. He urged this method upon the feudal lords of the Tokugawa age when they became financially embarrassed, and, even when they enjoyed prosperity, he still urged them to lay by something either to help the poor or against a time of famine.

He regarded self-sacrifice as a fundamental virtue, without which peace and prosperity were impossible. He used to say to young men:

'If you wish to succeed you must unselfishly serve men. I have learned from experience that self-sacrifice is essential to success. When I was a poor boy, I owned but one spade. One day it broke and I was greatly embarrassed. I tried to borrow a spade from an old man who lived next door, but, as he had need for it in his own garden, I offered to do his work for him. When I had finished digging and planting his garden, he gladly gave me the spade and said I was very welcome to use anything he had. You young men do not need to spend your mornings in bed; rise early and find something, however small, to do for some one else. Some may not appreciate your act of kindness, others may thank you profusely, while others may offer you some slight reward. It matters not how they receive it; your responsibility is to give yourselves to others.'

Ninomiya condemned the spirit of revenge. He said that Iyeyasu, the first of the Tokugawa Shoguns, being born in a warlike time, admired the spirit of revenge, but a great Buddhist priest taught him a better way, by emphasizing the beauties of benevolence. From that time the great Iyeyasu discountenanced revenge. Ninomiya thought that all Japanese should learn to love benevolence. Revenge leads to revenge without

limit. If it were encouraged, the world would become a scene of bloodshed and murder. It is the duty of the government to administer justice, and punish the guilty.

He taught that good and evil are relative terms, like far and near. The difference between far and near depends entirely upon your standpoint. So with good and evil; nothing is absolutely good or absolutely evil. Man deplores waste places; the bear and the deer rejoice in them. The thief thinks it good to steal; the government condemns it. Happiness and misery always go hand in hand. Water under control is a blessing; uncontrolled, it brings floods and misery. The hunters' joy is the sorrow of the birds and animals.

3. Religion.—Ninomiya favoured no one religious sect, but was liberal towards all. He thought that, just as one may reach the summit of Mt. Fuji by many different paths, so men may reach truth through any of the various sects of religion. Shintoism is useful for opening up the country, Confucianism for governing the country, Buddhism for giving peace of mind. He described his own teaching as a medicine tablet in which he had thoroughly mixed two parts Shintoism, one part Confucianism, and one part Buddhism. They need to be well mixed to be effective. His sacred book was the unwritten book of nature. He disliked priests because they were consumers rather than producers. Yet he was very religious. He used to say: 'Without sound, without odour, heaven and earth repeat over and over the unwritten sacred book.' To read this book you must close the physical eye and open the spiritual eye. There may be errors in the written sacred books, but never in nature's book. If the written book did not agree with nature's book, he rejected it.

4. Conclusion.—Ninomiya was not merely an economist, although his work was largely connected with the accumulation of wealth. In his report concerning the district round lake Imba he advocated a reformation of the ethical and moral conditions of the people as of more importance than the mere improvement of their material environment. He reported that it was impossible to employ them on any government enterprise unless their spiritual natures were reformed. Even if their district became wealthy, the moral ideals of the people were such that wealth would only increase their vice and sensuality. If their moral natures were reformed, wealth would be a blessing and not a curse to them. Again, when he was appointed to his last great work, he sighed and said: 'My intention is to refine human kind rather than to restore deserted places, but now I am again ordered to do the latter.' These references are sufficient to show that Ninomiya placed moral teaching first, and the development of wealth second. He used to say: 'If we could only develop the deserted places in human minds, we could then let the deserted fields look out for themselves.'

NIRMALAS.—The Nirmalā Sādhus, or 'pure saints,' are a Sikh order which was bitterly opposed to that of the Akālīs. They are said not to undergo any rite of purification, but merely to receive the *amrit* like other Sikhs when they become Singhs. They originated, like the Akālīs, in the time of Gurū Govind Singh, but the history of their foundation is obscure.

According to one story, a water-carrier was seized by the Gurū's soldiers for supplying their enemies with water during a battle, but the Gurū declared him 'stainless' (*nirmalā*). This account, however, undoubtedly arose out of a confusion between this order and the Sewāpanthis. According to the *Panth Prakash* (Amritsar, 1892, p. 855), the Nirmalās originated thus: Gurū Govind Singh invited a Brāhman to come from Benares to teach the Sikhs, his disciples, Sanskrit, but he declined the invitation, saying that none but Brāhmins were entitled to learn Sanskrit or the Vedas, and pointing out that many of the Sikhs were artisans or even menials by caste. To this the Gurū rejoined that the Sikhs would become more erudite than the Brāhmins, and that the latter would one day be glad to learn from the Sikhs. He also sent many of his disciples to learn Sanskrit. They wore the saffron garment of the *sādhu*, and translated many Sanskrit works into the vulgar tongue. These people were styled Nirmalās by the Gurū. Another story is that once the Gurū asked his Sikhs to cook *karā parshād* (sweet-meat eaten in communion), and they all obeyed him except thirteen, who kept their seats. These were called Nirmalās, as they had discarded the things of this world (from *nivṛt*, 'renunciation'). A third tradition is that once after a hard-fought fight the Gurū and his companions went to rest, but at midnight he arose to see if any were awake in meditation. Those whom he found keeping vigil in spite of their fatigue he called Nirmalās.

The precise derivation of the name is obscure. The Yogis practise a rite called *nivali*, or *niuli* (physical purification by purging) as a preliminary to the rite of *yoga* (drawing in the breath) properly so called, and the term Nirmalā may be derived from this practice.

At first the Nirmalās took the *pahul* and wore white raiment, but they have adhered to the study of the orthodox Hindu scriptures and thereby lost touch with Sikhism. They now wear the ordinary saffron robes of the Indian *fagīr*, possibly to facilitate begging, which they profess to avoid, as they claim to subsist on offerings voluntarily made. All Nirmalās are *kesh-dhārī*, i.e., they wear the *kes* of the true Sikh or Singh.

The Nirmalās form a well-disciplined and highly respected organization. Each monastery is under a *gurū*, while a council or committee periodically visits their societies throughout the Province. Almost always celibate, they bear a far higher reputation for morality than most of the other religious orders in the Panjāb. Their principal *akhāra* is at Hardwār, but they also have foundations at Amritsar and elsewhere in the Panjāb.

H. A. ROSE.

NIRVĀNA.—*Nirvāna*, etymologically 'blowing out,' 'cooling,'¹ or *mokṣa* (q.v.), 'deliverance,' is the central idea of the teaching of Śākyamuni and the *raison d'être* of Buddhism.

'As the vast ocean, O disciples, is impregnated with one flavour, the flavour of salt, so also, my disciples, this law and discipline is impregnated with one flavour, with the taste of deliverance' (*Chullavagga*, ix. 1. 4).

It was in order to lead his fellow-creatures to *nirvāna* that Śākyamuni preached the True Law; it is in order to reach *nirvāna* that monks and nuns forsake the duties of secular life, become strangers to the society of the family, both the dead and the living, which assembles around the domestic fire, and devote themselves to the practices of an asceticism which has one 'flavour,' the flavour of *nirvāna*.

It seems, therefore, that we should be amply provided with definitions of *nirvāna*, and that there should be no doubt as to the actual meaning of the word. As a matter of fact, the present writer believes that we know what *nirvāna* is as well as the Buddhists themselves did, and it is not our fault if we are not able to give an unambiguous statement. The Buddhist felt satisfied with a description which does not satisfy us, because, whereas we have been for centuries trained to make our ideas clear, this was not the case with the Indians; and also because we look at the Buddhist doctrines from the outside, without in the least believing in them: whereas *nirvāna* is

for us a mere object of archaeological interest, it is for Buddhists of paramount practical importance. Our business is to study what *nirvāna* may be; the business of a Buddhist is to reach *nirvāna*—a very different thing.

1. *Nirvāna* as a negative conception.—The idea of *nirvāna* cherished by the Buddhists is chiefly a negative one. They know what existence is. They know that existence is suffering—every existence, even the happy life of the gods, because the gods are to die and to be reborn; every existence, even the almost endless dreamy meditation of the beings living in the 'realm of neither notion nor no notion' (see art. COSMOGONY [Buddhist]). And they think that there is an exit, an end to the ever-recurring birth and death; there is an 'extinction' of the everywhere and always miserable consciousness; there is a *nirvāna*, deliverance from existence; and that is, indeed, enough. We must admit that the prospect of an endless migration from world to world, from hell and animal birth to hell and animal birth, is an appalling one, although we fail to realize fully its appalling character because we are not disposed to share it. But it is fairly evident that, at the time of Śākyamuni, many men were tired of existence.¹ They had learned to despise the trivial and unstable joys of life, and taken so gloomy a view of the universe that deliverance—unqualified deliverance—seemed to them a goal for which it is worth while to strive. This negative definition does not appeal to the most innate needs of our mind and heart—and that is the reason why *nirvāna* has been so often misunderstood; but the first duty of a historian of religion is to admit that some 'states of mind' may be human although they are not European or modern.

2. *Nirvāna* as a happy state.—While we believe that we are right on this point—namely, that some Indians were deeply pessimistic and that this pessimism culminated in the Buddhist ideal of an unqualified deliverance—it is not difficult to understand how this wan and cold ideal received the tinge of the warmest colours of confidence and hope. There is an enormous mass of texts which represent *nirvāna* as a happy state.² Every phrase that the Brāhmins use to describe the fortunate merging of the individual self into the absolute and universal self is or may be used by the Buddhists to describe the deliverance. *Nirvāna* is the farther shore (*para*), the island (*dvīpa*), the endless (*atyanta*), the immortal (*amṛta*), the immortal state (*amṛta pada*), the *summum bonum* (*naiḥsreyasa*). It is better than any existence, however pleasant. Śākyamuni, who discovered the path to it, felt obliged, out of love for mankind, to preach his discovery. Nothing can surpass the joy of the monk when he realizes that he will reach *nirvāna*; the *Dhammapada* and the 'Psalms of the Elders and the Nuns' (*Theragāthā*, *Therīgāthā*)³ give eloquent evidence of the deep joy and thrilling hope with which *nirvāna* was looked upon. It is difficult to find in the Brāhmanic literature, or

¹ E. J. Thomas, *Buddhist Scriptures* ('Wisdom of the East' ser.), London, 1913, p. 20, strongly remarks that 'it is sometimes unintelligently said that continued rebirth is a dreary doctrine. But it does not necessarily mean rebirth upon earth.' To read certain books it seems that India was, as it were, hallucinated by the idea of rebirth and death, whereas the Indian literature gives us a quite different image of Indian life. So far right. But we are concerned with the Buddhists, i.e. with the monks, with 'spiritual' men, who did really despise the paradisiac as well as human pleasures. Common religious people dreamed of paradises as they do to-day. Many more live, given to pleasure

² 'earthly *nirvāna*' (see below, § 4). But are such terms as *amṛta* compatible with this opinion?

³ See the tr. of C. A. F. Rhys Davids, *Psalms of the Early Buddhists*, London, 1900-12, i. and ii., esp. introd. to vol. i. p. xxxvii.

¹ On the various meanings of *nirvāṇi*, *nirvāna*, see Senart, *Nirvāṇa*, in *Album Kern*, p. 101 ('extinction,' 'disappearance,' 'becoming cool,' 'refreshment,' 'comfort' [*nirvṛti*], 'repose,' 'serenity' [*ānti*]).

even in the *Upaniṣads*, feelings so fervid and enthusiastic.

It may be said that such feelings draw their strength and their import from mysticism and religious exaltation; and we must agree that there is little doctrinal speculation in them. Nevertheless the fact remains that Buddhists spoke of *nirvāṇa* as a firm believer in happiness after death would speak of paradise; and this fact is an important point in the description of what the Buddhist thought of *nirvāṇa*.

3. Doctrinal statements.—When we turn to doctrinal statements, we are confronted with two or possibly three opinions: (1) deliverance is pure and simple annihilation; (2)—which will not prove tenable—*nirvāṇa* is some inconceivable existence; (3) Śākyamuni has refused, in so many words, to state whether deliverance is annihilation or not.

(1) There are texts which suggest that deliverance is annihilation—e.g., the narrative of the death of Śākyamuni:

'As the extinction of a flame
Even so was his mind's release';¹

but similes are, as a rule, misleading, and the simile of fire that perishes when the fuel is consumed is used in the *Mahābhārata*, where annihilation is out of the question.²

We have here in view the whole fabric of the speculative texts, the texts which force upon us the identification of deliverance with annihilation, because they do not leave room for any other surmise. These texts are very numerous and free from any loophole for doubt. They provide us with a scientific description of man, and teach that there is nothing permanent in him. As a matter of fact, there is no 'man' or 'being' (*puruṣa*, *sattva*), 'soul' (*ātman*), or 'person' (*pudgala*); such expressions are mere names for a complex of elements (*skandhas*), some corporeal, some spiritual, which are dissolved at death.³ If the causes—actions to be rewarded in some other life (see art. KARMA)—remain that give to the dying consciousness the power of creating, in some embryo, a new consciousness that continues the first one and enjoys the fruits of previous lives, there is no cessation of existence, there is no annihilation. If, however, these causes are wanting—and they are wanting in the case of a saint, who has destroyed desire and burned act—the consciousness is blown out as the flame of a lamp, and that is *nirvāṇa*, i.e. the end of life, of consciousness, and of suffering. All the mystic or psychological data—all idea of a transcendent self, of an immanent absolute—that could give any support to a conception of survival of whatever kind, personal or impersonal, have been sedulously destroyed by Buddhist philosophy.

Here we must confess, however, that this identification, '*nirvāṇa*=annihilation,' is not one of the 'primordial' doctrines of Buddhism. The doctrine of annihilation was not an 'original purpose'; it was a result. That is to say, Śākyamuni (or the Church) did not start with such an idea of deliverance; this idea has been forced upon him (or upon them) because he has been rash enough to deny the existence of a soul.

¹ *Digha*, II. 151. (cf. *Suttanipāṭa*, 235), tr. E. J. Thomas, *Buddhist Scriptures*, p. 116; cf. Rhys Davids, *Dialogues of the Buddha*, Oxford, 1899-1910, II. 176; the Sanskrit version, *Mahāyānakavyūṭi* (Bibl. Buddhica, IV., Petrograd, 1913), p. 524, with an interesting discussion on *nirvāṇa* conceived as something real (*bhāva*).

² xii. 543; *SBE* viii. 2 [1895] 247.

³ Thomas, p. 9: 'The self is compound and hence impermanent. When the individual is analysed into body and mind with its qualities and functions, what is there remaining behind? The soul, *ātman*, said the Vedāntin, that permanent entity which is in reality identical with the absolute and eternal Brahma. But the Buddhist answer was that there is nothing remaining. The elements of the self are the self, just as the parts of the chariot are the chariot.'

We shall see that, according to some evidences, Śākyamuni did his best to avoid this 'result,' and even objected to a definite statement of it. But, when certain premisses are accepted, conclusions follow with the fatality of destiny. *Tarka* ('logic') is indeed a most dangerous auxiliary of religious thought.

(2) There is a text, dressed in scholastic garb and therefore the more authoritative, which would lead us to suggest that *nirvāṇa* is, in the words of H. Oldenberg, 'an existence that is beyond reason and conception.'¹

'At this time, a monk called Yamaka has adopted the following wicked bereavement: "I understand the doctrine taught by Bhagavat to be this, that a monk who is free from the depravities (*āsava*) when his body dissolves, is annihilated; that he perishes; that he does not exist beyond death."

If it is a wicked heresy (*pāpakā dīṭṭhi*) to hold that the dead saint has perished, the obvious inference is that he continues to exist. But let us see the sequel.

Śāriputra, the disciple full of wisdom, endeavours to save Yamaka from this wrong view. Yamaka feels obliged to admit that a saint, a living saint, is neither identical with the bodily form, with the sensations—in a word, with the *skandhas* that are the constituents of what the common people style an individual or a person—nor, on the other hand, is he different from them. And Śāriputra concludes, in the words of Oldenberg:

'Thus then, friend Yamaka, even here in this world the saint is not to be apprehended by thee in truth. Hast thou, therefore, a right to speak, saying: "I understand the doctrine taught by Bhagavat to be this, that a saint . . . does not exist beyond death"?'

Hence the conclusion:

'One who clearly and indefinitely renounced an everlasting future would speak in another strain: behind the veil of mystery there lies the longing for escape from opposing reason, which declines to admit the conceivableness of everlasting existence, the hope for an existence which is beyond reason and conception.'

But, if it is heresy to maintain that a saint (an *arhat* or a *tathāgata*) perishes at death and does not exist beyond death, the obvious reason, stated by Śāriputra, is that an 'individual' or a 'person' is a mere *être de raison* which does not perish because it does not exist. As Śāriputra tells Yamaka, the living saint is neither identical with the *skandhas* nor different from them. If he were the body, etc., he would of course exist and would also be subject to annihilation when the body dissolves. If he were different from the body, etc., he would be eternal; but he is not different from them, because, when we speak of somebody as being a man or a saint, the only reality of which we are speaking is the group of *skandhas*. All Buddha's teaching is to make clear that the body, etc., are the only things that exist and that may be spoken of.²

The Yamaka-Śāriputra dialogue, therefore, cannot be understood as a veiled positive answer to the question of survival. It means that such questions are devoid of any actual meaning, and can be dreamt of only by foolish people who have not learned the first lesson of Buddha, that there is no soul.³

But what about the phrase which we have italicized above: 'apprehended in truth'?⁴ The present writer is of opinion that the passage must

¹ *Saṃyutta*, III. 109; cf. H. O. Warren, *Buddhism in Translations*, Cambridge, Mass., 1900, p. 133; Oldenberg, *Buddha*, 2, tr. Hoey, p. 233, tr. Foucher, p. 279.

² Cf., e.g., *Saṃyutta*, IV. 374: 'Yena rūpeṇa tathāgatam paññāpāyāmaṇo paññāpeyya taṃ rūpam paññam.' For another exegesis of the phrases, 'neither identical . . . nor different,' see below, p. 378.

³ See the end of the dialogue, and the concluding words of Yamaka: 'Henceforth, when I shall be asked whether a saint perishes at death or not, I shall answer: body is perishable (*rūpam añīcheṇam* . . .)'

⁴ *ditthe va dhamme saccheṇato tathāto anupalabbhiyamaṇo*, Fr. tr., p. 279: 'le Parfait ne peut être compris en vérité et en essence par toi.'

be translated: 'the saint is not found by thee to be something real,' or, in the words of Warren, 'considering now that you fail to make out and establish the existence of the saint in the present life.' The use of the expression *na upalabhyate* in later Buddhism (Mādhyamika school) has been known for a long time; also the logical use of the *anupalabdhī* to establish the non-existence of something somewhere; and we have now the evidence of the *Mahāniddesa*, the oldest of the commentaries, which has even been admitted in the *Suttapīṭaka*, where *natthi*, 'is not,' is commented *na samvījati*, 'does not exist,' *n'upalabhati*, 'is not perceived.'

Grammar is a conjectural science, and no matter of importance can be decided upon these philological grounds. But Oldenberg's version would be admissible only if supported by some clearer references to a state 'that is beyond conception and reason.' These references are scarce, and wear a garb of metaphor that diminishes their importance. Two may be mentioned. The first one, in the dialogue of the nun Khemā and the king Pasenadi (*Samyutta*, iv. 374), is specious. The comparison of the saint with the unmeasurable ocean must not lead us astray, as the text concludes with the common lesson on the *skandhas*. It gives only evidence of an ill-advised tendency to mystery. The second one is a celebrated fragment which occurs in two of our oldest books:¹

'There is, O disciples, a something that is not born, not produced, not created, not compounded.² Were there not, O disciples, this something not born . . . , there would be no possible exit for what is born.'

The present writer has often quoted this statement as favouring the opinion that '*nirvāṇa* is existence.' But Oldenberg has rightly remarked:

'These words seem to sound as if we heard Brāhmanical philosophers talking of the Brahma, that has neither beginning nor end. . . . Yet these expressions, when viewed in the connection of Buddhist thought, convey something wholly different. . . . For the Buddhists, the words: "there is something uncreated," merely signify that the created can free himself from the curse of being created.'

To sum up: there is little doubt that the nihilistic interpretation of Buddhism—negation of a soul, negation of the survival of the saint—is the leading doctrine of the *Pīṭakas* (old Scriptures), as it is of the mediæval northern scholastic (Mādhyamaka). But there have been in the ancient Church as well as in historical times many 'heretics,' and among them the 'believers in personality' (*pudgalavādīn*), these 'maintainers of Sāṅkhya' (*sāṅkhyavādīn*) in disguise. The *Pudgalavādīn*s stated that the *pudgala*, the self, is neither identical with the *skandhas* nor different from them; nothing can be predicated of it (*anabhilāpya*); it nevertheless exists. They probably admitted some transcendent form of eternal existence.

(3) There is a third set of texts which we may style 'agnostic' (see art. AGNOSTICISM [Buddhist]). Strong and clear as was the teaching of the Master, many of his disciples felt dissatisfied with his utterly nihilistic doctrines, and hoped, in the depth of their hearts, that they misunderstood him. Let us not forget that the disciples of Śākyamuni came to him as to the discoverer of the Path of Immortality (*amṛta*), and were not previously informed concerning the only immortality possible, namely eternal silence and destruction. If we are not mistaken, it is therefore easy to

¹ *Uddāna*, viii. 3; *Itivuttaka*, 43.

² It is worth while to look at the list of the 'not compounded' (*asamskṛta*), which seems to be old: (1) space (*ākāśa*), which is simply a name, being the mere absence of a thing 'making obstacle' (*anātarapamātra*); (2) the destruction of the things which perish without premeditation (*apratissanḥkhyānirodha*), as the wood perishes in the flame, as the flame perishes when the fuel is wanting; (3) the destruction brought about by premeditation (*pratisanḥkhyānirodha*), i.e. the extinction of the thought of the saint, more exactly, the cessation of the production of new thoughts—i.e. *nirāpāna*. See L. de la Vallée Poussin, 'Les trois Asamskṛtas,' in *Album Kern*, pp. 111-113.

understand that many monks were anxious to be made sure about *nirvāṇa*, not by logical conclusions drawn from metaphysical tenets, not by metaphorical and conflicting phrases, but by a definite and authentic statement from the lips of the Master. The texts give sundry evidences of this state of mind.³ But the Master refused to give any answer, and he added the reason of his silence:⁴

'Why has Buddha not taught his disciples . . . whether the saint lives on beyond death or not? Because the knowledge of these things does not conduce to progress in holiness. . . . What contributes to peace and enlightenment, Buddha has taught his own: the truth of suffering. . . . Therefore, Mālūkyāputta, whatsoever has not been revealed by me, let that remain unrevealed; and what has been revealed, let it be revealed.'

This passage seems to us to express the feelings of the Buddha's disciples who did not care for metaphysics; they did not seem to have realized that the first truth, 'Everything is unsubstantial,' contains at least an authoritative expression of nihilism.

A large number of the Buddhists, and by far the larger number of the Buddhists who wrote—to say nothing of Śākyamuni himself, whose personality remains an unfathomable riddle—were bold enough to face the problem of the 'non-existence of a soul' (*nairātmya*) with its inevitable consequence, namely annihilation at death. But the monks who have recorded and introduced in the Scripture this 'positivist' statement, 'I have taught what is useful; what I have not stated, let that remain unstated,' are the exponents of the commonest attitude concerning *nirvāṇa*.

The Buddhists have discussed the question of the nature of *nirvāṇa* much less than we have done.⁵ They know that *nirvāṇa* is deliverance and that deliverance is the highest good, the only good to be hoped for. That is enough. What is interesting and worth search is the path to *nirvāṇa*; discussing *nirvāṇa* is far from being the best path to it; and Buddha rightly discouraged such discussion.

4. An earthly *nirvāṇa*.—Childers⁶ was the first to point out that, in a number of texts, *nirvāṇa* does not mean deliverance from existence, the state beyond death of the dead saint, but the 'brief period of bliss' enjoyed by the man who has liberated himself from desire and become a saint, before he obtains final *nirvāṇa* at death—in other words, the state of the *arhat* or the *jīvanmukta* (qq.v.).⁷ Much stress has been laid on this conception of an earthly *nirvāṇa* by several writers, among whom is Rhys Davids; and rightly so. On the one hand, deliverance from desire is the cause and the token of deliverance from existence. On the other hand, India has always been full of reverence for the saints who have reached a thorough *āraṇyaka* and become insensible to pleasure, suffering, and hope: 'I do not wish for death; I do not wish for life.'⁸ Neophytes longed for that 'professional' perfection, a sublime pattern of which was given by Śākyamuni; and it can be maintained that many monks dreamed only of the earthly *nirvāṇa*, without taking trouble about final *nirvāṇa*. They thought only of attaining the happiness and detachment of *nirvāṇa* in this life.⁹ There is much 'professionalism' in Buddhism, more than is generally admitted. Childers' hints and Rhys Davids' discussions must not be neglected if we want to get a complete idea of what *nirvāṇa* was for the Buddhists.

¹ See, e.g., *Majjhima*, I. 426; *Samyutta*, iv. 374.

² Oldenberg, *Buddha*?, tr. Hoey, p. 276.

³ See, however, Burnouf's *Introduction* and *Mādhyamaka-ṭīkā*, ch. xxv. pp. 519-541.

⁴ *Dict. of the Pali Language*, p. 263.

⁵ The term *sa-upadhiṣṣa nirvāṇa* is often understood as referring to the state of the *arhat*.

⁶ *Theragāthā*, 1062.

⁷ See *Samyutta*, I. 251.

'The present treatment of the subject is not very clear, for it is difficult in dealing with such a problem to be both fair and coherent. Incoherence is one of the chief features of Indian thought. We believe that orthodox Buddhism (i.e. the Buddhism of the books) maintains that *nirvāṇa* is a mere concept, the state of a thing that does not exist and of which nothing can be predicated. A saint, after death, a *nirvṛta* or a liberated one (*mukta*), is 'void' (*śūnya*); therefore he can be said to be annihilated. The conclusion, in Europe, would be evident. But Mātṛcheṭa tells us:

'Others than Buddha may have won liberation; but in Buddha the superiority is altogether great: all the liberated are void; but the void of a hair cavity compares but poorly with the large void of the sky.'¹

We shall conclude with the words of Barth:

'The imagination even of an Asiatic has some difficulty in settling down to the idea of annihilation. Thus the Chinese pilgrims Fa-Hian and Hiouen-Thsang, who . . . were orthodox believers in the complete Nirvāṇa of Buddha, nevertheless speak of miracles, and even of apparitions of his, as if he had not ceased to exist; and it is beyond a doubt that with many of the Buddhists of former days Nirvāṇa was only what it is with the majority of them to-day, a sort of eternal repose or a negative state of blessedness. This does not hinder Buddhism from being doctrinally the confession of the absolute vanity of all things, and, as regards the individual, an aspiration after non-existence.'²

5. Origins of the notion of *nirvāṇa*.—This problem is very obscure. The present writer would merely state that Oldenberg's opinion that 'the idea of *nirvāṇa* originates from the idea of Brahman'³ cannot be received with absolute confidence. The Buddhist idea of *nirvāṇa*—unqualified deliverance or qualified annihilation—arose from the same causes that produced the Brāhmanic idea of *nirvāṇa*, *brahmanirvāṇa*, merging in the absolute. The same attitude towards life, towards 'contingent existence', produced two conflicting views on the end of man, two conflicting eschatologies, in harmony with two conflicting metaphysics—the nihilism of the Buddhists and the monism of the Brāhmins. But our texts never mention *brahman*, the absolute of the Vedānta; and they never consider the *ātman*, which is the absolute of the *Upaniṣads*, as the universal principle, but always as the individual soul—the existence of which they firmly deny. They discuss the possibility of reaching by the Brāhmanic means the world of the god Brahmā, and they show the right means to reach it; but they have not a word on the *brahmanirvāṇa*, the merging in *brahman*. It seems, therefore, that the Buddhists were, at the beginning, quite ignorant of the eschatology of the *Upaniṣads*. This ignorance may be explained in many ways; until the chronology of the Brāhmanic and Buddhist literatures has been settled, a sure explanation is impossible.

LITERATURE.—The literature of *nirvāṇa* is very large, and a complete bibliography would have hundreds of headings. We may mention: E. Burnouf, *Introd. à l'hist. du bouddhisme indien*, Paris, 1844, pp. 18, 516, 594; F. Max Müller, *Chips from a German Workshop*, London, 1867-75, I, 279 ff., 'The Meaning of Nirvāṇa' (1867); T. Rogers, *Buddhaghosa's Parables*, do. 1870, *Introd.* p. xxxix; *Dhammapāda*, SBE x. [1881], *Introd.* p. xlv; J. Barthélemy Saint-Hilaire, *Le Bouddha et sa religion*, Paris, 1862, tr. Laura Enssor, London, 1896; R. Spence Hardy, *Eastern Monachism*, London, 1866, pp. 5, 20, 291; P. E. Foucaux, *Doctrine des Bouddhistes sur le Nirvana*, Paris, 1864, and *Revue bibliographique*, 15th June 1874; R. C. Childers, *Dict. of the Pali Language*, London, 1875, pp. 265-274; A. Barth, *Les Religions de l'Inde*, Paris, 1879, tr. J. Wood, London, 1882, p. 113 ff.; V. Trenckner, *Mitinda-pañiḥ*, London, 1880, p. 424; H. Oldenberg, *Buddha, sein Leben, seine Lehre, und seine Gemeinde*, Berlin, 1881, 1912, 2tr. W. Hoey, London, 1882, 2tr. A. Foucher, Paris, 1903; T. W. can Lectures), New York, 1896; E. W. Hopkins, *The Religions of India*, London, 1896, p. 321 ff.; J. Dahlmann, *Nirvāṇa, eine Studie zur Vorgesch. des Buddhismus*, Berlin, 1897; J. A. Eklund, *Nirvāṇa: en religionshistorisk undersökning*, Upsala, 1899; E. Senart, 'Nirvāṇa,' in *Album Kern*, Leyden, 1903, pp. 101-104; F. O. Schrader, 'On the Problem of Nirvāṇa,' *JPTS*, 1904-05, p. 167; L. de la Vallée Poussin, *Bouddhisme: Opinions sur l'hist. de la dogmatique*, Paris, 1909, p. 84. L. DE LA VALLÉE POUSSIN.

NOACHIAN PRECEPTS.—The attitude of the Hebrews towards foreigners or 'Gentiles,' especially those who lived in their midst, underwent definite changes. It was in this connexion that there grew up the conception of the 'Noachian precepts'—the duties that could be required of the Gentiles in accordance with Biblical commands prior to the Mosaic legislation, which was regarded as peculiar to the Hebrews.

The exclusive temper of the Hebrew nation was a gradual growth. In the time of David (c. 1000 B.C.) a Hittite held high office and even the Philistines could be hosts. While P carefully notes that Isaac and Jacob avoid exogamy, the earlier sources, E and J, represent Joseph and Moses as marrying foreign wives. By the time of Deut., however, Israel's religion had become self-conscious, aware of its difference from other religions, devoted to the one spiritual God; accordingly, pagan customs were denounced, Canaanite peoples were banned, and an alien could not reside without restrictions among the children of Israel (cf. Dt 23³). This exclusive tendency is explicitly formulated in the Priests' Code with its regulations regarding alien immigrants, marriage, descent, diet, and the like. Within a short time after the return from the Exile P's account of man's early history had become axiomatic in Judaism, and the devout Jew found in the commands of the Creator as communicated by the Mosaic writings the sole sanction for human duty. P represents legitimate sacrifice, the Divine Name, the distinction between clean and unclean, as things unknown before the time of Moses. Yet, though he was ignorant of the Mosaic Law, Noah was a just man according to the standards of his age (P); and, as all the descendants of Noah could claim God as their creator and preserver, his standards might be expected from all; hence the term 'Noachian precepts.'

Post-Exilic writings vary in their attitude towards Gentiles. Ruth, Jonah, and some of the Psalms (100, 67, etc.) indicate a charitable disposition; the Wisdom literature favours tolerance; and the Greek influence created a party with wider sympathies. On the other hand, Joel, Zec 9-14, and Esther are definitely hostile. The forcible conversion attempted by Antiochus stimulated feeling in the same direction, and the Maccabean wars created the stern uncompromising piety of the future Pharisees. In the Apocrypha, while there is evidence of the more generous disposition (e.g., To 14⁶, Wis 1-11), the glorification of the Jews is equally conspicuous (e.g., Wis 12-19). The use of the names of Adam, Enoch, Noah, and Abraham in Apocalyptic literature was designed to avoid the risk of collision with the Torah, which was regarded as valid for all time. Among the disciples of Jesus the charitable attitude towards Gentiles had a new birth, but this tended to intensify the exclusive elements in Pharisaism; and it is to the discussions of Rabbis in this connexion during the first three centuries A.D. that precise definitions of the precepts of Noah are due.

The Noachian laws did not include all pre-Mosaic injunctions, but only those which coincided with the laws enunciated at Sinai (*Sanh.* 59a); e.g., circumcision was not required of Gentiles. It was only after this general principle was established that the number and scope of the Noachian precepts could be defined. According to the

³ *Buddha*, tr. Foucher, p. 281: 'L'idée du nirvāṇa est sortie de celle du Brahman.'

tractate *Sanhedrin* (56a), they were seven in number: (1) obedience to authority (יָרָא), (2) reverence for the Divine Name, (3) abstinence from idolatry, (4) from incest (Gn 12¹⁸ 20³), (5) from murder (4³⁴ 9⁵), (6) from robbery (21²⁵), (7) from eating flesh of living animal (9¹). The list grew, and in the 3rd cent. Ulla could speak of 30 commandments to which Noahide owed obedience, though he declares that they fulfilled only three (Cholin, α and β). The original seven, however, were the most important, and by observing these as a minimum a Gentile settling among Jews might be advanced to the privileges and responsibilities of the proselyte.

The Rabbis taught: Naaman's proselytism was only to perform the seven commandments given to the descendants of Noah. Nehusaradan, however, was a true proselyte; from the descendants of Sisera were such as taught the Torah among a majority of Israelites. From the descendants of Haman were such as learned the Torah in the city Bne-Berak' (*Sanhedrin*, tr. M. L. Rodkinson, New York, 1902, viii. 299).

The temper of the Rabbis appears in the following pronouncement:

'A Gentile who employs himself in the Law is guilty of death. He is not to employ himself except in the seven commandments that belong to the Gentiles. And thus a Gentile who keeps a Sabbath, though it be on one of the week days—if he make it to himself as a Sabbath, he is guilty of death; it is not necessary to add, if he appoint for himself a festival. The general rule is, that they are not permitted to innovate in religion, or to make commandments for themselves out of their own heads. Either let a Gentile become a proselyte of righteousness, and take upon him the whole Law; or let him remain in his own law, and neither add nor diminish. But if he employs himself in the Law, or keeps a Sabbath, or makes any innovation, he is to be beaten and punished, and informed that he is for this guilty of death—but he is not to be killed' (*Tilhoth Melaḥm*, x. 9, tr. A. McCaul, *The Old Paths*, London, 1837, p. 12).

The question was raised whether the Gentile should consider the seven precepts so inviolable as to claim his obedience even to the extent of suffering martyrdom for them. The school of Rabb (3rd cent. A.D.) decided in the negative, because Naaman had been allowed by Elisha to bow in the house of Rimmon (2 K 5¹⁸).

The fate of non-Jews in the Messianic kingdom was also discussed, the dominant view being that they would never adopt the whole Jewish Law.

Rabbi Jose (2nd cent. A.D.) declared that, though they would betake themselves to the Law and wear phylacteries, 'when they see the war of Gog and Magog breaking in upon the Messianic kingdom, they will throw away the Law and cry, "Let us break their bonds asunder and hrow their fetters away from us."'

The best that can be promised to a good Gentile has the authority of Maimonides:

'Whosoever confesses himself liable to observe the seven precepts of Noah and is diligent in fulfilling them, belongs to the pious among the nations and has a portion in the world to come' (*Melaḥm*, viii. 11).

The decrees of the Council of the Apostles in Jerusalem (c. A.D. 50), Ac 15²⁹ (cf. art. JUDAIZING), are independent of the later Rabbinical definitions. Among the Rabbis the postulates of the Priests' Code in Genesis are studied as the sole authoritative voice on man's origin and duty; but in the Apostolic Council custom and conduct are freely reviewed by the living Christian spirit.

NOETIANISM.—See MONARCHIANISM.

NOMINALISM.—See REALISM.

NOMISM.—'Nomism' or 'legalism' is the name given to the view that moral conduct consists in the observance of a law or body of laws. It stands opposed to those conceptions of morality which postulate an end to be pursued or an ideal to be realized rather than a law to be fulfilled. Legalism is not necessarily to be identified with what Kant, in contrast to morality, calls 'legality.' By 'legality' Kant means the moral practice of

one for whom moral law is no more than a rule, while he applies the term 'morality' to the conduct of one who finds in the law likewise the determining ground of his actions (cf. *Metaphysik der Sitten*, ed. J. H. von Kirchmann, Berlin, 1870, pp. 252, 226 f.; T. K. Abbott, *Kant's Critique of Practical Reason*³, London, 1883, pp. 269, 282), it being understood, of course, that the law is for Kant a rational and in essence a purely formal principle. Legalism may even take the form of a willing obedience which exalts reverence for the law above every other motive, whether such law be of a purely rational or of a positive and historical character. In this sense it may be, and indeed ought to be, an element in all moral life, even in its highest phase, and is then at bottom identical with what Kant calls 'morality,' though it need not bear the abstract character that Kant assigns to virtue nor imply any indifference to the practical results of observing the moral law. Whatever name we give to the supreme principle of morality, that principle must always be of the nature of a law. The moral ideal or end towards which our action is directed not only exercises an attractive power over us, but manifests itself also as an authority which makes demands upon us. Christian ethics, alike in its Protestant and in its Catholic form, has always upheld the conception of law, and rejected antinomianism, i.e. the doctrine that the moral agent who has attained to maturity has no need of external ordinances. It maintains that law cannot be dispensed with by the Christian, in so far at least as he is still subject to the power of sin; and it was from this point of view that the Formula of Concord decided the question of antinomianism. On the other hand, it is necessary to guard against what may be called positive legalism, which forgets that law and obedience are merely the form of the moral life, and not its substance. Positive legalism is exposed to danger on two sides: (1) it tends to regard the law as a multiplicity of commandments without inward coherence, and (2) it tends to confound a merely outward observance of those commandments with an allegiance of the will to the spirit of the law—to foster obedience from motives of fear or interest, and thus to become an unintelligent and Pharisaical conventionalism. Wherever we find these two defects, we have a spurious legalism, and it is to this false legalism, or else to the positive legalism as just defined, that the term is most frequently applied.

The idea of legalism, both in the good and in the bad sense of the word, was not unknown among the ancients. If we except the Stoics, Greek thinkers always identified the moral law with the law of the State. We nevertheless find Socrates, or at least Plato speaking as the interpreter of Socrates, insisting upon a willing and resolute obedience to the laws, and condemning the attitude of those who obey them only from the fear of punishment. Respect for and love of the law were quite familiar sentiments among the Greeks and Romans. The Stoics advanced to the conception of a universal law of nature, which they regarded as the foundation of all the duties and rights of human beings. This conception gave rise to a casuistry which could not fail to make a cleavage between a genuine and an unintelligent or insincere legalism. Spurious legalism is in a peculiar degree characteristic of the ethics of Judaism and Roman Catholicism. Judaism reduced all moral life to the observance of a historically revealed law, whose various constituents cannot be brought under the unity of one pervading spirit. Nevertheless, the obedience of the Jews issued in many cases from pure respect for and inward acquiescence in the law. Thus the love of the law plays a great part in the Psalms, although that love frequently

manifests itself in the form of sheer legalistic bigotry. Among the mass of the Jewish people, however, an unintelligent mechanical, self-interested, and even hypocritical observance of the law was the rule. In proportion as the casuistry of the scribes made obedience to the law ever more difficult and exacted an ever more scrupulous precision on the part of the conscientious observer, it gave rise to a deplorable practice of religious trafficking, and was itself compelled to find means of evading certain commandments under the show of fulfilling them. It would seem, nevertheless, that a reaction against this debased legalism made itself felt within the confines of Judaism itself, as is indicated by the fact that certain circles were intensely concerned to discover the 'great commandment' of the law, *i.e.* a commandment that would comprise all the rest.

It was felt necessary to appeal from the letter of the law to its spirit. Jesus made this appeal in the most emphatic way, and pursued the spurious legalism with denunciation and scorn. He even brought upon Himself the charge of being a despiser of the law, while, as a matter of fact, His great object was to secure its fulfilment by showing that its observance demanded, above all, love to its Author, and devotion to its supreme end—the transformation of mankind into a society of mutual love. St. Paul, too, incurred the imputation of antinomianism (Ro 7¹⁻²³), but he denied that he was *ἀνομος*: he was in truth *ἐννομος Χριστοῦ* (1 Co 9²¹), *i.e.* he upholds the idea of a law to which even the Christian is subject. As a matter of fact, he endorses the Law of Moses by bringing it under the unity of a supreme principle (Ro 13^{8ff.}), and sometimes he actually seems to maintain the letter by availing himself of an allegorical interpretation (1 Co 9⁸, Gal 4^{21ff.}). St. Paul's doctrine that the natural man is incapable of fulfilling the law, and that the law is unable to effect his salvation, was designed, above all, to sever the root of that spurious legalism which was the source of fatal delusion in some and of perpetual misgiving in others.

The legalistic tendencies reprobated by Jesus and St. Paul were not long in manifesting themselves in the Christian Church. The gospel came to be regarded as a new law; positive and even spurious legalism gained the upper hand in the sphere of practice and often also in that of doctrine. One of the main results of this triumph was the distinction between an obligatory morality and an optional morality, a distinction which had been made by the Stoics, and which re-appears in the Christian literature of the 2nd cent., developing later into the distinction between evangelical precepts and counsels. This tendency is closely allied to the false legalism to which the law is simply a mass of statutory ordinances without organic unity. Roman Catholic theology distinguishes various categories of laws, *viz.* natural divine law, positive divine law, positive human law, and prescriptions of the Church, of all which it proclaims the complete harmony, but which, in reality, form a collocation altogether heterogeneous, and are as such but little calculated to produce singleness and concentration of moral volition. In theory, no doubt, Roman Catholicism demands that the law shall be obeyed willingly and of conviction, but, as it does not insist upon the transformation of the heart, it is forced to place human liberty—regarded as the liberty of the natural propensities—in perpetual opposition to the law, which forms an obstacle to the growth of that liberty. Hence the law cannot be considered as anything but a yoke and a curb, nor can its observance rest upon any other motive than desire to evade penalty or acquire merit. Legalism in this sense was bound to adopt

the distinction between precepts and counsels, and to create the theory of probabilism (*q.v.*), which is hardly more than a device for eluding the law by rendering it vague. Such a legalism, however, can have no ground to stand upon where the law is regarded simply as the expression of an ideal which we have made our own and of an end which we strive to realize.

The Reformers, in reviving the Pauline doctrine of justification through faith, and in substituting for the distinction between precepts and counsels the idea of a vocation which, while individualizing the law, rescued it from the atomism of the casuists, struck at the very foundations of spurious legalism. It ought to be said, however, that, while the Reformers fought against false legalism with success, they were less fortunate in the manner in which they formulated the moral law, and in enunciating the claims of a properly defined legalism. While Protestantism may know nothing of the spurious legalism, it has not always been wholly free from legalism in the positive sense. The Reformed Church, in particular, has laid great emphasis upon the idea of law; it has frequently regarded the Scriptures as a legal code, and has not always succeeded in adequately distinguishing between the letter and the spirit of the Biblical precepts. Pietism likewise has sometimes lapsed into an ignoble and punctilious legalism. The Anabaptists thought of the Bible as being primarily the revelation of a law, and of the Christian life as consisting in obedience to it; yet, while their legalism made them narrow, it has not in the slightest degree undermined their earnest morality, as holds good likewise of the Reformed Church and Pietism.

If the spurious legalism that takes cognizance, not of a single all-pervading law, but only of particular laws, and deals with these in a commercial spirit, and the positive legalism, to which moral life consists wholly in fulfilling a law, play a large part in the history of the Christian Church and the history of humanity, it is none the less true that there is a just and proper legalism which is required as a counteractive to a morality purely æsthetic and sentimental. Legalism, narrow though it be, may have a considerable educational value in habituating human beings to resist their natural impulses, and to bow before an absolute authority. Rightly understood, indeed, legalism is a necessary condition of true moral liberty, as it reminds us that we are free only in proportion as we detach ourselves from our egoistic nature and rise above the claims of self.

LITERATURE.—The subject is usually dealt with in general histories of ethics and in histories of Christian ethics; *cf.* in particular: J. Denis, *Hist. des théories et des idées morales dans l'antiquité*, Paris, 1879; C. E. Luthardt, *Gesch. der christlichen Ethik*, Leipzig, 1888. See further works on Biblical theology, *esp.* B. EUGÈNE EHRHARDT.

NONCONFORMITY.—1. Meaning and application of the term.—Although anybody who declined to fall in with the religious usages of his people might be called a 'nonconformist,' the name has come to have a more definite, specific meaning in English national life and history, so that we can speak of 'the Nonconformists,' the article indicating a particular section of the community with its own characteristic views and policy. The negative form of the word points to

an antithesis. There can be no nonconformity where there is not some rule or set of regulations compliance with which is refused. Further, the word has a political connotation. While 'heresy' stands for opposition to ecclesiastically settled orthodoxy, 'schism' for separation from the communion of the society claiming to be the one true Church, and 'dissent' for divergence from the beliefs and doctrines maintained by the national settlement, Nonconformity consists in not carrying out the requirements of an 'Act of Uniformity,' which is a law of the State. Accordingly, in America, in the British colonies, and in India there are no Nonconformists, because the English Acts of Uniformity did not extend beyond England and Wales. The disestablishment of the Welsh Church involves an end to Nonconformity in Wales. On the other hand, in Scotland, while Presbyterianism is the established form of Christianity, the Anglican Church, though outside the Establishment, is not, strictly speaking, Nonconformist, because since the suppression both of the Prelatists and of the Covenanters, Scotland has enjoyed religious liberty unhampered by any Act of Uniformity. Next, it should be observed that all the Acts of Uniformity have aimed at enforcing the use of the successive forms of the Book of Common Prayer that Parliament has sanctioned from time to time. They are not concerned with differences of religious belief except in so far as loyalty to the contents of this book and an honest use of it are concerned. It is possible to be a heretic inside the Established Church—with regard to doctrines not defined by the Prayer Book—and commit no offence against an Act of Uniformity; and it is also possible to agree with the Church standards of doctrine and yet be a Nonconformist, because not accepting everything in the Prayer Book. For some time there were Nonconformists within the pale of the Church, even Nonconformist ministers and bishops; Hooper was such. But their position was illegal, and, though the earlier Acts of Uniformity were not always pressed, the rigorous application of the latest of these Acts (that of 1662) drove all Nonconformists out of the Church. Thus, strictly speaking, a present-day Nonconformist is a person who is kept out of the Established Church of England on account of his refusal to accept the Book of Common Prayer in its entirety. But practically any one who stands outside the Established Church and associates himself with some other Christian Church is regarded as a Nonconformist, whatever his views about the Prayer Book may be. There are even Nonconformist churches that use this book in their regular services. Here we have the exceptions that prove the rule.

Historically regarded, the Nonconformists have been further characterized by their adherence to Puritanism in opposition to any approach towards Roman Catholicism on the one hand and towards Erastianism on the other. The early Nonconformists rejected certain ancient mediæval beliefs and usages that had been retained in the Elizabethan Church, in particular two—Episcopacy and the use of vestments. They claimed to represent primitive Christian beliefs and practices, and denied the right of the State either to alter or to add to them. In this way most of the early Nonconformists became Presbyterians and the remainder Congregationalists and Baptists.

It has been maintained that beneath these specialities of opinion and practice there lies a vital principle inspiring them and so essentially separating the Nonconformist from the Roman Catholic conception of religion. This is that, while the Catholic system begins with the Church as an institution and seeks to work inwards towards

spiritual religion by the influence of its rites and ordinances, the Nonconformist process is the reverse, commencing with the individual, with personal spiritual life, from which the Church and its activities are evolved as its fruits and products. Although these two ideals appear to be more or less clearly represented in the two types respectively, yet it cannot be shown that the divergence began with them or that they were always recognized as the most fundamental factors.

Lastly, it should be observed that, while modern Nonconformists are opposed to any interference with religion by the State, and stand for complete religious liberty—Cavour's 'free Church in a free State'—this was by no means the case among the early Nonconformists, with the solitary exception of the Baptists. The Presbyterians, while holding to the Puritan principle of keeping to the Word of God pure and simple as the standard, would have had their interpretation of the Bible enforced by the government, and there are even some statements of the Congregationalists Browne, Barrow, and Greenwood that recognize the authority of the civil magistrate for maintaining religious orthodoxy. If Cartwright had obtained the support of the government in his controversy with Archbishop Whitgift, he would have put down Episcopacy by force in favour of Presbyterianism. There was nothing to choose between the two with reference either to religious liberty or to the idea of a State establishment of religion. It was only in course of time that the Nonconformists came to agree on an entire repudiation of State interference with religious beliefs and practices and a demand for the disestablishment of the Church and the maintenance of complete religious liberty—the present Nonconformist position.

2. Tudor period.—Previous to the Tudor period there were divergences from the standard beliefs and practices of the Church, most conspicuously in John Wyclif and his followers, the Lollards. But, while Wyclif repudiated the authority of the pope over the Church in England, he asserted that of the king. The Lollards were persecuted by the civil authorities for heresy and dreaded on account of their socialistic tendencies. Although when they met in secret doubtless they would have conducted their services in a manner agreeable to their convictions, since there was no Act of Uniformity under which they could be arraigned, yet their separation from the Church was not effected in this way, and therefore, strictly speaking, they should not be described as Nonconformists.

Under Henry VIII. the Act of Supremacy, substituting the king for the pope as head of the Church, and the legal enforcement of the Six Articles were two fruitful causes of dissidence—the one repudiated by stanch Roman Catholics and leading to the martyrdom of Bishop Fisher and Sir Thomas More as well as less notable champions of the papacy, the other making martyrs of thorough-going Protestants who denied the doctrine of the Mass, so that supporters of the Roman discipline were beheaded and rejectors of the Roman doctrine hanged. But Henry and his parliament did not interfere with the ceremonies of the Church, although in the year 1540 a commission was appointed to inquire into them. Meanwhile varieties of usages that had come down from time immemorial in the different dioceses continued undisturbed, and no attempt was made to enforce any particular form of service. As yet there was no one Book of Common Prayer to which conformity could be required.

The establishment of the reformed religion in the reign of Edward VI. was accompanied by an important innovation with regard to uniformity of worship. In the reign of Henry VIII., as early as

the year 1544, the litany was ordered to be used in English; but as yet there was no complete English Prayer Book. In the year 1549 there was issued the first Book of Common Prayer, compiled in the main out of ancient missals. This was revised by Cranmer with the assistance of Martin Bucer, then Regius Professor of Divinity at Cambridge, and Peter Martyr, who held a similar post at Oxford; and their labours resulted in Edward VI.'s Second Prayer Book—a work which showed considerable advance in the direction of Protestantism. Transubstantiation was now distinctly repudiated, prayers for the dead, anointing at baptism, and extreme unction were omitted, and the use of all vestments except the rochet and the surplice was forbidden. Neither of these Prayer Books had been submitted to Convocation when it was enforced by Act of Parliament. The first Act of Uniformity—that requiring the use of Edward VI.'s First Prayer Book—proclaims itself such. Its preamble contains the following declaration:

'Of long time there hath been had in this realm divers forms of common prayer, commonly called the Service of the Church; that is to say, the use of Sarum, of York, of Bangor, and of Lincoln; and besides the same, now of late, much more diverse and sundry forms and fashions have been used in the Cathedral and parish churches—with divers and sundry rites and ceremonies concerning matins and even song, and in the administration of the Sacraments of the Church.' It goes on to assert that the king has 'diverse times assayed to stay innovations or new rites,' adding: 'Yet the same hath not had such good success as his highness required—therefore he hath been pleased with the interest to secure a uniform, quiet, and godly order, to appoint commissioners, to make one convenient and meet order of common prayer, the which, by the aid of the Holy Ghost, is by them concluded.'

It is enacted that the services in the churches are to be conducted in such 'form as is contained in the said book, and none other, or otherwise' (*Statutes*, 2 and 3 Edward VI., cap. 1). The act is enforced by severe penalties, including deprivation, fines, and imprisonment, which after a third offence is to be for life. The origin of Nonconformity may be traced back to this first Act of Uniformity in English history. There were two parties to whom it was not acceptable. Designed expressly to effect a repudiation of Roman Catholic practices and doctrines, it could not but be obnoxious to adherents of the mediæval faith. It was against their position that its guns were directed. But there was another party in the line of fire whose antagonism had not been contemplated—the party of the Puritans. Aiming at the English method of compromise and moving slowly, the Reformation in the southern portion of our island was less drastic than in Scotland, where the Calvinistic model was adopted. This was not at all satisfactory to those English Protestants who desired to go as far as the more advanced Continental reformers. Foremost among them was John Hooper, afterwards bishop of Gloucester, who refused to use the vestments, openly objected to much in the Act of Uniformity, and even declined to take the oath of the royal supremacy. He has been called 'the first Nonconformist' (Skeats, *Hist. of Free Churches of England*, p. 6). He was also the first minister in the Church to pronounce clearly for the freedom of the Church from State control—a position which the main body of the Nonconformists did not take up till more than a hundred years later.

'Touching the superior powers of the earth,' he writes, 'it is not unknown to all of them that have read and marked the Scripture that it appertaineth nothing unto their office to make any law to govern the conscience of their subjects in religion'; and, again, 'Christ's Kingdom is a spiritual one. In this neither Pope nor King may govern. Christ alone is the governor of his Church, and the only law-giver'; and, again, 'The laws of the civil magistrate are not to be admitted in the Church' (quoted in Skeats, p. 7).

This is quite the Free Church position. Hooper was imprisoned at the Fleet, but was liberated by the king after some small concessions had secured

his submission, and then under the persuasion of leading Continental reformers he accepted the bishopric of Gloucester in the hope of helping to carry the Reformation further in England. Edward VI.'s Second Prayer Book (A.D. 1552) registered a considerable advance in this direction. The second Act of Uniformity (5 and 6 Edward VI., cap. 1), enforcing the use of the revised Prayer Book, forbade attendance at any other form of service under penalties amounting—for the third offence—to imprisonment for life.

During Mary's reign, while all types of Protestantism were banned, there was no longer any occasion for specific Nonconformity. Her brother's Acts of Uniformity were nullified by the restoration of Roman Catholicism. But the return of Protestantism with the commencement of the reign of Elizabeth brought back the Prayer Book and was confirmed by a new Act of Uniformity (Elizabeth, cap. 2, A.D. 1559) with penalties amounting to imprisonment for life in case of a third conviction, also fining parishioners twelve pence for every offence of non-attendance at church. The Book of Common Prayer was revised by a commission of divines and members of the Council, who combined the two forms of it issued in the reign of Edward VI. The result was a ritual less advanced in Protestantism than King Edward's Second Prayer Book. In particular, the description of the adoration of the elements as 'idolatry' and the assertion that 'the sacramental bread and wine . . . remain still in their very natural substances,' with other statements to the same effect, were removed. In the beginning of her reign Elizabeth desired to be conciliatory. It may be said that the *via media* of the Church of England is very largely due to the great Tudor queen's policy. She repudiated the papacy, and, while reluctant to be called 'supreme head' of the Church, accepted the title 'supreme governor.' But, quite apart from her desire to gather in as many of her subjects as possible, Elizabeth was personally enamoured of ceremony, and she found the bareness of the extreme Protestant type of worship repulsive to her taste. Accordingly she had no sympathy with Puritanism. This movement now came into prominence under the leadership of a great scholar and masterly controversialist, Thomas Cartwright of Cambridge, who exerted wide-spread influence, not only in the University, but also throughout the country. Cartwright went beyond the position of Hooper in the reign of Edward VI., and distinctly rejected the Episcopal form of government, pronouncing for Presbyterianism on grounds of Scripture. He was opposed by Whitgift, then Vice-Chancellor of the University. But even Whitgift, while defending Episcopacy, did not accept the Catholic doctrine of apostolical succession or even the divinely appointed authority of bishops as a distinct order of the ministry. This High Church view of the episcopate appears to have been first advocated by Bancroft in the year 1588. We wait for Laud in the reign of James I. for the full assertion of the doctrine of apostolical succession. While Cartwright held that the Presbyterian order, with the right of the people to elect their ministers, was authoritatively required by Scripture, Whitgift maintained that the external polity of the Church was left an open question which the Christian State could settle for itself. It may be said, therefore, that Whitgift took a more liberal view of the situation than Cartwright. But then the Erastianism that accompanied it limited this liberty to the crown and a subservient parliament. In point of fact, it was only the queen who enjoyed freedom in the matter; her subjects, including the Church and its ministry, were tied down by the Act of Uniformity to the system of government on

which she had decided. In the year 1574 Travers published his *Disciplina Ecclesiæ ex verbo Dei descripta* at Geneva, and twelve years later Cartwright translated it into English with additions. He and some 500 ministers signed their agreement with it. This book was pronouncedly Protestant, and it advocated the form of church government adopted by the French Presbyterians. Efforts were made to further the Puritan cause by the introduction into Parliament of bills limiting the stringency of subscription and the powers of bishops. But they were all stopped by the queen and the court party which stood for the Episcopal settlement. In spite of this fact most of the Puritans remained in the Church. These were Presbyterians who hoped for the ultimate triumph of their own views in the Establishment, and who, cherishing that hope, submitted for the time being to ordinances of which they did not approve. A minority could not agree to this policy. A Presbyterian conventicle was founded at Wandsworth in 1572. This was suppressed and its members were scattered—the first instance of the breaking up of a Nonconformist church. But it was by the Congregationalists that the idea of separation was developed. Their view was first expounded by Robert Browne, whose *Treatise of Reformation without tarying for aie* was published in 1582. He blames those preachers who will not reform themselves or their charges, but wait till the magistrate commands or compels them. In taking up this position, he plainly advocates positive and open Nonconformity. It may be regarded as an accident that this was first identified with Independency; but, while Presbyterianism could be established by the State or left free as the case might be, Independency logically involved separation, because it recognized Christ as the only Head of the Church and the body of the Church members as the one authority competent to interpret His will. Browne's fundamental principle also requires the same freedom. He states it thus:

'The Kingdom of God was not to be begun by whole parishes, but rather of the worthiest, were they never so few' (*A True and Short Declaration*, etc., p. 6).

The Presbyterians were willing to retain the parochial system, which assumed the Church membership of the whole nation. In rejecting this and arguing for a separated Church of genuine Christians, Browne necessarily broke not only with the existing Anglican and Episcopal Act of Uniformity, but with the very idea of such an act. He would have had to stand out from an established Presbyterian Church. It is true that he did not always see the legitimate inferences to be drawn from his contentions; for, while in one place he says, 'They [the magistrates] may do nothing concerning the church, but only evile, and as evile Magistrates' (*Treatise of Reformation*, p. 12), he is not always clear on the point or consistent with it. But this personal vacillation does not affect the inherent requirements of his principles. See, further, art. BROWNEISM.

Thus the early Independents became pronounced Nonconformists and were persecuted as such. Robert Browne was reconciled to the Established Church in his later days. But the Independents or Congregationalists—the names are synonymous—Barrow, Green, and Penry were hanged as Nonconformists, the grounds of their condemnation being publishing seditious books, denying the royal supremacy (which was treated as constructively implying treason against the queen), and attacking the existing ecclesiastical order. The statute of the royal supremacy was originally directed against the Roman Catholics and their adhesion to a foreign prince, in the pope, and Protestant Nonconformity was then scarcely con-

sidered. It does not appear that Queen Elizabeth knew or cared anything about the obscure Separatists. Their obstinate recalcitrance came as an unpleasant surprise to her. It was Whitgift who drew them out to the light, and he must bear the chief responsibility for the treatment that they received. For fuller particulars concerning these Elizabethan Nonconformists see artt. CONGREGATIONALISM and PRESBYTERIANISM.

In 1593 there was enacted a rigorous law against Nonconformity (35 Elizabeth, cap. 1), threatening imprisonment, which was to continue till open submission and declaration of conformity were made. Obstinate offenders were to abjure the realm.

3. Early Stuart period.—During the reigns of James I. and Charles I. the Elizabethan requirements remained in force and with them the prohibition of Nonconformity. Nor was this all. Fresh disabilities were introduced and additional power was given to the engines of repression, so that the plight of the Nonconformists was worse now than it had been during the later years of Queen Elizabeth. They were harried out of the land. The irresponsible courts of the Star Chamber and the High Commission destroyed both liberty and justice. The first flight of the Separatists to Holland took place under Elizabeth; a second followed under James I., when life in England had become intolerable for them. Unlike the Presbyterians, Puritans within the Church, who numbered in their ranks some of the ablest, most scholarly, and cultured men of their day, the earlier Congregationalists were for the most part persons of humble origin and meagre attainments, although the martyrs Barrow and Greenwood were both educated at Cambridge University. A man of wider culture and larger intelligence, as well as higher tone, was John Robinson, who went from Scrooby in Nottinghamshire to Amsterdam, where he was followed by his congregation, and thence to Leyden. Here Congregationalism was first established on a firm basis by a capable and large-minded exponent of its principles, and from this place it crossed over to America with the Pilgrim Fathers (*q.v.*). The Independents from Leyden were followed by others from England and also by Puritans who had not voluntarily separated from the Established Church, but who could not submit to its legally enforced requirements. They too, on joining the exiles at Plymouth, came to be fused with the Independents, whose principles they ultimately adopted. On the other hand, the Puritan Nonconformists, who made a new settlement in Massachusetts, carried with them their Presbyterian tenets and established a rigorous Calvinistic government in the New World. It has been urged against the Nonconformists that after claiming liberty in England they practised tyranny in America. But to say this is to fail in discrimination. We should distinguish between the two classes of exiles. John Robinson's people, who had claimed Church freedom in the Old World, did concede it to a very large extent in New England; but the Puritans, who denied it and enforced a State-governed Presbyterianism in Massachusetts, had never objected to the State establishment of religion, and, if they had obtained the upper hand at home, they would have enforced their form of Church government, as was the case with their successors in the days of the Long Parliament when the Covenant was adopted. Thus each party remained consistent with its principles.

Meanwhile efforts were being made to secure an ecclesiastical settlement in England. In the year 1604 the Hampton Court Conference was summoned—ostensibly in order to bring the opposing parties together. Dr. Reynolds, representing the Presby-

terians, desired to secure permission for assemblies of the clergy every three weeks, 'prophesying,' and diocesan synods, each composed of the bishop and his presbyters. This proposal aimed at a compromise combining the essential elements of Episcopacy and Presbyterianism. In all probability, if it had been adopted, we should have heard little more of Nonconformity except among the detached sects—Congregationalists, Baptists, Quakers, etc.; for the majority of the Puritans were anxious to remain in the Church and to arrive at a common settlement. But this was not to be. The tone of the conference was anti-Puritan, and all that it effected was a more pronounced opposition to the Presbyterians and other Nonconformists.

The same year James I., who thought his own consummate wisdom equal to a task at which theologians and statesmen had failed, made an attempt to determine the dispute by issuing his *Book of Canons*, which required every clergyman to subscribe 'willingly and *ex animo*' to the royal supremacy, the Book of Common Prayer, and the Thirty-nine Articles. The king did not explain how any compulsion could be needed for what was to be done willingly. Although the book was passed under the Great Seal, it was never adopted and authorized by Parliament. But it sufficed to aggravate the persecutions of a royal and episcopal tyranny. The hard case of the Puritans was still further embittered by the position taken up by Laud—and that on two accounts. First, Laud followed Bancroft in adopting the doctrine of the apostolical succession of bishops. This implied that Presbyterian ordination was invalid, and it repudiated the Churchmanship of all but Episcopalians. Inferentially it cut off the Church of England from communion with all the great Protestant Churches on the Continent, Lutheran, Calvinistic, and Zwinglian—a complete reversal of the policy of Elizabeth, who had championed the Continental Protestants. It also indicated some undoing of the work of the Reformation—a move back in the direction of Roman Catholicism. Laud himself had no leanings towards the papacy. On the contrary, his aim seems to have been to strengthen the Church of England by giving it a sound basis. Under the strong Tudors the royal supremacy was an adequate substitute for the papal; but that was not the case with the Stuarts. Hooker had tried to justify the Episcopal position on grounds of Scripture and antiquity. But some one clear principle seemed needed to strengthen it against the Presbyterian position and at the same time justify it in view of Roman Catholic claims. This Laud thought he had found in the divine appointment of the Anglican episcopate and its mystical powers. Such a contention was especially offensive to the Puritans, and it aggravated their objections to the conduct of Church affairs by the authorities. The Prayer Book as interpreted by Laud was far worse than the Prayer Book as interpreted by Parker. In the second place, Laud was an Arminian, and the 17th cent. saw the Church of England invaded by Arminianism. Archbishop Whitgift had been as Calvinistic as Cartwright. Those two controversialists agreed in doctrine, while they differed as to the discipline and government of the Church. Elizabeth herself was Calvinistically inclined, and the Elizabethan Church was mainly Calvinistic. The Lambeth Articles, which went beyond the Thirty-nine Articles in the direction of extreme Calvinism, represented the dominant spirit of Anglicanism at the end of the 16th century. But the 17th cent. saw a great change in this respect. The Puritans, however, remained true, in the main, to the Genevan theology. There were exceptions, as in

the case of John Smyth, who broke off from the Independent Church at Leyden on Baptist principles and founded the General Baptist body, and later in the Independent John Goodwin. The Calvinism of the bulk of the Puritans was directly opposed to the Arminian tendencies of the Stuart Church, and thus a second ground of divergence appeared, still further widening the breach and intensifying the antagonism between the Established Church and Nonconformity. The vigorous activity of Laud made this antagonism acute.

4. The Parliamentary and Cromwellian periods. —Then came the reaction, and Laud was sacrificed to the Presbyterian opposition. But the execution of the great Churchman did not save the ill-advised king and his incompetent courtiers. The Civil War indicated the uprising of Protestant England and Scotland against prelatical tyranny as much as against royal despotism. It was a fight for religious liberty. But with the Presbyterians this proved to be only liberty for themselves and their own views. Two stages in the subsequent triumph over the court and Episcopal side must be kept distinctly apart if the parties concerned are to be justly judged. The first is in the period of the Westminster Assembly and the Long Parliament, when Presbyterianism was made the religion of the nation by Act of Parliament, and the Solemn League and Covenant adopted by Parliament in England as well as north of the Tweed. The execution of this Erastian requirement was never complete. Presbyteries were established in London and in Lancashire; but little was done to set them up in other parts of England. Many Episcopalians were then ejected from their livings, with a reduced maintenance at least allowed them by law (though they did not all get it), but not so many as Walker's *Sufferings of the Clergy*, London, 1714, might lead us to suppose. In his exhaustive study of *The Ejected of 1662 in Cumberland and Westmorland*, 2 vols., Manchester, 1911, B. Nightingale has gone carefully through Walker's names for those counties, and finds (1) some incumbents removed for inefficiency or moral faults, (2) some for malignancy, on political grounds, and (3) some only deprived as pluralists of all livings but one, which they were allowed to retain. There is no reason to believe that the case was different in other counties, the records of which have not been so thoroughly searched. Still, no doubt there was much suffering under this parliamentary despotism, as well as real heroism and the true martyr spirit among loyal lovers of the suppressed Prayer Book.

The second period is that of the Commonwealth, when Oliver Cromwell held the power of the State in his own hands. Cromwell had called the Westminster divines 'persecutors.' The five Independents who had left the Westminster Assembly when they had found all protests against the forcing of Presbyterianism on the nation ineffectual had stood out for a freer course. But even they had not anticipated the breadth of the great Protector's policy. This was to leave all godly men and gospel preachers, whether Congregationalist, Presbyterian, or Episcopalian, in possession of their parishes so long as they discharged their duty faithfully. His triers were not all of one party, and they were expressly ordered not to molest worthy ministers of any of these persuasions. It was the widest, most comprehensive Church order ever established. Even some Baptists as well as many of the three denominations mentioned above now entered the ministry of the Established Church, notably Henry Jesse, rector of St. George's, Southwark, John Tombes, vicar of Leominster, and Paul Hobbson, chaplain to Eton College. We must regard this as a large-minded statesman's

practical expedient devised to meet a peculiarly awkward situation. It was not wholly consistent with the requirements of any of the parties concerned, for the Episcopalians had no bishops, the Presbyterians had no synods except in London and Lancashire, and the Independents were in charge of whole parishes, while also gathering and meeting their separated churches in those parishes. In reality it was an established Congregationalism unfettered by any formal creeds or canons of Church order. This secured personal liberty for the ministers and churches that it included within its ample boundaries. No Episcopalian was to be ejected except for inefficiency, immorality, or plotting against the government. Roman Catholics, Unitarians, and Quakers were not included in Cromwell's otherwise comprehensive Church. But none of these people are known to have been holding livings when he assumed the reins of government. The Protector removed the disabilities of Baptists and Congregationalists who had remained outside the Establishment all along—quite the majority in those denominations; and, although the Quakers were still obnoxious to the law, he endeavoured, being favourably impressed in an interview with George Fox, to soften its rigour against them. Oliver Cromwell did not live long enough to test the efficacy of his efforts to secure religious amity; and his arrangement fell to pieces in the chaos that followed his death and the succession of his incompetent and negligent son Richard, who was more at home in a country gentleman's life among horses and dogs than in great affairs of State.

5. Period of the Restoration.—A national revulsion against the gloom and sternness of Puritanism and despair of the establishment of settled order by the government of the day led to a joyous welcome of Charles II. when he landed at Dover on 25th May 1660. Many have expressed surprise that the Presbyterians took the lead in bringing about the restoration of the Stuart dynasty. It should be observed, however, that at the time of the Westminster Assembly this party, in its antagonism to the Independents, who had leanings towards Republicanism, was turning towards the monarchy. Besides, could its leaders have gauged the depths of Charles's perfidy? Ten years before this, when in Scotland, he had sworn to support both the National Covenant of 1581 and the Solemn League and Covenant of 1643, and he had renewed his oath when crowned at Scone. Honourable men would find it hard to expect that a king would so forswear himself as to repudiate such an oath and sanction the persecution of those who remained faithful to its principles. Then they had the king's letter to the House of Commons, in which he promised to respect tender consciences and maintain religious liberty. Was it to be supposed that within two years he would break his word and repudiate the promise on condition of which he had been called to ascend the throne? Many had grave misgivings; but the tide was too strong for them. The worst that we can say of the Presbyterians who invited Charles is that they were deceived as to the character of the prince with whom they were dealing, having no conception of its incredible baseness. Not that we are to accuse Charles of any Machiavellian policy of duplicity. Probably in his easy, careless way he intended to keep his word when he gave it. He was no lover of persecution; he would have liked all things to go pleasantly so long as he could revel in his own pleasures. But, when these were threatened—being the only serious objects of his life—oaths and vows might be scattered to the winds.

So it came about that the restoration of the monarchy brought with it almost as a matter of

course the restoration of the Anglican Episcopal Church. The popular revulsion against Puritanism made this inevitable. Charles could not have prevented it. What his pledged word should have opposed was the concurrent ecclesiastical tyranny which immediately began to oppress every other kind of Church life. Many Presbyterians and others were at once expelled from their livings in the Church. In most cases this was in order to restore the rectors and vicars who had been cast out by the previous government. As far as that was the case, there could be little just ground of complaint. It was hard on the ejected; so had the previous ejection been hard on the Episcopalians, who could also claim priority of right. But these cases do not cover all the ground. Apart from the restoration of livings to survivors from previous ejection, a dead set was made against the Puritans, and many suffered in consequence. For two years, however, no new law was passed in order to bring about a sweeping clearance. But the storm was brewing, and in the year 1662 it burst with wide-spreading results. During the intermediate period the Puritan party was gradually experiencing more and more disfavour. This was seen in Parliament, where the expressions of vindictiveness against the opponents of the late king became more pronounced as time went on. It was also manifested by the actions of the government. Ten Presbyterian ministers were appointed among Charles II.'s first chaplains, of whom, however, only four actually preached before the king. These were Reynolds, Spurstow, Calamy, and Baxter.

'I suppose,' writes Baxter, 'never a Man of them all ever received or expected a Penny for the Salary of their Places' (*Life and Times*, pt. ii. p. 229).

The Worcester House Conference was then called together at the house of the Lord Chamberlain. It consisted of a meeting of Presbyterian chaplains with leading statesmen in the presence of the king, who professed to be glad at any approach to agreement—no doubt, in spite of his deep duplicity, with some sincerity, for he was not ill-natured, and he always desired to see things going pleasantly. Baxter had previously conferred with Archbishop Usher, and the two had come to an agreement as to the terms to be proposed for a settlement. These were the appointment of a suffragan bishop in each rural deanery, annual diocesan synods, and a national synod every three years. It was to be a combination of Episcopacy and Presbyterianism. This suggestion, together with a recommendation for revision of the liturgy, was now adopted and proposed by the Presbyterian chaplains. They do not seem to have made any clear pronouncement on the vital question of Episcopal ordination. When the scheme was submitted to the bishops, they drew up a reply, which was presented to the Presbyterian chaplains in writing. On 4th Sept. Clarendon sent a draft declaration for indulgences to the Presbyterian divines, to which Baxter wrote an elaborate answer; and on 22nd Oct. he effected a meeting of representatives of both ecclesiastical parties together with the Dukes of Ormond and Albemarle, the Earls of Manchester and Anglesey, and Lord Hollis, the king himself being present. There were six bishops and six Presbyterians. This was at Worcester House in the Strand, where Clarendon was living at the time. Unhappily, the conference broke down on a proposal of the king, introduced by the Lord Chancellor, granting liberty of meetings for religious worship provided they did not disturb the public peace. This was in response to a petition for toleration that the king had received from 'Independents and Anabaptists.'

'The Presbyterians,' says Baxter, 'all perceived . . . that it would secure the Liberty of the Papists' (pt. II. p. 277).

Baxter, himself the champion of liberty, who was labouring for peace and comprehension, protested against the inclusion of papists and Socinians. Thereupon the king broke up the meeting. Two or three days later Charles issued a manifesto embodying some of Baxter's proposals, including the appointment of suffragan bishops, the requirement that censures should not be issued without the co-operation of presbyters, and a revision of the Prayer Book. The king also gratuitously renewed the declaration from Breda that no one should be disquieted for differences of religious opinion. Baxter, Calamy, and Reynolds were offered bishoprics. Baxter declined; Calamy would wait till the new royal declaration became law—which never was the case; Reynolds, on Baxter's advice, and hoping to help the Puritan cause, accepted the see of Norwich. When the proposals of Charles's manifesto came before Parliament, they were rejected.

In the winter of the same year an excuse was found for oppressive measures in Venner's insurrection—a petty disturbance raised by a small party of fanatical Fifth Monarchy men. But this was not the real cause of the new severity, for, although a declaration curtailing religious liberty was not issued till 10th Jan.—four days after the riot—the Council Book shows that its provisions had been decided on in the Council on 2nd Jan., i.e. four days before that outbreak (see J. Stoughton, *Church and State Two Hundred Years Ago*, London, 1862, p. 131). This order in council forbade the meetings of Anabaptists, Quakers, and other sectaries in large numbers, and restricted them to their own counties. Apart from its specific requirements, there were plenty of old laws that had slumbered neglected under more liberal administrations which could be revived and utilized for the persecution of Nonconformists, and there were many victims of this persecution before the famous ejection. Among others John Bunyan had been sent to Bedford jail for his Nonconformist activity on 12th Nov. 1660—eighteen months before the new Act of Uniformity was passed.

6. The Savoy Conference.—The Savoy Conference was summoned by royal authority on 25th March 1661, as a commission to attempt a settlement by a revision of the Prayer Book. It consisted of Church dignitaries and Presbyterians. The Congregationalists, Baptists, and other denominations were not represented in it. The bishops showed from the first no inclination to come to terms, and they repudiated the objections urged by the Presbyterians to any of the contents of the book as it stood. Baxter, who had undertaken to draw up a scheme of suggestions for amending it, made the amazing mistake of writing an entirely new book of prayers and offering it to the bishops as a substitute for their old Prayer Book. Utterly unpractical and altogether lacking in diplomatic policy as the great and good man showed himself to be in this matter, he was throughout labouring for peace, and the supreme object of his endeavours was to secure a united Church. It was not Baxter's unpracticalness, however, but the obvious determination of the bishops to make no concessions, that led to the failure of the conference. The Savoy Conference met at the time when preparations were being made for the king's coronation—a great and gorgeous function in which none but Episcopalians of the Established Church took any part. Thus the very object of a conference called together by royal authority was negated in the eyes of all men while its discussions were being carried on.

7. Reactionary measures.—Meanwhile a new

House of Commons was elected, and no sooner did it meet than it began to show its character. Young squires whose fathers had suffered for the royalist cause were in no mood to welcome projects of conciliation and compromise. In particular, three measures passed in the first year of this parliament (1661) marked the reaction against the Puritan régime very distinctly, viz. acts for the return of the bishops to the House of Lords, the restoration of some ancient ecclesiastical customs, and the exclusion of Nonconformists from municipal offices by requiring the test of the sacrament in an Anglican church. These measures were brought in so closely together and pressed through so quickly that it is manifest that they were in a pre-concerted plan for the effective re-establishment of a dominant Episcopacy. Charles's promise at Breda of respect for tender consciences and religious liberty was flung to the winds in the royal assent to these Acts of Parliament.

8. Act of Uniformity.—A fourth measure, of greater historical importance and far-reaching consequences, was the now famous Act of Uniformity (14 Charles II., cap. 4), which split the Church in two, and thereby created Nonconformity as a powerful factor in the national life. The bill was introduced into the House of Commons by Serjeant Keeling, a man whose disposition may be seen in the fact that on one occasion, when he was a judge, he fined each member of a jury 100 marks for acquitting some people who had assembled for worship one Sunday with Bibles but without Prayer Books. It was read a first time on 29th June, and it had passed through all its stages and was sent up to the House of Lords by 10th August. As it then stood, this bill required all clergymen, on pain of ejection from their livings for disobedience, to declare publicly 'their unfeigned assent and consent to the use of all things' contained in the Book of Common Prayer. This was legislating in the dark; for the revision of the Prayer Book in Convocation by order of council was not begun till November, and was completed only on 20th Dec.—more than four months after the requirement to give conscientious consent to the use of all that it was to contain had been voted by the Commons. Any clergy who after their ejection conducted public services were to be punished with imprisonment—three months for each offence.

It was not till the next year, 1662, that the House of Lords took the measure into consideration, and then several amendments were introduced, most of which rendered it more drastic. The date for ejection in case of non-compliance was brought back from Michaelmas to St. Bartholomew's day, thereby depriving the incumbents of the tithes which they had earned by nearly a year's work. Worse than this, the subscription was altered from assent and consent to the 'use' of the Prayer Book to assent and consent to 'all its contents,' so as to run thus: 'I, A. B., doe declare my unfeigned assent and consent to all and everything contained and prescribed in and by the book intituled The Book of Common Prayer,' etc. Here we come to the crux of the matter. The acceptance of this amendment by the Commons and the assent given to the bill by the king constituted the essential cause of subsequent Nonconformity. The clergyman who could not declare that he conscientiously believed every sentence printed between the two covers of that book was to be deprived of his living in the Church of England. When an attempt was made in the House of Lords to explain this clause as meaning only a promise to use the book in its entirety, that explanation was negated. There can be no doubt that the clause was made as exacting as possible for the express purpose of expelling the Puritans from the Church of England. Addi-

tional amendments required of all cathedral dignitaries, schoolmasters, and private tutors a declaration of non-resistance and a repudiation of the Solemn League and Covenant—*i.e.* a condemnation of the action of the parliamentary party in the late war. The clause referring to the Covenant was to be in force only for twenty years, after the expiration of which period it might be expected to be no longer necessary. On the other hand, two amendments were introduced by the Lords mitigating the severity of the bill. One was assenting to the king's suggestion that he should be allowed some dispensing power, the other giving to the ejected ministers a grant of one-fifth out of their forfeited livings, similar to the grant that had been made to ejected Episcopalians by the Long Parliament. When the bill thus amended was sent up to the Commons, the House accepted all the changes which added to its severity and rejected the two changes of the opposite character. No doubt Charles's motive in claiming dispensing power was suspected as intended to prepare for leniency towards Roman Catholics. The rejection of the amendment proposing a small pension for the ejected clergy shows the animus of the House.

9. The ejection.—On 19th May the bill in its final form received the royal assent. Baxter at once resigned his two London lectureships. This he did lest his attitude should be misunderstood as implying compliance with the measure. It is commonly supposed that, when the act came into force, it resulted in the ejection of 2000 clergymen.¹ In point of fact, the number of those who were deprived of their livings on 24th Aug. 1662 was somewhat less; but, if we add to the list the names of those who had been expelled after the king's accession, during the intermediate two years, probably it will mount up to more than 2000. This then may be said in round numbers to be about the total of the ejected Nonconformists in the reign of Charles II.² Among them were some of the most learned, earnest, and effective ministers. The ejection of these men inflicted a tremendous blow on the Church. At the same time the impoverishment of the Establishment carried with it a corresponding enrichment of Nonconformity. To the few Congregationalist and Baptist churches that had dared to maintain their independence was now added a large number of ministers and their disciples who were henceforth to maintain their religious life and teaching outside the pale of the Church of England. Most of these people went out with no faith in Free Church principles. The majority were Presbyterians who had stood for the establishment of Presbyterianism. There were also some Episcopalians, who, while believing in the three orders and the authority of bishops, could not give their conscientious assent to certain things in the Prayer Book, chiefly because it seemed to contain remnants of Romanism; and there were the Independents and the few Baptists who never would have been in an Established Church if they

had realized the logical issues of their principles. Together these four classes of ejected ministers with their faithful disciples all became Nonconformists. Many of them proceeded to found new churches in accordance with their distinctive tenets. The result of their activity is to be seen in the number of 1662 churches that were celebrating their 250th anniversary in the year 1912. The ministry of the ejected ministers was liable to punishment, and in many cases was punished, the penalty imposed for preaching or conducting services after ejection being three months' imprisonment.

There can be no doubt that this act entailed a vast amount of suffering among the ejected and impoverished clergy and their families. It is clear also that there were real heroism and a fine fidelity of conscience on the part of men who left their homes and their flocks and went out as wanderers, in most cases with no prospect of a livelihood or opportunity for continuing their life-work. On the other hand, the following facts should also be remembered. (1) The persecutors had in many cases been persecuted themselves under the parliamentary régime. Revenge is un-Christian; but it is human, and its added severity when the tables are turned is also in accordance with human nature. (2) Most of the victims would have enforced a uniformity of their own on their persecutors if only they could again have got the upper hand, for they were in sympathy with the Covenant. This is not true of all. (3) The position of the Presbyterians, Congregationalists, and Baptists within the Established Church, if they had been permitted to remain, could not have been happy, and they would have been wise to come out of their own accord in order to share the freedom and independence of their ecclesiastical fellows who were already maintaining their separate churches. Hard as was their fate personally, the ejected were able to advance their principles much better outside the Church than would have been possible within its bounds, however wide these might have been.

10. Conventicle Act.—The Act of Uniformity was directed against nonconforming clergymen and teachers. It did not directly affect the congregations. There were old laws that could be brought to bear on the attendants at Nonconformist services. In particular, by an act of the reign of Elizabeth (35 Elizabeth, cap. 1) all persons attending any other services than those of the Church of England as by law established incurred a penalty of imprisonment, and, if they failed to make their submission in three months, were liable to banishment from the kingdom. But doubts were raised whether this law was still operative. Accordingly, in the year 1664 the Conventicle Act (16 Car. II., cap. 4) was passed, declaring it to be 'very clear and evident' that the Elizabethan statute was still in force and 'ought to be put in due execution,' and providing further and more speedy remedies against the practices of 'seditious sectaries and other disloyal persons.' It was now enacted that every person over sixteen years of age attending any Nonconformist service, at which five or more persons—in addition to the household—were present, was liable to a fine of £5 for the first offence, and in default of payment to imprisonment for three months; for the second, £10 or six months; for the third, £100 or seven years' transportation to one of his Majesty's foreign plantations. The exile was to pay his own passage money, and, if he did not provide this, his goods were to be distrained for the purpose. If that did not bring in enough money, the shipper might detain him as a labourer till he had worked the amount off for any period up to five years. The

¹ Calamy reckons 2188; Palmer, 2196.

² It has been pointed out that, since the Revised Prayer Book was not published till about three weeks before the act was to come into operation, some clergymen in remote parts could not even have seen it when they were required to give their solemn assent and consent to all its contents. It would have been only reasonable to have allowed everybody a sufficient time for studying it. And indeed it should be noted that the act expressly provides for those who are prevented from complying with its requirements at the assigned date by any 'lawful impediment.' But it was left to the bishop to determine what constituted a 'lawful impediment.' Inability to see the book in time might well be reckoned such. And there is extant a document in which the bishop of Peterborough excuses delay in signing on the part of his cathedral prebends for this very reason. On the other hand, a bishop might override this excuse or hold that a delaying clergyman whose ejection he desired could have obtained a copy of the book in time. It was left entirely to the bishop's decision.

act was to be in force for three years and till the close of the first session of Parliament held after the expiration of this period. Now began the romance of Nonconformity, fascinating to read about, but tragic to experience. Meetings were held in lonely houses, in cellars, in hay-lofts, in all sorts of out-of-the-way places. Secret passages were provided and watchers were set to give notice of the danger of arrest. In spite of every precaution, many conventicles were surprised and their attendants carried off to jail.

11. Five Mile Act.—The next year occurred the Plague of London, and then, some of the newly-appointed city clergy having fled to the green fields to escape the infection, some of their predecessors—the ejected ministers—returned to their old flocks and ministered to them in their distress (see Baxter, pt. iii. p. 2; Burnet, *History*, i. 411). The same year, 1665, there was passed the Five Mile Act (16 Car. II., cap. 2), to still further restrict the activity of Nonconformist ministers. It required all persons in holy orders or pretending to be in holy orders who had not made the declarations required by the Act of Uniformity to take an oath that ‘it is not lawful upon any pretence to take up arms against the king,’ and to add, ‘I will not at any time endeavour any alteration of government, either in church or state.’ The ejected minister who refused to take this oath was forbidden, under penalty of £40, to come except on a journey within five miles of any city or corporate town, or of any parliamentary borough, or of any parish, town, or place in which he had formerly been the parson, vicar, curate, stipendiary, or lecturer, or had conducted any Nonconformist service. He was also forbidden to keep any school.

12. New Conventicle Act.—A scheme of comprehension agreed upon between Wilkins, bishop of Chester, and the Presbyterian leaders, and favoured by Stillington, Tillotson, and Reynolds, which would have allowed Presbyterian ordination with the addition of the laying on of the bishop’s hands to confer legal authority and also permit assemblies in orthodox meeting-houses, never got the length of a bill in Parliament. On the other hand, in the year 1670, after the expiration of the Conventicle Act, Sheldon, bishop of London, who had taken a foremost part in shaping and pushing forward the measures against the Nonconformists, persuaded the king to issue a proclamation commanding the old (Elizabethan) laws against Nonconformity and also the Five Mile Act to be put in force. The House of Commons thanked the king and proceeded to pass a new and milder Conventicle Bill (22 Charles II., cap. 1), fining only five shillings for the first offence and ten shillings for the second, with no imprisonment. If some could not afford to pay the fines, others who were in the congregation could be required to make them up to the amount of £10 for each person thus mulcted. Preachers were to be fined £10 and £20. This measure, though much less severe than the earlier law, proved to be more effective. It was followed in 1673 by the Test Act, which practically excluded consistent Nonconformists from all government employment—civil, military, or naval.

13. Indulgences.—In the year 1672 Charles attempted to put in force the dispensing power which he said was ‘not only inherent in him, but hath been declared and recognized to be so by several statutes and Acts of Parliament.’ He gave as his reason for doing so that there was ‘very little fruit of all those forcible courses,’ so strong and stubborn was Nonconformity in spite of all attempts to suppress it. This was while the king was enjoying some freedom during a parliamentary recess; but the next year, within a week of re-assembling, the Commons resolved ‘that the Penal Statutes in

matters ecclesiastical cannot be suspended but by Act of Parliament.’ When the king held out, they refused him supplies. This drove him to yield, and he broke the seal of his declaration with his own hands and recalled the licences issued under it.

James II. went further with the obvious intention of securing privileges for the Roman Catholics by enlarging the bounds of religious liberty, perhaps also because he was really opposed to persecution. On 4th April 1687 he issued a Declaration of Indulgence suspending all laws inflicting penalties for Nonconformity. There were victims of those laws who gravely disapproved of this unconstitutional action and refused to avail themselves of the advantages that it offered them. John Howe denounced the dispensing power. Daniel Williams said that he would rather suffer injustice than sanction violation of the fundamental principles of the constitution. But great difference of opinion on the question existed, as may be seen in the war of pamphlets that followed, and many Nonconformists availed themselves of these indulgences—as many as 3500 in five months (for specimens of the licences see G. L. Turner, *Original Records of early Nonconformity under Persecution and Indulgence*, 2 vols., London, 1911). On 27th April 1688 James issued his second Declaration of Indulgence with a command that it should be read in all the churches. When the seven bishops who refused to obey the illegal order were tried and acquitted, the Nonconformists joined with the people generally in acclaiming this vindication of law in opposition to Stuart despotism.

14. Toleration.—The flight of James followed by the accession of William and Mary brought the Nonconformists relief from the persecuting laws. The king himself recommended the repeal of the Corporation and Test Acts; but, although efforts were made in Parliament to bring about these ends, they were not successful. On the other hand, all holders of office in State and Church were required to take the oaths of supremacy and allegiance to the new sovereign. Four hundred of the clergy, including six bishops, refused, considering themselves still bound by their oaths of allegiance to James. These ‘Non-jurors’ (*q.v.*) were really Nonconformists in their separation from the Church, although not as regards the Act of Uniformity, to which they still adhered. On 24th May 1689 the Toleration Act (1 William and Mary, cap. 18) was passed. It granted exemption from all the penalties to which Nonconformists were liable under the Acts of Elizabeth and Charles II. Thus, while it did not repeal any of those acts, it drew their teeth. Nonconformity was still illegal. The Act of Uniformity not only still kept those who did not accept the Prayer Book in its entirety out of the Church; it still forbade ejected ministers to conduct services elsewhere, and conventicles were still prohibited. But there was no punishment for disobeying these laws. This anomalous position involved toleration, but not full liberty of conscience, much less religious equality. It was only granted subject to the following conditions: (1) the oath of allegiance, (2) subscription to a declaration against popery, (3) subscription by ministers of Nonconformist congregations to the Thirty-nine Articles, with the exception of Article 3 and part of Article 4. Baptists were also exempt with regard to the Article on Baptism, and Quakers were altogether free from this condition. Previous legislation making attendance at public worship compulsory was confirmed and extended to include Nonconformist places of worship. These were to be licensed and protected from molestation under penalties.

Limited as the toleration was, it gave at once release from legal persecution, and it was followed by a great extension of the building of Nonconformist meeting-houses. Before the end of the century as many as 2418 licences for Nonconformist places of worship were taken out.

15. Comprehension Bill.—Meanwhile Burnet, Tillotson, Tenison, and other men of liberal sentiments were for going further, and they favoured a Comprehension Bill, which was introduced into the House of Lords by the Earl of Nottingham and passed in that chamber, but relegated by the Commons to Convocation, where, after it had been carefully examined by a commission, the Upper House favoured it, but the Lower condemned it. The Presbyterians and Congregationalists were largely in favour of it, especially Baxter and Calamy. But the House of Commons did not proceed with it in face of the adverse attitude of the bulk of the clergy. Calamy thought that, if the bill had passed, it would have brought two-thirds of the Dissenters into the Church. The Baptists, the Quakers, and the Unitarians would still have stood out in nonconformity. This measure had required a modified subscription giving general approval of the doctrine of the Church of England and a promise to conform to its worship and government. The more rigorous Nonconformists could not have agreed to that; but it was the Church party that actively opposed the measure and stopped its progress.

16. Queen Anne and reaction.—The reign of Anne was marked by a reaction against the tolerant policy of William and Mary, the queen's main object being to strengthen the Church of England. Dissenters were now subjected to many kinds of petty persecution and insult in spite of the Toleration Act. In the first year of the new reign De Foe's *Short Way with Dissenters* appeared as an anonymous tract. It recommended their extermination. The High Church party was completely deceived by it, and, reading it as a grave recommendation of the sternest measures, exulted in the daring of its proposals. When they discovered that it was written by a Dissenter as a satire on their attitude to Nonconformity, they were furious. Its author was discovered, prosecuted for using seditious language, fined £200, and put into the pillory—an outrage which the London populace turned into a glorification by decking the pillory with flowers.

17. Occasional Conformity Act.—During this reign two measures were enacted for increasing the disabilities of Nonconformists. One was the Occasional Conformity Act, which was passed by the Commons in 1702 and again in 1703, but on each occasion thrown out by the Lords. At last, in 1711, it was pushed through Parliament by a bargain with the Whigs, who preponderated in the Upper House, they being then intent on defeating the negotiations that led to the Peace of Utrecht. It had become customary for Nonconformist municipal and other officials to evade the Test and Corporation Acts by taking the sacrament in their parish churches once or twice a year, though attending their own meeting-houses on other occasions. De Foe had vehemently denounced the practice. This new law enacted that any persons in public offices who, after taking the sacrament test, attended any religious meeting where five persons were present besides the family should be disabled from their employments and fined £100, with the addition of £5 for every day they acted in such employments, and further incapacitated till after a year's conformity. A reward of £40 was offered to informers, encouraging spies in the meeting-houses. This act was designed to exclude Nonconformists from all public service. It was to

a considerable extent evaded by the practice of keeping a private chaplain in the occasional conformist official's house.

18. Schism Act.—The Occasional Conformity Act had allowed Nonconformist teachers and preachers to exercise their callings on certain conditions elsewhere than in the counties where they had been originally qualified, and many of them obtained a living by keeping schools. Academics were now springing up for the education of the ministry. The 17th cent. Nonconformist ministers had been among the most cultured alumni of the universities, but the Act of Uniformity excluded their successors from those ancient national seats of learning. Accordingly, valiant attempts to compensate for this deprivation were made by the Nonconformist scholars, who prized an educated ministry. The Schism Act (1714) was designed to destroy Nonconformist scholarship; like a similar ordinance of the emperor Julian directed against the higher education of the Christians in the Roman empire, it aimed at accomplishing its purpose by a process of intellectual starvation. To recover favour with the queen, the free-thinker Bolingbroke prompted the measure. It was introduced in the Commons by Sir W. Windham, and, though opposed by the Whigs, carried there by 237 votes to 126. Bolingbroke obtained only 77 votes to 72 in the Lords. To their credit five bishops and 28 lay peers signed their protest against this peculiarly mean and cruel bill. It enacted that teachers must (1) be licensed by their bishop, (2) promise to conform to the liturgy, (3) take the sacrament at least annually in the Church of England way. Certain mitigating qualifications introduced by the Lords were accepted by the Commons and incorporated in the bill, viz. (1) teachers of elementary subjects were exempt, and (2) also tutors in noblemen's families; (3) only the higher courts could inflict the penalties. A gratuitous injustice was the extension of the act to Ireland. So strongly was the government set against the Dissenters that in all probability before long the Act of Toleration would have been repealed if Queen Anne had not died the same year.

19. Nonconformity under the House of Hanover.—While many in the Anglican Church sympathized with the cause of the two Pretenders, the Nonconformists welcomed the House of Hanover and were among its staunchest supporters. George I. came pledged both to Protestantism and to the maintenance of religious liberty. But, although overt acts of persecution ceased with his accession, the Occasional Conformity and Schism Acts were not repealed till the year 1719, when Stanhope carried through the measures of liberation. He attempted to destroy a third act of religious intolerance, the Test Act; but with that he failed. In the year 1722 an act was passed to relieve the Quakers from a form of words in making their affirmation of loyalty which they deemed contrary to their principles, with the result that even now some of them were in prison. It was vehemently opposed by Atterbury and other bishops and clergy; but their opposition was ultimately borne down.

20. Period of decline.—The removal of the worst legal disabilities was not followed by prosperity to the Nonconformists, who shared in the general decline of religious life during the period preceding the Methodist revival. The anonymous author of *An Enquiry into the Causes of the Decay of the Dissenting Interest*, published in 1714, attributed this to two causes—lack of thought and defective organization resulting in the inadequate payment of ministers. But the subsequent growth of Arianism, issuing at length in Unitarianism among

the Presbyterians and General Baptists, did not suggest a creed-bound orthodoxy. The causes were deeper in the life of the nation and the spirit of the times, and Anglicans as well as Dissenters shared in the depression of religious life. There was a further cause of weakness that affected only a minority of the ministers. This was the *Regium Donum*, a secret annual gift from the king for the benefit of ministers' widows that had been engineered by Walpole. When it became known, many Nonconformists opposed the receiving of it as contrary to their principles. But it was kept up amid much heart-burning for more than a century.

21. 'The Church in danger.'—The invasion by the Pretender in 1715 was made the occasion for the cry of 'The Church in danger,' when riots occurred in which a number of Dissenting meeting-houses were destroyed. Two years later a sermon preached before the king by Hoadly, the bishop of Bangor, on 'The Nature of the Kingdom or Church of Christ' raised a storm and revived this party cry. Hoadly advocated 'the union and mutual charity of all Protestants,' and declared that the time had come when all the disabilities of the Dissenters might be removed. For this he was charged in the Lower House of Convocation with undermining the constitution of the Church and impeaching the authority of the king. Convocation was prorogued before the Upper House had time to face the question, and for long after effectually silenced.

22. The 'Dissenting Deputies.'—Just before the general election of 1734 a body known as the 'Dissenting Deputies' was formed in order to take political action for the rights of Nonconformity. It exists to-day and consists of delegates of the Presbyterian, Congregational, and Baptist Churches within ten miles of London. Sir Robert Walpole promised it his support, and the Dissenters in return worked for his side in the election. But when, after he had secured a majority, the deputies asked him to use the government influence for relieving them from the oppression of the Corporation and Test Acts, he procrastinated on the plea that the attempt would revive the cry of 'The Church in danger,' and finally declined altogether to help them. In the House of Commons he declared that the proposal was ill-timed, and thereupon it was lost by 251 to 123 votes. Nevertheless the Dissenting Deputies succeeded in stopping many local acts of illegal tyranny and oppression and also in securing some parliamentary relief.

For instance, there was a peculiarly cruel form of tyranny practised in the city of London when Nonconformists were elected to the office of sheriff. A heavy fine was inflicted on a person who declined to serve in this office after being elected to it. The Corporation Act prevented honest Nonconformists from serving. But some Nonconformists were elected in view of that fact for the express purpose of getting them fined. This iniquitous procedure was now stopped.

An attempt to widen the Church by the abolition of subscription to the Articles, which was begun in the year 1771 by Archdeacon Blackburne in his *Proposals*, was defeated by protests in the interests of orthodoxy which cut across the old lines of division. It was thought to be promoted in the interests of the Unitarians—people who at this time were taking the most prominent place in efforts for religious liberty under the able leadership of Priestley and Price. Towards the end of the century renewed attempts to abolish the Corporation and Test Acts secured the powerful support of Fox; but they were opposed by Pitt, partly on account of the sympathy of the Dissenters with the French Revolution in its earlier stages. In the riots that took place at Birmingham the mob burned down Priestley's house.

23. Methodism. — Although both of John

Wesley's grandfathers had been ejected ministers, he as well as George Whitefield was a Churchman, Wesley in particular clinging to Anglicanism to the last, even after he had been denied access to the churches and had himself ordained Methodist ministers. Nevertheless the Methodist revival gave a great impulse to Nonconformity in two ways: (1) by its revival of religion; unlike the parish clergy, the Dissenters welcomed the movement for which their most earnest ministers, Isaac Watts and Philip Doddridge, had prepared; (2) by the breach between Methodism and the Church; while the Methodists did not reckon themselves Nonconformists, their compulsory separation from the Establishment and independent action could not but weaken the Church-and-State position and correspondingly strengthen that of Nonconformity.

24. Repeal of penal enactments.—A 'Protestant Society for the Protection of Religious Liberty' was founded in the year 1811. Its object was to 'obtain the repeal of every penal law which prevented the complete enjoyment of religious liberty. The chief leader in this movement was John Wilks, a son of Matthew Wilks, the minister at Moorfields. Acting in conjunction with the Dissenting Deputies, within a twelvemonth it secured the repeal of the Quakers' oaths, the Conventicle Act, and the Five Mile Act. The statutes of William III. and George III. which excluded Unitarians from the benefit of the Toleration Act and punished a denial of the doctrine of the Trinity as blasphemy were repealed the next year (1813). In 1820 Lord John Russell, who had become the champion of religious liberty and obtained the enthusiastic support of the Nonconformists, carried through the long-delayed repeal of the Test and Corporation Acts. The earliest of all the acts against Nonconformity, its very parent, the Act of Uniformity, still remains on the statute-book, and it is still in force as regards the ministry of the Anglican Church, although its penal clauses with regard to Nonconformists were neutralized by the Act of Toleration. The Registration Act of 1836 (6 and 7 William IV., cap. 85) ordered a State registration of births, deaths, and marriages, which is specially beneficial to Nonconformists, because previously the only registers were those of the parish clergy. The Dissenter Marriage Act of the same year (6 and 7 William IV., cap. 83) allowed of marriages in Nonconformist places of worship licensed for the purpose on condition of the presence of the registrar. The starting of the *Nonconformist* newspaper in the year 1841, under the masterly editorship of Edward Miall, gave a fresh impulse to movements for religious equality as well as liberty. Three years later 'The British Anti-State Church Association' was formed for the disestablishment of the Church. Its title was changed in 1853 to that of 'The Society for the Liberation of Religion from State Patronage and Control'—known popularly as 'The Liberation Society'—of which J. Carvell Williams was long the secretary. Compulsory Church rates were abolished in 1868 (31 and 33 Victoria, cap. 109). After many earlier attempts had failed, W. E. Gladstone, who had defended them while he represented Oxford University, now supported the abolition of compulsion, so that Church rates were made purely voluntary and to be demanded only of those willing to pay them. The disestablishment of the Anglican Church in Ireland (32 and 33 Victoria, cap. 102) under Gladstone's leadership in 1868 put an end to Nonconformity in Ireland by establishing complete religious equality in the island.

The year 1871 saw the University Tests Abolition Bill passed into law (34 and 35 Victoria, cap. 26). This threw open degrees and appointments in

the universities to Nonconformists. The emancipation, however, was not so complete as C. S. Miall represents it in his continuation of Skeats's *History of the Free Churches* (p. 624). Theological degrees and theological professorships are still confined to members of the Church of England. In 1882 the headships of colleges and fellowships were freed from ecclesiastical restrictions.

25. Education.—The Education Act of 1870 (33 and 34 Victoria, cap. 75), though the work of a Liberal government, conceded privileges to the Established Church to which the Nonconformists strongly objected, since they put the denominational schools on the rates. The Education Acts of 1902 (2 Edward VII., cap. 24) and 1903 (2 Edward VII., cap. 42) still further extended those privileges by placing the entire maintenance of such schools on public funds, leaving only the providing of the buildings to the denominational supporters. This is objected to by Nonconformists as an unfair privilege, especially as most of the expense of the building had previously been met by grants of State funds. But two other objections are felt to be more serious: (1) the compulsory attendance of the children of Nonconformists at Church schools in single school areas, the 'conscience clause' which provides an escape from the denominational teaching proving to be practically ineffective; (2) tests for teachers, involving the exclusion of Nonconformists from the head teacherships of thousands of State-supported schools.

26. Free Church councils.—Until near the close of the 19th cent. the Nonconformists had acted together only for specific objects and as occasion required. In the year 1892, mainly owing to the instigation of Rev. Hugh Price Hughes and Dr. Guinness Rogers, the first Free Church Congress met in Manchester with some 370 delegates representing all the leading Free Churches. Dr. Mackennal was then appointed honorary secretary of a movement which developed into 'The National Council of Evangelical Free Churches.' Local councils affiliated to the National Council and nominating its members have been formed all over the country. These councils carry on united missions, organize common parochial visitation, take action with regard to morals in civic and public life, and generally give effect to the united action of the Churches which they represent. The National Council deals with such questions as religious liberty, temperance, peace and war, social and trade ethics, slavery, gambling, and immorality, in the State and the nation.

27. Present condition of Nonconformity.—According to the statistics of the *Free Church Year Book* for 1916, in the previous year there were 1,995,278 Free Church members reported by the denominations of the Federation; 10,863 ministers in charge; 54,449 lay preachers; 399,624 Sunday-school teachers; and 3,161,791 Sunday-school scholars. These figures do not include the nearly 750,000 attendants at Brotherhood meetings, except in the case of those who are also Church members, nor the 100,000 members of adult schools, most of which are organized by Free Churchmen, nor the members of Churches that send in no report—some few in the Federation, others of small denominations not in it. Then we must add those Nonconformists who are not registered members of Churches, though attendants at Free Church services, if we would form any estimate of the present number of Nonconformists in the country.

28. Nonconformity in Wales.—The first conspicuous Welsh Nonconformist was John Penry, who had done much to evangelize his native country when he was hanged at Southwark on a charge of

issuing seditious publications. This was in the reign of Elizabeth. The several Acts of Uniformity applied to Wales as well as to England, and resulted there also in Nonconformity with its consequent sufferings. At the instigation of Laud the bishops of St. David's and Llandaff commenced a systematic prosecution of clergy who did not conform. In his annual addresses to the king the archbishop reports many instances.

In 1633 he states that the bishop of St. David's certifies that he had suspended a lecturer for 'inconformity'; in 1635 that the bishop of Llandaff had carefully prepared articles for the High Commission Court against 'two noted schismatics, Wroth and Erbery—where, when the case is ready for hearing, they shall receive according to the merits of it'; in 1636 that 'there is one Matthews, the vicar of Penmain, that preaches against the keeping of all holy days, with divers others, as fond or profane opinions. The bishop hath inhibited him, and if that doth not serve I shall call him into your High Commission Court.' Many more instances might be given (see Lambeth MSS Vol., 943, cited in Rees, *Nonconformity in Wales*, pp. 38–40).

The founding of regularly organized Nonconformist churches in Wales began with William Wroth, known as the 'Apostle of Wales.' Born in 1570 at or near Abergavenny, he was educated at Jesus College and Christ Church, Oxford, where he appears to have lived for nine years. As rector of Llanvaches in Monmouthshire, he attracted multitudes of people from the surrounding districts and carried on a great religious work among them. Like John Wesley in England at a later time, he gave offence to the ecclesiastical authorities by preaching in various places all over the principality. In 1638, soon after Laud became archbishop of Canterbury, Wroth was summoned to the Court of High Commission and there deprived of his living on the ground of his ecclesiastical irregularities. The next year he founded an Independent church at Llanvaches, where he died three years later. This is reckoned to have been the first Nonconformist church in Wales. The outbreak of the Civil War scattered the Welsh Nonconformists, who found themselves a small minority in the midst of a population of royalists. For the time being the churches were broken up and the fugitives took refuge from persecution in Bristol. Those who dared to remain in Wales were harried by Prince Rupert, their cattle driven off, their houses robbed, and some of them killed. After the defeat of the royalists there was an ordinance of Parliament for sending itinerant ministers into S. Wales supported by the revenues of St. David's and Llandaff. In the year 1649–50 Parliament passed an ordinance entitled 'An Act for the better Propagation of the Gospel in Wales and Redress of some Grievances,' appointing commissioners with authority to try to remove clergymen and schoolmasters found guilty of 'any delinquency, scandal, malignancy, or non-residence,' to grant certificates for approved ministers and schoolmasters, and pay them out of the sequestered revenues of the parishes from which the persons objected to had been ejected. Most of these commissioners had been Royalists and Churchmen previous to 1646, and only a minority appeared as Nonconformists after the Restoration. In his *Sufferings of the Clergy* Walker states that between 500 and 600 were ejected by the commission; but he is able to name only some 330, and of these, as in his lists of the ejected in England, some were pluralists who were only deprived of all benefices but one, but allowed to retain that.

The earliest Nonconformists in Wales were Congregationalists. The first Baptist church in the principality was founded at Ilston, Glamorganshire, in 1649 by John Myles. The Society of Friends appeared in Wales a little later than the Baptists. The first known Quaker in the principality is Thomas Holmes, who was very active in promulgating his principles. The leaders of the

early Welsh Quakers were educated men of some social position, but the majority of their followers were drawn from the lower classes.

Immediately after the Restoration persecution of the Welsh Nonconformists began, and in a month every prison in the principality was filled with them. This was before the passing of the Act of Uniformity in 1662. That act issued in over 100 ejections in Wales and, consequently, a considerable increase of Welsh Nonconformity. Previously there were no Presbyterians among the Welsh Nonconformists, who were all Independents, Baptists, or Quakers. But now the expulsion of the Puritans, the majority of whom were Presbyterians, developed a Presbyterian type of Welsh Nonconformity, but not as yet with any formal distinction between Presbyterian and Congregational Churches. The impossibility of organizing presbyteries and synods in times of persecution compelled the Nonconformist Churches to work independently, so that the practice was Congregational even among people who cherished the Presbyterian ideal, although the ordination of a number of ministers together in one place for the charge of different places and some other innovations showed tendencies towards Presbyterianism. In point of fact, the words 'Independent' and 'Presbyterian' came to be used as synonymous terms throughout the principality and to be applied to the same churches. Following the Act of Uniformity, the Conventicle, Five Mile, Test, and Corporation Acts affected Wales as well as England and added to the disabilities and sufferings of the Welsh Nonconformists. As usual, the Society of Friends came in for the most cruel treatment, but some of the ministers of the various dissenting churches were rudely handled and compelled to suffer great hardships.

The early Nonconformists were foremost in printing and publishing books for the religious instruction of the Welsh. Of the ten editions of Scripture in Welsh—five of the whole Bible and five of the NT—which were issued between 1641 and 1690 nine were produced by Nonconformists. The *Assembly's Catechism* and the *Whole Duty of Man* were published in Welsh during this period, as also were several original works composed by Nonconformists. All these books had to be printed in London or Oxford.

The Act of Toleration set the Welsh Nonconformists free in common with their co-religionists in England. Unhappily a hot controversy between the Baptists and their opponents occurred about this time and seriously impeded the positive religious work of the Welsh Nonconformists. A more serious trouble appeared about 1729 in the 'Great Arminian Controversy.' Hitherto, with the exception of the Quakers, the Welsh Nonconformists had been Calvinists and their young people and converts had been required to learn the *Assembly's Catechism*. But now Arminian ideas began to take hold of the students at Caermarthen and to spread through their influence as they came to be settled in pastorates.

Depressed during the reign of Queen Anne, Nonconformity in Wales made considerable progress in the middle of the 18th cent. throughout the south part of the principality; but as yet it scarcely took hold of the Welsh population in the north, where it was then almost confined to the English churches. The Methodist revival was anticipated in Wales by Griffith Jones, an Anglican clergyman, who carried on a preaching mission throughout the principality and established 'itinerant schools' for the education of children by travelling teachers, for the most part Nonconformists. But the actual founder of Methodism in Wales was Howell Harris, who was born at Trevecca, Breconshire, in 1714. He and his associates, like the early English

Methodists, did not contemplate severance from the Anglican Church or the founding of a new denomination. Though treated as Dissenters by rigorous Churchmen, they did not regard themselves as Nonconformists. But one result of their activity was to quicken and enlarge the religious life of the Nonconformist Churches. They met with violent opposition from Churchmen as well as from the mob. Worse than this was the division that arose between Harris and Rowlands and their followers. About the year 1769 a division occurred between the Calvinists and the Arminians in the Churches then known indifferently as Independent and Presbyterian, and after this the Calvinistic section came to be called simply 'Independent,' and the Arminian, which had its headquarters at Caermarthen, and had drifted towards Unitarianism, was denominated 'Presbyterian.'

The Wesleyan Methodist movement was slow in making progress in Wales at first, because its preachers could preach only in English; and later, when Welsh preachers were sent out by this Church, their Arminianism was dreaded by the Calvinistic Methodists. These people considered themselves to be members of the Church of England down to the year 1811, when they had ministers formally ordained. There were then some 300 or 400 congregations with a few clergymen travelling about among them to administer the communion; and the necessity of the case drove the society to the new step in spite of the vehement protest of most of the clerical leaders. After that this Church began to grow rapidly, and it is now the most powerful denomination in the principality. One consequence of the religious awakening in the 18th cent. was that Nonconformity spread rapidly in Wales. The disestablishment of the Anglican Church in Wales, an action for which almost all the Welsh members of parliament were pledged, but which hitherto had been prevented by the House of Lords, in spite of being repeatedly voted by the House of Commons, was passed into law under the Parliament Act in the year 1914. Subsequently it was hung up by the suspensory legislation agreed upon because of the Great War. This would put an end to Nonconformity in Wales by liberating the principality from Charles II.'s Act of Uniformity and establishing religious equality among the Churches. Wales, like England, is still left to bear the grievance of the 1903 Education Act in its patronage of denominational schools with tests for teachers, against which the Free Church Council still protests.

NONJURORS.—The Nonjurors were clergy and laymen who, though no Romanists, scrupled to take the oaths of allegiance and abjuration imposed, particularly on office holders, under William III. and George I. The term, strictly including some Scottish Covenanters, is commonly restricted to Episcopalians, but extended to persons who, though exempted from the oaths as unofficial, attached themselves to the Nonjurors proper. Those rejecting only the oaths of 1701 and 1714 are sometimes distinguished as Non-Abjurors.

The English and Scottish Nonjurors may be most conveniently treated separately; their Irish brethren, including but one bishop, William Sheridan of Kilmore, hardly demand separate notice.

1. **England.**—The English Nonjurors—originally over 400 clergy, with an unknown number of laymen—were often important individually as men of the highest character and of great learning. Corporately, they stood on the one hand for the doctrines of passive obedience and non-resistance, on the other for the right of the Church to independence in spiritual matters. They maintained a 'State point'—that William's title was 'pretended'; and a 'Church point'—that even a legitimate sovereign could not deprive bishops without ecclesiastical sanction.

Their reputation for piety and learning requires no laboured proof. The Dr. Wolf of *The Nonjuror* (Colley Cibber's adaptation of *Tartuffe*, London, 1718) at best misrepresents as typical the servility and intrigue which poverty and dependence perhaps fostered in exceptional cases. Inspired by an antipathy political and possibly personal, it flattered and fomented popular prejudice. But, in spite of Johnson and Macaulay, it has long been recognized as a libellous caricature, well matched by Whiggish abuse of the Nonjurors as 'British Hottentots, as blind and bigoted as their brethren about the Cape, but more savage in their manners' (cited by Overton, *Nonjurors*, p. 310). The Nonjurors in general, sacrificing everything to conscience, showed at least a noble courage. Nor could any small community easily outmatch a group of saints like T. Ken, J. Kettlewell, W. Law, R. Nelson, and N. Spinckes. Again, the mere names of G. Hickeys, H. Dodwell, T. Baker, R. Rawlinson, and T. Hearne sufficiently attest the learning of a class in which, at both universities, 'the intellectual interests of the time were almost entirely centred' (W. H. Hutton, *The English Church, 1625-1714*, London, 1903, p. 243).

The Nonjurors were no whole-hearted enemies of William, little as they might approve of his birth, his character, or his creed. They included five bishops of the famous Seven—W. Sancroft, T. Ken, J. Lake, F. Turner, and T. White—with two others, R. Frampton of Gloucester and W. Lloyd of Norwich, who had lacked only opportunity to join them. They accepted William's interposition, stoutly refusing to proclaim their abhorrence of it. They even joined in urging him to safeguard the welfare of the Church and nation. But they denied (Ken with one hesitating reservation) that the crown could be forfeited. Sancroft would neither visit William nor attend the Convention. The other bishops insisted on a Protestant regency for a titular Romanist king. And none joined in the offer of the crown to William and Mary. It was indeed a commission from Sancroft to his suffragans that made the coronation possible; yet neither he nor his party would swear allegiance, or even use the State (henceforward the 'immoral') prayers. Hence, under 1 William and Mary, cap. 8, six prelates with their beneficed supporters were *ipso facto* suspended on 1st Aug. 1689 and deprived on 1st Feb. 1690. Lake, W. Thomas of Worcester (a like-minded bishop), and T. Cartwright of

Chester (distinguished from the rest by his devotion to James, whom he followed abroad) died between the passing of the act and the deprivation. Kilmore—Sheridan having withdrawn—was adjudged, like the throne, vacant by desertion.

The sees thus emptied remained unfilled for over a year. William, desiring compromise, offered to waive the oaths if the bishops agreed to discharge their spiritual functions. And great Churchmen like South, though recognizing William, declined preferment gained through the scruples of others. But Nonjurors could not accept conditions involving at least implicit recognition of William's royal supremacy; they could only promise to live quietly. And hence in May 1691 new bishops were consecrated, headed by the reluctant J. Tillotson as primate.

Meanwhile many lay Nonjurors—notably Dodwell, Roger North, and the second Earl of Clarendon—had sacrificed their prospects to their consciences.

James II.'s death, apparently inviting reconciliation, merely added Non-Abjurors to Nonjurors, for the oath of 1701 not only abjured the Pretender, but expressly recognized William's legitimacy—a point hitherto discreetly evaded. And the oath of 1714, to George I., increased their number.

But Nonjurors, however Jacobite in sympathy, were seldom actively disloyal. Turner, indeed, earned exile by complicity in Preston's and Fenwick's plots (1690 and 1696). And the Non-Abjuror historian T. Carte, apparently a '15 rebel, had a price of £1000 on his head as a conspirator with Atterbury. But Turner's implication of his fellow-thinkers in his treasons was unjustified. They waged, indeed, a paper warfare. They ministered spiritual comfort to dying plotters. But they seldom plotted themselves. One Jacobite scheme was actually revealed by a Nonjuror. And, as the Jacobite menace weakened, Nonjuring politics—the 'State point'—lost all importance.

The 'Church point,' however, to some extent remained. The conception of the Church as an autonomous society—the lasting contribution of the movement to English theological thought—had an immediate practical significance. It produced a certain alienation of the Nonjurors from the Establishment. They repudiated deprivation by mere Act of Parliament. They therefore considered Tillotson and his fellows intruders, thrust into sees not canonically vacated, without title to recognition, at least while the lawful incumbents survived and claimed their rights. And hence some of them condemned the National Church as now schismatic.

'Some'—for all along they suffered from those distracted counsels which especially beset seceders from a great communion who lack alike a supreme constituted authority and the sobering influence of corporate wealth and temporal responsibilities. Even their bishops adopted different attitudes towards William's proceedings: Thomas of Worcester, who died before suspension, was yet already preparing to welcome Stillingfleet as his successor; Ken remained at Wells as late as possible, publicly protested, like Turner, against his deprivation, and long retained his diocesan style; and Sancroft yielded only to the imminent threat of forcible eviction. Again, Kettlewell justified resistance by the mere injustice of the expulsions, Dodwell only by their invalidity.

There was equal disagreement as to future relations with the Established Church. Sancroft, unlike Ken, declared her schismatic. Hickeys denied to her 'usurping' bishops and their adherents not only sacerdotal powers, but even the benefits of the Incarnation (it was the posthumous publication of his attack on all Jurors that pro-

voked Benjamin Hoadly to reply, and so led to the 'Bangorian Controversy' and the long suspension of Convocation). But Kettlewell professed himself still a member, and many clergy, though never officiating, remained in lay communion.

Practice as to public worship therefore inevitably varied. Some, like Law and Nelson, attended their parish churches, without protest against the 'immoral prayers.' Others went, but protested: Frampton, retaining a small living, read the service and preached, but omitted the names of the sovereigns. Others, again, attended only failing some convenient Nonjuring assembly. And others refused attendance altogether, holding, with Sancroft, that it would necessitate a second absolution after the service. Yet in the country, generally, opportunities for special corporate worship were few. Even in London, though Nonjuring 'churches' were reckoned in 1716 at over fifty, the prologue to *The Nonjuror* mocked their furtive character:

'Each lurking pastor seeks the dark,
And fears the Justices' inquiring clerk.
In close back rooms his routed flock he rallies,
And reigns the patriarch of blind lanes and alleys.'

The number is possibly a gross exaggeration. The Nonjurors had now not only lost their great protagonist Hickes, but, even before his death, suffered a secession revealing once more their inveterate disunity.

Dodwell's *Case in View Consider'd* (London, 1705) had limited the separation to the lifetime of the deprived bishops. Hence in 1710, when Ken, the sole survivor, renounced his claims, Dodwell and many others rejoined the Established Church, though still maintaining the 'State point.' But Hickes insisted that only official repudiation of the deprivations could heal the schism, and the distinct Nonjuring episcopal succession which his view required had been secured in 1694, when he and Thomas Wagstaffe became suffragan bishops of Thetford and Ipswich. Here again difference of opinion had appeared. The consecration, authorized by James and Sancroft, was performed by Lloyd (to whom Sancroft had delegated his metropolitan authority in 1692), Turner, and White. But Frampton held aloof, and Ken only reluctantly consented. The proceeding involved continued schism, and its claim to legality—based on Henry VIII's Act for Suffragan Bishops—was not undisputed. Yet the 'Hickesites,' between 1713 and 1741, carried out further consecrations, continuing the episcopal line till the death of Robert Gordon in 1779. The new prelates, however, were bishops 'at large,' without territorial title, though Jeremy Collier, after Hickes's death, styled himself 'Primus Anglo-Britannice Episcopus.'

Meanwhile yet another controversy had arisen. The Prayer Book of 1662, with Kettlewell's form of recantation for converts, satisfied the early liturgical demands of most Nonjurors. But Hickes used the Communion Office of 1549, and after his death (1715) a reform movement began, culminating in the compilation, by Collier, T. Brett, and others, of a new Service Book (1718) based on the 1549 Prayer Book, but enriched from primitive liturgies. Four 'Usages'—the mixed chalice, prayers for the faithful departed, prayer for the descent of the Holy Ghost on the consecrated elements, and prayer of oblation on the consecrated elements—were thus adopted, sometimes even declared necessary to salvation, by 'Usagers.' 'Non-Usagers' rejected them, or at least condemned a view branding as schismatics Romanists, Anglicans, and even most Nonjurors. The Scottish bishops, invited to decide, named a mediator whose attempted compromise failed. Both parties consecrated bishops to maintain their views, and only in 1732 was ritual unanimity attained through the

'Instrument of Union,' restoring the 1662 book on condition that it should be so used and interpreted as to satisfy the Usagers on the four crucial points. No important event marked the later history of the English Nonjurors, but meantime they had long negotiated for union with the Orthodox Church, failing, however, completely—mainly through the demand of the Eastern patriarchs for unconditional submission.

EPISCOPAL SUCCESSION AMONG THE ENGLISH NONJURORS.—

I. THE REGULAR SUCCESSION.—

1694—George Hickes († 1715); Thomas Wagstaffe (|| 1712).

1713—Jeremy Collier († 1720); Samuel Hawes († 1722); Nathaniel Spinckes († 1727).

1716—Thomas Brett, sen. († 1743); Henry Gandy († 1734).

1721—Hiliah Bedford († 1724); Ralph Taylor († 1722).

1722—John Griffin († 1731).

1725—March: Henry Doughty († 1730); May: John Blackbourne († 1741); June: Henry Hall († 1731).

1727—Thomas Brett, jun. († before 1743?).

1728—March: Richard Rawlinson († 1755); December: George Smith († 1756).

1731—Timothy Mawman (†?).

1741—Robert Gordon († 1779).

II. THE IRREGULAR SUCCESSIONS.—(a) For America.—

1722—Richard Welton († 1726); John (?) Talbot († 1727).

(b) To carry on the Usager party.—

1733—Roger Laurence († 1736); Thomas Deacon († 1753).

1752—Kenrick Price († 1790).

[?]—P. J. Browne (said to = Lord John Johnstone, son of the Marquis of Annandale, † 1779).

1780—William Cartwright († 1799).

1795—Thomas Garnett (†?).

?—Charles Boothe († 1805).

2. Scotland.—In Scotland the almost universal rejection of the oaths by the clergy, including every bishop, on the one hand, and the re-establishment of Presbyterianism, on the other, created conditions unparalleled in England. No 'Church point' of the English type was possible. Yet almost the whole Episcopal Communion was involved in the 'State point.' Anne, indeed, allowed a tacit toleration, though the Toleration Act of 1712 nominally enforced the oaths and prayers. But her death, the '15, and (after a peaceful period) the '45 brought ever more harshness to bear on the Church, culminating in an attempt to destroy it altogether. The share of Churchmen in Jacobite risings—though far slighter in 1745 than in 1715—was both a cause and a consequence of this severity. Hence the decline of Jacobitism and the accession of George III.—resolute for toleration—were epoch-making in Scottish Church as in English political history. And the recognition of George by the Scottish bishops when the Young Pretender died ended the northern Nonjuring movement.

Meantime Scottish Nonjurors had both influenced and been influenced by their English brethren. Archibald Campbell and James Gadderar, Scottish bishops 'at large' living in London—Campbell for life, Gadderar for many years—had supported both the Usages and the negotiations with the Eastern Church, and with others had helped to consecrate English bishops. Conversely, the Usages problem—complicated by the question whether bishops should again become diocesan (though no regular royal nomination or *congé d'élire* was available) or, as a college, should jointly rule the whole Church—divided the Scottish Nonjurors. They too produced two sets of bishops—Usagers and diocesans v. Non-Usagers and collegers. But here again a compromise, favouring the diocesans, established final peace in 1732. To the Scottish Church Gordon, the last regular English Nonjuring bishop, commended his dwindling flock. To the single-handed action of the Scottish Campbell—an irreconcilable Usager—the English Nonjurors owed an irregular episcopal succession lasting from 1733 to 1805. And from the Scottish Church the American Colonies finally secured a renewal—in canonical fashion—of the short-lived line of bishops irregu-

larly founded by the English Nonjuror R. Taylor in 1722.

LITERATURE.—T. Lathbury, *Hist. of the Nonjurors*, London, 1845; J. H. Overton, *The Nonjurors*, do. 1902 (the notes afford a good guide to works on the movement); S. L. Ollard and G. Crosse, *Dict. of English Church Hist.*, do. 1912, s.v. The subject is also partially treated in *Lives of the leading Nonjurors*, notably in the biographies of Ken hy 'A Layman' (J. L. Anderson)², 2 vols., do. 1854; and E. H. Plumptre³, 2 vols., do. 1890. Nonjuror writings—especially those of Brett, Collier, Dodwell, Hickes, C. Leslie, and Spinckes—illustrate the various controversies.

NOSE.—The nose is important from an anthropological point of view, since the variations of its form afford an index of race. In the skull the shape of the nasal bones and the nasal opening are expressed in figures as the nasal index—in other words, the relation between the height from the root of the nose to the anterior nasal spine, and the breadth of the bony mass. The skull may be platyrrhinian (flat-nosed), leptorhinian (long-nosed), or mesorhinian (medium-nosed), according as the breadth of the bones and opening is greater or less, this forming an invariable criterion of race. Negroes, Australians, and Bushmen are platyrrhinian (61.7 to 53.7), Mongolians are mesorhinian (52.1 to 50.1), and Caucasians are leptorhinian (47.9 to 42.2). In Hindu literature the nose is described as one of the nine (or eleven) portals of the body, or one of the apertures of the head.¹ These portals or cavities are divided into those above and those below the navel, pure and impure respectively.² The nose, being above, is one of the pure apertures. The *Satapatha Brāhmaṇa* says:

'That part of the vital air which is immortal is above the navel, and streams out by upward breathings,'³ i.e. from nose or mouth.

In the OT strength is expressed by forcible breathing from the nostrils (Job 39²⁰, Ps 18¹⁵). The importance of breathing through the nose, not through the mouth, was already recognized by the American Indians, as noted by G. Catlin, who wrote a small book on the subject. In accordance with the belief in monstrous races current in antiquity (see MONSTERS [Ethnic]), we find an occasional assertion of the existence of noseless tribes who 'draw breath through two holes,' as Benjamin of Tudela alleges of the Turks of the steppes, a people with mesorhinian skull, naturally regarded as noseless by an observer accustomed to more shapely noses (cf. § 3 for noseless ghosts).⁴ On the other hand, extravagantly long noses are sometimes attributed to mythical beings—e.g., the nose of the Norse Huldre folk is very long, reaching to the saddle-pommel.⁵

1. The odour of the sacrifice.—Whatever later notions may have attached to burnt sacrifices, it is probable that the early idea was that the smell rising upwards with the smoke was pleasing to the gods.

In the Babylonian flood-story Utnapishtim offers sacrifice and 'the gods smelt the sweet savour; the gods gathered like flies

over the sacrificer.' In the corresponding Hebrew narrative, when Noah offers burnt-offerings, 'the Lord smelled the sweet savour' (Gn 8²¹). Generally it is said of burnt-offerings and of incense that they are 'a sweet savour before the Lord,'¹ just as offerings on high places were 'sweet savour' to Idols (Ezk 6¹³). When God is displeased with Israel, He is represented as saying, 'I will not smell the savour of your sweet odours' (Lv 26³¹), 'I will smell no sweet savours in your solemn assemblies' (Am 5²¹). Similarly, Homer describes the savour of the sacrifice involved in smoke ascending to heaven,² and the Zulus burn incense with the caul of the sacrificial beast to give to the spirits a sweet savour.³ Both Origen and Porphyry maintained that the demons were nourished with the fumes and smoke of sacrifice and incense, and waited in the region of the air for these, presumably inhaling them with nose and mouth.⁴ The idea is finely spiritualized in Ezekiel (20⁴¹), where God says of Judah, 'As a sweet savour will I accept you,' and by St. Paul, who says of Christ's sacrifice that it was 'to God for an odour of a sweet smell' (Eph 5²), of the faithful that they are 'a sweet savour of Christ unto God' (2 Co 2¹⁵), and of the gifts sent by the Philippians that they are 'an odour of a sweet smell, a sacrifice acceptable, well-pleasing to God' (Ph 4¹⁸).

Gods and spirits, like mortals, loved sweet-smelling odours and disliked evil odours. Hence they were pleased with incense, and malodorous fumigations were commonly used to drive off demons, though pleasant odours sometimes have this effect (see INCENSE, § 2).

2. Salutations with the nose.—One curious form of salutation found among several peoples is that of smelling each other or of rubbing noses. The custom is found in N. Asia and America, in Polynesia and parts of Melanesia, in the Malay Archipelago, in New Guinea, among aborigines of India, in Madagascar, and sporadically elsewhere.

The Eskimos rub noses and draw the palms of their hands over their faces.⁵ With the Laplanders each man lays his right hand on the shoulder of the other, and places the point of his nose on that of the other, rubbing them, with the words, 'Well, Well!'⁶ The custom is found among the Samoyeds,⁷ and E. Petitot reports it of the Dénés and Dindjé of the north-west of Canada,⁸ and it is alleged of the Blackfoot Indians.⁹ In New Zealand and in the Friendly Islands the noses are joined (*hongi*) and the one rubs the other's hand on his nose and mouth.¹⁰ Similar customs are found in many others of the Pacific groups.¹¹ The Samoans join noses, at the same time giving each other a hearty smell.¹² In Astrolabe Bay, New Guinea, the natives squeezed the nostrils with the forefinger and thumb of the right hand, pointing to the navel with the index finger, and grunting at intervals.¹³ Joining noses without rubbing is also mentioned of the Sandwich Islanders in former days.¹⁴ In Fiji smelling the hand is described as the parting or greeting ceremony, along with strong inhalation. A person of lower station smells the foot of a chief.¹⁵ Rubbing noses is met with in New Guinea, as well as in the Aru Islands and Buru (among women).¹⁶ Among the Malays smelling is the usual form of greeting, the words 'smell' and 'greet' being interchangeable. The head and neck are embraced and the snell inhaled.¹⁷ In Celebes at the departure of friends there is a general nose-rubbing—the Malay kiss—and the Burnese phrase, 'Give me a snell,' is the equivalent of 'Kiss me.'¹⁸

¹ Cf. Ex 29^{18, 25}, Lv 10^{13, 17} 23¹³, Nu 15³ etc. Cf. 1 S 26¹⁰ 'Let him accept (=smell) an offering.'

With them, as with the Chittagong Hill people, the mouth and nose are placed on the cheek of the other person and a strong inhalation takes place.¹ The Khyongtha adopt the same method of greeting.² Among the Mongol tribes and with the Chinese (only as an act of love) the nose is placed on the cheek and inhalation follows.

Though these methods of salutation vary, it is probable that all are connected with the act of smelling each other on meeting or parting. The sense of smell is much stronger with savages than with more civilized men. The smell of the human body, or of various parts of it, different with different races, is agreeable to many, whether on normal or abnormal grounds.³ Whether or not the smelling of a person in greeting is associated with a recognition of him through the sense of smell, as H. Spencer maintained,⁴ it is certain that it must have some agreeable sensations for those who practise it.

There are numerous instances of this: a Mongol father smells from time to time the head of his youngest son as a mark of affection;⁵ a father in Timorlaut smells and fondles his child;⁶ Isaac smelled the smell of Esau's raiment on Jacob, and compared it to 'the smell of a field which the Lord hath blessed.'⁷

The salutation by smelling might easily become conventional—a mere rubbing or touching of noses, or laying the head on the shoulder of a friend, as with the Ainus of Saghalien.⁸

3. Nose-ornaments.—The piercing of the septum of the nose, less usually one of the alae, is found very generally in some regions, but only sporadically in others, and with some peoples not at all—e.g., Fuegians, Andamans, Polynesians, nearly all N. American tribes, and most of the higher races. The piercing, which is often of a ritual character, has for its purpose the wearing of some ornament in the hole thus formed—a piece of wood or bone, feathers, or metal (e.g., a ring). The peoples among whom this custom is found are the Austrorians (almost universally), peoples of Papuaia (Solomon Islands to New Guinea), wild tribes in Malaysia, some African tribes (Bushmen, some western Negro and Bantu tribes), tribes of N.W. America, tribes in the interior of S. America, Hindus, and formerly the Jews and some other Semitic peoples.

In Australia a piece of wood or bone, or on ceremonial occasions, feathers or pieces of twig, are worn.⁹ Women in the Lower Murray River tribes wear a little ring of bone.¹⁰ The piercing is usually ceremonial. In New S. Wales the medicine-man goes through a series of contortions on the ground, pretending to suffer pain, and is then delivered of bones—those which the boys are to wear. The boys are told that the more the medicine-man suffers, the less will they suffer.¹¹ Among the Kurnai the piercing occurs before initiation. With the Wurundjerri old men do it for boys, old women for girls.¹² With the Arunta and other tribes the piercing of a girl's nose is done by her husband, with the Kaitish by the wife's father.¹³ Among some of the tribes the nose-peg is merely ornamental, but, as special objects are sometimes inserted at ceremonies, this may not have been its only purpose. A medicine-man in the Warra-munga tribe wears through the nose a *kupitja*, 'the emblem of his profession and very closely associated, in some mysterious way, with his powers as a medicine-man.' It is made of fur-string, coated with grease and red ochre, and is held in great reverence.¹⁴ The natives of Gippsland believe that those who have no nose-peg will suffer in the other world. In some of the tribes the mother flattens the nose of the child; the insertion of the nose-peg also aids this.¹⁵

Among the Papuans from the Solomon Islands to New Guinea a pin is usually worn in the septum. Among the Motu

(British New Guinea) the piercing occurs at the age of six.¹ Should a child die before then, the operation is performed on the corpse. Here the reason is that those whose noses are not pierced cannot enter into bliss, where, curiously enough, spirits are noseless. The unpierced must go with ghosts possessing noses to a place where there is little food.² So, among the Koita, corpses with unpierced noses have the operation performed on them; otherwise in the other world creatures like slow-worms would be attached to their nostrils.³ In the Fly River district children of both sexes have their noses pierced, for scandal would otherwise arise, and an unpierced person could not marry. At the piercing, which is done by the mother's father or uncle, a feast is given. The nose-ornament is a piece of wood three-quarters of an inch in diameter with pieces of shell at each end.⁴ In Mabuiag and Muralug, Torres Straits, the septum is pierced when the child is a fortnight old. Long nose-ornaments are worn on festival occasions.⁵ In Torres Island a ring is worn. In the Solomon Islands the tip of the nose is pierced and a pin inserted; in New Britain the side of the nose is pierced.⁶ In Torres Straits Islands, where the skull is preserved, it is sometimes given an artificial nose of wood and beeswax, or, as in New Guinea, a very large ornament is fixed to the nasal cavity.⁷

The custom is found among the wild tribes of the Malay Peninsula (Semang, Sakai), a quill of porcupine or a piece of bone or stick being worn.⁸

Passing to Africa, among the central tribes (Machinga, Yao, and Nyasa groups) women pierce the left side of the nose at the age of eight and wear in it later a metal or ivory ring. They are laughed at if the right side is pierced.⁹ Among the western tribes, Bantu and Negro, nose-ornaments are common, but sometimes, though the septum is pierced, no ornament is worn, as in the Congo Free State.¹⁰ Nose-piercing is also found among the Bushmen.¹¹

Among some of the north-western tribes of America—Aleuts, Kutchin, etc.—the piercing of the septum was general, and the wearing of a quill-like shell.¹² The interior tribes of the Amazonian region perforate the septum to receive straws, feathers, and other ornaments. Among the Nambiquiras this is confined to the men.¹³

It is in India among women that the most elaborate nose-ornaments are worn, their form varying according to caste and position. Here the piercing is found on the right wing of the nose, or with Muhammadans in the Panjāh on the left wing. The piercing is performed in infancy. Special respect is paid to a woman's nose-ring. A stranger may not mention it, and it is a sign of wedded happiness. Shīh women remove it in Muharram as a sign of mourning.¹⁴

The Hebrews probably derived the custom of wearing nose-rings from their Semitic kindred. Whether, among the latter, they were generally worn by men is uncertain. In Jg 8²⁴ Ishmaelite men seem to wear them, and Pliny also refers to the custom among men. In the OT the practice among the Hebrews is confined to women.¹⁵ Such a ring, often of large size, was a valuable present from a lover (Gn 24⁴⁷), and sometimes more than one were worn, hanging from the alae, not from the septum. This ornament was much valued, perhaps as an amulet as well as an ornament.¹⁶ The Talmud forbids nose-rings to be worn on the Sabbath. The Mishnah describes them as one of the ornaments liable to become unclean.¹⁷ In modern Egypt nose-rings are worn by women of the lower classes, usually through the right alae. The ring is of brass or gold, sometimes with pendent heads.¹⁸ They are also worn by Bedawi women.

While ornaments are liable to be attached to any part of the body, and while it has been thought that the idea of wearing nose-rings may have been suggested by the fact that they were put through the nose of cattle (this does not account for nose-sticks and the like), it is possible

that, like labial ornaments, nose-ornaments and piercing the nose had a magical origin. The nose is one of the spirit-entries of the body; hence, like mouth-ornaments, those of the nose may have served the purpose of amulets to prevent spirits entering by the nose when breathing (see MOUTH). The purposes alleged of the nose-ornament with some Australians and Papuans (see above) are perhaps secondary. Yrjö Hirn points out that savage face-ornaments, wood or bone, in nose, mouth, ears, etc., give an appearance of strangeness to the face and hence attract eyes which might otherwise regard it with indifference. They have the effect of charming.¹ Nose-ornaments are of wood, shell, pearls, feathers, bones, teeth, and metal. Sometimes they serve as distinctive tribal marks, or are worn by one sex, or only after marriage.²

The nose is sometimes ornamented by painting or tatuing, or by cicatrices. It may also be further deformed by flattening or by slits. The Miranhas of Brazil incise the alæ and turn them over.³ Some castes in India slit the alæ in connexion with religious usages.⁴ If the passage in Lv 21¹⁸ means 'slit nose' rather than flat nose, such a mutilation prevented a man from being a priest.

4. Sneezing.—Superstitions about sneezing are found in ancient and modern times, and also among the lower races.

The Greeks regarded sneezing as a favourable omen, or as divine.⁵ 'For Simichidas the Loves have sneezed,' and of a bridegroom it is said 'Some good spirit sneezed out on thee a blessing.'⁶ Penelope says, 'My son has sneezed a blessing on all my words.'⁷ Generally the sneezer was saluted with *ζῆθε, Ζεὺς σάουε!* So the Romans saluted the sneezer with *Salve!*, or wished him health.⁸ With the Hindus sneezing is connected with demoniacal influence—a spirit entering or leaving the nose, or being expelled from it. The formula on sneezing are 'Lavs!', answered by 'With you!', or 'God bless you!', or 'God be praised!' The last is Muhammadan, and with Muhammadans it is customary to wash the nose out with water because the devil visits it at night.⁹ In Egypt, when a man sneezes, he says, 'Praise be to God!' Each one present says, 'God have mercy on you!', and he replies, 'God guide us and guide you!'¹⁰ In certain cases in Hindu belief sneezing is ominous; e.g., if one is beginning work and bears another sneeze, it is necessary to begin over again. Sneezing at a threshold is unlucky.¹¹ In ancient Persia it was necessary when sneezing to recite one *Yatha ahū vairyo* and one *Ashem vahū*, because there is a fiend in the body as well as a fire or disposition or instinct of sneezing. This wages war with the fiend, and sneezing means that the fiend is coming out. When another bears the sneeze, he also utters the same prayers.¹² The Jewish formula towards one sneezing is called *Asusa*, or 'Health.' The wish is, 'Your health!', 'God bless you!', 'For life!', or 'For a happy life!' The sneezer usually cites Gn 49¹⁸, and, when the bystanders bless him, replies, 'Be thou blessed!'¹³

A legend in *Pirqe Eliezer* says that until Jacob's time man sneezed at the end of his life and then died. Jacob was, however, granted time to make his will, and now illness always precedes death. Hence, when one sneezes, the wish is uttered 'For life!', so that this sign of death may be changed to that of life.

In mediæval and later folk-custom in different parts of Europe similar formulae have been in use—'Helfu Got!', 'Christ ih helfe!', 'Got helfe dir!', 'Deus te adjuvet!', 'Gesundheit!', 'God bless you!', 'Bless you!', 'Felleite!', etc.¹⁴ Sneezing was sometimes regarded as a momentary palsy.¹⁵ In early Christian times the sign of the cross was made, but later ecclesiastical advice was not to regard sneezings.¹⁶

With the Zulus sneezing is a good omen, as it is a sign that the *idhlozi* (*manes*) are with the sneezer, and he returns thanks. If a child sneezes, the people say, 'Grow!', as it is a sign of health. Christian Zulus say, 'Preserve, look upon me!', or 'Creator of Heaven and Earth!'¹ In Guinea, when a chief sneezes, all wish him happiness and prosperity.² In Samoa a sneezing tbs bystander said 'Life to you!'³ (for Indonesian beliefs see ERE vii. 236). The Kolita of British New Guinea regard sneezing in sleep as a sign that the soul has come back to the body. If one does not sneeze for some weeks, this is a bad sign—the soul must be far away.⁴ So, with the Zulus, if a man is ill and does not sneeze, it is thought that the disease is great. Sometimes sneezing is of bad omen. In Tonga, if one sneezes while starting on an expedition, it forebodes evil.⁵ In Old Calabar people say, 'Far from you!', with gestures as if warding off evil, when children sneeze, and in New Zealand on similar occasions charms are said to prevent evil.⁶

Thus the rationale of the practice varies, though in its origin it is connected with the presence of spirits, their entrance or egress from the body. According as the spirits are good or bad, sneezing will be regarded as wholesome or the reverse. Where it is thought that the soul is itself returning, the omen will be good (cf. the sneezing of the child restored to life by Elisha [2 K 4²⁵]); but, if the soul is leaving the body, it will be bad (cf. the Jewish tradition above). Perhaps a sneeze was regarded as dangerous because it might expel the breath or soul, man's breath (i.e. life-breath) being in his nostrils (Is 22²; see MOUTH, § 3), just as yawning is dangerous for this and other reasons.⁷

Omens are drawn from sneezing.

The Negroes of Jamaica think that, if your nostrils itch so that you sneeze, some one is backbiting you.⁸ In N. Carolina, if you sneeze when eating, you will bear of a death.⁹ Other German omens are that sneezing while putting your shoes on is a sign of ill-luck, or, if you are telling something and you sneeze, your assertion is true, or (Estonian), if two pregnant women sneeze together, they will have daughters, but sons if their husbands sneeze.¹⁰ Many othersuch omens exist. Omens, usually of a trivial character,¹¹ are also drawn from an itching nose.

In connexion with the idea that the soul is entering or leaving the body at sneezing, it is noticeable that some savages believe that it may find an exit by the nose just as it does by the mouth. Hence the nostrils of a dead or dying man are sometimes held or closed (along with the mouth) to keep his soul in, either to benefit the man or to prevent its issuing forth and carrying off the souls of others.¹² In Celebes fish-hooks are attached to a sick man's nose to catch the issuing soul.¹³ Eskimo mourners or those who prepare the body for burial plug the nostrils, lest the soul should find an exit and follow the dead.¹⁴ Instances of a savage sleeping with nose and mouth covered to prevent the soul leaving are known. Again, as the breath from the mouth may contaminate sacred objects, so also may breath from the nose. Hence both are covered in certain rites.¹⁵

5. For nose-bleeding many medico-magical cures are current among the folk—holding a living spider twisted up in a linen cloth to the nose (Roumania); the use of the Bible and key (England); the use of a bloodstone, allowing the blood to fall on it, then placing it down the back; as the blood dries, so does

NOVATIANISTS.—This is the name given to the adherents of Novatian, a distinguished Roman theologian and presbyter of the 3rd century. His case is remarkable in that his secession had nothing to do with his teaching, but was the result of disputes, personal and disciplinary, within the orthodox Churches of Rome and Carthage; it is remarkable also as an instance of a characteristic doctrine being developed to justify a separation which had already been carried out. To understand the schism, it is necessary to consider the events in Rome and Carthage of the years 250 and 251. One of the first victims of the Decian persecution was Fabian, bishop of Rome, who suffered on 20th Jan. 250. During the crisis his place could not be filled, and there is evidence of a struggle among the leading presbyters for the direction of the policy of the Church and the ultimate succession to the bishopric. The first to take the lead was a grossly illiterate person, the author of *Ep. viii.* in the collection of St. Cyprian's letters. That letter was the beginning of Cyprian's troubles. It was addressed by the presbyters of Rome to the presbyters of Carthage, and advised them to act as if both sees were equally vacant. Cyprian had (in obedience to a vision, as he believed) secreted himself at a distance from Carthage, and the spokesman of Rome regarded this as an abdication which was as effectual as the martyrdom of Fabian to make his see headless. It is needless to enter into the dispute in Carthage, where the bishop and the majority of the presbyters were soon at strife over the terms on which Christians who had lapsed into paganism through fear of death should be restored to communion. Cyprian took a sterner line than the clergy. The confusion at Carthage became intolerable, and it was largely due to the encouragement which Rome had given to the clergy against their bishop. There was a change in Roman policy, and therefore also a change in its spokesman. Novatian became the leader. He had strong claims to the position, and therefore also to succession, when an election should be possible, to the see. He was a distinguished theologian, and the only one of the Roman clergy, so far as is known, who could speak with authority on the topic. His orthodoxy was above suspicion; his doctrine was derived from that of Tertullian, on which he had made a certain advance. It is true that his Christology, like that of all theologians before Chalcedon, was in some measure tentative and contained hints which might be developed into conclusions that were, in the future, to be regarded as heretical; but it would be an anachronism to suppose that he

or any of his contemporaries dreamed that anything was wrong with it. His life was as far above suspicion as his doctrine; the charges that were to be brought against him in the struggle for the bishopric of Rome are disproved by the fact that they had never been advanced against him as a presbyter. He was regarded as a grave, learned, and consistent minister and teacher. Especially it must be noted that his doctrine on the point where he was, as a schismatic, to vary from the normal teaching of the Church was as yet precisely that of St. Cyprian. The bishop of Carthage insisted that the penitence of the lapsed must be tested before they were restored to communion. So taught Novatian also, who gave his full approval, when writing as representative of the Roman Church, to the measures which Cyprian was taking. As yet he had not discovered that the Church was powerless to pardon such sin. He was, in fact, no rigorist. We learn from Cyprian (*Ep. lv.*) that he took the more lenient view, and that generally held, concerning the restoration of penitent adulterers to communion.

It was thus as a normal Churchman that he stood as a candidate for the see of Rome. His rival was Cornelius, an equally respected presbyter of Rome, apparently of longer standing. The election was held, after the slackening of persecution, in March 251. We know nothing of the proceedings, save that both candidates claimed to have been duly elected, and that both were consecrated by bishops who were their supporters. Those who thus sanctioned the election of Cornelius were much more numerous than those who upheld Novatian; but the rights of the latter, if he were duly elected, were not diminished by the fact that the bishops who consecrated him were few in number. There was no recognized court to which the rivals could appeal; the validity of the successful candidate would in due time be demonstrated by the adhesion of the Roman community. At first it seemed that Novatian's chance was good. The majority of the confessors, those who had suffered in the late persecution, were on his side, and they were the most respected members of the Church. But local opinion was guided in great measure by the decision of the leading churches elsewhere. Both rivals at once sent clerical messengers to the great sees to announce their election, and the holders of those sees had at once to make up their minds. Not only the emissaries but other Christians from Rome would certainly visit their cities, claiming communion on the ground of commendatory letters from either Novatian or Cornelius; and the letters of one or the other must be repudiated. The two great Eastern sees decided differently. Fabius of Antioch took the part of Novatian. His character and motives are above suspicion, and, since he had evidence before him which is now lost, we must assume that there was a good deal to be said on behalf of Novatian's claim that he had been duly elected. Dionysius of Alexandria took the opposite course and supported Cornelius. But he bore himself with Christian courtesy in a strife which engendered much bitterness. He suggested to Novatian that he should retire in the interests of peace from a position which he had unwillingly assumed. But Novatian's 'nolo episcopari' may have only been an expression of conventional propriety; and in any case Novatian might reply that he could not desert his supporters or sanction, by withdrawing his claim, Cornelius's assumption of an office to which he had not been lawfully elected. But Dionysius had not suggested that the affair should be compromised by a resignation of both competitors, and can hardly have expected that his kindly effort should succeed. Its tone, however, proves that he disregarded the

¹ *FLJ* ii. [1884] 219; *FL* xvi. [1905] 160, xxiii. [1912] 233, 349; many other instances in W. G. Black, *Folk-Medicine*, London, 1883.

² See J. H. Moulton, *Early Zoroastrianism*, London, 1913, p. 189 f. He rejects C. H. Toy's correction of the text (*EBJ* ii. 1463), 'they are a stench in my nostrils.'

attacks on Novatian's character that were being made by his rival. There remained one Church whose importance and whose nearness to Rome rendered it necessary for each candidate to gain its adherence. It was that of Carthage. We have seen that Cyprian, its bishop, had been involved in grave difficulties with his clergy, in which Rome, led by Novatian, had taken his side. But Cyprian was still engaged in warfare with the majority of his clergy, he ignoring their existence and they professing (as Rome had once done) that he had vacated his see. The leader of the clergy was Novatus, whose name has been confused by Eusebius and others, to the darkening of the story, with that of Novatian. The two men were known to each other, for Novatus had visited Rome during the vacancy and had been courteously received by Novatian. The latter had approved Cyprian's policy in regard to the lapsed and disapproved the laxity of Novatus and his colleagues. He had also recognized Cyprian as bishop; but there was nothing strange in his welcome to Novatus, for he may well have thought that Cyprian was acting unconstitutionally, or at least harshly, towards the clergy of his Church, and that, in the interests of future peace in Carthage, it was well to keep on good terms with both parties in the conflict. This relation of Novatian with the clergy of Carthage won him their support as soon as Cyprian had adhered to Cornelius. There, as at Antioch and Alexandria, the messengers of both rivals had appeared, and claimed recognition. For a while Cyprian withheld his decision. Cornelius, we know, was made anxious by the delay; probably Novatian was hopeful. But, when Cyprian had made up his mind, he expressed himself with as much vigour as Cornelius could have wished. And it must be said that both Cyprian and Cornelius used to the full the licence of the age. Vituperation was a department of the art of rhetoric as taught in the schools, and need be taken no more seriously when employed by a Christian writer than when Demosthenes or Cicero used it to discredit an opponent. It was the ordinary missile of controversy. The charges against Novatian either related in the main to circumstances of his baptism which had been condoned by the bishop who admitted him to orders, and therefore could no longer be pleaded against him, or were reflexions upon his courage in the persecution, and are refuted by the fact that his chief supporters were the confessors, who must have known how he had borne himself and were the last of men to tolerate in their bishop a lower standard of loyalty than their own. But the breach between Novatian and Cyprian was now impassable, and, in obedience to a principle common to both, each henceforth asserted that the other was outside the Christian Church. Their test of membership was that of communion. Cyprian was in communion with Cornelius, who, according to Novatian, was not bishop of Rome; therefore, according to Novatian, Cyprian was not a bishop of the Catholic Church. According to Cyprian, Novatian, being out of communion with his own Church as represented by Cornelius, its bishop, was out of communion with the whole of Christendom. It was common ground that a local church must have a bishop, and therefore Novatian procured the consecration of one of the party of his ally, Novatus. This party provided the new bishop with an organization in working order, and including a majority of the presbyters of Carthage, who had already, and on independent grounds, reached the conclusion that Cyprian had vacated his see and was no longer bishop.

This consecration of the new bishop, Maximus, in Carthage, took place in 252, and from that time

the schism, represented by bishops in Rome and in Carthage who claimed to be the true bishops of those sees, was incurable. At first it seemed that the chances of the two Churches were about equal. But in this year, 252, Fabius of Antioch died, and his successor reversed his policy. And very quickly, actuated by motives of which we are uninformed, the Roman confessors, or at least the great majority of them, transferred their allegiance to Cornelius. There is no reason whatever to think that they were wrong in doing so. But Novatian could not see the matter in that light. He held that he had been validly elected and therefore that communion with himself was a necessity for Christians. Numbers were not the test, and those who deserted him unchurched themselves. He still had considerable support. In 254 we find Marcian, bishop of Arles, the most important see of Gaul, in communion with him, and Cyprian writing (*Ep. lxviii.*) to Stephen, who had lately become bishop of Rome, urging him to initiate a movement at Arles for the consecration of a new bishop there who should be in communion with themselves. We do not know the sequel, but there can be no doubt that there, and universally, the Novatianists were excluded, but still claimed to be the true Church and provided for their continuity by consecrating for themselves bishops. That their numbers were considerable and their extension wide is evident, but we have no means of estimating the size of their Church. It is only by accident that we hear of their existence in various regions; e.g., their presence in Spain is proved by the controversial writings against them of Pacian of Barcelona in the second half of the 4th century. They were strongest in Asia Minor, where the Montanists, attracted by their claim to purity, seem to have fused with them; and the nearness of that region to Constantinople gave them weight in the great doctrinal controversies.

With the claim to purity we come to what grew into the *raison d'être* of Novatianism, though, in fact, so far as Novatian was concerned, it was an afterthought, and not the occasion of his action. We have seen that he began by agreeing with Cyprian, and with the general opinion of Christendom, that, though lapse into paganism was a sin of the greatest gravity, it was not unpardonable. But, when his schism was final, though his breach with the Catholic Church was due to a dispute upon a historical fact, whether he or Cornelius had been duly elected, it was inevitable that differences should arise, and that he should detect fresh errors in the society which had rejected him. He found one in this very matter of the lapsed. The Church, he came to teach, was defiled by restoring those who had been guilty of such a sin. It did not cleanse them; it shared their guilt. The unpardonable character and the contaminating nature of the sin became for the followers of Novatian a cardinal doctrine; not that they denied God's power to forgive, but they denied His gift to the Church of that power. This contamination was unending; it passed from generation to generation of those who received communion or orders from the persons who had contracted the original defilement. There was thus a second barrier between Novatianists and the Church; the latter had not only erred in rejecting the lawful ministry, and so cut itself off from Christ, but it was also involved in a guilt from which no power on earth could relieve it. As the original, the historical, question lost its interest through the lapse of time, the latter doctrine became the conspicuous differentia of the Novatianist Church.

In all other respects its development followed the same lines as its rival. Novatian's own theology, borrowed from Tertullian, started his Church

on a course of thought which led to full agreement with that which prevailed at Nicæa in 325. It may be that, conscious of rivalry, the smaller body made it a point of honour not to fall behind in doctrine; in any case, the Church of Novatian had its day of triumph when Constantine called in Acesius, its bishop of Constantinople, to advise him as an impartial expert in his dealings with the bishops of the greater Church who were at strife. Acesius's verdict was for the doctrine of Athanasius, and, though he gave no satisfactory answer to Constantine's natural inquiry why, seeing that they believed alike, the two Churches did not coalesce, and had to endure the emperor's taunt, 'Set up your ladder and climb to heaven alone,' he and his followers had earned the gratitude of the orthodox. Therefore, during the dominance of Arianism, from the reign of Constantius to that of Valens, they suffered from persecution equally with the orthodox, and, when the victory of Athanasianism came with Theodosius, they were tolerated and even favoured. They seem, at least in Constantinople and Rome, to have been an educated and influential body, with weight beyond their numbers, though in each city they had several churches. Monasticism grew up among them as early as among the Catholics. Of distinctive practices we hear as little as of distinctive doctrines, apart from the great barriers between them and the rest of orthodox Christendom. There is some evidence that they dispensed with unction at baptism, and some of those who represented the former Montanists retained certain Montanist peculiarities. But the Novatianist community was singularly free from internal differences, and nothing unworthy of its claim to purity is recorded. To a body so respectable and so orthodox in doctrine it was natural that advances should be made, and the Council of Nicæa, in its 8th canon, even offered to recognize the orders of Novatianist clergy.

This was the consistent temper of the Catholics till, with the death of the generation that had known the Arian strife, the Novatianist services to orthodoxy were forgotten. In 412 the Western emperor Honorius issued a severe edict against them, and the popes of the 5th cent. consistently aimed at their suppression. In the East they were suffered to remain in peace a little longer, and the interest in their concerns taken by the historian Socrates has raised the suspicion that he may have been one of their number, and certainly shows that it was safe for a literary man to sound their praise. The storm came in the middle of the century when Cyril in Alexandria and Nestorius in Constantinople, agreeing in intolerance, denied them the opportunity of public worship and strove to force them into conformity. But they maintained their corporate life in many places. There is evidence of Novatianists in the 6th cent., and perhaps in the 7th, and probably it was rather to the general collapse of the ancient society than to the efforts of their adversaries that their final disappearance was due.

LITERATURE.—Eusebius, *HE* (letters of Cornelius and Dionysius); Cyprian, *Epp.*; Pseudo-Cyprian, *ad Novatianum* (printed in Cyprian's works); Socrates, *HE*; Sozomen, *HE*; Pacian, *Opuscula*; numerous references in all the ecclesiastical writers of the 4th and 5th centuries. Modern Church histories and histories of doctrine deal fully with the subject; the best recent treatment is by A. Harnack, in *PRE*³.

E. W. WATSON.

NOVEL.—See FICTION.

NUBA. — 1. Geographical distribution and organization.—The Nuba may be regarded as the Negro or Negroid aborigines of Kordofan, although at the present day the northern half of this area is inhabited by Arabic-speaking tribes professing

Islām, so that Dar Nuba, the country of the Nnba, occupies only the southern half of the administrative province, extending over 2½° of latitude from about 12½° to 10° N. Even so it includes some 50,000 sq. miles, being bounded on the east by the Shilluk territory fringing the west bank of the White Nile, on the south by Lake No and the Bahr el-Ghazal, and on the west by Dar Homr and Darfur. But, since southern Kordofan is a great plain dotted with isolated hills and ranges, and the Nuba are essentially hill people, they actually inhabit only a small part of this area. Although it would be out of place to discuss the mixed Muslim population of the flat country, it may be said that, except in the case of some of the smaller and weaker Nuba hills where intermarriage has taken place, they have not exerted any great influence on the hill-men. Indeed, it is surprising to find that even in northern Kordofan, where the country has come thoroughly under Arab influence, traces of the older religious and social systems persist, while on some hills many inhabitants show Nuba physical characters. On the other hand, there do not seem to be any northern hills on which non-Arabic languages are spoken, even where the remains of the old religious beliefs exist, as, e.g., on Jebel Kaja (about 14° 30' N.). It is far otherwise in the south, where the Nuba, though raided for cattle and slaves, have retained their independence, for even under Dervish rule the Emirs sent against the Nuba did little more than reduce the more exposed hills, in some cases carrying off almost the whole population.

North of the twelfth parallel foreign influence is pronounced; even in Bruce's time¹ Jebel Tegele and Jebel Daier had been overrun from Darfur and Sennar alternately, and had furnished a garrison to the latter province—or kingdom, as it then was. The inhabitants of the hills lying between the eleventh and twelfth parallels, though less sophisticated than their northern neighbours, are by no means as unaffected as the hill-men further south.

It does not appear that any recent physical, cultural, or linguistic influence has been exerted on the southern Nuba by the Shilluk, whose villages form a line along the White Nile to the south-east of Dar Nuba, nor by the Dinka and Nner to the south.

As customs vary from hill to hill, and even in different communities on the same hill, it may be as well to state that the present writer has visited the following hills, Amira, Korindi, Eliri, and Talodi, all in the extreme south of Dar Nuba, and has had opportunities of obtaining information from natives of Kanderima, Kawarna, Tiramandi, and Dilling, the last lying just north of 12° N. lat.

One of the most remarkable features of Dar Nuba is the multiplicity of languages spoken within its bounds. The inhabitants of hills only a few miles apart may speak languages mutually unintelligible, and even on the same *massif*—when this is of moderate size—there may be two or three communities speaking different languages and coming little in contact with one another, though their habits, customs, and beliefs are fundamentally the same.

A good example of the prevailing condition is offered by Jebel Eliri. The Eliri, said to be the original inhabitants of the *jebel*, have been forced to cede the best part of it to the Lafota, who came from the neighbouring Jebel Tekeim. The Eliri have mixed with the 'Arabs' below to some extent, and now inhabit a small village high up on the *jebel*, a few houses close to the Lafota village, and a settlement at the base of the hill. A few Eliri men speak the Lafota dialect, though none of the Lafota profess to understand the Eliri dialect, and only two or three mixed marriages are recorded. On the same *jebel*, about 6 miles to the west, is Talassa, where the Korongo dialect is spoken, the founders of this community being natives of Jebel Korongo who were joined by refugees from various northern hills which had been attacked by the Derrishes.

At least sixteen languages are already known in

1 J. Bruce, *Travels to discover the Source of the Nile, 1768-73*, Edinburgh, 1790.

southern Kordofan, and, if a few of these should prove to be only dialects, this can hardly be the case with the majority.

This brings us to one of the outstanding difficulties connected with the Nuba, viz. their widespread confusion with the Barabra or Berberines, the inhabitants of Nubia north of the fourth cataract—a difficulty which makes it necessary to define the position of the Nuba at some length and as precisely as possible. Apart from the fact that Dar Nuba is even now one of the least known parts of Africa, the confusion is due, at least in part, to writers who have insisted on applying linguistic criteria to determine the ethnological position of the Berberines and the tribes of northern Kordofan. Frederick Müller formed a Nuba-Fulah group of languages to include the Barabra dialects and Fulah. Keane rejected this view almost with scorn, but, on account of similarities in the language, or some of the languages, spoken in northern and central Kordofan to those spoken by the Barabra, did not hesitate to proclaim the essential unity of the Barabra and the tall black Negro hill-men of Kordofan. The confusion may have been increased by the similarity of the names Nuba and Nubia, for German scholars actually speak of the Barabra dialects as 'Nuba Sprache.' In any case it is not difficult, in the light of fuller knowledge of the Nuba themselves and of the history of Kordofan, to explain the similarity of language which misled Keane. This will be referred to later; meanwhile it may be pointed out that the difference between the present-day Barabra and the Nuba of Kordofan, as shown by physical measurements, is confirmed by a whole series of characters not susceptible to expression by measurement. The Nuba is stoutly-built, muscular, and so dark-skinned that he may be called black; the Berberine is of slight, or more commonly medium, build, not particularly muscular, and in skin-colour varies from a yellowish to a chocolate brown. The hair of the Nuba is invariably woolly; that of the Barabra, though approaching the Negro in individual instances, is commonly curly or wavy, and may be almost straight, while the features of the Barabra are not uncommonly absolutely non-Negroid.

Thus there can be no doubt that the two peoples are essentially different in physical characters, and the same holds good on the cultural side. The Barabra scar their faces in the manner common to the Beja and riverain tribes of so-called 'Arabs'; they circumcise their youths and mutilate their girls, but they do not cover the bodies of their women with cicatrices or remove their incisor teeth, nor do their women perforate the lower lip in order to wear a lip-ornament. The Nuba do not circumcise their boys or mutilate their girls, but practise the remaining deformations mentioned.

To return to the language: If the speech of the southern Nuba be compared with dialects (Mahass, Sukkhot, etc.) spoken by the Barabra, it will be found that the inhabitants of the hills of southern Kordofan situated but little north of the Bahr el-Ghazal have a language, or rather a series of languages, with grammatical structure and vocabularies which do not resemble the Berberine dialects. The communities of some of the hills are as yet unaffected by northern influence, as is shown by the fact that the men still go absolutely naked and uncircumcised—the very first result of Arab (Muhammadan) influence being the assumption of at least a minimum of clothing and the adoption of circumcision. The resemblances found between the languages of the Barabra and the Nuba of northern Kordofan are, in fact, due to foreign influence, to which the more northern hill-men have been subjected for a considerable period. It has long been known that the southern Barabra of Dongola Province are keen traders; indeed, the traveller in Kordofan soon comes to recognize that these folk have exerted a sustained and increasing influence for a considerable time. As might be expected, this influence is most marked in the north, where important settlements of Barabra have long existed, but there is no doubt that it has penetrated deep into the heart of Kordofan to a degree not commonly realized, and it is this pacific and mercantile penetration that must be held

responsible for the similarities which have been discovered in the Berberine and Nuba languages. So much evidence in support of this opinion, which apparently has not previously been put forward, will be found in Macbichael's recent work, *The Tribes of Northern and Central Kordofan*, that it will be sufficient to note that passages confirming this view occur in the writings of El Tounsi (referring to about 1784-85), Rüppell (1829), and Pallme (1839).¹ But, although some of the languages of northern Kordofan and even of northern Dar Nuba may show resemblances to the Barabra dialects, the languages of southern Dar Nuba are quite unlike these both in structure and in vocabulary. In the Berberine dialects grammatical changes in both nouns and verbs are produced by suffixes; in the Nuba this is done by initial change. Moreover, in the latter, alliterative assonance prevails to a considerable extent; e.g., the plural of *talanga jôte* (Elkri), 'a good club,' is *malanga môte*.² Turning to the vocabularies of seven languages published by B. Z. Seligman—and for the moment neglecting the most northerly—the most that can be said from the point of view of affinity with Barabra is that there are a few words scattered in the lists which might be connected with Nubian or Arabic. Kawarma, the most northern of the languages investigated, shows a decided Berberine influence.

The position may perhaps best be made clear by a consideration of the numerals. The most southern hills have special words for the first numerals, but form 6 by $x+1$, 7 by $x+2$, etc. This is not a Berberine characteristic, though Kawarma shows a decided Berberine influence especially in the agreement of the initial sounds of the words, while the numerals given by Munzinger for Jebel Daier (about 12½° N.) show merely dialectical differences from the Berberine.

It is then obvious that there is the greatest difference between the languages spoken by the Nuba in the far south of Kordofan and those used further north, the latter closely resembling the Berberine. Moreover, in physical characters and culture the Nuba stand absolutely apart from the Barabra, so that it is perfectly reasonable to conclude that the Berberine characteristics in the languages of the more northern Nuba are due to the gradual penetration of Berberine influence, and are not due to the common origin of Nuba and Berberine.

Each Nuba community is autonomous; there is no division into clans and no restrictions upon marriage other than those imposed by blood-relationship; indeed, nearly all unions take place within the community. Women and children are well treated, property passes in the female line, and girls choose their mates and are allowed the greatest freedom; no bride-price is paid, and either party can break the marriage at pleasure, separations and the formation of new attachments occasioning little or no trouble so long as they are openly declared. This applies to the most southern communities; further north, where a bride-price is paid, matters are less simple.

There is no definite evidence of the existence of totemism, but on Tira el-Akhdar and also on Jebel Lumun there are people who claim descent from leopards, and who will not kill leopards as other folk do. These man-leopards can make themselves invisible at pleasure, and, even if speared, cannot be seen or tracked. No difficulty is made about marrying into the leopard families. Although no man turns into a leopard without good cause, no one will go into a man-leopard's house without an invitation lest he should come upon the owner while skin-changing. On Tira el-Akhdar there are also people descended from a species of snake called *erunga*, which is the family-name of the snake people. These folk can turn into snakes, and, if any one is injured by an *erunga*, one of them spits upon and massages the injured part and the patient gets well. Probably exogamy does not prevail in either leopard or snake families.

The regulation of public life is ultimately in the hands of the rain-maker and certain subordinates who are in fact his executive officers,³ though, in some instances at least, they seem to partake of his spiritual authority and to be his assistants in the rites of his office.

¹ W. P. E. S. Rüppell, *Reisen in Nubien, Kordofan, und den petrischen Arabien*, Frankfurt, 1829; I. Pallme, *Travels in Kordofan*, Eng. tr., London, 1844.

² S. H. Ray considers that certain forms of grammar seem to connect the Nuba languages with those spoken far away to the west and to the south, i.e. the Jolof (Wolof) and somewhat more indefinitely the Bantu.

³ The men usually called *mek* and considered as chiefs in the intercourse between the government and the Nuba are, as a rule, executive officers of the kind indicated.

The Nuba are skilled and energetic cultivators, and possess only a comparatively small number of cattle, so that their herds do not take the great place in their life which cattle occupy in the thoughts and conversation of the Dinka and Shilluk. Nevertheless, only men herd the cattle and milk the cows, and, since on certain hills the initiation-ceremonies of the lads are connected with the cattle and take place in specially prepared cattle-kraals, it seems possible that at one time cattle may have played a larger part in the lives of the Nuba than they do at present.

During recent years, and even now when peace has been established and the fear of Arab raids has been removed, the Nuba cultivate their grain upon the plateaux of their hills, or, if these are insufficient, construct terraces on which to grow *dura*. But there is reason to believe that at one time, before the Baggara pushed their way into central Kordofan and began to raid the south, considerable areas of the plain in the neighbourhood of the hills were cultivated.

At his best, i.e. on those hills which have been strong enough to resist Arab influence, the Nuba is plucky and generous, and, when once his innate suspicion of strangers has been overcome, he is a cheerful companion and makes an excellent host. Both sexes are cleanly, and the condition of their settlements compares most favourably with that prevailing in the villages of the Nilotes. To a certain extent this may be due to the presence of the domestic pig which is found in their hills, but it is, in part at least, due to their being more particular to keep themselves and their huts clean. No rubbish or dirt is allowed to accumulate in the interior of their houses, and the women always wash their hands before grinding *dura* or preparing food.

2. High gods.—Although it is probable that all Nuba believe in an otiose high god, in practice he is overshadowed by the spirits of the dead, except perhaps in connexion with rain-making, while in some instances a powerful ancestral spirit seems to be confused with the high god, or has perhaps usurped his name. Thus, on Jebel Kawarma, Jebel Kanderma, and Jebel Tira el-Akhdar the highest spiritual power is called Elo, but, while some at least of the Kawarma people recognize him as their ancestor who came out of the rock Eldu, and know the site of his grave, the inhabitants of the other two hills do not believe that he was human, and say that he lives in the sky with the rain which he sends. Nevertheless the Kawarma folk invoke Elo at a ceremony held at the beginning of the rains, which has as its purpose the increase of the cattle. A bullock is killed and a bowl of native beer is passed round and over the body, while Elo is invoked, 'Elo, we are hungry, give us cattle, give us sheep.' So, at Dilling, while some appeared to regard Belet as an ancestral spirit, some at least of his attributes are those of a god. He sends rain when the rain-maker asks it, and causes the corn to grow; he also gives increase of cattle and men. He inhabits (perhaps only at times) a holy cave called Kulignala which would appear to be regarded as Tvala, 'the other world,' or at least as its entrance. It should be noted that religion appears to be more developed in the northern hills of Dar Nuba than in the extreme south, though there is no reason for attributing this to Arab influence.

On some hills the high god is invoked in oaths, as among the Lafafa, who swear by a sacred fire and by Kalo, who created all things and in whose house (the sky) are the sun and moon.

3. Eschatology and the cult of the dead.—The eschatological ideas of the Nuba, though fairly uniform in principle, vary somewhat from hill to hill.

Generally speaking, the spirit or shade of the deceased is considered to remain in the grave with the body, yet the spirit can and does emerge to visit the village, and is seen by relatives and friends in dreams, but not otherwise. In spite of this it was sometimes said that nothing was known concerning a life after death, and that man was literally 'as the beasts.' It was especially on Jebel Eliri that this view was proclaimed; but, even if some folk of the Lafafa and Eliri communities hold no formal beliefs as to the survival of any spiritual part after the death of the body, the funeral rites of these people would alone suggest that the general opinion is that something persists after death. As a matter of fact, the agnostics were relatively few in number.

The animals killed at and after the funeral are for the benefit of the dead; one informant went so far as to say that, if a bullock, or at least a goat, was not killed, the dead in the family grave would hold the new-comer to be a wretched fellow of no account. The near blood-relations of the deceased alone eat the flesh of these animals, and husband and wife do not partake of the flesh of animals killed for a spouse. If a bullock is killed, it is provided by a son of one of the sisters of the deceased. It appears that the relatives should stay in the house of mourning where the feast is to be held for the whole of the first night after the funeral.

The southern Nuba bury in family-graves shaped like an inverted funnel, the shaft, corresponding to the stem of the funnel, being so narrow that a living man can only squeeze down with his hands above his head. The shaft is 6 to 8 ft. long, and expands below into a circular chamber with sloping sides some 3 ft. high in the centre and perhaps 8 ft. across. In the middle of the floor, i.e. under the opening of the shaft, there is usually a mound of earth about a foot high. Any one lowered down the shaft naturally lands on this. When a burial takes place, a couple of men are lowered into the grave and they receive the body, which is laid (whether on side or back is uncertain) at the periphery of the chamber. It is said that such family-graves occurred at least as far north as Dilling; nevertheless, there is great variety in the mode of burial. Thus, on Jebel Nyema and Jebel Katla Kurun the grave is a short narrow-necked cell in which a single body is interred in the squatting position, while at Beraeis, in the far north of Kordofan, the Nuba ancestors of the present half-breed population buried in the lateral posture with limbs flexed. The body is commonly rubbed with oil before burial, but it is generally buried naked except for bead-ornaments. Various objects may be placed in the grave, including a hoe; those which are not of iron are broken, while iron ones (perhaps these, too, are destroyed) are removed the next time the grave is opened, and the iron is worked up into new implements, which become the property of the sons of the sisters of the deceased. The more important the man, the greater the number of things buried with him, and at Talodi it is said that, when a really notable man is buried, his *angareb* and shield are placed on his grave. Most of the graves actually seen had one or more gourds or pots upon them; often these had been purposely holed. The whole matter of death ceremonial was summed up by a native of Jebel Tamtam who said, 'The stronger the man, the more important he is both in life and after death.' Hence, in most communities, when an ordinary man dies, there is only one big feast, which is held soon after his death, but for important men two or three feasts are held at intervals of about a year. These feasts appear to be made in or near the house of the deceased.

At Dilling the spirits of the dead are thought to

visit the living, especially at the time of the *dura* harvest. When the *dura* is cut, every widow believes that the spirit of her husband will come to her that night, so she sends her children away and prepares food and drink. She puts a clean mat upon the floor and sleeps naked upon it as if with her husband. A woman does this only for her first husband, and, although there is no idea of any congress with the spirit, her husband (if she has married again) would not remain in the hut. Mothers prepare food and a bed for a dead child in much the same way.

On Jebel Kawarma live sheep, often as many as ten, are said to be put in the grave with the body as well as a hoe and other objects. The sheep are not tied up. The bead-ornaments commonly worn are left upon the body, which is wrapped in the skin of a pig killed for the purpose. The spirit remains in the grave and delights to look after the sheep, yet it comes out at times and may then be seen in dreams. If a 'big' man is seen in a dream, his relatives may pour a pot of *merissa* on the grave and sacrifice an animal at the door of his house, the latter custom possibly being due to Arab influence.

The matrilineal habits of the Nuba are specially well marked in their burial rites. Both men and women are buried with their mother's relatives. The men of Jebel Eliri were at first reluctant to show their burial-places. This was the more remarkable because no difficulty was made in talking about death and burial customs. It was explained later that it was not customary to show the graves to strangers, and that the people themselves did not visit them.

On Jebel Korindi it was thought that death might be due to the dead calling the living to join them, and in one case an *angareb* with the dead body upon it was taken round to the houses of certain deceased who were supposed to have called the dead person to them.

4. Rain-makers and rain-making.—The rain-maker is the most important man in each community, and the regulation of public life is ultimately in his hands, though he will scarcely be heard of by strangers until they have gained a considerable measure of the confidence of the people. In the old days the rain-maker was not allowed to go to war, and every effort was made to protect his person against accident, the reason for this being that each succeeding rain-maker incarnates the spirit of a great and long-dead predecessor. The rain-maker is not the only practitioner of magic; there are experts in other departments, but these have nothing like the same influence and do not at present demand consideration. Far below the rain-maker in importance there are certain men who are more or less responsible for the temporal government of the community, and who formerly led the fighting men of their *jebel*, though assuredly they would do nothing in opposition to the wishes of the rain-maker. When the rain-maker drinks and eats with other important men, he takes the first sip or mouthful and then tells the others to begin; this makes even a small quantity of food sufficient for all. On Jebel Eliri he keeps the large fire-sticks with which to make the fire on which oaths are sworn 'by this fire and by Kalo,' and the plaintiff must pay him a fee before he will produce the sticks and kindle the fire.

In some communities, as at Dilling, the rain-maker may not leave the hill, while on Eliri he may go no further than the grave of his great predecessor Geberatu (whose spirit is immanent in him), where he performs the rain ceremony.

The power of the rain-maker and the other departmental experts of the Nuba is due to the

immanence in their bodies of the spirit of a great predecessor in their own department of magic; thus Koko, the rain-maker of the Lafafa of Jebel Eliri, is supposed to have in him the spirit of Geberatu,¹ who lived three generations ago, and the remains of whose homestead still exist at the base of Jebel Eliri. According to the commonly accepted belief, the spirits of the dead cause the ancestral spirit of the expert, *i.e.* the spirit of the great predecessor, to become immanent in the new expert. It is held that this occurs while the future expert is quite young, and the writer has more than once been told how a mother will wake up in the night to find that her child is not by her side, though he is there in his old place in the morning. She tells her friends, and it may be thought that the spirits have taken her child to make him an expert. It is believed that the spirits come to the experts in dreams and help them, but informants frankly admitted that they knew nothing about this, for, as one of them said, experts are not given to relating their experiences. The rain-maker may be a woman, as is the case on Jebel Kawarma at the present time, and as among the Lafafa three generations ago, when Nalu, the grandmother of Koko, was rain-maker.

At Dilling the rain is called *ara*, and each rain-maker has immanent in him the spirit of Orsera, the first rain-maker. Soon after the death of a rain-maker his spirit becomes immanent in his successor, possessing him by night and causing him to shiver, groan, and shout. The next morning the assistants of the dead rain-maker are told that the *oro* (*i.e.* the ancestral spirit immanent in rain-makers of the tribe) has come to him. They take him to the holy cave Kulignala, which he enters and where he speaks with Belet. When he comes out, they put round his neck a very old piece of (woven?) material which is kept in the cave, and at the same time he is given certain sacred spears (*oro*) and a metal bracelet, said to have been the property of Belet, which are taken to Kulignala whenever a rain-maker dies. The rain-maker keeps these spears in a special house, and uses one of them to kill the sacrifice at the rain ceremony. The house of the dead rain-maker is destroyed, and a new house built on the same site with fresh materials; for, if the rain-maker were to live in the house which belonged to his predecessor, he would soon die.

The accounts of the technique of rain-making given below show very considerable variations on different hills or different groups of hills. Each community 'makes' its own rain, and no one seems to have realized that one rain-maker would be sufficient for each *massif*. On the contrary, the greatest wonders are told of rain-makers only a little way off. Thus, the Lafafa people believe that the rain-maker of Jebel Tekeim on the Eliri *massif* is associated with a 'red' snake, whose form he is said to assume at will. According to

¹ The writer first heard of Geberatu as a long-dead hero of extraordinary wisdom and foresight, who generations ago led the Lafafa up the *jebel*, and it is certain that to most of the Lafafa Geberatu is the mighty hero of a remote and almost legendary age. When the name of the first rain-maker is asked, the answer is invariably the same, 'Geberatu,' yet Nalu, the sister of Geberatu, is still alive, though she is an old woman; and on the Lafafa plateau there are still standing the remains of walls said to have belonged to a group of huts occupied by Geberatu after he and his people left their settlement on the plain below. Nalu, with whom the writer talked in 1910, cannot be more than 60 or 70 years old. It was not possible to discover how many years separated her birth from that of Geberatu, but, as she and the rain-maker had one mother, the maximum can scarcely have been more than 25 years; probably it was less, and Geberatu must have been in his prime not more than 50 or 60 years ago. Thus, although Geberatu died within memory of living folk, and although his near relatives are still alive, the identity of the rain-maker is fast being forgotten, and for it there is being substituted the figure of a legendary hero, gifted with extraordinary wisdom and foresight.

the Lafofa, the Tekeim people, to obtain rain, take milk and put it in a special hole high on a hill, where it is taken by the snake or rain-maker in his snake form.

In connexion with the rain-making snake of this hill, it was extremely interesting to find at Jebel Kaja, in the far north of Kordofan, among a people who have been Muhammadans for some generations, that, though it is recognized that Allah sends the rain, a ceremony is held in honour of or to propitiate Abu Ali, a great ancestor and rain-maker who did not die but disappeared, and whose spirit still possesses folk at the ceremony. But Abu Ali is also a great snake; indeed, in some villages of the Kaja massif he is known only in that form, and, although he has not been seen since the Mahdiya, the yearly ceremony is performed in and before a special hut built by the crevasse on the sacred hill which was his place. A goat is killed and its blood smeared upon the rocks, its flesh being cooked at a fire newly made with fire-sticks, and eaten by those concerned in the ceremony who become possessed by Abu Ali, who was described as 'riding' them.

At Talodi the rain-maker keeps in his house a potsherd on which lie three fragments of *dura* grinding-stones and one fragment of one of the larger stones on which the grain is ground. To bring rain, he pours water on these stones inside his house and kills a ram or pig, cutting its throat in the central court of his house. The blood is caught in a gourd and brought outside the house, when first the rain-maker and then the people take some of the blood in their hands and fling it in the air towards the sky, and into the rain-maker's house. Then the rain-maker takes a gourd of water and throws its contents towards the sky. Before he does this, the people howl as on joining battle, and the women shriek; only the rain-maker is silent, praying inwardly. The rain should come the same day, or at most in two or three days. When it comes, the potsherd and the stones on it are brought out of the dark corner where they have been kept, and placed where the water from the roof will drip on them during the whole of the rainy season. Then, when the crops are cut, the stones are brought inside the house.

The rain-maker should stay in the house all the rainy season, leaving it only when absolutely necessary. A rain-maker will not give strangers (or any people other than members of his own family) anything to eat or the rain will not fall. The rain-maker takes *merissa* with others, but drinks first, and this blesses the liquor.

The site of the rain-making ceremony of the Lafofa is at the foot of Jebel Eliri, where among the ruins of what was once a considerable settlement there are certain remains which are associated with Geberatu. These are: (1) the foundation of his house, showing remains of large pots and of his granaries; (2) his grave; (3) a slab of rock near by, bearing the foundations of a hut in which, it was said, Geberatu made his rain-medicine. These remains are excessively holy, and it was only after prolonged negotiations that the writer was allowed to visit them, and certain preliminaries (said to be those preceding the rain ceremony) were necessary. These included the sacrifice of a goat, which was eaten where it was killed in the pass above the remains, its blood being sprinkled on the rocks at the side of the track. It was not possible to ascertain anything as to the procedure of rain-making on this hill, but it appeared that a special hut or shelter (perhaps temporary and destroyed after use) would be erected not far from the site of the hut used by Geberatu for making rain, and in this the rain-maker would perform his office.

At Dilling before the rain-making ceremony a clean vessel filled with beer is left overnight for Belet in his sacred cave. In the morning the bowl is empty, and it is supposed that Belet has drunk it.

The following is an account in outline of the rain-making ceremony, but it must be remembered that it was given by a man standing in no specially close relationship to the rain-maker.

The rain-maker builds a special house, henceforth regarded as sacred, and provides a white cock and a virgin she-goat of any colour. His assistants make a hole in front of the sacred house and let the blood of the cock and of the goat run into the hole; the skin, feathers, bones, and bowels also go in. This is all done privately by night, and at the same time the rain-maker puts some of his own *dura* and *merissa* in the hole. Then, as it is believed, the rain-maker goes the same night to the cave Kullgala and there communes with Belet. After this

the rain comes; if the *dura* put in the ground by the rain-maker comes up well, all the country will have a good crop. The flesh of the goat and fowl is eaten by his assistants and by certain old men.

5. Magic and departmental experts.—Although the rain-maker whose prayers bring the rain is the spiritual and temporal head of the community, yet he has not universal control, for there are other departments each of which has, or may have, its own expert. On Jebel Eliri there are only two, but there is a larger number on more northern hills. On Jebel Eliri, where there is a 'sickness expert' and a 'grain expert,' the former, Deboi by name, is much looked up to, but little consideration is shown to the grain expert, perhaps because he is an old and feeble man belonging to the weak Eliri community. The position occupied by Deboi is particularly interesting, though it is difficult to appreciate its significance. With the possible exception of a few old men who are his relatives, he eats alone, and he always drinks alone; no one would touch *merissa* from which he has drunk, for he has the *korgo* (control?) of sickness and his mouth is 'hot.' Yet he is obviously a man respected and feared; he exacts what seem enormous fees for curing people (whoever he treats is assuredly cured, so many say), and does not hesitate to refuse to treat people who seem unlikely to get well. The writer feels tolerably confident that the awe in which Deboi is held is not due to his practising magic to induce disease or death, yet he cannot account for it, nor could his informants explain it. Probably the explanation of the matter is to be found in the remark that 'the stronger the man, the more important he is both in life and after death,' and Deboi is certainly one of the most striking people upon the hill.

When a man is sick, some one, usually his *imbib* (mother's brother, sister's son), takes some iron to the smith. This the latter makes into a bracelet, receiving a comparatively small fee of *dura* or something equivalent in value for his pains. The *imbib* takes the bracelet to Deboi, who puts it in the ashes of his sacred fire. Next morning the *imbib* conducts the patient to Deboi, taking with him a sheep or *dura* and beans. The patient does not go into Deboi's house, but sits down under the tree near the special fire which Deboi has lighted early in the morning by rubbing together two pieces of wood. The *imbib* takes the offering into the house and Deboi bleeds the patient, the blood being buried in the ground. He then takes ashes from the special fire and rubs the wounds, mumbling charms meanwhile; he also puts the iron bracelet, now regarded as a potent amulet which must never be removed, on the patient's wrist. He then washes his hands and sprinkles the patient's whole body with the water, telling him to go away, for he is cured. After ten days, when the patient is better, he goes back to Deboi, who awaits him under the tree where he has again kindled a fire: Deboi pours some water over the patient's head and tells him to go and have his head shaved. Young men go to Deboi before the ceremonial heating at the end of their first period of seclusion; he pours sour milk on their bodies, and they smear ashes of the fire on themselves to prevent them from feeling pain.

The corn expert is an old and decrepit man, a native of the Eliri community. He has in his house in special gourds a supply of *dura* of his own growing, which is mixed with the seed *dura* of the people of Eliri and Lafofa before planting. Both the sickness and the corn expert have within them an ancestral spirit, namely that of the original departmental expert; but, though iron-working on Jebel Eliri is conducted in a small rock-shelter by one man, who besides smelting the ore performs a certain rite to ensnare a good smelting year, the writer could not discover that any ancestral spirit was thought to be immanent in him. At Dilling besides the rain-maker there are corn, sickness, and war experts, in each of whom an ancestral spirit is immanent.

6. Oaths.—Reference has been made above (§ 2) to the form of oath used among the Lafofa on Jebel Eliri. On Jebel Kavarma oaths are sworn upon a very old spear-blade kept by the rain-maker. The man taking the oath licks the blade, and, holding it to his throat, says, 'If I swear

falsely, may I be killed!' Sacred spears also exist at Dilling, but the writer cannot say whether oaths are taken upon them as they are upon special iron bracelets and perhaps other metal objects which are the property of the rain-maker whose insignia they probably are. At Tasume on Jebel Talodi men swear by the earth, the formula being, 'By this earth in which I shall be buried.'

NUMBERS.

Introductory (T. DAVIDSON), p. 406.

Aryan (A. B. KEITH), p. 407.

Semitic (W. CRUICKSHANK), p. 413.

NUMBERS (Introductory).—1. **Origins.**—From our observation of the minds of children in learning arithmetic, as well as from the evidence gained among savage races, we may conclude that numeration ultimately depends upon the evidence of sense. The very names still used to denote lengths, such as 'hand,' 'foot,' 'span,' show how the art of mensuration had its origin, and it is equally certain that arithmetic began by counting on the fingers and toes—by fives, tens, and twice tens, or twenties (quinary, decimal, and vigesimal notation). The next step to the primitive mind was the formation of numeral words, which served as numerals after their original sense was forgotten. Numeral figures began by the adoption of special marks for the fives, tens, hundreds, etc., leaving the simple strokes for the few units left over, as in ancient Egypt and Assyria, and our present Roman numerals. Another device was to employ the letters of the alphabet in their order to stand for numbers, as in the sections of Ps 119, which are numbered by the letters of the Hebrew alphabet. Or the initial letter of the word for the several numbers might be used, as in the Greek inscriptions, χ (χίλια), 1000, etc. The Roman C has been understood to be the initial of *centum*, M, of *milie*. The history of the word 'calculate' (Lat. *calculus*, 'pebble') throws a light on the ancient use of pebbles for counters—a method of figuring systematized in the Roman *abacus*, with lines of holes for pegs, the Chinese *swan-pan*, with balls strung on wires, to be found in our own infant-schools. The last stage is the invention of the sign for zero, or nothing, to show the empty column in the *abacus*, whether due to the Arabs, as we suggest in speaking of 'Arabic numerals,' or to the Indians, as ascribed by the Arabs themselves. The quinary system is frequent among the lower races, among whom we find also the vigesimal system, but the more developed races show a preference for the more convenient intermediate decimal system. The Roman numerals, i., ii., . . . v., vi., . . . x., xv., etc., form a quinary system; the Gaelic 'one, ten, and two twenties'=51, a vigesimal; and we find a vigesimal system surviving in the midst of a decimal system, as in the French *quatre-vingt-treize*=93. The introduction of the late Latin *dozena* (Lat. *duodecim*) shows an apprehension of the practical advantage of counting by dozens. And we see a striking example of the vitality of an older system of numerals in the survival to this day of the so-called 'Anglo-Cymric score,' a corrupted form of the Welsh numerals in doggerel rhymes, still used in Cumberland for counting sheep, and by children in their games in many parts of Great Britain and even America. Our own system of numerals is decimal, yet we find such survivals as 'three-score-and-ten'=70. The scheme of grammatical number (singular, dual, plural), as in Hebrew, Greek, etc., has been ingeniously and plausibly explained as a survival of

a primitive stage of thought when all beyond two was an idea of indefinite number.

2. **Significance.**—In the folklore of many peoples we find evidences of peculiar sanctity attaching to certain numbers, notably 7, 10, 70, and in a lower degree, 3, 4, 5, 12, 40, and 100. In Scripture we find that some of the numbers are meant to be taken representatively rather than determinatively. The numbers 7, 10, 40, 100 are regarded as giving the idea of completeness—a notion found in the speculations of Pythagoras, the Gnostics, and even St. Augustine. Philo explains the six days of the Mosaic creation as not so much a chronological succession as an order attached to created things; 6 is chosen on account of its perfection, and because it contains the male and female principles, being the product of 3 and 2, the first of the odd and even, or the male and female, numbers. The number 7 is an image of God, and is impressed on the universe, as well as on the bodily and mental constitution of man; 2 is the image of matter, being divisible; while 3 is the image of solid body, which has three dimensions. But among the numbers up to ten 7 alone neither produces nor is produced, not being formed from any other number by multiplication. Everything in the kosmos is enamoured of 7—the idea of the planets, as unity is of the fixed sphere. Such fantastic speculations were carried further by many of the Kabbalists, but their conclusions may be neglected.

'Away with all niceties of Pythagorean calculations; all numbers are alike to me,' says Joseph Hall (*Select Works*, London, 1811, p. 510), 'save those which God himself hath chalked out to us.'

3. **Superstitions.**—Folklore is full of superstitions about lucky and unlucky days. Eschew the fifth day, says Virgil (*Georg.* i. 277, 284), but choose the seventeenth. Hesiod (*Op. et dies*, 823) distinguishes between 'mother-days' and 'step-mother' days. Shakespeare notices the belief that there is luck in odd numbers, but Virgil had already said 'numero deus impare gaudet' (*Ec.* viii. 75), and, accordingly, three threads of three hues are used in the thrice-repeated charm to draw Daphnis home. The number 3, or some multiple of it, is the most popular of mystic numbers in Britain. It enters largely into all prescriptions of folk-medicine, while 7 hardly appears, except with reference to the personal healing powers of a seventh son. It is still counted peculiarly unlucky to be the thirteenth guest at table, or to rent a house numbered 13. And few superstitions have greater vitality than the belief that there is grave danger to life in the attainment of the sixty-third year—the 'grand climacterie' of ancient medicine.

'For the dates of men,' says Sir Thomas Browne, 'are usually cast up by Septenaries, and every seventh year conceived to carry some altering character with it, either in the temper of body, mind, or both. But among all other, three are most remarkable, that is, 7 times 7 or forty nine, 9 times 9 or eighty one, and 7 times 9 or the year of Sixty three; which is conceived to carry with it the most considerable fatality'

(*Pseudodoxia Epidemica*, bk. iv. ch. 12, *Works*, ed. S. Wilkin, London, 1835-36, ill. 48).

4. Mystical numbers.—Another use of numbers has given rise to much perverse ingenuity. Thus the mystical number 666, in Rev 13¹⁸, is now usually read NeRON KeSaR, the Hebrew form of the Latin Nero Caesar:

N R O N K S R
60+200+6+50+100+60+200=666.

It is needless to point out that it may be read equally well as Lateinos, or perhaps other words.

Perhaps the most remarkable example of this fantastic use of numbers is to be found in Sir Thomas Browne's *Garden of Cyrus*. Its aim is to show that the number 5 not only pervades all the horticulture of antiquity, but recurs throughout all plant life, as well as the 'figurations' of animals. 'You have,' says Coleridge, 'quincunxes in heaven above, quincunxes in earth below, and quincunxes in the water beneath the earth; quincunxes in deity, quincunxes in the mind of man, quincunxes in bones, in the optic nerves, in roots of trees, in leaves, in petals, in everything' (*Biographia Epistolaria*, ed. A. Turnbull, London, 1911, l. letter 127 [1804]).

T. DAVIDSON.

NUMBERS (Aryan).—1. Indian.—(a) *Vedic*.—In Vedic religion and mythology the numbers 3, and its multiples, and 7 occur frequently, and for the most part without any trace of the earlier use of either 3 or 7 as the more primitive unit. In the case of the number of worlds, however, it is clear that 3—heaven, sky, and earth—is the earliest division, from which in the Rigveda is often derived the triplication of each of these, making 9 divisions in all. There is mention, however, of 7 regions and 7 places of the earth in the Rigveda (IX. cxiv. 3, I. xxii. 16), probably derived from the conception of 7 points, which itself is a development of the 4 or 5 of the Rigveda, and the 6 or 7 of the Atharvaveda. That Veda (X. viii. 18) and the *Aitareya* (II. xvii. 8) and the *Pañchavimśa* (XVI. viii. 6) *Brāhmaṇas* agree in using 1000 as the number to describe the distance of the heaven from the earth, whether measured by the day's flight of a bird, or journey of a horse, or by cows placed on the top of one another. There is no clear mention of 7 worlds before the *Mundaka Upaniṣad* (I. ii. 3).

The number of the gods in the Rigveda is often given as 33, divided into 3 sets of 11 each, which once (I. cxxxix. 11) are said to be situated in the heaven, the earth, and the waters, presumably the aerial waters. By a mere freak the number is once given as 3339 (III. ix. 9). In the *Brāhmaṇas* a different conception of the composition of the number 33 appears: the main elements are the 8 *vasus*, 11 *rudras*, and 12 *ādityas*, but the *Satapatha Brāhmaṇa* adds either (IV. v. 7. 2.) Dyaus and Pṛthivī or (XI. vi. 3. 5) Indra and Prajāpati to make up 33, while the *Aitareya* (II. xviii. 8) adds the *vaśaṭ* call and Prajāpati. The number in the Rigveda and the *Brāhmaṇas* does not include all the gods. Other passages of the *Satapatha* make the gods 7-fold (VI. v. 3. 11) or 3 (XIII. i. 7. 2), but these are mere cases of speculation. The division into 3 worlds leads to an occasional grouping of the 3 chief gods of these worlds: the Rigveda in a late hymn (X. clviii. 12) connects Sūrya and the heaven, Vāta and the air, and Agni and earth; the *Maitrāyaṇī Samhitā* (IV. ii. 12) declares that Agni, Vāyu, and Sūrya are sons of Prajāpati, and, by Yāska's time (c. 500 B.C.), theologians existed who reduced all the gods to one of the triad Agni, Indra or Vāyu, and Sūrya (*Nirukta*, vii. 5). It is not improbable that this triad is to be traced to the simpler conception of the 3 forms of fire—on earth, in the atmosphere, and in heaven—which appears

also to be the explanation of the story of Trita Aptya,¹ and the Avestan Thraetaona. There are also 3 sacrificial deities who are invoked in the *Apri* hymns of the Rigveda—Sarasvatī, Idā, and Bhārati. The number 7, however, is also prominent, especially in connexion with Agni; he has 7 wives, mothers, or sisters, 7 flames, rays, or tongues; the sun has 7 horses; the song for Agni is 7-fold. Rudra, who has 3 mothers already in the Rigveda (VII. lix. 12), is given 8 and 9 names in the *Kaṣṭhaki* (vi. 1 ff.) and *Satapatha* (vi. 1. 3. 7 ff.) *Brāhmaṇas*. The *maruts* are numbered as 3×60 (VIII. lxxxv. 8) or 3×7. The cow, or the dawn as the mother of the cows, has 3×7 names. There is a group of 7 *ṛsis*, who in the *Satapatha Brāhmaṇa* (II. i. 2. 4) are identified with the stars in the constellation of the Great Bear; 7 demons are also grouped together (Rigveda, X. cxx. 6). The Atharvaveda mentions 7 honeys of the *āsvins*' whip, 7 reins and wheels of time, and 1007 births of Rohita. The rivers and seasons are 7 as well as 5. The number 3, however, appears as that of the heads of Viśvarūpa, son of Tvaṣṭr, and a 99-armed demon is mentioned in the Rigveda (II. xiv. 4). The demons, especially Śambara and Vṛtra, have 90 or 99 citadels, and their numbers sometimes go as high as 30,000 or 100,000. On the other hand, ancient priestly clans of Navagvas and Daśagvas seem to be connected with the numbers 9 and 10 respectively.

The *ādityas* are 12 in the *Brāhmaṇas*, but in the Rigveda no more than 6 are mentioned by name, and the number is given as 7 or 8 only in late hymns (IX. cxi. 3, X. lxvii. 8). In the *Brāhmaṇas* their connexion with the 12 months of the year is obvious: a year of 12 months with 360 days is clearly known in the Rigveda (i. 25 and 164), and the intercalation of a month is also referred to. The theory² that earlier the *ādityas* represented the 7 planets, being borrowed from a Semitic source, is not supported by any evidence. The *4ṛbhus* who sleep for 12 days (Rigveda, IV. xxxiii. 7) in the house of Agohya, perhaps the sun, apparently may represent the seasons: the 12 days may be merely a representation of the months of the year rather than 12 days added to bring a lunar year of 354 days up to a solar year of 366 days, neither of which is known to the Rigveda.³ The 27 *nakṣatras* of the *Samhitās* after the Rigveda, and the 27 *gandharvas*, developed from the one *gandharva* normal in the Rigveda, indicate a scheme of 27 lunar mansions which may be borrowed from a Semitic source. The later *Samhitās* also present the numbers in the light of deities to whom offerings are made at the horse-sacrifice.

In the ritual there is a group of 7 *hotrs*, from whom the conception of 7 *ṛsis* may have been borrowed; the full soma-ritual, however, requires 16 arranged artificially in 4 groups of 4.⁴ Though in the developed ritual all kinds of numbers appear, 3 remains very frequent, animal victims often being offered in threes, as at the horse-sacrifice; 7 or 3×7 stalks of *darbha*-grass are used; there are 7 layers or 21 bricks of the fire-altar. The number 3 is also important for the arrangements of the soma-sacrifice: there are 3 pressings, each accompanied by songs and recitations, 3 soma-tubs, and 3 sacrificial fires. Among the forms of chanting used the 3-fold, 15-fold, 21-fold, and 25-fold are prominent. The number 12 is also important; soma-sacrifices up to 12 days' length were classed as *ahina*-sacrifices, those of 12 days might be either

³ A. A. Macdonell and A. B. Keltb, *Vedic Index*, London, 1912, II. 413; Keith, *JRAS*, 1915, pp. 131-133.

⁴ The Iranian ritual has 8; cf. Oldenberg, p. 383 ff.

¹ Traces of an earlier belief in 10 gods are seen by E. W. Hopkins, *Oriental Studies*, pp. 150-154; but for this view there are no adequate grounds.

ahinas or *sattras*, and those above 12 days were *sattras*, based on the 12-day form as a norm. In the *Mahad Uktha* of the *Gavāmāyana* ceremony the litany was made up of 3 sets of eighties of triplets. The number 7 is of importance in the marriage ritual in the form of the 7 steps which, when taken, render the marriage securely concluded. A period of 9 days' impurity follows after childbirth; the naming of the child on the 10th day ends the impurity. In the funeral rites, after a death the relatives in some cases had to sleep for 3 days on the ground; when the *pitṛmedha* was performed, the place of burial was thrice circumambulated, 3 stones were thrown into a hole in the ground, and 7 furrows were dug. The favourite day for offerings was the 8th of certain months, though the 9th was sometimes chosen.

Vedic magic is also full of references to 3, 7, and 21 as numbers; of special interest is the enumeration of 55, 77, and 99 in a charm in the *Ātharvaveda* (vi. 25). In another passage (xix. 47) the numbers 11, 22, 33, 44, 55, 66, 77, 88, and 99 are enumerated, but their signification is obscure.¹ Mention is also made of 53 sorceries, 100 sorcerers, and 7 charms. The 55 and 77 may be compared with the 55 and 78 steeds offered at the horse-sacrifice by Bharata on the Gaṅgā and the Yamunā (*Śatapatha Brāhmaṇa*, XIII. v. 4. 11).

(b) *Post-Vedic*.—Of the many mentions of number in post-Vedic religion and mythology only a few have any special characteristic. In the epic and in *Manu*² appears for the first time the doctrine of 4 ages: each has a dawn and a twilight of a tenth of its whole duration, and the periods of the main portions of the 4 are 4000, 3000, 2000, and 1000 years respectively, though the exact length of each year is obscure. The total is 12,000 years. The geography of the world is also stereotyped in the theory of 7 concentric continents,³ and an elaborate doctrine of hells⁴ is developed: the *Mārkaṇḍeya* and *Padma Purāṇas* give 7, the *Mahābhārata* 6, *Manu* and *Yājñavalkya* and the *Āgṇi Purāṇa* 21, and the *Bhāgavata* and *Viṣṇu Purāṇas* 28. The importance of the number 4 appears in the definite acceptance of 4 Vedas and 4 orders of life in place of the simpler 3—student, householder, and ascetic—of the Vedic texts. The quarters now number 8 and are provided with deities, the 8 *lokapālas*. Moreover, the gods now appear in sculpture with more than a normal number of heads and arms. *Brahmā* is 4-headed, probably to signify his omniscience and omnipresence, which is an inheritance from Vedic conceptions of *Puruṣa* and *Prajāpati*. *Śiva*, again, has, besides 5 heads, 3 eyes, which may be connected with his epithet *Tryambaka*, 'having three mothers,' in Vedic texts. He has 1008 names to *Viṣṇu*'s 1000. His names are, however, in practice usually 8 as against 9 in Vedic times. *Viṣṇu*'s *avatars* are given at 10, 20, or 22, not with multiples of 3.

The triad of *Brahmā*, *Viṣṇu*, and *Śiva* as creator, preserver, and destroyer of the universe is probably later than a conjunction of *Viṣṇu* and *Śiva* under the name *Harihara*, and in any case cannot be traced beyond the latest portions of the epic and the *Purāṇas*.⁵ Nor does it appear ever to have been anything but a philosophic view.

(c) *Buddhist and Jain*.—In Buddhist literature we find frequent references to the gods as *tīḍasa* or *tāvatiṃsa*, 30 or 33. The former term is also used in the epic and probably must be explained as merely a more convenient expression for the 33 of

the more regular use; that it means 13¹ is quite incredible. In the accounts of the Buddha the number 7 recurs with remarkable frequency: the new-born *bodhisattva* takes 7 steps (*SBE* xix. 3 f.); on a 7-gemmed ladder Buddha descends from heaven (*ib.* p. 241); there are 7 jewels of the Buddha (*ib.* xxxvi. 220), 7 sacred places at *Vesālī* and *Rājagaha* (*ib.* xi. 40, 56 ff.), 7 ramparts and 7 rows of palm-trees in King *Sudassana*'s town, 7 terraces in the world *Sukhāvātī*, 7 kinds of instruments, 7 classes of minds, 7 acts which bear fruit even in this life; the earth shook 7 times at *Vessantara*'s largesse; and there are even 7 Buddhas. This list, which could be indefinitely extended, is clear proof that the number 7 is as holy for the Buddhists as for India in general, and the fact that Buddhist hells are 4, 8, 16, and 32 by preference cannot be treated² as a real proof that 8 is the holy number of Buddhism in place of 7 of Hinduism, for 8 has otherwise no special appeal to Buddhism. The number 10 is found in the statement that Buddha is possessed of 10 noble states, 10 powers, understands 10 paths of *karma*, and is endowed with 10 attributes of *arhat*-ship (*ib.* xiii. 141 f.). The *Lalitavistara*³ tells that Buddha left the *Tuṣita* heaven 12 years after it had been predicted that he would do so, and that he chose the 13th of the possible forms presented. More important, however, is the fact that Buddhism is devoted to enormous numbers, especially in the *Mahāyāna* school, but also quite markedly in the *Hinayāna*, such numbers as 84,000⁴ and multiples being quite common (*ib.* xi. 239, xvii. 1 ff., xxi. 1 ff., xlix. [ii.] 2 ff.).

Jainism, with its passion for systematizing, divides the gods into 4 classes, each assigned in definite numbers years of existence of colossal amount (*SBE* xxii. 222 ff.), and it arranges all its tenets under numerical categories in which every number is given full consideration. The 4 noble truths of Buddhism, a conception which has affinities in Indian medicine, are replaced by 9, while Buddhism lays stress on 3 in its triad of Buddha, the *Dharma*, and the *Saṅgha*. The doctrine of 24 *tīrthakaras* in Jainism has a Buddhist analogue, and modern Jainism lays stress on the 4-fold character of the community as composed of monks and nuns and male and female lay adherents respectively.⁵ The number 12 is found in the Buddhist doctrine of causation, where the number of members is so loosely constructed that it is not impossible that the desire to make up the full number had something to do with the production of the chain.

Buddhists and Jains alike share in the ordinary views of sacred numbers of other Indians: the mother of a Jain child is solemnly bathed on the 9th day after birth, the child's name is given on the 12th day, its hair is cut in the 3rd, 5th, 7th, or 9th month of its first year of life, and in the feeding ceremony performed by the maternal aunt the food is given 7 times.⁶

2. *Iranian*.—In Iranian literature the number 3 and its multiples appear together with 7, which is certainly more frequent in the later *Pahlavi* texts than in the *Avesta*. The conception of 3 worlds appears to be reflected in the form of the 3 heavens through which the soul ascends to *Garōnmāna* (*Yast* xxii. 15), while a 9-fold division occurs in the 3 heavens, 3 intermediate spaces, and 3 hells. *Yima* is also said to have enlarged the earth by a third on 3 occasions (*Vendidad*, ii. 11, 15, 19). But the *Yasna* (xxxii. 3) clearly recognizes 7 *karšvars*

⁶ *ib.* p. 194 f.

of earth, and it is impossible to prove either from the 10 kinds of men in the *Bundahišn* (xv. 5) or from a reduction of the 16 lands enumerated in the *Fargard* to 10¹ that 9 was the primitive number. From each of the 2 chief streams, in later Parsiism, 9 minor streams are derived. In the *Bundahišn* (i. 8 ff.) is found the doctrine of a world age of 12,000 years divided into 4 periods of equal length; in the *Ardā Viraf* (18, 54), however, the period is 9000, while in Plutarch (*de Is. et Osir.* 47) it is 6000—which suggests that it is not of Aryan origin.²

Among the gods certain traces of triads can be found. Thus Ahura Mazdāh, Aša, and Vohu Manah stand in specially close association (*Ys.* xxx. 9, xxxiii. 6), and Artaxerxes Mnemon joins Ahura with Anāhita and Mithra in his inscriptions. Thraetaona is not to be dissociated from the Vedic Trita; he is credited with 3 sons. The demon, Azi Dahāka, overthrown by Thraetaona has 3 heads (*Yt.* v. 29), like the snake Srobar, who has been compared with the 3-headed Kerberos. Later tradition saw in the 3 maidens mentioned in *Yt.* xiii. 141 f. the mothers of the 3 saviours—which has led to their being compared with the Norns.³ Late texts ascribed a spirit to each of the 30 days of the month (*SBE* v. 401–406), and 33 lords of ritual order appear earlier (*ib.* xxxi. 198, 205). The 24 deities mentioned by Plutarch (*de Is. et Osir.* 47) appear to be unknown in Iranian texts.⁴ According to the *Bundahišn* (xxx. 2 f.), when the end of the world comes near, one taste of consecrated food affords nourishment for 3 days and 3 nights, and in the last 10 years men need no food at all. For 90 days the heavenly powers contend with Ahriman, and after Keresāspa's death 99,999 *fravašis* guard his body (*Yt.* xiii. 61). The 4 regents in the heaven of the *Ishtiya Yast* are probably not primitive. The 7 planets and the 7 powers of the demon Aesma are only recorded late (*SBE* v. 108, 113), but the number of the Amesha Spentas as 7 is already foreshadowed in the close association of the 7 in the *Yasna* (xiv. 10, xlvii. 1).

In the ritual the purification of a woman after childbirth is produced by 3, 6, or 9 drinks of a certain preparation. Death in the house renders it necessary to extinguish the sacred fire for 9 days; the mourners follow the dead to within 90 paces of the burning place; a dog is taken 3, 6, or 9 times over the road along which the body is carried to make it pure. The priest murmurs thrice the 3 words, 'Good thought, good word, good deed.' In the 3 nights after death an account is made of merits and rewards, of faults and punishments.⁵ For the pious man the Chinvat bridge extends to the breadth of 9 spear- or 27 arrow-lengths. Up to the 9th generation the sinner affects his descendants. The number 9 appears also in the ordinary sacrificial ritual: the *Vendidad* (xxii. 20) records the offering of 9 bulls, 9 horses, 9 camels, and 9 of each male kind of lesser animal. The sacred *barsom* is made up of 3, 5, 7, or 9 bundles (*SBE* xxxi. 299). The *Vendidad* (iii. 14) knows of 9 openings of the body, and (xxii. 2) of 9 diseases which are magnified to 99,999. The number 5 is of importance in so far as the Avestan doctrine recognizes 5 divisions of human personality,⁶ but the number 12 is unimportant.

3. Greek.—In Greek religion and mythology the leading numbers are unquestionably 3, 9, and 12, which occur much more frequently than any others. Among the great gods indeed no triad is definitely to be found: the triad Zeus, Poseidon, and Hades (*Il.* xv. 193) seems poetical rather than religious,

and there is no clear evidence that at Eleusis Zeus, Demeter, and Kore formed a triad in close relationship.¹ But among the lesser divinities triads are not rare: 3 Horai appear on an old Spartan relief;² the Erinyes, Eumenides, or Semnai are 3 as early as Euripides (*Or.* 408); the number 9 in the Orphic *Theogony* (frag. 218) appears to be later. Though Hesiod (*Theog.* 273 f.) knows only 2 Graiai, they appear as 3 in Aischylos (*Prom. Vinct.* 795). Hesiod himself (*Theog.* 902) knows of 3 Horai, and the 3 nymphs mentioned by Longos (*Past.* ii. 23) were doubtless a popular view. We hear also of 3 forms of Aphrodite and 3 of Hera. By the time of Plato (*Gorg.* 523 ff.) Aiakos, Rhadamanthys, and Minos had become a triad of judges of the dead, and the number 3 appears often in the mythology, though that number is not specifically distinctive of either the Charites, of whom Homer seems to recognize many, or the Graiai.³ The Muses are 9 in Hesiod (*Theog.* 77 ff.) and the *Odyssey* (xxiv. 60), though elsewhere their number appears as 2, 3, 4, or 7; the Korybantes and Kouretes also appear as 9. The same number appears in the years of exile allotted to Apollo and Herakles, and in the strange story recorded by Pliny (*HN* viii. 81) of the practice in the worship of Zeus Lykaeos for a man of the family of Anthos to go and live for 9 years among the wolves as one of them. The same period of 9 years is allotted to the souls for purification in Pindar's eschatology (frag. 133).

The number 12 is not formally recorded of the gods in Homer, even in the late *Theomachia*; but Hesiod has 12 Titans (*Theog.* 133 ff.), and the *Homeric Hymn* (ii. 128) speaks of Hermes dividing into 12 pieces the two oxen which have been slain, implying a knowledge of the 12 gods. Later the view is accepted generally: Aristophan (*ap. Athen.* 563) represents Eros as a 13th god cast out from the circle of the 12, but Herakles is said to have refused to be included in the 12 since some other must be omitted to provide room for him (Diod. Sic. iv. 39). The narrative in Plato, *Phaedr.* 247 A, implies 13 gods, and Philostratos (*Ep.* 39) declares that the Athenians added Eleos as the 13th god. The labours of Herakles are 12, and in the 13th generation he arises to set free Prometheus. The story of Odysseus is marked by the number 12: he has 12 ships (*Od.* ix. 159), he goes with 12 companions to the cave of Polyphemos (ix. 195), he shoots through 12 axes (xix. 573 f.), and has 12 women working at the mill (xx. 107). After 12 years Erichthonios is the supplanter of Amphiktyon (Apollod. III. xiv. 6). Of Neleus's 12 sons Nestor alone survives (*Il.* xi. 692). The children of Niobe are reckoned at 12 or 14. The number 13 appears in the tale of Ares being fettered for 13 months in a bronze jar in the *Iliad* (v. 387), and in the tale of the wooers of Hippodameia who were slain in seeking her hand.

The number 7 is confined to groups like the Pleiades or the stars of the constellation of the Great and Little Bear. The 50 sons and daughters of Selene and Endymion are possibly also of astronomical origin, the months of the Oktateris. E. Siecke⁴ finds also in the 3 heads of Hermes, Hekate, Kerberos, the Lernaean hydra, and Skylla and in the birth of Hermes on the 4th day of the month allusions to the 3 days of no moon and its birth on the 4th day.

In the ritual 3 and 9 are favourite periods of time; thus offerings to the dead were made on the 3rd, 9th, or 30th day after death. For 9 days before the Thesmophoria women were required to observe strict chastity (Ovid, *Met.* x. 434). The

Karneia, and the festivals known as Agogia and Katagogia of Aphrodite (*Ælian, de Nat. An.* iv. 2, *Var. Hist.* i. 15), were carried on for 9 days. Every third year, by inclusive reckoning, the Bacchic revels were normally held, and every 9 years, according to Plutarch (*Thes.* 15), the Athenians were compelled to send tribute to Minos, whose 9-yearly rule (*Od.* xix. 179) is a problem of much obscurity.¹ But Apollo's birthday was on the 7th of the month; he was also a 7-month child (Lucian, *Dial. Deorum*, ix. 2), and great festivals like the Karneia and Thargelia began on the 7th day, while there was a festival of 7 days' duration to Demeter Mysia of Pellene (Paus. vii. xxvii.). The older period of 9 days is, however, predominant in Homer; thus the king of Lycia entertains Bellerophon for 9 days and slays 9 oxen in his honour (*Il.* vi. 174), and for 9 days the Trojans are to mourn for Hektor (*Il.* xxiv. 664), as opposed to the 7-day periods of mourning for Adonis. In other points the same facts can be observed: the tripod and triaina are especially sacred; the first at least is clearly connected with 3, and the latter was so understood in classical Greek times, whatever its original sense. The same number appears in the important offering of 3 perfect male beasts—bull, ram, and boar—which was common from Homer (*Od.* xi. 130 f.) onwards especially in oaths (schol. *Il.* xviii. 197). The hekatomb was divided often into 3 classes of animals, and the funeral pyre was circumambulated 3 times (Dio Cass. lvi. 42). The number of victims was often 9; in Homer the hekatomb is already a mere description of a large sacrifice, and the largest described had 9 × 9 bulls (*Od.* iii. 7 ff.). At Mykonos an annual offering was made to Semele of which a ninth was given to the goddess and the rest consumed (Dittenberger, *Syll.* 615). In Homer (*Od.* xiv. 434 ff.), on the other hand, one out of 7 parts is given to Hermes and the nymphs and the rest eaten by Eumaios and the others. Selene was offered 6 *selenai*, or round cakes, with a 7th shaped like an ox (Poll. vi. 76); but that goddess had a special connexion with the number 7, and offerings of 7 animal victims are totally unknown, the evidence of Vergil (*Æn.* vi. 38 f.) being of no value for historical purposes.²

4. Roman.—In Roman religion a fairly important place is taken by the number 3, and, with the development of this religion, by multiples of 3. The oldest pantheon seems to have treated Jupiter, Mars, and Quirinus as the 3 chief; they appear as the gods with *flamines maiores*, as opposed to *flamines minores*, and they occur in conjunction in such solemn and ancient rites as the conclusion of treaties by the *fetiales* (Livy, viii. 9), the ritual of the Salii (Servius on *En.* viii. 663), the formula of *devotio* (Livy, viii. 9), and in the dedication of the *spolia opima* (Festus, p. 189). Similarly in the *Iguvine Tables* the three gods, Jupiter, Mars, and Vofonius, bear the name Grabovius apparently as a mark of their special rank among the Umbrians. Other triads are not primitive: the 3 Fates are Greek borrowings, Parca being originally a single goddess concerned with childbirth. The 9 Muses are also Greek, but 12 divine powers were invoked, according to Servius (on *Georg.* i. 21), at the offerings to Tellus and Ceres performed by the *flamen Cerialis* at the time of sowing. A formal list of the great gods as 12 is not found before 217 B.C., when a *lectisternium* to the 12, Jupiter, Juno, Neptunus, Minerva, Mars, Venus, Apollo, Diana, Vulcanus, Vesta, Mercurius, and Ceres, was held and the number 12 introduced

in imitation of the Greek practice (Livy, xxii. 10). The same number appears in the legend of Romulus, who took the place of the 12th son of Acca Lanrentia, and who saw 12 vultures while Remus saw only 6. The *ancilia* were also 12.

The numbers 3 and 12 play a part in the priestly colleges which are so prominent in Roman religion.³ The 3 *flamines maiores* had beside them 12 *flamines minores*. Of the *augures* and *pontifices* alike the original number seems to have been 3, raised first to 6, then by the *Lex Ogulnia* to 9, by Sulla to 15, and by Cæsar to 16. The classical number of the Vestal Virgins was 6 (Festus, p. 344), and it is doubtful what faith can be put in the odd tradition (Dion. Hal. ii. 67, iii. 67; Plut. *Num.* 10) that they were originally not 3, but 4; only quite at the end of the classical period do we find 7 or 10 mentioned. The *III. viri epulones*, instituted in 196 B.C., increased, through the stage of 7, to 10 in Cæsar's time. On the other hand, the Arvales were 12, the Salii 12+12, and the Luperci probably the same number. Those charged with the divinity of Rome were also 12. The *XV. viri sacris faciundis*, on the other hand, seem to have grown from 2 to 10 by 367 B.C. The Sibylline Books which were their care were, according to tradition, originally 9, but were reduced to 3 or 1 as a result of the slowness of King Tarquin to avail himself of the offer. As performers of dances in honour of the gods we hear of bands of 10 girls and 10 boys, or of 27 of either sex, as at the *Ludi Seculares* of Augustus. The *Sodales* instituted by Tiberius in honour of Augustus numbered 21 (Tac. *Ann.* i. 54)—a number later increased to 28.

In the ritual we find that vows were sometimes offered for 5, 10, or 20 year periods: thus the *ver sacrum* recorded in Livy (xxii. 10) was for the event of 5 years' success. The duration of religious festivals, originally fixed at one day, tended in the case of celebrations of victory to be extended from 2 or 3 to 10, 25, or 50 days. The number 9 appears in the *novemdiale sacrum*, which was regularly ordered when a shower of stones fell (Livy, i. 31, xxx. 38), the festival lasting for 9 days. The usage seems to have been no more than an extension to public life of the offerings of purification made on the 9th day after the birth of a child, when its name was given (Macr. i. xvi. 36), and when apparently the adoration of the *fata scribunda*, the writing Fates, mentioned by Tertullian (*de Anima*, 39) may have taken place,² and the sacrifice offered to the dead on the 9th day recorded by Porphyry (on Horace, *Epod.* xvii. 48). The use of the name in the last two cases can be explained only on the theory that the term applied originally to the whole period of impurity after birth or death respectively, which was brought to an end by the offering on the last day. On the *nundinæ* offerings were regularly made to Jupiter, according to Macrobius (i. xvi. 30); in that case, the reckoning being inclusive, the offering recurred every 8 days.

The amounts and numbers of victims varied. In the old offering to Mars and Silvanus for the welfare of the cattle (Cato, *de Agr.* 83) the offerings were 3 portions each of spelt and wine, and 4 of lard and pulp. From the spoils of Camillus 3 golden vessels were dedicated in the temple of Jupiter (Livy, vi. 4). The offering of 27 Argei by throwing them from the Pons Sublicus into the Tiber is variously explained,³ but the significance

¹ G. Wissowa, *Religion und Kultus der Römer*, Munich, 1912, p. 603 ff.

² *Ib.* p. 205 f. With this rite may be compared the Indian belief that on the 6th day the fate of the child is written invisibly by the goddess of the day (Mrs. Stevenson, p. 193 f.).

³ W. Warde Fowler, *Religious Experience of the Roman People*, London, 1911, pp. 54 ff., 321 ff.; *GH*, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, II. 107 f.

¹ J. G. Frazer, *GH*, pt. iii., *The Dying God*, London, 1911, p. 70 ff., takes the period as 8 years.

² P. Stengel, *Opferbräuche der Griechen*, Leipzig, 1910, p. 222 ff.

of the number is the same in any case. Other numbers occurring are 20 (Livy, xl. 2), 40 (xliii. 13), 120 (xxx. 21), 300 (xxii. 10), and 50 (xlv. 16). In magic also the number 3 and its multiples are common; noteworthy are the *dodra*, a drink of 9 elements, mentioned by Ausonius (*Ep.* 86), 7 or 9 knots used in a magic rite reported by Pliny (*HN* xxviii. 48), and the rule of repeating a formula against gout 27 times recorded by Varro (*de Re Rust.* i. ii. 27). The number 9 in connexion with the *manes* occurs in Ovid, *Fast.* v. 439, 443.

5. Celtic.—In Celtic religion and mythology the number 3 is of very frequent occurrence, 9 and other multiples are not rare, and 7 is fairly often found, but, in the main at least, probably owing to Christian influence, and certainly so in works which were composed in their present form long after Christianity had worked upon the Celts. The number 3 is often connected with a group of goddesses known from many inscriptions found in Celtic areas on the Continent, the *Matres* or *Matronæ*, in whom has been seen an earth-goddess developed into 3 under the influence of a division of the year into 3 seasons.¹ As *Nemetiales* the *Matres* were divinities of the grove, as *Campestres* of the fields; they were specially worshipped by women, whom they protected. They survive in folklore as the *dames blanches*, as wise women, and as fairies. They are found in Roman Britain, once as the 3 *Lamiæ*, but whether of indigenous origin is uncertain; in Ireland the conception seems attested by the legends of 3 *Brigits* and 3 *Morrigans*, and perhaps also in the legend of the 3 wives of the 3 kings of Ireland who asked that that country should bear their names. Another triad is to be seen in the figure on a Paris altar of a woodman cutting down a tree,² the branches of which are carried round to the next side of the altar, on which is a bull with 3 cranes; the woodman is the god *Esus*, who with *Taranis* and *Teutates* is mentioned by Lucan (i. 444), but there is no evidence that these three ever formed a real triad of great gods among any branch of the Celts. A 3-headed or 3-faced god, perhaps *Cernunnos*, is found represented on several altars in France. In myth the number 3 is found in every form; the sun,³ or vegetation,⁴ hero *Cúchulainn* has hair of 3 colours, he bathes in 3 baths, the heat from his body melts the snow for 30 feet around him; the 3 blemishes of the women of Ulster arise from love of him; he steals the 3 cows of *Mider*; he is slain through the agency of the 3 sons and 3 daughters of *Calatin*; his body is buried under the 3 flagstones of *Lugaid's* courtyard; in one version his feats are numbered as 27. *Medb*, queen of the west, had 3 brothers, the white ones of *Emain*, and 2 sisters; *Gwydir* is one of the 3 herds of Britain; we hear also of 3 landless monarchs, 3 holy clans, 3 astrologers; *Manannan* is one of 3 golden cordwainers of Britain; he is reputed to have 3 legs, and banishes 3 men from fairy-land to the Irish court of *Tara*, to remain there for 3 reigns as a punishment for lying or injustice. The *Fians* are numbered as 3000, divided into smaller bodies of 100, 50, and 9, under captains.

The number 9 appears in the myth of *Manannan*, who is submerged by 9 waves but rises on the 10th; he has 9 daughters. *Medb* always needed 9 chariots, and the doors of the palace in which *Conaire* was slain were 9. There are 9 porters at the 9 gates of *Yspadaden Pencawr*, in the story of *Kulhwch* and *Olwen*. *Peredur* vanquished the 9 witches of Gloucester; 9 maidens fed with their breath the fire beneath the cauldron of the Head of

Hades; in the Irish story 9 sacred hazels grow over the well of wisdom. *Niall* has 9 hostages, *Fedelm* 9 forms or hearts, *Forgall* perhaps 9 tricks. In art we find a god represented with a ring to which are attached 9 symbols of S shape.¹ The number 7 is in comparison of little importance: the step of *Arthur* causes 7 years' sterility; *Bres* grows twice as fast as other children until he is 7; for 7 years the magic birds of *Rhiannon* charm *Bran's* companions; at 7 *Cúchulainn* takes *Conchobar's* weapons and overcomes 3 champions; he has 7 eye-pupils; he also fought the waves for 7 days; there are 7 daughters of the sea, and one legend tells that a child set floating on the waves every 7 years keeps them in their place. There are 7 or 8 *Maine*, and 8 officers of *Arthur's* court, 7 of whom serve under one.

For other numbers there is little evidence; round the image of *Cenn Craich* were 12 others,² but this is an isolated case. For 13 days *Nuada* resigns his throne to *Lug*. More significant is the custom recorded of the *Galati* by *Strabo* (xii. 5. [p. 567]), according to which 12 priest-kings were with 300 others concerned in the great assemblies held in the *Drunemetum*. The initiation of the Irish *Filé* lasted from 7 to 12 or even 20 years (*Cæsar, de Bell. Gall.* vi. 14). The number 4 occurs in the story of *Kulhwch* and *Olwen*, from whose footsteps sprang 4 white trefoils, in the legend of the 4 dimples of *Cúchulainn*, and in the 4 kisses of *Oengus* which turned into birds to haunt the youth of *Erin*. Mention is made in the story of *Olwen* of the 24 sons of *Custennin* slain by their uncle, with whom may be compared 24 ladies released by *Owein ab Urien*.³ Of larger numbers may be mentioned the 3×50 islands to the west of *Erin* which occur in the story of *Bran*, the same number of queens who loved *Cúchulainn*, and the 300 years spent by *Oisín* in *Elysium*.

Of the ritual so little is recorded that it is not surprising that numbers are not prominent; it was, however, customary to perform the *dcasil*, or ceremonial circumambulation, 3 times, and there are many traces of numbers as used in magic: thus 3 berries of one tree make a man young, while one berry is an equivalent of 9 whole meals. From the grave of *Diancecht*, the Irish god of medicine, grew 365 healing plants, doubtless one for each day of the year,⁴ and *Diodorus* (v. 32) mentions a great quinquennial human sacrifice.

6. Teutonic.—Throughout Teutonic mythology and religion there are clear traces of the importance of 3 and its multiples, especially 9. There is some evidence for a belief in 9 worlds and 9 heavens; to *Valhalla* are ascribed 540 doors, and *Asgard* is not merely divided into 12 or 13 spheres, but, according to *Honorius of Augustodunum*, appears to have consisted of 3 heavens with 9 spheres each.⁵ More unequivocal is the evidence regarding the gods: there was a distinct tendency to group the 3 chief deities together; *Cæsar* (vi. 21) speaks of *Sol*, *Luna*, and *Vulcanus* as worshipped by the Germans; *Tacitus* (*Germ.* 2) tells of the origin of the tribes of *Ingvæones*, *Istævones*, and *Erminones* from *Mannus*; in the 3 names have been seen designations of *Tius*, or of *Nerthus*, *Wodan*, and *Tius* respectively. In *Germ.* 9 he speaks of the worship of *Mercurius*, *Mars*, and *Hercules*, in whom we are, no doubt, to see *Wodan*, *Tius*, and *Thor* respectively. The heathen Saxons, when required to abjure their gods in A.D. 776,

⁴ MacCulloch, p. 189 f.

abjured Thuner, Woden, and Saxnot, the last being the Saxon appellation of Tius. At Upsala Adam of Bremen (iv. 27) tells of the worship of Thor, Odin, and Freyr, the equivalent there of Tius. Other triads are also known, but doubtless are less primitive—those of Odin and his two brothers, Veli and Ve, of Odin, Hœnir, and Loki, and of Har, Jafnar, and Thiridi. The last combination, the final member of which has been compared with the Vedic Trita, is late, and doubtless not influenced by the doctrine of the trinity.¹ More primitive are the 3 Norns and the 3 swan-maidens; and the Valkyries sometimes go in threes. The stones on which Loki is bound to undergo the penalty of slaying Balder are also 3.

While there is no set of 9 recorded for the high gods, lesser divinities are not rarely thus grouped: there are 9 daughters of Aegir, 9 mothers of Heimdall, 9 daughters of Odin; the *Beovulf* (575) mentions 9 sea-monsters, and 9 is a frequent number of spirits of various kinds—ghosts, elves, and so forth. The Valkyries are sometimes 9; they consort with men for 7 years, probably a later variant of the 9 years which the swan-maidens may spend with men. For 9 days men remain werewolves, and leave the skin on the 10th day, according to the *Volsunga Saga* (8); other accounts make the condition last 3, 7, or 9 years. Tyrr's wife has 900 heads, and the sun wheel seems to have been thought of as having 9 spokes.² After slaying the serpent in the last battle of the gods, Thor goes 9 steps before he dies.

The number 12 for the gods is not found before the late Edda, where it occurs in the *Hyndlalied* (30).³ The *Gylfaginning* (14) speaks of 12 seats for the gods with one for the All-father. The Norns also appear later as 12, the Valkyries as 13 or 27. The 12 knights and 12 nuns of Kreuzburg⁴ seem to be based on the doctrine of 12 gods. The number 12 occurs in other connexions: Mimir has 12 workers under him; heroes are ascribed the strength of 12 men.

For the ritual there is the important evidence of Thietmar of Merseburg, who (i. 9) gives an account of New Year sacrifice at Ledra in Denmark, at which every 9 years 99 men, horses, dogs, and cocks were offered, and of Adam of Bremen, who (iv. 27) describes a spring festival held every 9 years at Upsala, in which 9 of each male kind were offered. It is possible in each case, but not recorded, that the sacrifice lasted 9 days. The *Ynglinga Saga* (29) tells of the Swedish king Aun or Ani who offered his 9 sons, one every 9 years, to Odin to secure long life; the people prevented his offering a 10th son, so that the king died. We hear also of the use of cakes of 9 constituents in the ritual. The name of a child was given on the 9th day after birth, when it became a subject of *vergeid* (*Lex Sal.* xxiv. 4, xli. 10). After death the souls returned on the 3rd or 9th day, and feasts for the dead seem to have been held on the 3rd, 6th, or 9th day after death; spirits rove about at the 3rd, 9th, or 12th hour.

Diseases are numbered variously as 3, 9, 70, 72, 77, and 99. Plants used against them are often counted as 9, while a single plant is stated to have 9-fold strength. The number 9 repeatedly occurs in magic and divination, often beside 3. It figures also in the ordeal, where 9⁵ ploughshares are used as the test, and appears in many prescriptions of law, as in the numbers 9 and 12 for witnesses.

¹ W. Goltber, *Germanische Mythologie*, Leipzig, 1895, p. 355.

² In suni spells the number 9 is very often found in both Teutonic and Celtic records; see *GE*³, pt. vii., *Balder the Beautiful*, London, 1913, l. 155, 172, 201, 271, 278.

³ Goltber, p. 199 f.

⁴ Böken, p. 25 f. This may be Slavic in origin.

⁵ In late Indian use the number 7 is normal; in Iran 6 and 33 oracles are known; for 9 cf. the years of punishment of an oath-breaker in Hesiod, *Theog.* 801.

and judges. In all these cases traces of the substitution of 7 for 9 under Christian influence are found.

7. *Slavic*.—In the scanty records of Slavic religion and in the mythology there are clear signs of preference for the numbers 3 and 9, 7 being due to Christian influence. Among the ancient Prussians, at their chief sacred place, Romove, in the niches of the sacred oak were placed images of the 3 chief gods, of whom Perkunos, the thunder-god, was the most important.¹ Other evidence speaks of 3, 9, or 27 Pehrkonis as Lithuanian deities. With the last number may be compared the 27 lands or 30 kingdoms which occur often in Russian folk-tales.² The Serbian hero Balatchko, like the Celtic Cernunnos, is believed to have had 3 heads, and the same account is given of Pegam of Carniola. The Russian folk-hero, Fjodor Tugarin, watches for 3 days without sleeping 12 mares belonging to an old woman; he accomplishes this task with the aid of 3 grateful beasts, and is rewarded by the gift of a foal which grows up in 3 days. Another story tells of Ivan, the cow son, who by the aid of 12 smiths compels a dragon, who has sons with 3, 8, and 9 heads, to disgorge his two brothers whom in the shape of a sow she had swallowed. The number 12 occurs frequently in other folk-tales in conjunction with 3 and 9. Among the Letts the conception of the *Parcæ* is not found as a trinity; a late legend reported in 1839 tells of 7 goddesses, of whom 3 spin the life of men, the fourth tells tales to divert the spinners and shorten the duration of life, the fifth exhorts to industry, the sixth cuts the threads, and the seventh washes the garment and gives it to the most high god, and it becomes the man's winding-sheet.³ The Bulgarian Samodévy have affinities with both the 3 Fates and the 3 swan-maidens.

8. *Signification of numbers*.—The evidence cited shows clearly that 3 and 9 are Aryan numbers, and suggests that they had definite sacred associations before the development of the different branches of the family, though it is possible that the development of the sacred character of the numbers is later and independent. The explanation of the choice of these numbers is doubtful. The most popular theory appears to be that which derives the use from reckoning of time by weeks of 9 days, 3 of which make up, with 3 *epagomenai*, a full synodie month. Hüsing,⁴ who takes this view, explains the choice of a week of 9 days as due to the effect of the 3 *epagomenai* which led to the division of the visible phases of the moon by 3, with the result of 3 weeks of 3×3 days. The existence of this week as a division of time derived from observation of the moon is open to serious doubt; it is supposed to be supported by the Latin *nundinæ*, but that week was one of 8 days only, the reckoning involved in the term *nundinæ* being due to the fact that the Romans reckoned inclusively the date of the market-day from the previous market-day; moreover, the Romans carried on the system of reckoning without regard to the fact that it never did coincide with the movements of the moon. Rhys,⁵ who accepts for the Celts a week of 9 nights and 8 days, which he compares with the *nundinæ*, though we have no evidence that the *nundinæ* were ever so conceived, admits that such a week has no reference to the moon. For other Aryan peoples there is no evidence⁶ in favour of the 9-day week except what is deduced from its appearance in religion and custom.

as a period of solemnity, and this use need not, of course, be in any way connected with a reckoning of time. Böhlen¹ holds that the origin of the use is to be traced to the fact that the period from the last quarter of the moon to the appearance of the first sickle of the new moon is 9 days; it would be convenient to reckon from the last quarter in order to predict the appearance of the new moon, which it would be difficult to observe if the sky was obscured. He supports this view by the fact that the word 'nine' (Skr. *nāvan*) may be connected with 'new' (Skr. *nāva*), and that in magic practices it is common to count backwards from 9 to 1—which has certain analogues in the Greek and Roman calendars. Moreover, in many myths a decided issue is arrived at with the 9th or 10th day, 10 being a variant reckoning of the period in question. The grounds adduced are clearly far from strong, and it is in this view hardly sufficiently recognized that the number 9 is constantly used in places where 3 is also used: a good example of this is the Vedic recognition of 9 worlds, which is clearly based on the assignment to each of the 3 of 3 divisions. In this sense it may safely be said that many nines are merely developments of primitive threes, and the problem reduces itself to the origin of the sanctity of 3. This is hardly to be traced to a reduction from the number 12, or to the 3 *epagomenai*, or, as suggested by Böhlen for stories of the Trita type, the full moon, waning half-moon, and last visible moon phase, but may rather owe its importance to the fact that it is in the Aryan languages which distinguish a dual the first expression of plurality; this may be enough to explain its prominence in all forms of religious and secular life.

The number 7 has certainly in many cases in Celtic, Teutonic, and Slavic myth superseded an older 9, nor is it reasonable to doubt that this is directly due to the influence of the Jewish and, later, Christian week; there is clear evidence that in the 1st cent. B.C. at latest there had sprung up in Rome the use of a week in which the names of the days were given according to the planets,² and the fact that the days of the week in Teutonic mythology are heathen names suggests that the 7-day week was received before Christianity. But the theory that 7 is due to Babylonian influence—apart from the fact that the 7-day week is not proved for Babylon—is open to the serious objection that 7 is a favourite number in the Rigveda, and that it must therefore be assumed that this number was borrowed at a very early period by the Vedic Indians from a Semitic source; but this is improbable in the absence of any other clear indication of Semitic influence on the Rigveda. Hüsing and Böhlen agree in seeing in the 7-day week a week based on the phases of the moon, making up a month of 4 weeks+2 days, in the view of the former, while, in the opinion of the latter, the origin of the choice of 7 is that, when the period of 9 days takes the place of the last quarter, the remaining part of the month naturally falls into 3 sets of 7 days. Neither explanation is convincing, and, as the Vedic Indians did not know the 7 planets,³ and, though they knew 7 *ṛṣis*, these were not stars in the Rigveda period, the question of the origin of the sacred character of 7 must probably remain unsettled.

The numbers 12 and possibly 7, if taken as 6+1, are usually ascribed to Babylonian influence, and brought into conjunction with the sexagesimal reckoning which is indicated by the forms of the numbers for 11, 12, and 70 in Gothic, and of which traces are seen in the Latin use of *sexaginta* and

sescenti as indefinite numbers;¹ in the ship catalogue in the *Iliad* numbers like 12, 60, and 90 are found; 12 is prominent in Odysseus's adventures, and 360 as a round number appears in the total of Eumaios's swine. But too much stress must not be laid on this evidence; 12 is found in the Rigveda in connexion with the months of the year, and this is most probably the significance of the 12 *ādityas* of the *Brāhmanas*. By far the most plausible explanation of 12 is its connexion with the months, and of the sexagesimal system the 360 days of the year, also Rigvedic, and there is no ground to ascribe either 12 or 360 in the Rigveda to Semitic origin.² Other theories of the origin of 12 are the 12 *epagomenai* added to make up a year of 354 days to 366, itself probably a late conception derived from the 12 months, or the 12 signs of the zodiac, which are clearly quite late. Böhlen, however, insists that the 12 are moon phases, that the idea goes back to neolithic times, but was probably developed by the Babylonians, who transferred it into a solar method of reckoning. He supports his theory by insisting that it offers the best explanation of the unlucky character of 13, which, however, if early, as is most improbable,³ can equally well be explained by the unsettled character of the 13th month seen already in the Rigveda (i. xxv. 8), and of its frequent alternation with 12, the alternation of 12 with 14, with 16, with 24—the phases being counted as double, and the full moon being omitted—with 27, and with 40 (i.e. 30+10). He also derives the number of months, or *epagomenai*, and the figures of the zodiac from this source. But all these hypotheses lack solid grounds; the only clearly lunar number is 27 in the case of the Indian *nakṣatras*, which may be Semitic in origin, but are not found in the Rigveda.

LITERATURE.—The following are the more important of recent works on numbers in Aryan religion: E. W. Hopkins, 'The Holy Numbers of the Rigveda,' *Oriental Studies*, Boston, 1894, pp. 141-169; H. d'Arbois de Jubainville, 'Les Nombres trois et neuf,' *Les Celtes*, i. 177 ff.; W. H. Roscher, 'Die Sieben und Neunzahl im Kultus und Mythen der Griechen,' *AG* xxiv. (1904); 'Die Tetrakontaden und Tetrakontadenlehren der Griechen und anderer Völker,' *Berichte der phil.-hist. Klasse der königl. sächs. Gesellschaft der Wissenschaften*, lxi. (1900); K. Weinhold, *Die mythische Neunzahl bei den Deutschen*, Berlin, 1897; W. NUMBERS (Semitic).—1. Scope of term 'Semitic.'—In his *Vergleichende Grammatik der semitischen Sprachen* (Berlin, 1898) H. Zimmern exhibits five comparative lists of the numbers 1-10 (p. 179), in Assyrian, Aramaic, Hebrew, Arabic, and Ethiopic, all of which show marked similarity. The first three of these may be considered as falling within the scope of this article. He further presents the oldest forms of the names of these numbers, now reduced to a single list (p. 181), and finds that Egyptian shows analogy to this in respect of the numbers 2, 6, 7, 8, and 9, but that 1, 3, 4, 5, and 10 are altogether different. On philological grounds, therefore, we should be justified in leaving Egyptian in a neutral position, the difference being equal to the agreement. G. A. Barton (*A Sketch of Semitic Origins*, New York, 1902, p. 170; cf. *EBJ* iii. 3434) classes the Hamito-Semitic system of number as one, being decimal or

quintal, in opposition to the sexagesimal system of the earlier Babylonians. Comparison of the system of signs used to express numbers also reveals a considerable degree of likeness between Egyptian and Aramaic notation. We may add to the latter Hebrew,¹ since there are grounds for believing that signs were in use among the Hebrews, although, it is true, their Scriptures reproduce numbers only by words. The ostraka discovered at Samaria show signs and words in combination, the ninth and tenth years being spelt in full, and two others, apparently the eleventh and the thirteenth, always expressed by figures (D. G. Lyon, in the *Harvard Theological Review*, iv. [1911] 138). S. R. Driver remarks that, on the supposition that their numbers were not written in full, but expressed by symbols, 'the ancient Hebrews, it is reasonable to suppose, would have adopted a system similar to that in use amongst their neighbours, found equally in Phœnician, Palmyrene, Nabatean, and Old Aramaic inscriptions, and used also in Syriac' (*Notes on the Hebrew Text of the Books of Samuel*, Oxford, 1913, p. 97, n. 2). We shall subsequently note the leading features in this notation by means of symbols, which was current among the W. Semitic peoples who made use of the decimal (or quintal) system of numeration. But in the first place it is necessary to look more closely at the sexagesimal system of Babylonia (E. Semitic, it may be termed), which at all times had a good claim to be regarded as decimal also,² and which in the course of centuries came to be closely approximated to the purely decimal system of adjacent lands to the west and south.

2. Babylono-Assyrian (or E. Semitic) notation. —A flood of light has been cast on the earlier stages of the science of numbers by the discoveries at Nippur, the results of which, in so far as they are relevant to our purpose, have been set forth by H. V. Hilprecht (*The Babylonian Expedition of the University of Pennsylvania*, Philadelphia, 1906, vol. xx. pt. i. chs. ii. and iii.) in a treatise to which every student of the subject acknowledges his indebtedness.³ To deal only with the 'mathematical' tablets, excluding the 'metrological' (ch. iii.)—they show for the most part a series of multiplication and division tables, symbolically represented. Such terms as are necessary to supplement the symbols are derived from the Sumerian language, which suggests that the whole numerical system was derived from the older civilization of Sumer and Akkad. It may, indeed, be affirmed that the sexagesimal-decimal system of the Semitic Babylonians is in reality Sumerian. The list of these terms as given by Hilprecht (p. 23) includes:

A-DU (=x), 'times'; A-AN, rendering a number distributive; IGI-GAL (= 'denominator,' used to express a fraction); LAL (= -), 'minus'; SI-A (= +), 'plus'; IB-DI, 'square'; and BA-DI-E, 'cube.'

The lists of multiplication tables actually known to Hilprecht from the Temple School and Temple Library of Nippur number from 44 to 46. All the integers from 1 to 9 are used as a basis, with the exception of 7, i.e. all the numbers which are divisors of 60 or its powers. Generalizing, it is found that the tables range from 2×1 to $180,000 \times 1$, and that they are all related to 60^4 , or 3600^2 , which is 12,960,000. In the sexagesimal system the numbers 60, 600, and 3600 bear special names, viz. *šoss*, *nér*, and *šar*, corresponding to units, tens, and hundreds among ourselves, or, more accurately, to tens, hundreds, and thousands.

¹ Josephus (*Ant. l. viii. 2*) credits Abram with having communicated arithmetic to the Egyptians.

² A. Jeremias (*The OT in the Light of the Ancient East*, London, 1911. l. 63) holds that both systems are of pre-historic origin.

³ See the remarks of T. G. Pinches, in *Hilprecht Anniversary Volume*, Leipzig, 1909, p. 77.

The symbols employed for the units are upright wedges (I), combined in such a way as immediately to suggest the number for which they stand. Tens and multiples of 10 are represented by oblique wedges or 'crotchets' (◁) up to 50. With the *šoss* (60) the upright wedge used for absolute units is renewed, each wedge standing for a multiple of 60. The value to be attached is determined by the position of the upright wedges relatively to the smaller numbers, i.e. tens and units, following them. Intermediate tens are represented by a combination of upright and oblique wedges—e.g., $\text{I} \llcorner = 70$; $\text{II} \llcorner = 140$. The *nér* has, as a rule, its own symbol (Γ), and likewise the *šar* (◁), although the oblique wedge alone, by virtue of its position in the scale, can do duty for 600, and the upright wedge alone for 3600, and the series can be continued indefinitely, thus:

I ◁ I ◁ I ◁ I ◁ I

12,960,000 2,160,000 216,000 86,000 8600 600 60 10 1

As an example of how the system works out,¹ the following (Hilprecht, no. 16, l. 24 rev.) may be given:

◁◁◁ A-DU (=x) ◁◁◁ = ◁◁◁◁◁◁◁

i.e. 1 *nér* + 2 *šoss* + 8 tens × do. = 156 *šar* + 1 *nér* + 5 *šoss*, or, by the above series:

12 *šoss*
i.e. 600 + 2 × 60 + 80 × do. = 2 × 216,000 + 3 × 86,000 + 6 × 8600 + 1 × 600 + 5 × 60
(i.e. 750 × do.)
i.e. 562,500 = 562,500.

Owing to the absence of the 'zero' in the Babylonian system, there is, according to our idea, an element of ambiguity present. It is difficult to know whether absolute units or *šoss*-units are dealt with, and it is only by reference to the context (as in the above example) that the truth can be ascertained. The ambiguity is not found in later texts, where the *šoss* symbol never terminates a number and the rule as stated above is strictly adhered to. In early texts, however, the *šoss* is found at the end, even in numbers relatively small. Thus, A. Poebel (*Historical Texts*, Philadelphia, 1914, p. 190, n. 1; cf. plates xx., xxi.) gives $5700 = 3600 + 3 \times 600 + 5 \times 60$. The *šoss* in this instance is indicated by a horizontal instead of a vertical wedge. On the same tablet (no. 34) can be seen the circles and semi-ellipses out of which the conventional wedges arose. The *nér* is composed of a horizontal wedge followed by a semi-ellipse, and the tens are complete circles.

A. T. Olaj (*The Babylonian Expedition of the Univ. of Penn., ser. A, xiv. [1906] 16 f.*) informs us that 'in the pre-Sargonic period, when the circle had the value ten, and the semi-elliptical impression stood for one, it is very likely that the upper end of the stylus was round; and that it was used to make the numerals. The circle was made by pressing the stylus perpendicularly into the soft clay; and the semi-elliptical by leaning it lengthwise, as in writing.'

An interesting number given by Poebel in the tablet referred to is 5864 (col. 20, 10), which is made up of $6000 - (2 \times 60 + 10 + 6)$. That is, the LAL sign (= -) is employed, covering 2 *nér*s, 1 ten, and 6 units. As a rule the LAL has a much more restricted use than this, entering into the number 19 principally; 19 is 20 LAL 1, which, appearing in our type as 21 - LAL, is apt to be mistaken for 20—another evidence, as it seems, of the disadvantage arising from the want of 'zero.'² It should be noted that in lists where we make the entry '0,' as an alternative to leaving blank, the Babylonians in some cases make use of the sign *ul*, meaning 'not,' 'nothing.'

It will readily be seen that the Babylonians (or rather the Sumerians), by employing the *šoss* (60)

¹ It is unsuccessfully applied by D. W. Myhrman in *The Babylonian Expedition of the Univ. of Penn., ser. A, vol. iii. [1910] pt. i. p. 63, n. 2*. In this instance the true sign of *nér* is given, as can be proved by means of three partial totals in the body of the text.

² On this point see C. H. W. Johns, *Assyrian Deeds and Documents*, Cambridge, 1893-1901, II. 100.

⁷ *Ib.*, pp. 40, 52.

peoples,¹ the differences will be found to be very slight. Even the Egyptian system is not unlike.²

The so-called Alexandrian system, according to which numbers are compounded by means of the letters of the alphabet—a system in general use about the time of Christ, and still to be seen in the Hebrew Bible—is here left out of account, as having entered into Semitic use from an extraneous (probably Greek) source,³ and as being common property among so many nations and peoples of antiquity. The system is one very apt to lead to corruption in numbers relating to foreign matters.⁴

4. Semitic numbers in general. — It can be gathered both from the language of numbers and from the symbols employed to represent them that, in theory at least, no upper limit is to be assigned to Semitic enumeration. If we except indefinite expressions (e.g., myriads)—a form of speech common to all nations past and present—we find that in practice numbers are confined to sums under 1,000,000. In the OT there is only one instance of a number exceeding this (1,100,000 [1 Ch 21⁵]). The notation appears to us clumsy, but cannot be characterized as amateurish. Indeed, we marvel at the ease with which *sošses*, *nērs*, and *sars* are manipulated. We have insisted on the difficulty presented by fractions, and we find that the results of problems involving fractions are only approximately correct. This is especially true of Egypt, where, it is evident, knowledge was the outcome of repeated trials and practical tests, the truth, when attained or approximated, being carefully treasured and transmitted. The method is inductive, and 'the answers given represent the accumulated experiences of many previous writers.'⁶ In the keeping of accounts the accuracy of the scribe is not lightly to be questioned. The many business tablets that have now been deciphered, recording a single transaction that did not require to be transcribed, with their system of partial totals and grand totals,⁶ can readily be checked, and as a rule they are found to be correct. It is otherwise with numbers occurring in annalistic records. These have often been copied, and show a tantalizing number of discrepancies. A glaring example may be seen in the figures relating to Shalmaneser III.'s campaign of 854 B.C., where four sets of enemy losses are given, the numbers ranging from 14,000 to 29,000. There is reason to think that the Assyrians in this instance were actually defeated.⁷ Equally unreliable are the figures appearing in the Elephantine papyri, which are supposed to be a transcript of the Inscription of King Darius at Behistūn.⁸ While these discrepancies may be due to the copyist,⁹ the chief reason for the doubtfulness of the figures lies in the tendency to exaggerate—a common failing among the despots of the ancient East. The Oriental partiality for large numbers is shared even by the Chronicler of the OT.¹⁰ Where exact numbers were no longer obtainable, round numbers took their place—an evident

feature of the chronology of the book of Judges,¹ and far more evident in the length of the reigns of the mythological kings before and after the Flood. The foreshortening of the historical perspective, to which Sayce has called attention² in connexion with the narrative of the book of Kings, as a source of certain subtle errors in chronology, finds its counterpart in the protracted figures attached to the times that are unhistorical and even mythical, which prevent a reliable chronology ever being drawn up. The same phenomenon that meets us in Genesis in the great age ascribed to the antediluvians and the reduced longevity of the generations following is found in the Babylonian records, as can now be studied in the new lists of kings published by Poebel (*Historical Texts*, pp. 73-140).³ In another connexion the same writer comments (p. 50) on the idea that whatever man made (e.g., a boat or a landmark) in those old days was of enormous dimensions, and connects it with the belief in enormously long life and higher stature than at present.⁴ This tendency to gild the past has therefore to be allowed for in dealing with numbers, but usually we have no great difficulty in drawing the boundary-line between the mythical and the historical.

5. Sacred numbers.—Jeremias asserts⁵ that a preference for odd numbers is universal: 'Numero deus impare gaudet.' This accords with the selection of 5 and 7 to be the fundamental ciphers of the astral system, to which he attaches himself. It is in reality duodecimal-sexagesimal: $5+7=12$; $5 \times 12=60$. To this may be opposed the finding of Hilprecht (p. 34), who says that 7, 11, and 13, being no divisors of 12,960,000, have continued even to the present to be regarded as unlucky numbers in the life and history of man. He invites us in this light to examine the Babylonian Sabbath question. It may be assumed that 3 and 5 as factors of the sexagesimal unit are to be excluded from this condemnation. The fact, therefore, would appear to be that facility or difficulty in operating with the various numbers was of chief account. It is difficult to see why any number, abstractly considered, should be either lucky or unlucky. Numbers had to be related to deities, magic, divisions of time, etc., before moral or sacred significance could arise. A 'science of number' in the Pythagorean sense was not yet conceived of; number had not been exalted as the ἀρχὴ καὶ ὅλη of which the world was made.⁶ At the same time, all numbers were sacred to the Babylonians:⁷ but there was a limit set to their sanctity:

'Numbers might be sacred, they could never be deified, they were not worshipped, nor were artistic representations of them imagined' (F. Cumont, *Astrology and Religion among the Greeks and Romans*, New York and London, 1912, p. 112).⁸

In Babylonia the numbers from 60 down to 1 came to be reserved each for a particular deity, the planetary deities having their numbers apportioned with less regularity than the great gods, which points to the fact that the latter were brought in, and, as it were, 'canonized,' last of all. Thus, 60 = Anu (father of the gods), 50 = Bel, 40 =

En, 30=Sin, 25=Merodach, 20=Šamaš, 15=Ištar, 10=Ramman.¹ This species of identification is dependent upon the calendrical system—e.g., Sin=30=days of the ordinary month.² It would be difficult to show that the whole of the numbers 1-60 were thus appropriated, but at least 'sixty' is representative of all the gods, and equivalent to 'the entire pantheon.'³ An interesting contrast in number is afforded by the 'fifty' renowned names of the great gods, with which Merodach was at last endowed.⁴

Among the units 7 has come to be regarded as the sacred number *par excellence*. In Babylonia it was so esteemed, Jastrow thinks, largely, if not solely, because it was a large number (cf. seven spirits of Scripture—a miscellaneous mass of spirits).⁵ It holds the foremost place in magical formulæ. We have already noted the fundamental position accorded to it in the astral system. By others it has been regarded as sacred because of its astronomical relations—e.g., the seven planets, and the division of the lunar month into four quarters of seven days.⁶ The tabu on the seventh day (and multiples thereof) of certain Babylonian months has generally been regarded as transitional to the sanctity of the seventh day (Sabbath) among the Hebrews.⁷ The number 7 is favoured by the Priestly Writer, 5 figures prominently in the Joseph story,⁸ and 3 (and its multiples by 10) in the story of Samson.⁹ For reasons associated with deity or deities, 1, 2, 3, and 9 have special claims to sanctity (monism, dualism, triads, enneads). By reason of a recent discovery, made by Poebel,¹⁰ whereby the goddess Nin-Harsag took a part in the creation of mankind along with the triad, An, Enlil, Enki, the number 4 may also be included in this category. Groups of 5 and 10 (pentads and decads) have recently acquired significance in the laws of Babylon and Israel.¹¹

A comparison of articles on 'Number' in *HDB*, *SDB*, and *EBI* discloses the fact that 1, 3, 4, 7, 10, 12, 40, and 70 are specially treated for their sacred and symbolical significance. The symbolism of such numbers has been variously interpreted—e.g., by C. F. Keil,¹² H. Schultz,¹³ R. L. Ottley,¹⁴ and A. H. McNeile,¹⁵ the last-named prefacing his rendering by the caution:

'It is easy to be led into extravagance in attempting to interpret the significance of numbers; allegorical arithmetic has called forth fantastic absurdities from both Jewish and Christian writers.'

This caution is all the more needed in view of the methods of the astral school, represented by H. Winckler and A. Jeremias, whose *motifs* are still open to considerable doubt.

Their main thesis would, however, appear to be strengthened by Hilprecht's exposition¹⁶ of the meaning of the number 12,960,000 (=60⁴ or 3600²). This is none other than the famous 'number of Plato' (*Republic*, viii. 546 B-D), as determined by

J. Adam¹ and others, the 'lord of better and worse births,' a geometrical number constructed out of the elements of the number which expresses the shortest period of gestation in the human kind (216 days). Hilprecht takes the number as the arithmetical expression of a great law controlling the universe, which he calls the 'law of uniformity or harmony.' For this reason 12,960,000 has a claim to be regarded as the sacred number in chief of Babylonia. When related to time, 12,960,000 days=36,000 years (counting 360 days in a year), which is 'the great Platonic year' and also a Babylonian cycle.

The conclusion is obvious that Babylonia, and not Greece, is the home of this whole cult. The number 12,960,000 is fundamental both in astronomy and in astrology, governing the universe (the macrocosm) and also the life of man (the microcosm). Everything in man's life from his birth to his death is governed by this number or one of its divisors, especially the period of gestation; 216 days, the period of the seven months' child, and 270, the period for a nine months' child, inaugurate a lucky birth, for both are divisors of 12,960,000. So with every other number which is a divisor of 12,960,000 (for unlucky numbers, see above).

From this it will be seen what an elaborate astrological structure has been reared upon the foundation of the geometrical number 12,960,000. Granting the theoretical validity of this number, there is a serious difficulty about its application, if we think only of births, for the multiplication and division tables now known (§ 2 above) are far more extended than would be necessary for the particular end of determining lucky and unlucky births. The situation is somewhat relieved by bringing in the periods of the moon, in its phases or in its course (see art. BIRTH [Assyro-Babylonian], vol. ii. p. 643). Even with this added, we are left in ignorance about many points in the Babylonian praxis. 'How far they carried their liking for numbers and mystic calculations we have yet to learn.'² While the theory of Hilprecht, which, as we have seen, is astral, may be said at present to rule, there may be some who will share the view of R. W. Emerson, who said of Plato that, 'in his eighth book of the Republic, he throws a little mathematical dust in our eyes.'³ What has now been added to Plato or, rather, what has been shown to be the source of the ideas of Plato (and Pythagoras) may seem to them like throwing a little more dust.

LITERATURE.—This has been given in the article, the more important references being embodied, the others appearing in the footnotes.

WILLIAM CRUICKSHANK.

NUSAIRIS.—The Nnsairis, also known as Ansariyah, are not only a sect, but a nation, inhabiting the mountainous country north of the Lebanon, between ancient Eleutherus, the Orontes, and the Mediterranean coast. Although the Nnsairi population in this mountainous barren region live a rather wretched life, cultivating mainly the vine and tobacco, the colonies which it has founded in Antioch, Mersina, Tarsus, and Adana are very prosperous. We may reckon the total of this population at 150,000; in earlier times they were no doubt more numerous.

1. Etymology.—The name 'Nnsairi' has given rise to a great many theories: it has been thought to be a diminutive of the Arab *Nasrani* ('little Christian'), but this etymology is contrary to Arabic grammar, and, as the supposed conversion of the race to Christianity took place before the establishment of Islām in this region, it would be

surprising if the name was borrowed from Arabic. Another theory, which is more wide-spread, is that 'Nusairi' comes from Muḥammad ibn Nuṣair, who is said to have founded the sect in the 11th century. But this Ibn Nuṣair was a follower of the eleventh *imām*, Ḥasan al-'Askari, while the doctrine of the Nusairis recognizes only seven *imāms*; and this etymology, which has given rise to popular accounts placing Muḥammad ibn Nuṣair in the time of the Umayyads Mu'āwiyah and Yazid, cannot be admitted, although upheld by S. Guyard, C. Huart, and H. Lammens. It has no more to recommend it than the theory which connects them with Nuṣair, a freedman of 'Alī, or with the Anṣārs of the Prophet. As Dussaud abundantly proves, the Nusairis of our day are the Nazerini mentioned by Pliny the Elder (*HN* v. 81) as forming a tetrarchy separated from Apamea by the river Marsyas (Orontes). The Greek historian Sozomen (*HE* vii. 15) shows them at the end of the 4th cent. helping the pagans of Apamea against the Christians; he gives them the name of Galileans, which Lammens, by an extremely ingenious hypothesis, derives from Bargagylus, a supposed ancient form of Bargylus, the name given by Pliny to one of their mountains.

2. History.—The Nusairis, being isolated, preserved their paganism in spite of the triumph of Christianity, and later of Islām, in the surrounding country. Nevertheless it is certain that the contact of these two religions was not without influence upon the Nusairi beliefs. The greatest influence, however, was exercised by the Ismā'īlis, who were forced in the 12th cent. to leave their ephemeral dwelling-place in Bānās and settle in the Jebel, where they became famous under the name of Assassins (*q.v.*). Further, the influence of the Ismā'īli doctrines had begun as early as the 9th cent., and we see from a refutation by Hamzah, the apostle of the Druse religion, that the Nusairi religion was established at the beginning of the 11th century. After the victories of Baibars and the destruction of the Ismā'īli power the Muslims made an unsuccessful attempt to convert the Nusairis. Their massacre, which was demanded by certain fanatics—among others the theologian Ibn Taimiyyah, in a *fatwā* published by Guyard (*JA* vi. xviii. [1871] 158–198)—would have been contrary to the interests of the Muslims. They have maintained their independence, and survive down to the present day divided into clans, often at war with one another, but paying tribute to the pasha of Tripoli. In the middle of the 19th cent. a chief arose among them, Ismā'il Beg by name, who proclaimed his authority, and secured recognition by the Turkish government as ruler of the country of Safta. By paying an annual tribute of 300,000 francs he enjoyed absolute authority, and, like Rashid al-Din Sinān among the Ismā'īlis, became the hero of legends far more ancient than himself. After his death the Turkish government succeeded in establishing its direct administration in the country—the result of which, as everywhere else, was the persecution and ruin of the land.

3. Present-day religion.—The religion of the Nusairis, therefore, is the ancient pagan religion of the district, very much altered by Christian, Muslim, and especially Ismā'īlian influences, but not reaching the stage of Christianity and Islām. The groundwork of their doctrines is contained in the *Kitāb al-Majmū'*, published and translated by Dussaud (*Hist. et religion des Nusairis*, appendix, pp. 161–198). Like the Ismā'īlis, they divide time into seven eyles, each having its own manifestation of deity; this resembles the doctrine of the pagan Harrānians, according to which the creator was single in his essence but multiple in his manifestations in bodies, and these bodies were

the seven planets which govern the world. The Ismā'īlis and the Druses hold that a prophet appears in each entrusted with a new religion (*nātiq*, 'utterer'). The *nātiq* multiplies into seven persons, the first of whom is called *asas* ('foundation'). The *asas* are inferior to the *nātiqs* (except 'Alī) among the Ismā'īlis and the Druses. With the Nusairis the *asas* are superior to the *nātiqs*; the *asas* are Abel, Seth, Joseph, Joshua, Asaph, Peter (Shema'un), and 'Alī; the *nātiqs* Adam, Noah, Jacob, Moses, Solomon, Jesus, and Muḥammad. 'Alī, the *asas* of the seventh period, has become a god; he bears the epithet Ma'nā, corresponding to that of 'the Word' for Jesus; it is to the Ismā'īlian influence that he owes this rôle.

'Alī ibn Abu Ṭālib was not begotten; he is unique, immortal, and has existed from all time; his essence is the light; from him the stars shine; he is the light of lights. Although deprived of all attributes, he cleaves rocks, drives back seas, and directs affairs; it is he who destroys empires. He is hidden, not enveloped, that is to say, he is hidden by the nature of his divine essence, not by a covering. He is mind, *ma'nā* (*Kitāb al-Majmū'*, tr. Dussaud, p. 162).

The formula employed is copied from the Muslim formula: 'I testify that there is no god but 'Alī ibn Abu Ṭālib.' Dussaud ingeniously conjectures that there is a confusion between 'Alī el 'Alā and the epithet of the old Phœnician deity Elyum ('the very high'), whom the Greeks called Adonis. 'Alī created Muḥammad, whom he called his 'name' (*ism*), and who is also his 'veil' and his 'dwelling-place.' Muḥammad in his turn created Salmān al-Fārisi from the light of his light, made him his 'gate' (*Bāb*), and entrusted him with his propaganda. These three persons form a triad, which seems more ancient than the Christian Trinity, and which goes back to the divine triads of the Syro-Phœnician cults, and in particular to the Palmyrene triad 'Alī=sun (Ba'al-Shamain, Balsamem), Muḥammad=sun (Malak bel), and Salmān=moon (Aglibol). In the initiation ceremonies this triad is represented by 'the mystery of 'Ain-Mim-Sin' (the initial letters of 'Alī, Muḥammad, and Salmān). Muḥammad created the five 'incomparables,' who in their turn created the world and are the five planets. The five 'chosen ones' are the five divine emanations to which the five prayers of the day are consecrated.

The Nusairis do not believe in the immortality of women, who have no reasonable soul, and they hold that the use of wine is lawful.

4. Sects.—The Nusairis are divided into four classes: the Ḥaidāris (from the surname given to 'Alī, El-Haidar, 'lion'), who have come most into contact with foreign influences, the Shamālis, the Kalazis, and the Ghaibis. The Shamālis claim that the god 'Alī, identified with the sky, dwells in the sun, which represents Muḥammad. This idea recalls the Syrian cult of Ba'al-Shamaim (sky-god) assimilated by the Greeks with Helios. The name Shamāl (from which the Jews derive Samuel, the angel of death) seems to represent the sun (another name of the sect is Shamsi) in its nocturnal course; it should be noticed that the Shamālis go a great length with their worship of Muḥammad, who, in the primitive triad, is identified with the sun, united with 'Alī by the light, but separated from him by the manifestation of appearance. With the Kalazis, or Qamaris, the moon is the abode of 'Alī; it is celebrated in the poems that we possess of this sect and represented by wine: in their figurative language, according to Dussaud, by drinking pure wine one reaches a close acquaintanceship with the moon. Some writers hold that there are traces here of a lunar goddess who is none other than the great Syrian goddess Astarte. Their name is derived from that of the *shaiḥ* Muḥammad ibn Kalāzi. The fourth sect, the Ghaibis, 'believe that God appeared, and then became

invisible; the present time is that of the absence' (*ghaibah*), whence their name; they seem to be influenced by the Ismā'īlian doctrine of the *Tanzīh*, which deprives God of His attributes; they therefore consider the absent (*ghaib*) as God (Ali), identified with the air, as, among others, with the sky.

5. Initiation.—The initiation ceremonies seem to have been borrowed by the Nusairis from the Ismā'īlians, and to have replaced the ancient mysteries; but, as in the case of the doctrine of the *nāṭiqs* and the *asas*, the Ismā'īlis initiate into a doctrine, the Nusairis into mysteries (Dussaud, p. 105). They have retained the use of wine and the veiling of the initiate. The nine degrees of Ismā'īli initiation are reduced to three, overburdened with ritual elements. The initiate must be the child of Nusairi parents; he receives instruction from a stranger to his family—which creates between him and his teacher very close bonds of relationship. The *imām* receives him into the number of the faithful after certain ceremonies, in the last of which wine plays a very important part, in the form of communion. It should be noticed that, among non-initiated Nusairis, Khodhr (Khadhr=Eli) is the name of the god *par excellence*, as 'Ali is among the initiated.

6. Metempsychosis.—Metempsychosis is one of the dogmas of the Nusairis, but it differs from that held by the Ismā'īlis. The faithful is transformed seven times before he goes to take his rank among the stars, of which Ali is the prince. If he is blameworthy, he is re-born as a Christian or a Muslim, until expiation is complete. Infidels, who have not worshipped Ali, live again in the form of dogs, camels, mules, asses, or sheep.

7. Festivals.—The chief festivals of the Nusairis are: (1) the *El Ghadir* ('the pond') festival, on the 18th of Dhū'l ḥijjah; it is of Shi'ite origin, and commemorates Muhammad's appointment of 'Ali as his successor; it is celebrated among the most important *shakhs*; (2) the festival of the breaking of the fast (*fiṭr*); (3) that of the sacrifices (12th of Dhū'l ḥijjah); (4) that of the *Firash*, which commemorates the self-sacrifice of 'Ali exposing himself to the blows of the Quraysh in place of Muhammad; (5) that of *Ashurāh* (10th of Muḥarram) in memory of the massacre of Karbālā. According to the Nusairis, Ḥusain did not die, but disappeared like Jesus. The festival of the second *El Ghadir* (9th of Rabī' I.) celebrates the recognition of the sons of 'Ali by Muhammad. That of the Birth commemorates the nativity of Jesus Christ, but it is of Muslim origin; perhaps it is a remnant of that which the pagans of Harrān celebrated at the winter solstice for the birth of the sun. The spring and autumn equinoxes are the occasion of festivals in forms borrowed from the Persians—the *Nauruz* and the *Mihrajan*. Those are the official festivals. Some popular ones are: that of the Baptism (*El Qiddas*), the day of the Epiphany, of the Palms, of Pentecost, and especially of St. Barbe. Lastly, there are several pilgrimages, the most important of which is that of Khodhr (Khadhr=Eli).

8. Conclusion.—Like all secret sects, the Nusairis have been subjected to all kinds of accusations: the Ismā'īlis have contended with them by rivalry, and the Christian historians of the Crusades have re-echoed the slanders hurled at them by the Muslims.

LITERATURE.—The chief work on this sect is R. Dussaud, *Hist. et religion des Nusairis*, Paris, 1900, which has been followed in this article (cf. art. by R. Basset, in *RHR* xlv. [1902]; C. F. Seybold, *LCBL* lll. [1901] 1255 ff.; M. Hartmann, *ZDPV* xiv. [1901] 186-194; R. Duval, *RA* xxxvi. [1901] 184-189; C. Clermont-Ganneau, *CAIBL* [1900] 700-702; J. Halevy, *RS* ix. [1901] 88 ff., and I. Goldziher, *ARW* iv. [1901]); on pp. xlii-xxxv will be found the complete list of works, both Eastern and Western, that have appeared on the Nusairis down to 1900. See also H. Lammens, 'Notes de géographie syrienne,' in

Mélanges de la faculté orientale de Beyrouth, i. [1900] 271-283, 'Une Visite au šāih suprême des Nusairis Haidaris,' *JA* xi. v. [1916] 139-159. RENÉ BASSET.

NYANJAS.—The peoples dealt with in this article are those speaking the Nyanja or Lake language of the Protectorate of Nyasaland and adjoining territories. They cover the district embraced by the southern portion of that Protectorate, extending from Port Herald on the south as far north as the 13th parallel of south latitude. Divisions of the tribe stretch into Portuguese territory on the west, and into N. Rhodesia, where they inhabit the lower part of the Loangwa valley. They are also to be found in a narrow strip of country along the east shore of Lake Nyasa, into which they were driven by pressure of the Yao tribe from the east.

The tribe is divided into various subdivisions, which differ from each other to a small degree both in dialect and in customs. These divisions are: Amang'anja, Ampotola, Amaravi, Ambo, Antumba (or Akantunda), Achewa, and Achipeta. About the time of Livingstone's first visit to Nyasaland, a tribe of Zulus called Angoni migrated from the south and after various wanderings conquered the country inhabited by the northern divisions of the Nyanja tribes, on whom they imposed several of their habits and customs, while at the same time they adopted the language of the conquered people. Now Zulu has entirely given place to Nyanja in one or other of its dialects.

i. Clans.—Like many other Bantu tribes, the Nyanjas are divided into clans or families, which trace their descent through the mother. The better known of these clans are the following: Abanda, Apiri, Amwale, Anilanzi, Adzimbiri, Ankhomā, Ambewe, and Anthanga. The clan-names are to be found all through the adjacent tribes—the result largely of intertribal warfare and slaving, in which women formed the most prominent and most valuable asset. Though the origin of these names has been accounted for by the theory of the totem, there is now no trace of any such ideas connected with the names as would point to a totem origin. The names are not those of any animal or object in nature, nor do they carry any custom of tabu peculiar to the clan. Certain of the clans, however, used to have customs peculiarly their own. The Abanda, e.g., always killed slaves to put into the grave along with the dead body of their chief. Among the Apiri a man used to take a temporary wife, living with her for a year, and then putting her away before taking a permanent wife, or wives, according to native rite and custom.

With the arrival of the Zulu Angoni there came the custom of the descent following the clan of the father, and then a series of new clans was introduced: Apovu, Anjobvu, Anamvu, Ansomba, Ananyoni, etc. These are the names of wild animals—gazelle, elephant, hippopotamus, etc.—and to the members of the clan the flesh of its name-animal is tabued. This custom has gradually spread over the northern portion of the tribe—especially those parts conquered by the Angoni—and now it is common to find natives who claim to belong to two clans, one by the father and one by the mother, the former carrying with it the tabu. Such clan-names are now largely employed as surnames.

2. God and spirits.—(a) The generic name for God among the Nyanja is Mulungu or Mlungu, which appears in Swahili as Muungu, and in Lomwe and Makuwa as Muku. Under this term is embraced not only the deity, but all that appertains to the spirit world. Whether in its primary sense it conveys the idea of personality is doubtful,

as the word belongs to an impersonal class of nouns, and always takes the concord of an impersonal class. When, however, the deity is alluded to in respect of any of his attributes, there is no doubt that personality is assigned, as when the Nyanja speak of 'Leza, the Nurse,' 'Mlengi, the Creator,' 'Mphambi, the heavens,' and 'Chauta, the Almighty.' Other names are also assigned to the Supreme Being, as Chanjiri, Chinsumpi, Mbamba, Mphezi, but these are generally confined to certain local manifestations of the deity through the possession by some individual of divine powers. Among the tribe of S. Angoniland in 1910 there appeared an individual who claimed such divine powers under the name of Chanjiri, and demanded tribute in the form of offerings from the people, at the same time attempting to dissuade them from paying the annual tax to the Government. While the names Leza and Chauta are the common appellatives of the deity among the neighbouring Awemba and Atonga, the name Mulungu is universally recognized as signifying the Supreme Being, and among the Nyanja people is the only designation in use.

(b) Some districts have their local deities or spirits to whom worship is paid at definite shrines—generally on the top of some prominent mountain. In the Blantyre district there are two such shrines on the summits of Mounts Soche and Michiru, where offerings are made in time of public distress to the spirits of Kankhomba and Mpalele. There is little doubt, however, that these are the names of two chiefs who ruled in the respective districts before the time of historical record, and whose names are thus preserved in the worship paid to their spirits. Till recently a local *mbona*, or seer, lived near Port Herald who claimed divine powers for himself, and whose wife—always chosen from a certain family—acted as priestess and means of communication with the outer world, he having shut himself up in complete seclusion.

(c) The *mizimu*, or spirits of the dead, form the chief inhabitants of the unseen world. The word is used to denote the disembodied spirit or soul of man, and there is no spirit which was not at one time existent in a living bodily personality. When this disembodied spirit is conceived as a worker of evil and as possessing an evil influence, it is termed *chivanda*.

It is to the *mizimu* that the people most frequently resort when they wish to get into communication with the unseen. It is to the *mizimu* that prayers are most frequently offered and sacrifices made. Only in time of great local fear or calamity, such as drought or famine or pestilence, are addresses paid to Mulungu or to the local deities.

The *mizimu* make their presence known and communicate their wishes to the living by means of dreams, when the spirits of the dead hold converse with the spirits of the living and the spirits of the living hold converse with each other, and through the medium of the *mlaula*, or prophet, who is inspired by the *mizimu* to rave (*bwebwela*)—the ravings being accepted as the voice of the dead.

The *mizimu* have their abode at the hut of the deceased or at the grave where the body is buried. Offerings are not usually made at the grave—as among so many of the neighboring tribes—but at the hut where the person lived, or at some place such as the foot of a tree near the hut where he was accustomed to resort. Sometimes in the case of an important chief a small sacrifice hut, called *kachisi* or *gombazi*, is built on the outskirts of the village, and there the customary offerings are made.

(d) The spirit may take up its abode in some

wild animal, as a lion, leopard, or python. This is the case only with such persons as have while in life secured medicine which has the power of effecting such a transmigration of the soul. These animals are held in awe, and are rarely interfered with; but, should one be killed accidentally or of necessity, the native has no theory as to what comes after. There, as in so many problems of life, he confesses that he is against a dead wall which he has no means of surmounting.

(e) Among the Angoni Nyanjas the spirit may be made to locate itself in any object such as a piece of cloth, a basket, a doll, or, in the case of a person of importance, such as a chief or headman, in a fowl, a goat, or an ox. The spirit is 'captured' by the *mlaula*, or, if it is that of a person of lower rank, by an old woman who has ceased to bear children. Such objects or animals are set aside as sacred. Should the animal die, another animal is chosen and set aside as *wa mizimu*, the property of the spirits. The other class of objects in which the spirits are located are treasured among the household stuff, and are generally kept near the bed or sleeping-place of the head of the family.

3. Burial customs.—Immediately after death the corpse is bathed, if of a man by men, if of a woman by women. Any one may perform this office, but it usually falls to the older people. Any neighbour may assist in carrying the corpse to the grave, and in digging the grave, but on those who go down into the grave and receive the corpse from those above special duties are laid. They are known as the *adzukuru* (from the root *kuru*, 'greatness'). There are no official *adzukuru*; any person may perform the function, but by habit and custom of the community certain individuals usually have the office assigned to them. To them afterwards falls the duty of offering the sacrifices to the spirit of the dead. Theirs are the portions of food which are left over from the sacrifice, and which they have the right of dividing among their friends. After the burial the mourners return to the empty hut, which the *adzukuru* pull down. Should it be decided to take steps to ascertain the cause of the death, the *ula* is consulted (see § 9), and the case may proceed to the chief's court to be settled there. Two months or so after the burial the *adzukuru* summon the mourners together, and a feast is made (generally of beer), a sacrifice is offered, and the shaving of heads of the mourners finishes the mourning.

4. Sacrifices. — Sacrifices are offered (a) to Mulungu, (b) to the spirits of the dead chiefs and headmen, and (c) to the spirits of dead relatives.

(a) Sacrifices to Mulungu as the Supreme Being are offered in a small sacrificial hut (*kachisi*) built on the outskirts of the village or at the foot of any large tree where there is shade—preferably the large tree in the village *bwalo*, or courtyard. Any tree, however, that gives shade may be a place of sacrifice. Persons on a journey or in the hunting-field place an offering almost anywhere—under a tree, if possible, or at the meeting of two roads. The offerings consist mostly of food—beer, flour, etc.—while pieces of calico are offered by being torn up and hung from the tree or spread over the sacrifice hut. At the beginning of harvest offerings of first-fruits are made in the sacrifice hut, the whole village joining in the sacrifice and the chief or headman acting as officiating priest for the occasion.

(b) Sacrifices are offered to the spirits of the dead chiefs or headmen. These, like the others, consist of food—beer, flour, etc. They may be offered near the hut where the dead person lived, or at the sacrifice hut where his spirit may be approached. The offerings are made by some descendant or relative of the deceased chief, generally by his

successor in office. In one instance near Blantyre the dead chief had been the chief of a tribe which had been conquered and its members scattered by the present chief of the country. When a sacrifice was made, a member of the conquered tribe—a relative of the deceased—had to be found to offer the sacrifice, as likely to be more acceptable to the spirit whose favour was sought. Among the Angoni Nyanjas the offering may take the form of an animal in which the spirit of the dead is located, and the animal is thereafter looked upon as the property of the spirit. If it is a fowl or goat, it is not usually separated from its fellows, but if it is an ox—usually dedicated to chiefs only—a special kraal may be built for it and a special caretaker set apart.

(c) Sacrifices are made to the spirits of dead relatives or friends—a little flour, beer, a fowl, or a goat, part of which is made the offering, the remainder being partaken of by the friends of the *adzukuru*, or offerer. Where the spirit of the dead has been located in any article of household use, the offering is placed close to it.

5. Initiation ceremonies.—Among the whole of the Nyanja-speaking peoples there is no initiation ceremony for males and no rite of circumcision. This shows that they had not come under the influence of the coast Arab or Muhammadan. There is, however, in the case of females a ceremony of initiation at the age of puberty. The period of instruction varies among the different sections of the tribe from one or two days to a month. During this period the girls live in a hut apart by themselves and are instructed by old women in the duties and acts of the married state. There is no form of mutilation or circumcision, but the girls are taught by manual manipulation to prepare the organs for the marital acts. When the married woman becomes pregnant for the first time, the old women again take her aside and instruct her in the mysteries of childbirth and motherhood.

6. Marriage.—In the marriage ceremony of the Nyanja people the chief agents, next to the persons themselves, are the 'sureties' (*ankhosove*), by whom the marriage is arranged and on whom the responsibility for its well-being depends. They are usually the brothers or some very near relatives of the contracting parties. The man and woman take no part in the preliminary negotiations; everything is done for them by their respective 'sureties.' Should difficulties arise between the husband and wife, the duty of making reconciliation or of permitting a divorce lies with the 'sureties,' and without their consent no alteration in the condition of husband and wife is sanctioned.

The woman remains in the village of her parents, where the husband builds her a hut if her father has not already built one for her. The mother-in-law expects help from him in the hoeing of her garden. Beyond this the husband has no other indebtedness to his wife's family. When the hut is ready, the husband makes his wife's village his home. If he has other wives, he pays it periodical visits. There is no marriage ceremony beyond the entry of the husband into the wife's hut. Should the husband prove impotent, this is a ground for annulling the marriage at once. The first-born child is named by the husband's relatives, and, when other children are born, it goes to the home of the mother-in-law and is reared by her, 'in the place of the daughter whom she has lost.'

The custom of *ukulobola*, or payment by the husband to the wives' relatives, does not exist among the Nyanja tribes. Only in the northern districts, where they are in close touch with the Angoni (Zulu) tribe, does one find the custom occasionally introduced.

Wives are inherited from the maternal uncle along with other property. The uncle's head-wife may become the head-wife of his successor. More generally she is allowed to retire into private life, and her place as head-wife may be taken either by the successor's first wife or by some other of the inherited wives. Separation is common, the cause generally being adultery on the woman's part or neglect on the husband's part. The matter is decided by the 'sureties.' If divorce is sanctioned, the husband hands over some small article (*kuper-eka mubvi*, 'to hand over an arrow') to the wife as a token of her freedom, and without this ceremony no divorce is complete. The whole marriage principle is simple. The woman is the property of her clan or family, and so are the children. Hence the husband makes his home with his wife's relatives. This is altogether a different state of society from that in which the husband takes the wife to his home—in which case he must pay the *ukulobola* as compensation to her family for the loss of the woman and her children.

7. Witchcraft and disease.—The power of witchcraft belongs to a certain clan of witches (*afiti*). Their object in seeking this power is to obtain the means by which they may avenge themselves on their enemies and destroy their fellow-beings. As they keep this power by eating human flesh, they may be supposed also to exercise it that they may secure the necessary food. They work their spells by means of 'medicines,' which they keep in small antelope's horns, and hence they themselves are euphemistically described as a *nyanga*, 'they of the horns.'

The *afiti* have their enemies, who are bent on their discovery and destruction. These may be renegade *afiti*, who turn their knowledge to the destruction of their old associates. The *seketera*, or *setekera*, the 'throat-cutter,' is the most commonly recognized of these enemies. The *ua nyundo*, 'he of the hammer,' is another. By means of more powerful medicine they compel the *afiti* to reveal themselves, when they attack them, the one with his knife, the other with his hammer. The *afiti* form a secret society into which only the initiated are admitted. The fear of them hangs a dark cloud over the whole of native life, and the superstition is the cause of more deaths than all the diseases of the climate put together.

The *mabisalira* is a professional witch-finder, generally a woman, who is known over a large district, and who is called in when all other means of inquiry have failed. She obtains her power by means of medicine, which she purchases or otherwise secures from another member of the craft. In the process of her divination she works herself into a frenzy and her audience into a state of excitement by a weird dance, accompanied by physical contortions and bodily postures such as enter into all native dancing. She seizes and smells the hands of the bystanders till she is able to fix on the guilty person, whom she names. In the course of her performance she digs up with a spear the various horns of medicines and charms which have formed the suspect's stock-in-trade. In this way the village is purged of all occult agencies. The *mabisalira* has also the power of expelling from any person the *afiti* power which he may have acquired without realizing what its possession meant. By application of medicines the patient is caused to vomit, and in this way gets rid of the occult powers which he has acquired. Of course, against an accusation by a *mabisalira* the accused has always the resources of appeal to the poison ordeal (see § 9).

Disease has its origin in witchcraft, whatever be its nature. The same applies to all accidents, epidemics, losses, and misfortunes. Although a

disease may be acknowledged as contagious or infectious, its ultimate origin is always to be found in the dark operations of the *afiti*. Hence medicines are almost always charms, working through occult powers. No doubt experience and experiment have led the native to acknowledge the medicinal value of certain substances, and for external diseases the application of certain drugs is recognized to have its curative effect. But for the treatment of deep-seated or unknown disease it is to the occult powers of charms that resort is always had.

8. *Fetishes and charms*.—Among the northern branches of the Nyanja tribe, the Achewa and the Achipeta, as has already been pointed out, certain articles may become the abode of the spirits and are fetishes, objects of reverence as well as worship. Among the southern branches of the tribe there is no such belief, except in so far as the spirit of the dead may be believed to enter into some wild animal. Charms, however, are used and worn among all classes and for almost every variety of purpose. They range from the application of some medicinal herb either as an ointment or as an ash rubbed into incisions made in the skin of the affected part, or the little twigs worn in the necklace to cure a headache or toothache, to the big bag of medicine worn round the neck of the elephant-hunter by which he brings the game within reach and range of his guns and obtains accuracy in shooting. Charms are worn to secure safety on a journey, success in trading or in war, and to protect the hut from the visits of the dreaded *afiti*, or the garden from the depredations of wild pigs or thieves. Doubtless these charms were originally fetishes, endowed with occult power from being the abode of some spirit. Now, however, in the native mind they are entirely dissociated from any spirit-possession, and the powers which they possess are ascribed to the articles themselves.

9. *Divination*.—(a) *Lots*.—Divination is by means of *ula*, 'lots,' which are resorted to on all occasions of doubt, or when the disclosure of secrets is desired. For the discovery of such crimes as witchcraft, theft, or adultery it is the invariable means. The lots are consulted whenever the fortunes of the future are in doubt, as before going on a journey, making war, or starting on a hunting expedition. The *ula* exist in a large variety of forms, from simple divination by means of the position in which small pieces of a cup or plate fall when thrown out of a dish to the *phenda*, or ordeal by boiling water, and the use of the divining-rod. In the last the holder of the rod grasps it by both hands, and is dragged by it to the spot where the object sought for is concealed or where the guilty individual is to be found.

(b) *The poison ordeal*.—The poison ordeal (*mvabvi*) is the supreme court of appeal for a final declaration on all questions of innocence or guilt. The verdict of the *ula* or the *mabisalira* may be refused or denied; the verdict of the poison ordeal is accepted by both parties as a final closing of the case. It consists of a decoction of the bark of the *mwabvi*-tree, which is pounded in a mortar with a certain quantity of water warmed by means of a hot stone dropped into it, and given to the accused or appellant to drink. Sometimes both parties drink together to assert the truth of their asseverations. Upon the effect of the poison hangs the verdict. If the accused dies, he is guilty, and, the case being thus decided against him, his friends and relatives have to pay compensation for the crime which he committed. If the accused vomits, he is innocent, and the accusers, having made a false accusation, have to pay compensation to the person whom they thus defamed.

The poison ordeal is administered in several ways. (1) It may be drunk by the accused himself in the presence of the accusers. As soon as the poison begins to show that it is to have a fatal effect, the accuser and his friends usually set upon their victim and beat him or otherwise maltreat him till he dies. The body may then be burned, or thrown into the bush to be devoured by beasts of prey or vultures. It is never given ordinary burial. (2) The poison may be administered to some domestic animal, a fowl or a dog, and by the result the innocence or guilt of the accused is declared. (3) Among the Angoni Nyanjas the poison is administered to villages or even districts, in order to clear them of the accusation or suspicion of witchcraft, or to purge them of all persons suspected of using occult powers. Not infrequently, if an Angoni chief doubted the loyalty of any of his villages, he would order a wholesale drinking of the poison. In this way many deaths occurred, whole villages being sometimes almost entirely wiped out.

10. *Social organization*.—The chief sitting in the council of his elders or headmen is the head of all authority and the highest court of law in his country. Decisions may be given in smaller cases by the headmen, but all serious cases are taken to the chief's court for final decision. War is declared by the chief alone. None of his people can go on a foray without his consent. The chief is responsible for the acts of his subjects. The members of a village or clan are all held individually responsible for the actions of any of their fellow-members. There is no criminal law nor such a thing as 'crime' in native law. All offences are civil offences—against property—and so may be atoned for by payment according to the amount of damage done. This is the fundamental principle at the root of native law. The native whose goods have been stolen fails to see the justice of merely imprisoning the thief while the stolen property is left unrestored. Under native law the thief would have been obliged to make restitution for the stolen goods, or his relatives would have paid the amount for him. Assault on the person is compensated for by a monetary payment according to the amount of the injury inflicted. Adultery is punishable by death or by payment of a slave or the value of a slave. It is, in native law, an offence against the property or rights of the husband.

The line of descent being through the mother and the laws of property demanding that it be kept within the clan, inheritance falls to the brother by the same mother; failing him, to the oldest sister's son. The heir takes the name as well as the property of the deceased. No one can fall heir to two names. Under the native régime monogamy is the rule and polygamy the exception. Wealth or inheritance alone is responsible for polygamy.

NYAYA.—*Nyāya* in Sanskrit signifies 'Logic,' and is the title of the latest of the six philosophical systems of the Brāhmins. These are in order the Sāṅkhya, Yoga, Mīmāṃsā, Vedānta, Vaiśeṣika, and Nyāya. Its founder is known either by his gentile name of Gotama (Gautama) or by a nickname which has lost its opprobrious meaning and has supplanted the personal name, Akṣapāda, 'the eye-footed,' i.e. with the eyes directed on the feet.

The name of 'Logic' has been given to the system, because it treats of formal logic in the most exhaustive manner, and this forms its principal theme. In the first sentence of Gotama's text-book, the *Nyāya-sūtras*, which were composed c. 150 B.C., sixteen logical ideas are found enumerated, with the characteristic addition that the true knowledge of their nature leads to the attainment of final emancipation, i.e. the release of the soul from the cycle of existence. Nothing shows more clearly the dominant position assumed by formal logic in the Nyāya system.

Gotama's logic enjoys great popularity in India, and for a long time has served as the foundation of all philosophical research, as is shown by the fact that the terminology of the Nyāya has found its way into the later text-books of all the other schools. The Nyāya philosophy, however, is in no way limited to logic and dialectic, but claims to be a complete philosophical system. Regarded as such, it is only a further development and completion of the Vaiśeṣika system (see art. VAIŚEŚIKA), from which it has borrowed not only its doctrine of atoms and of the origin of the universe, but also its psychology. Just as in the philosophy of the Vaiśeṣika, so according to the doctrine of the Nyāya, souls are infinite and eternal, possess definite qualities, and are only by means of the material organ of thought which they possess capable of experience and knowledge. Nevertheless the Nyāya philosophy is set to a different key from that of the system of the Vaiśeṣika. In harmony with the older systems in its theory of the universe it maintains the consistent pessimism and the ascetic character which above everything else require the suppression of the desire for action; and in connexion with this it again presents deliverance from the misery of empirical existence, i.e. the attainment of a condition of absolute unconsciousness, as the supreme goal of human endeavour—prominent characteristics which in the Vaiśeṣika philosophy (at least in Kaṇāda's text-book) appear toned down to a remarkable degree.

In all the Indian systems the means by which knowledge may be attained are discussed, now a greater and now a less number of methods being recognized, but nowhere is the subject so fully expounded as in the Nyāya. Here four sources of true knowledge are recognized: (1) perception (*pratyakṣa*), (2) inference (*anumāna*), (3) analogy (*upamāna*), (4) credible testimony (*śabda*). It is obvious, however, that inference, as the only reliable means of attaining philosophical knowledge, completely overshadows the other three. There are three kinds of inference: (1) inference from the cause to the effect (*pūrvavat*), when, for instance, from the rising clouds the conclusion is drawn that a storm of rain is impending; (2) inference from the effect to the cause (*śeṣavat*), when, for instance, from the swelling of the rivers it is inferred that rain has fallen in the uplands; (3) conclusion as to something beyond the reach of the senses only to be known in the abstract (*sāmānyato drṣṭa*), when, for example, the individual senses are made the foundation on which to base a general conception of the instrument of perception. The distinction usual in European logic since the time of Aristotle between induction and deduction was strangely enough never made in India.¹

The syllogism of the Nyāya consists of five members, which are illustrated by the standing example of fire inferred from the smoke on the mountain:

(1) Proposition (*pratijñā*): there is fire on the mountain.

(2) Cause (*hetu*): for the mountain smokes.

(3) Exemplification (*dṛṣṭānta*): wherever there is smoke there is fire, as, for example, on the hearth in the kitchen.

(4) Recapitulation of the cause (*upanaya*): the mountain smokes.

(5) Conclusion (*nigamana*): therefore there is fire on the mountain.

If this scheme is contrasted with the simple threefold syllogism of Aristotle, it is seen to be unnecessarily diffuse, since the members (4) and (5) are, in fact, only repetitions of (2) and (1). The aim, however, of the founder of the Nyāya system was not in the least to propound the most concise form of syllogism possible; he desired to teach how best to impart to others a conviction reached by an inference. Thus, from the sphere of logic he encroached on that of rhetoric. Even in India, therefore, no difficulty was found in accommodating the above-mentioned scheme of five members to that of three, to which we are accustomed. The conception on which the theory of the syllogism of the Nyāya rests bears the name of 'invariable association' (*vyāpti*). Instead of starting as we do with an affirmative proposition, universally valid—'All smoke presumes the existence of fire'—the Nyāya philosophy asserts the 'invariable association' of smoke with fire. The sign observed (*linga*)—in this instance the smoke—is 'invariably associated' (*vyāpya*); the vehicle of the sign which is to be inferred (*liṅgin*)—in this instance the fire—is the 'invariable associate' (*vyāpaka*). Logically the conception is quite correct, although the form of the expression conveys to us a suggestion of strangeness. For smoke is always and unconditionally associated with fire, but not *vice versa* fire with smoke; for there is smokeless fire. The definitions of the conceptions here mentioned, and the doctrines of their application, not only occupy a large place in the literature proper of the Nyāya system, but have a wider range in the philosophical systems of India.

The conception which the Nyāya philosophy presents of causality is somewhat different from that of the older systems, in which only two kinds of causes are admitted, the material and the effective. The material cause of a thing (*upādāna-kāraṇa*) is the matter from which it proceeds or of which it is composed or consists; the effective cause (*nimittakāraṇa*) is both the motive-power from which it originates and the means by which it is produced. The material cause of a given object is always the same, and therefore is described as the chief cause. The effective causes, on the other hand, of which frequently a whole series present themselves, need not be the same in similar cases, and are therefore termed also accompanying or secondary causes (*sahakārikāraṇa*). In place of the expression 'material cause,' which is elsewhere customary, the Nyāya philosophy employs in exactly the same sense the term 'inhering cause' (*samavāyikāraṇa*), with evident reference to the sixth category of the Vaiśeṣika system, and together with the two kinds of causes here named postulates a third, the 'not-inhering cause' (*asamavāyikāraṇa*), which we may describe as 'formal.' To use the ordinary example of the Nyāya books, in the case of a carpet the threads are the inhering cause, the combination of the threads the not-inhering cause; the weaver's tools, his diligence and skill, and the weaver himself are the effective causes. The carpet itself is the inhering cause of its qualities; the qualities of the threads are the not-inhering cause of the qualities of the carpet.

The most important features of the Nyāya philosophy have here been set forth. But the system further treats of the meaning of numerous logical conceptions, and of fallacies, sophisms, and other

¹ Cf. Max Müller, *ZDMG* vi. [1860] 235; Albert Bürk, *WZKM* xv. [1901] 251 ff.

errors of speech, accompanied always with elaborate and subtle classifications and subdivisions. To those desirous of investigating the subject further, the able article of H. Jacobi on 'Indian Logic' may be recommended.¹

One point of importance remains to be noticed, which has to do with the Vaiśeṣika system as well as with the Nyāya.

The *Vaiśeṣika*- and *Nyāya-sūtras*, the treatises upon which the two schools are founded, contain no mention of God. Since they, moreover, assert the eternal and uncreated nature of both soul and matter, and conceive the fate of the individual in harmony with the universal Indian view as the result of his good and evil deeds in the present or earlier existences, there can be no doubt of the originally atheistic character of both systems. Probably we ought to recognize here the influence of the Sāṅkhya system; and in fact the doctrines of the Vaiśeṣika-Nyāya, although in several respects opposed to the Sāṅkhya, seem, on the other hand, to be dependent upon it in some of their fundamental tenets. When later the Vaiśeṣika and Nyāya systems came to be blended together, the combined school adopted theistic views, but never saw in the personal God, whom they assumed, the creator of matter. Their theology is set forth in the *Kusumāñjali* of Udayanāchārya (c. A.D. 1300), and in various later works which discuss the two systems in common. According to the view which they hold in harmony with the doctrine of the Yoga, God is a distinct soul like the other individual souls, and these are equally with Him eternal. He is, however, distinguished from them by the fact that He alone possesses the attributes of omniscience and omnipotence, which qualify Him for the government of the universe; and that, on the other hand, He lacks those attributes which result in the entanglement of all other souls in the cycle of existence.

R. GARBE.

NYIKA.—I. Distribution.—'Nyika (Wanyika), also 'Wanika' and in the Portuguese records 'Vanica,' is a name applied to several Bantu tribes in E. Africa. It is not an ethnic designation, as it simply means 'people of the wilderness,'³ and appears to have been used by the Swahili to denote a set of tribes who, during the 16th cent., migrated down the coast in a south-westerly direction from the steppes on the left bank of the Tana. It is not used indiscriminately for the inland natives, as the Taita, Pokomo, Segeju, and Kamba do not seem ever to have been included under it, though the first three, at any rate, are probably connected in some way with the nine tribes to whom it has—whether arbitrarily or not—been assigned. These are distributed as follows:

(1) The Giryama, in the country north and south of Mt. Munga, which lies, roughly speaking, about 39° 40' E. by 3° 20' S. They extend beyond the Sabaki—in fact, the important settlement of Garashi lies north of that river; and in recent years single families have been migrating farther and farther north, even beyond the Tana. Their southern boundary is the Mleji, the stream which crosses the road from Rabai to Kaloleni.

(2) The Ravai³ between the Mleji and the Mtsapuni stream, the latter being about half-way between Rabai Boma and Mazera's station on the Uganda Railway.

(3) The Duruma, west of the Mtsapuni. They are said to be partly descended from a number of Makua brought to Mombasa by a Portuguese known as 'Bwana Kigozi' (De Goes?).

¹ GGN, phil.-histor. Klasse, 1901, p. 400 ff.

² *Nyika*, in Swahili, originally meant 'grass,' and is used for the 'bush steppe,' the open ground covered with coarse grass and scrub, as distinguished from the forest, *muritu*.

³ *r* here denotes the 'bilahali r,' which is the sound used by the people themselves. The Swahili call them 'Warabai,' and the name in this form has been officially given to the district. It does not belong to the present mission station (founded by Rebmann in 1850), which is properly called Kisulitini.

(4) The Digo, west of the Duruma and extending over the border into German E. Africa, where they occupy the hinterland of Tanga (Baumann, *Usambara und seine Nachbargebiete*, pp. 144-161). These four are the larger Nyika tribes; the remaining five are (now, at any rate) of less importance. They are chiefly found on the ridge of hills running southward from the Voi river, between the Giryama country and the sea.

(5) The Kauma have their principal *kaya*, or fortified village, about a day's march south of Mtanganyiko on the Voi river (which runs into the Kilifi creek). Some of them live north of the Sabaki, near Garashi.

(6) The Chonyi, whose *kaya* lies south of Kaya Kauma. There are also a few of them near Garashi.

(7) The Dzihana (Jibana), a few miles south of Kaya Chonyi, on the way to Ribe. Their clan-names (see below) seem to indicate a close connexion with Chonyi.

(8) The Kambe (not to be confounded with the Kamba of Ukambani, the district south-east of Nairobi) have one *kaya* between Jibana and Ribe (but a little off the main road) and another (Kaya Kambe ya Bate) north of the Sabaki, near Jilore.

(9) The Rihe ('Ribe') are a small tribe living almost within sight of Mombasa and a few miles from Rabai. The old *kaya* is not quite an hour's walk from the present (Methodist) mission village of Ribe.

Krapf (*Reisen in Ost-Afrika*, i. 180) mentions twelve tribes of 'Wanika,' but nowhere gives a definite list of them. He incidentally refers to the tribes of Shimba and Mtawi (ii. 91), who are subdivisions of the Digo, and on the same page mentions the Lungo tribe 'der zu den Wadigo-Stämmen der Wanika gehört,' so that it is not clear whether he reckons it separately. He may, however, have reckoned as the twelfth the Tiwi, which he does not mention, but which occurs in an Arabic MS of which translations are published by both Owen (*Narrative of Voyages*, i. 418) and Guillaumin (*Documents sur l'hist. . . de l'Afrique orientale*, i. 618). Among the 'cities of the Vanikat' (evidently meaning the *kayas*) enumerated in this MS, nine can easily be identified as the tribes given above; the others are Mtawi, Mtawi-Shimba (probably an offshoot of the former), Tiwi, and Lungo. There is a village called Tiwi about half-way between Mombasa and the German frontier, and on the Shimba hills, just south of Mombasa, are several Digo villages somewhat isolated from the rest of the tribe, to which, no doubt, all four names really belong.

2. Origin.—The general native tradition is that the Wanyika come from Sungwaya (Shungwaya, Shingwaya), the native name for the plains on the left bank of the Tana (Hollis, *JRAI* xxx. 276, n.). They are said to have been driven thence by the Galla. According to the old headman of Kaya Kauma, this happened thirteen generations ago. Some say that all the Wanyika are descended from Matseze and his wife Mbodze, who lived near Sungwaya.¹

Another Kauma informant told the writer that, at the time of the migration, the Pokomo (*q.v.*) were already settled in the Tana valley and the Segeju in the delta of the same river, 'from the old Ozi to Chodoro.' The former preferred to submit to the Galla, and were treated as their serfs till within the last fifty years; the latter marched south with the Wanyika till they arrived at or near their present abode, viz. the neighbourhood of Tanga, though there are some within British territory, south of Gasi (Baumann, p. 25 f.). The Wanyika appear to have remained with them for some time; but, as their numbers increased, they sent off three successive swarms northward, the first being the Kauma, the second the Rabai (who, according to this informant, built their *kaya* at Mbuyuni, not far from what is now Mazera's station on the Uganda Railway, migrating afterwards to Rabai Mpia, where Krapf found them), and the last the Duruma, who seem to have settled much about where they now are. Krapf's account (i. 411; cf. also his *Dict. of the Swahili Language*, London, 1882, s.v. 'Mutsi muiru') at first sight

¹ Near Kaloleni, in Giryama, is the grave of another Mbodze, by some said to be a descendant of the first, where rain-making ceremonies are performed in time of drought.

seems incompatible with the above; he says (and this is borne out by a MS kindly placed at the present writer's disposal by Miss Austin) that they came from Rombo in Chaga and built their *kaya* on Mriale hill, where the site is still shown, though quite overgrown with forest. Thence they moved to Rabai ya Kale ('Old Rabai,' or Vokera), and later to Rabai Mpia ('New Rabai'), which had, in 1845, been occupied only for about 30 years (Krapf, i. 251). He gives no very clear indication as to the site of Rabai ya Kale, which he visited more than once (i. 215, 230), but it seems to have been near the head of the Jomvu creek.

As this migration is evidently much later than the other, it was probably a return movement. There is nothing to prevent our supposing that some, if not all, of the Wanyika had reached the neighbourhood of Kilimanjaro, or that they were joined by some of the Chaga clans when they once more set their faces northward. The MS above referred to states that Chonyi and Dzihana are offshoots of this tribe.

A note of time for the southward migration from Sungwaya is furnished by the recorded fact that the 'Mosseguejos' assisted the Portuguese, in 1589, to defend Malindi against the Wazimba (Guillain, i. 402; Baumann, p. 26; Strandes, *Die Portugiesenzeit von Deutsch- und Englisch-Ostafrika*, p. 153).

The Giriama are said by some to have come from the Taita hills and to be quite distinct from the Wanyika who came out of Sungwaya. The probable solution is suggested by other informants, according to whom the Giriama and Taita tribes left Sungwaya together and settled down, as did the Wanyika and Wasegeju. Later, the Giriama, leaving the others behind, went north again and established themselves on Mt. Mangua, which is looked on by some as their original centre of dispersion (Krapf, i. 359; Wakefield, *Thomas Wakefield*, p. 60). The Kambe insist that they left Sungwaya as a separate tribe, along with the Kauma, of whom the Rihe are an offshoot. But 'the Rihe are the most ancient of all the Nyika sub-tribes, and if members of all the sections meet together, the Rihe representative has the right to speak first' (Hollis, MS information). Probably some of these conflicting accounts are to be explained by the fact that the tribes are not always homogeneous. Thus, some perplexity was occasioned by a statement that the Pokomo came from Taita. This appears to mean that, when the Rabai left Mriale, they 'split up into several sections, going respectively to Pokomo, Chonyi, Jibana, Mtahi, and Mtongwe. . . . To this day the section which went to Pokomo are said to be distinguishable by their Rabai names' (Austin, MS). This is confirmed by members of the Pokomo tribe.

3. Physical characteristics.—The Giriama present a well-marked physical type: they are tall, many well over 6 ft., muscular and well made, with a peculiar breadth of head and squareness of face; the complexion is a very dark brown; the nose, as a rule, not excessively flat. Similar types are sometimes found among the Rabai, but these are far less homogeneous; their situation, within easy reach of Mombasa and in touch with several inland tribes, exposed them to frequent contact with strangers who came to trade and frequently settled down and intermarried with them. Besides, we find that, as long ago as 1614, Rabai was inhabited by the slaves of the Sultan of Mombasa (Guillain, i. 419), and these would be drawn from various parts. Many of the present inhabitants are freed slaves, or the children of such, belonging to the Nyanja, Yao, Ngindo, and other tribes. The Duruma are far from homogeneous, perhaps for the reason already stated. The population of Rihe is also

very mixed. Chonyi and Jibana may perhaps represent the primitive Rabai rather better than those who go under the latter name.

The Digo 'are slender and remarkably well built; they have pleasant, oval faces, in which the negro type is not exaggerated, and which decidedly indicate an affinity with the northern Hamitic tribes, such as the Galla and Somali. The predominant colour of their skins is a shade between cinnamon and coffee-brown; but, as might be expected, innumerable gradations occur' (Baumann, p. 145).

4. Social organization.—(a) *Clans*.—All these tribes are organized on a basis of exogamous clans, among which, however, there are important distinctions. The Giriama trace descent through the father, as do the Kauma and Kambe, Chonyi, Dzihana, and Rihe. The Digo and Duruma trace it through the mother, and the Rabai appear to be passing from one stage to the other. They have two sets of clans, called 'male' and 'female'—the men belonging to the first, and the women to the second. A man inherits two clans, his father's and his mother's, but for all practical purposes he is counted as belonging to his father's, while the reverse is the case with his sister. The statement that one of the Dzihana clans is 'a women's clan' seems to indicate that this tribe may once have had a similar arrangement. We have a hint of the change from matrilineal to patrilineal descent in the case of the Kauma, in a pedigree which goes back for seven generations in the male line, then changes to the female; also perhaps in the fact that the tribal ancestress, Mbodze, is always named before her husband, Matsezec.¹

A former Assistant District Commissioner at Rabai says: 'It is probably not very long since the Northern Nyika passed from the stage when mother-right obtained, for I remember a case . . . in 1898, of a Rabai man suing his nephew for seizing the estates of his deceased father' (Hollis, MS).

(b) *The kaya*.—The *kaya* is intimately connected with the clan-organization. It is usually situated on a hill-top in the densest part of the forest (Kaya Jibana has a particularly commanding situation and difficult approach); it is surrounded by a circular palisade of stout stakes, with two gateways at opposite points, closed by heavy wooden doors and approached by a steep and narrow pathway. Usually there are three gateways at each entrance—perhaps there was formerly a triple palisade, but, since people have been able to live outside the *kaya*, the defences have fallen into decay. Kaya Rihe and Rabai Mpia are now deserted, though the latter is still used for assemblies of the elders, and the *mwanza* is kept there; and, in the former, the site of the old council-house can still be traced. The *moro*, or council-house, is the meeting-place of the men, and serves the purposes both of a parliament-house and of an ordinary club. At Garashi and both the Kambe *kayas* it seemed to be open to strangers; at Kaya Kauma, though the place was pointed out, the present writer was not allowed even to approach it. Should any unauthorized person (i.e. one not belonging to the order of elders, or armed with their permission) go there, it was said that he would fall down in a fit and not recover till treated by the elders. Besides the *moro* each clan (*mbari*), or in most cases each of the larger divisions of the tribe (usually consisting of several *mbari*), has its club-house (*lwanda*, but the Swahili word *baraza* is often used), round which the huts of the families belonging to that section are grouped. Evidently the only name for these larger units is *kabila*, from the Swahili; it is possible that they were originally *mbari* which branched off into the smaller divisions now known by that name, and it is sometimes difficult to keep the two sets of names distinct. There are five sections of the Kauma tribe: the Andarari, Adzaka, Amongwe, Adzundza, and Amvitsa, compris-

¹ This is not accidental, for the present writer was expressly corrected by an old man when mentioning them in the reverse order.

ing seventeen *mbari*; but there are only two club-houses, the Amvitsa and Amongwe sharing one opposite the north gate of the *kaya*, the other three the corresponding southern one. At Kaya Chonyi, however, eleven out of seventeen *mbari* have a *baraza* each; the remaining six share three between them, perhaps indicating a recent subdivision. Kaya Dzihana and Kaya Rihe each have (or had) four *barazas*.

(c) *Totemism*.—There are traces of totemism, though, as far as our present state of knowledge goes, it seems to be almost forgotten. The Giryama clans 'are divided into two sections, according as they avoid the *kasiji* or the *katsendzere* bird' (MS information communicated by Hobley). The *kasiji* is a tiny finch, sky-blue and grey in plumage; it is never killed or eaten, but it is difficult to determine how far it is actually regarded as sacred. The *katsendzere* is a still smaller bird, grey, with a crimson spot just behind the head. Some of the Chonyi clans refuse to eat the *loma* (ant-bear), an animal to which some curious superstitions are attached. There are other food-prohibitions, though it is not certain whether these have anything to do with totemism or not; Chonyi, and certain clans of Kauma and Kambe, may not eat the flesh of the *funo* antelope within their *kaya*, though there is no objection to their doing so elsewhere (Hollis, MS).

How far the curious veneration for the hyena (Krapf, i. 248, and *Dict. of the Suahili Language*, s.v. 'Fisi'; New, *Life . . . in E. Africa*, p. 132; Taylor, *Giryama Vocabulary*, p. 82) is really totemistic is difficult to say. It is not connected with any particular clan, as with the Nandi, who certainly have a hyena totem (Hollis, *The Nandi*, Oxford, 1909, p. 11; some usages with regard to the hyena extend to the whole tribe [*ib.* p. 7]). Nor can it be connected with a custom of leaving the dead to be devoured by hyenas, for among the Nyika tribes the dead are always buried. Sham traps were set up on recent graves outside Kaya Kauma, to prevent exhumation by hyenas or bush-pigs. Neither the Galla nor the Pokomo venerate the hyena, though the latter remark on such veneration as a peculiarity of the Wakoshoro (their name for the Giryama). Giryama of middle age say that a man was formerly fined by the elders if he killed a hyena, but the regulation is no longer observed.

(d) *Government*.—There is nothing like a paramount chief of any Nyika tribe, though the Digo have hereditary sultans, with the title *kubo* (Hollis, *JRAI* xxx. 276, 289, and MS information). The government is carried on by the 'elders' (*azhere*). Any member of the tribe who has passed through the preliminary degrees (Taylor, pp. 43-45) is eligible for entrance into the *kambi*, or council, on payment of the proper fees, the badge of this status being an ivory armlet (*luvo*). Members of the *kambi* may afterwards be admitted, first to the *vaya*, or 'circle of the elders,' who 'may deliberate on smaller judicial questions in their own district, but are really nothing more than a convivial club' (Taylor, p. 44), and afterwards to the *Fisi* 'Hyena'—the Inner Circle of all and very select. . . . The members of the Hyena inspire great terror, as they are the depositories of the most potent spells and oracles' (*ib.* p. 45). From these last two classes are chosen the three *enye-tsi*, 'owners of the land,' who carry on the government during the space of a *rika* (or 'circumcision-cycle') and then 'hand over the country' to their successors, i.e. all those circumcised next after them, the ceremony taking place about once in thirteen years, which, according to one native informant, is the duration of a *rika*. But the collective circumcision-festival is falling into disuse, the operation being regarded more and more as a purely individual, or at most a family,

matter; and this, perhaps, is the reason for the difference in a recent account:

'There are now among the Wagiryama a considerable number of native councils or *kambis*. An elder more intelligent than his confrères soon becomes the nucleus of a *kambi* and by general assent is established as their president (*mwanamuli*). All the people living within the sphere of his influence send their elders to the *kambi* which meets at or near his village' (Hobley, MS).

The whole system seems, in its general features, to be common to Nyika, Pokomo, Kamba, Kikuyu, and probably other Bantu tribes, also to the Galla (*Journ. of the Afr. Soc.*, 1913, p. 369, 1914, p. 262 ff.), Masai (Hollis, *The Masai*, Oxford, 1905, pp. 260-263), and Nandi (Hollis, *Nandi*, p. 12). The *mwanza*, or friction-drum, used for convening the *kambi*, is kept by the elders in a hut built for the purpose in the *moro*, and carefully hidden from all but the initiated (Krapf, i. 312 ff., where the ceremonies connected with it recall the W. African *poro*). It is sounded when a new law is to be promulgated, or as a signal for dances and other ceremonies which take place at the beginning of the rains—usually in February.

5. *Religion*.—The Nyika, like other Bantu tribes, use the name Mulungu, which, according to Taylor (p. 47), 'is often popularly understood as (1) sky, (2) luck, (3) manes of father,' etc. The greater part, if not all, of their religious observances seem to be connected with ancestor-worship. There appear to be some spirits (*pepo*) which are, or have become, distinct from ancestral spirits (Taylor, pp. 32, 81); of these, Katumbakazi recalls certain mythical beings of Pokomo tradition, and also the Zulu legends of the Abatwa (Bushmen). The Duruma say (native MS communicated by Hollis) that every person is accompanied by a guardian spirit (*pepo*); it may be ancestral, but, if so, the native mind is not apt to perceive any incongruity between this and the belief that the shade (*koma*) of the dead haunts the vicinity of the grave. An important grave is marked by a carved post (*kigango*), sometimes surrounded by other posts representing wives or relatives not necessarily buried in the same place (see photographs taken by Captain Knox at Kaya Dzihana, in *Man*, ix. [1909], facing p. 145, with note by Hollis). It is here that offerings are made to the *koma*, usually of meal and beer (*pombe*); occasionally a fowl is killed (Taylor, p. 81). Possession by spirits is frequent (*ib.* p. 32, and Hollis, MS) and gives rise to the usual dances, etc. (cf. the Nigerian *bori*); it is sometimes induced by dancing, in order to obtain information believed to be communicated by the spirit, as in a case witnessed by the writer, where the mother of a sick child had the appropriate remedy revealed to her. Diviners (*tsuha mburuga*) are frequently consulted in case of illness or other difficulty, and make use of a process analogous to the *bula* of the Baronga, etc. There do not appear to be any professional rain-makers; in fact, it is not rain-making that is attempted in time of drought so much as the discovery of the persons who are keeping back the rain, having buried certain charms for the purpose. A ceremony for producing rain, however, has sometimes been performed at the grave of Mbodze, and is of the nature of sympathetic magic; the main point of it is the setting up of a *kinu* (wooden mortar) on the grave and filling it with water (native information; cf. also Taylor, p. 82).

The elders of the *fisi* supply the charms (*kiraho*) which protect growing crops, etc., and entail a curse on any one who removes or disregards them. They, with the *vaya*, also administer the ordeal (*kiraho*, *kurya muma*) in certain criminal cases (Hollis, MS).

6. *Material culture*.—The material culture of the Nyika offers some interesting peculiarities. Their huts are quite unlike the hemispherical ones of the Zulus, the slightly different ones of the Pokomo

and Galla, or the circular ones with a conical roof of the Kikuyu, Nyanja, etc. They are rectangular in ground-plan, with a thatched roof descending from the ridge-pole to the ground, so that there are, properly speaking, no walls, and the general outline is not unlike that of a haystack. Sometimes this kind of house has straight gable-ends, filled in with upright stakes; more usually the ends are sloped and thatched down to the ground like the sides. Those of the Digo are somewhat different (Baumann, p. 147). The dress of the men is the usual waist-cloth of cotton fabric, with or without an upper cloth draped over one shoulder; the characteristic costume of the women (where they have not adopted the two cloths of the Swahili women) is the *rinda*, or kilt, reaching from the waist to the knees (*ib.* p. 146).

The most usual weapon is the bow; the Giriama bow differs slightly in form from that used by the Wasanye. The arrows are often poisoned; in this case they are reed-tipped; otherwise they have barbed iron heads. The Giriama also use the parrying-stick (*kupungu*), which is very rarely found elsewhere in Africa; and another peculiar weapon is a three-sided club (*ndata*) used for killing snakes. They also have swords (*mushu*, *mufyu*), which are as much implements as weapons, and smaller knives.

The Giriama are said to have been once highly skilled in metal-work, but now they buy from the Kamba the fine copper and iron chains which they wear as ornaments and which, so they say, they taught the Kamba to make.

The Nyika live chiefly by agriculture, which is mainly the concern of the women; they keep goats and sheep, but few, if any, cattle. In recent years they have taken to planting coco-nuts, less for the sake of the nuts than for tapping them for palm-wine, which formerly they bought from the Swahili. The ground is cultivated with the hoe (*jembe*) and the most usual crops are maize, millet, sweet potatoes, beans, pumpkins, etc.

7. Conclusion.—Different opinions have been expressed as to the character of the Wanyika, and they consist of such various elements that it would be difficult to give a compendious judgment of them as a whole. The unfavourable estimate, *e.g.*, of H. H. Johnston (*The Kilima-njaro Expedition*, London, 1886, p. 42) must be qualified by the consideration that the Rabai people are a very mixed race, consisting largely of ex-slaves, and that a starting-point for caravans is much on a level with a seaport in the types of character that it presents. The Giriama are a vigorous race, full of fine possibilities; and the others, with all deductions, contain very good material for future development. Their old institutions appear to be breaking down, which is unfortunate, as there are many important facts yet unrecorded; but, so far as one can judge, this is not a symptom of decay, but a stage of growth, to be watched with interest and fostered with judicious care.

NYMPHS.—See NATURE (Greek), vol. ix. p. 226^b.

NYSA (Νύση).—The sacred name of Nysa is from the beginning an integral element of the legend of Dionysos. There is, doubtless, an etymological connexion between the two names, but their significance escapes us (Diod. iv. 2. 4: *Διὸς καὶ τραφέντα τὸν Διόνυσον ἐν τῇ Νύσῃ τυχεῖν τῆς προσγωγῆς ταύτης ἀπὸ Διὸς καὶ Νύσης*).¹ The name of Nysa first occurs in one of those tantalizing passages, of which there are several in Homer, in which we get a glimpse into a whole world of legend lying behind the Homeric poems. The story is told, merely in outline, of the fate of Lykoergos, king of the Edones of Thrace, who withstood by violence the spread of the orgiastic cult in this its native home:

ὅς ποτε μαινομένοιο Διωνύσοιο πιθήνας
σεῖε κατ' ἡγάθεον Νυσήϊον,
'that erst chased through the goodly land of Nysa the nursing
mothers of Dionysos' (*Il.* vi. 132 f.).

As we come down the stream of Greek poetry and myth, the name frequently recurs—now as that of a mountain, now as that of a city, now, again, as that of a nymph fabled to have mothered the infant deity; but, whatever its guise, it is always a mystic entity, eluding exact analysis and baffling all attempts at precise localization. Hence it has been happily described as 'in fact, a mountain which attended Dionysos on his travels' (quotation in J. E. Sandys, *Bacchæ of Euripides*, Cambridge, 1892, line 556).

The vine, the god's chief gift to man, must, it was felt, have had somewhere on earth a place of origin, and in much the same way as Attica claimed to be, for Greece if not for the whole world, the motherland of the olive (Herod. v. 82: *λέγεται δὲ καὶ ὡς εἰλαίαι ἦσαν ἀλλοθι γῆς οὐδαμῶς κατὰ χρόνον ἐκείνον ἢ ἐν Ἀθήνῃσι*; cf. Soph. *Œd.* Col. 694 ff.: *ἐστὶν δ' οἶον ἐγὼ γὰρ Ἀσίας οὐκ ἐπακούω . . . φύτειν ἀχείρωτον αὐτοποιόν, κτλ.*—Where note the reference in the opening words [678 f.]: *ἵν' ὁ βακχίωτας αἰεὶ Διόνυσος, ἐμβαρεῖς*), so did various places, nearer or more remote, in all parts of the Greek world, claim to be the original home of the vine (*e.g.*, Soph. *Antig.* 1131: *καὶ σὲ Νυσῶν ὄρεον | κισσῶν οὐχ ἔχει χλωρὰ τ' ἀκτὰ | πολυστάφυλος πέμψει*—alluding to the claim of a Nysa in Eubæa near Ægæ; cf. Soph. frag. 235).

Hence Herodotos (iii. 97; cf. ii. 146) knows of a 'sacred Nysa' (Νύση Ἱερή) among the Ethiopians who border upon Egypt. Diodoros, who greatly exercised himself over the antecedents and early history of Dionysos, holds that the scene of his birth was in Arabia (in support of which opinion he is never tired of quoting *Hymn. Hom.* i. 8 f.: *ἐστὶ δὲ τις Νύση, ὑπατον ὄρος, ἀνθέν Ὀλῆ, | τηλοῦ Φοινίκης, σχεδὸν Αἰγύπτου ῥοάων*—which does not appear very convincing; see Diod. iii. 66. 3, and cf. iv. 2. 3: *πρὸς τὸ ἄντρον τὸ ἐν τῇ Νύσῃ, κείμενον μεταξὺ Φοινίκης καὶ Νεῖλου*—the cave at any rate is vouched for by *Hymn. Hom.* xxvi. 5 f.: *Νύσης ἐν γυάλοις· ὁ δ' ἄεξετο πατρός ἔκρηι | ἄνθρω ἐν εὐώδει*); but he knows also of a serious claimant in Libya (iii. 68. 5), not to speak of a third in India (i. 19. 7). Similarly in poetry, starting as, for Homer, a Thracian locality (whether mountain or plain is not clear),² it has already 'won over into the mythical' in Soph. frag. 782:

ὅθεν καρεῖδον τὴν βεβακχισμένην
βροτοῖσι κλεινὴν Νύσαν, ἥν ὁ βούκερος
ἱαχὸς αὐτῷ παῖαν ἠδίστην νέμει,
ὅπου τις ὄρεος οὐχὶ κλαγγαῖαι;
(*ap.* Strabo, xv. 637).

¹ P. Kretschmer's view, in *Aus der Anomia*, Berlin, 1890, p. 17 ff., that the element *νύος* is a masculine form of a Thracian *νύσα* = 'nymph,' or 'daughter,' is not now accepted. The first part of the name Διόνυσος is, of course, from the same root as the word Ζεύς, and means 'god.'

² In Apoll. Rhod. ii. 1214 (*οὔρεα καὶ πεδῖον Νυσῆϊον*) it is both mountain and plain—though, of course, now far removed from Thrace.

Euripides also never commits himself to any clear indication of locality. It was not until the time of Alexander that the floating mass of legend and imagery connected with the name became anchored upon a definite spot. Until that time came we see Nysa, as the geographical horizon of the Greeks widened, being pushed ever farther away towards the edge of the world, a far-off land of wild beauty, fit birth-place of a god of wine and revelry and sensuous delights, who was also connected so closely with the mystery of life as exhibited in vegetation and wild animals.

The triumphant irresistible bursting of Alexander the Great into the secrets of the Far East naturally appealed to the imagination of his generation as a sort of incarnation of a fabled progress of Bacchus through these same regions. The exploits of Alexander it was that gave birth to the legend of the conquest of India and the East by Dionysos, rather than the converse; and the imagination of court flatterers was exercised to provide divine prototypes of Alexander's achievements. Being himself reputed son of Zeus-Ammon, and Dionysos also being, in some stories, a son of Ammon (Diod. iii. 68. 2 f.), it was altogether suitable that Alexander should tread literally in the footsteps of his divine predecessor, and at last come upon that very city of Nysa which had existed in the imagination of so many generations as built by Dionysos for his wearied Bac-

chanals, and upon that same Mt. Mēros on which his troops had refreshed themselves amid its ivy and laurels:

πολὺν παρ' αὐτοῖς Νύσαν Διονύσου κτίσμα, καὶ ὅρος τὸ ὑπὲρ τῆς πόλεως Μηρόν, αἰτιασάμενοι καὶ τὸν αὐτὸς κισσὸν καὶ ἀμπέλων, οὐδὲ ταύτην τελεσίκαρπον, κτλ. (Strabo, xv 687. c. Arrian, *Anab.* v. 1 ff.).

Perhaps these stories were set afoot by Aristobulos and Kleitarchos, who accompanied Alexander's campaigns for the express purpose of glorifying them. Arrian (*loc. cit.*) makes it clear that Alexander himself desired and encouraged these inventions and flatteries, being by this time far gone in megalomania. He also makes it clear that sensible people mocked at these pretensions (*Anab.* v. 3, criticism by Eratosthenes). It is interesting to mark the misplaced ingenuity of these fabulists. Alexander could not well be allowed to outdo the god, so he merely re-discovers the town which Dionysos founded. Herakles, however, was at best but a demi-god, and, besides, an ancestor of his own; consequently there was nothing unseemly in feigning that Herakles had failed to capture Aornos, which Alexander, a greater son of Zeus, mastered (*ib.* iv. 28, v. 28). Aornos has been identified as Mahāban (q.v.), a precipitous stronghold above the Indus. The city of Nysa which Alexander discovered is thought to have lain at the foot of the peak of Koh-i-Mor,¹ a culmination of a spur of the Kunar range in the district of Bājaur, or Bājaur. If so, the Koh-i-Mor itself will be the Mt. Mēros of Arrian. According to T. H. Holdich (*Geogr. Journ.* vii. [1898] 42 ff.), a section of the Kāfir community of Kandesh² actually claim a Greek origin, and still chant hymns to the god who sprang from Gir Nysa ('mountain of Nysa'). Wild vines and ivy growing in profusion recall the classical attributes of the region (see the remarkable art. above quoted, where, on p. 48, some lines of a hymn are translated).

LITERATURE.—There is nothing known to the present writer except stray remarks in commentaries upon the ancient passages here quoted. W. J. WOODHOUSE.

0

OAHSPÉ.—The Book of Oahspe, though little known, possesses considerable interest for students of the pathology of religion; and from this point of view it is, perhaps, of greater value even than the Book of Morimon (for which see SAINTS, LATTER-DAY). Its author had evidently read fairly widely, the result being an indigested—and indigestible—farrago of superficial Orientalism, Gnosticism, baseless history, fantastic cosmology, Freemasonry, spiritualism, and fads of every sort, combined with hatred of Christianity.

The author of Oahspe was an American dentist, John Ballou Newbrough. According to his preface, he was a spiritualist who, about 1881, claimed to have received from 'angels' revelations which he took on a typewriter for half an hour daily. These lucubrations, which he was forbidden to read until, after fifty weeks, the whole work had been 'mechanically written through my hands by some other intelligence than my own,' form the Book of Oahspe. The followers of the religion are to call themselves 'Faithists,' and are to be pacifists, vegetarians, and altruists, besides avoiding intoxicants, drugs, and tobacco, and abolishing all competitive systems, national tariffs, national legislation, and the like.

To give a full analysis of the some 800 pages of Oahspe, with its multitudinous 'books,' would be futile, and only the most salient points will be noted here. The work is so named because 'it relates to earth, sky and spirit' (Oahspe, v. 2^o), but is not infallible (v. 2^o). It 'is not a destroyer of old systems or religions. It reveals a new one, adapted to this age, wherein all men shall be as brethren' (pref. to 1st ed.).

The Supreme Being is named Jehovih ('from the sounds the wind uttereth . . . E-O-Ih' [Book of Jehovih, 17]), who possesses two entities, unseen and potent (Es) and seen and impotent

(Corpor), Es being further divided into 'etherean' and 'atmospherean' worlds, only the former of which are inhabitable (*ib.* 1^o 2). Between Jehovih and mankind numerous beings intervene, the hierarchy being: Lord, Lord God, God, Orion Chief, Nirvanian Chief, and Jehovih. Those of immediate concern to man are the Lords and Gods, who are ex-mortals, and whose origin is as follows:

The earth and the family of the sun travel in an orbit requiring 4,700,000 years to traverse. Every 5000 years the earth passes through etherean lights, and angels from the second heaven come to earth. These form ties with mortals and cannot inherit the 'emancipated heavens' of Jehovih till their children are redeemed 'in wisdom and power even to the sixth generation.' The chief of these is called God, who appointed, among other assistants, Lords. At the end of the dominion of a God and his Lords, Jehovih sends ships from Etherea to them and to Brides and Bridegrooms and carries them 'up to the exalted regions I have prepared for them.' These are called Harvests, and take place every Dan (=six generations of mortals). When angels cohabit, they 'shall rise in wisdom and virtue; but such of them as cohabit with asuans [human beings] will bring forth heirs in the descending grade of life.' God and the Lords appoint Ashars as guardians of mortals, and Asaphs for the Es'yans, or spirits of the dead (*ib.* 7).

The first God was Sethantes, son of Jehovih; but there were many others—Ithua Mazda, who inspired Zarathustra, Yima, who inspired 'Po, Div, who inspired Brahma, Vishnu, who inspired Abram of Par'sic and (later) of Arabin'ya, and Os', who inspired Ea-Wah-Tah of N. Guatemala (N. America).

The world is now in its sixth era, which began when the Beast (self) divided itself into four heads—Brahman, Buddhist, Christian, and Muham-madan; but in the seventh era, which is now dawning, the Faithists will separate from the

¹ The Koh-i-Mor is visible from the Peshāwar valley. On its southern slope is the village of Nuzar, or Nusar.

² These live in the lower Bashgol valley—the Bashgol being an affluent of the Kunar river, joining it from the north-west some 40 miles below Chitral.

Uzians (the rest of mankind) and found Jehovah's kingdom on earth. This revelation was made in A.K. 33 (=A.D. 1881, the era of Kosmon beginning in A.D. 1848). There have also been sixteen cycles, whose Gods were Sethantes, Ah'shong, Hoo Le, C'pe Aban, Pathodices, Goemagak, Goepens, Hycis, See'iticius, Miscelitti, Gobath, Faiyis, Zineathaes, Tothsentaga, Nimeas, and Neph.

The earth is divided into Whaga (or Pan), Jud (Asia), Thouri (America), Volu (Africa), and Dis (Europe). Because of the general decay of mankind Whaga was submerged by a deluge, though a trace is left in Japan, or Zha' Pan, which means 'relic of the continent of Pan.' After the flood the kingdom passed 'near and over the land of Jaffeth' (China). Finally, after many vicissitudes, the dominion of the Lords and Gods on earth will be completed in Thouri, thus fulfilling what the I'hins of Whaga began (Lords' First Book, 1²³⁻⁴³; *65*; Synopsis of Sixteen Cycles, 3; Book of Aph, 4, 6; Sethantes, 11⁴⁻⁷). These I'hins, who were the 'mound-builders' and Puebloan Indians (First Book of First Lords, 3⁴⁻⁸; Book of Thor, 1¹⁹), were Abels, begotten of heaven and earth. Through association of man with Asu'ans (Adams) arose the Druks (Cains), who were idle, naked wanderers in the wilderness. 'The I'hins were white and yellow, but the Druks were brown and black; the I'hins were small and slender, but the Druks were tall and stout.' From the Druks and Asu'ans sprang the Yak, or 'ground people,' walking on all fours, and made eunuchs and servants by the I'hins. Asu'ans, Yaks, and Druks have all disappeared, except where the last have cohabited with I'hins, thus giving rise to the Phuans or Ong'wce (American Indians), who were 'red like copper; and they were taller and stronger than any other people in all the world' (First Book of First Lords, 1-3, 6).

The first Faithists were the Par'si'e (Persians), whom Jehovah 'created as a shield, to guard his chosen, the I'hins' (Lords' Fifth Book, 3⁴), and many of the great men in the Bible followed this religion. Thus, according to the 'Basis of Ezra Bible,' set forth in the Book of Savah, Moses, Samuel, Elijah, and the Prophets were Faithists, and from them sprang the Asenean (Essene) Association. From the Aseneans came Joshu in Nazareth, who 're-established Jehovah, and restored many of the lost rites and ceremonies. In the thirty-sixth year of Joshu's age he was stoned to death in Jerusalem by the Jews that worshipped the heathen gods' (cf. God's Book of Eskra, 42-44). Forty years later a false God, Loveamong, brought on war, and later 'changed his name and falsely called himself Christ, which is the Ahamic word for knowledge. And he raised up tribes of mortal warriors, who call themselves Christians, who are warriors to this day.'

Loveamong, with the other Triunes, Ennochissa and Kabalactes, endeavoured to overthrow Jehovah, assuming the names of Brahma, Budha, and Kriste to combat Ka'yu (Confucius), Sakaya (Buddha), and Joshu. But Loveamong failed to keep his word to his chief angel warrior, Thoth, or Gabriel, who rebelled in consequence, and raised up Muhammad. Muhammadanism is to perish first, then Brähmanism, then Buddhism, and finally Christianity. During the period treated by the Book of Es (c. 1448-c. 1848) there is an abrogation of revelations, ceremonies, etc., and liberty of thought begins to prevail. Melkazad is divinely sent to inspire a migration to Guatama, and he raises up Columbo to discover it to broaden the sphere of Jehovah's kingdom and to aid in overthrowing the Triunes and Thoth. Then Loveamong inspires his followers (Roman Catholics) to punish heresy, thus giving rise to Protestantism,

which also is inspired by evil spirits. The Pilgrim Fathers were inspired by the God, but corrupted by Loveamong; the Quakers were Faithists at heart. Thomas Paine was inspired by Jehovah, the other chief men 'raised up by God, to establish the foundation of Jehovah's kingdom with mortals,' being Jefferson, Adams, Franklin, Carroll, Hancock, and Washington. During the decay of Loveamong's kingdom petty Drujan Gods set up little principalities, such as Methodists, Presbyterians, and Baptists, while Pirad founded the Mormons, Lowgannus the Shakers, and Sayawan the Swedenborgians.

Jehovah's earlier struggles are recorded in the Book of Wars against Jehovah, but these need not be summarized, any more than the fantastic biography of Zoroaster in the Book of God's Word, or the life of Sakaya, who became a Zoroastrian (God's Book of Eskra, 24-29). The wildness of the work in history is evident when we say that it alleges that Buddhism and Christianity were made up chiefly from the history and miracles of Zoroaster, who flourished 8900 years ago; that Abram was a Persian; that Brahma, who lived 5800 years ago, re-established Zoroastrianism in India; and that Ea-Wah-Tah, Brahma's contemporary, established a United States of America, called O-pah-e-go-quin or Algonquin, which formed the model for the present country of that name.

There are three resurrections: the first, when the corporean doffs his mortal body and is born a spirit; the second, when the individual self is put off and an organic community is begun; and the third, when angels rise so high that they pass into Ethera (Sethantes, 14²; Book of Discipline, 1¹⁹ 2-4). As to those not yet prepared for future blessedness, Drujas, Fetals (spirits who graft themselves on mortals), and Es'yans are taken to 'a place in My exalted heavens suitable for them; and ye shall wall them about in heaven that they cannot escape, but that they may be weaned from evil' (Synopsis of Sixteen Cycles, 3¹⁸; cf. Book of Aph, 6³⁻¹¹).

The keynote of Jehovah's message to man is 'Order, Purity, Discipline, Justice, and Good Works—or, Retribution' (Book of Discipline, 3¹⁸). Asceticism, charity which does not make its recipient self-supporting, and missionary activity are condemned (celibacy is, however, regarded as higher than the married state); law is to be abrogated as necessity for it diminishes; freedom of opinion and of judgment is urged (*ib.* 26-29; Book of Inspiration, 11); and separatism from secular governments is advocated (Book of Jehovah's Kingdom on Earth, 26¹²⁻²⁰). Seven castes exist: prophets, those of highest lineage, priests, nuns, physicians, very rich, and very poor (First Book of God, 5¹³); and systems of government are threefold: monarchies, republics, and fraternities, the last being the highest (Book of Discipline, 11¹⁴). The doctrines are best summed up in Book of Judgment, 1³³⁻⁵⁰ 21¹⁸⁻²² (cf. Book of Discipline, 6, 9¹⁻²⁸).

About 1894 a community called Shalam was established by the Faithists in New Mexico, the most of its area of some 14,000 acres being for children (of non-Faithists) and their nurses, teachers, and caretakers. This was to be conducted according to the principles set forth in the Book of Jehovah's Kingdom on Earth. The remainder, called Levitica, is regulated by the rules of the Book of Gratiyus (not contained in Oahspe itself). Heavenly schools, factories, nurseries, etc., are repeatedly mentioned in the book; and what may have been intended as initiation rites are described in the Book of Savah.

The sect still survives, though its numbers are very small.

LITERATURE.—The first ed. of *Oathspe* was printed at Boston in 1882; a second ed., considerably changed, do. 1891 (reprinted London, 1910). See also C. L. Brewer, *Historical Outline of Oathspe*, the *Cosmic Bible*, San Francisco, n.d.; J. N. Jones,

Thaumdt-Oathspe, Melbourne, 1912. This sect publishes, at Los Angeles, Cal., *The Faithist Messenger*.

NT and Christian (W. ERNEST BEET), p. 434.
Semitic (M. A. CANNEY), p. 436.

OATH (Introductory and Primitive).—The oath¹ connects with the vow, the ordeal, the covenant, and the wager. Its definition must distinguish it from those, but we must recognize the fact that their primary constituent is the oath; they are special applications of it. A vow is not actually such, unless there is a personal condition realizable upon fulfilment; an ordeal 'involves an imprecation with reference to the guilt or innocence of a suspected person, and its proper object is to give reality to this imprecation, for the purpose of establishing the validity or invalidity of the suspicion.'² So in the Middle Ages 'an oath was an indispensable preliminary to every combat, and the defeat was thus not merely the loss of the suit, but also a conviction of perjury, to be punished as such.'³ But the oath of the ordeal was tested immediately. A covenant—the blood-covenant, e.g.—has no force except from the fact that it is 'accompanied by curses or self-imprecations,'⁴ and it is mutual. With regard to the distinction between the oath and the covenant, it is clear that the latter is a mutual oath. A good parallel is to be found in the distinction between the Moroccan *l'ār*, the individual oath, and *l'āhēd*, the mutual, 'both parties transferring conditional curses to one another.'⁵ A wager, as in the old Roman method of action at law, is also a mutual process, and involves the oath in the form of a promise to pay. The ethical significance of the oath is, throughout, personal responsibility. As such, it is eminently fitted for legal use, and has always figured conspicuously in the legal process of all races; it is still, in the highest civilizations, a formal guarantee of truthfulness, both in courts of law and in ordinary social intercourse, and still retains some of its primitive supernatural force and dignity, which seem to have been based originally upon the magical power of the spoken word, and later upon the appeal to a supernatural being.

The *OED* defines oath as 'a solemn and formal appeal to God (or to a deity or something held in reverence or regard), in witness of the truth of a statement, or the binding character of a promise or undertaking.' This definition is defective, because many primitive oaths have no appeal to anything 'held in reverence or regard,' but are absolutely direct; there is only the personal will or wish. Tylor defined an oath as 'an asseveration or promise made under non-human penalty or sanction.'⁶ But oaths can be taken under human sanctions and upon living persons, just as a life may be insured.

Westermarck developed the conception of oath by emphasizing, not its indirect reference, but its essential character.

'An oath is essentially a conditional self-imprecation, a curse by which a person calls down upon himself some evil in the event of what he says not being true. The efficacy of the oath is originally entirely magical, it is due to the magic power inherent in the cursing words.'⁷

But the essence of 'cursing and swearing' was in existence before human speech was at all well

developed, and the efficacy of the spoken word was no doubt preceded by the efficacy of emotion, of the inarticulate will or wish. To complete the definition proposed by Westermarck, it is necessary to note that where a magical process is involved the imprecation is frequently not formally expressed; but a magical process may imply an imprecation, or itself be actually the imprecation, translated from words into matter.¹ When oath gives place to solemn affirmation, the guarantee of good faith and of truth-speaking is now in the moral sphere of personality; there is no more magic or religion. The process has this in common with the pre-animistic, that its essence is emotional—the emotion being that of self-respect and personal responsibility. And this has always been 'the nature of an oath.'

1. Early forms.—The oath in the form of a pure self-imprecation without a medium (or object sworn upon, or, rather, with which contact is established) or reference to a helper, witness, or punisher (king, spirit, or god), is naturally rarely found, but *a priori* it should precede the materialistic magical oath or the spiritualistic. A man may say or wish, 'May I be hurt, or die, if what I say is untrue!' and such a process may clearly be antecedent to elaborate use of objects and spirits. Even in advanced culture, when religious sanctions are real and, later, customary, this mode is natural and frequent, both in serious (though not public) swearing and in profane oaths like 'Damn me!' where there is no real reference to a divine power. In cases like that of the Sumatran oath, and a story by Eusebius, we do not know the form of the oaths, but they may have been merely spoken wishes without references. Marsden writes that the Sumatran swears thus:

'If what I now declare is truly and really so, may I be freed and cleared from my oath; if what I assert is wittingly false, may my oath be the cause of my destruction.'² The 'oath' here may be the object sworn by or merely the spoken word, which in primitive thought early acquired an almost material substance, and was fully material when written.

Eusebius records that three men accused Bishop Narcissus and confirmed the charge by solemn oaths, the first that he might perish by fire, the second, by pestilence, the third, that he might lose his sight. These self-imprecations were fulfilled.³

'The Dharkār and Majhwār in Mirzapur, believe that a person who forswears himself will lose his property and his children; but as we do not know the contents of the oath, it is possible that destruction of the latter is not ascribed to mere contagion, but is expressly imprecated on them by the swearer.'⁴

The oath is in the first place a curse, and the 'magic power inherent in the cursing words'⁵ is its essence. The words may come to be regarded as a form of *mana*, magical power, semi-material and semi-spiritual.

Thus, in old Teutonic folklore, the curse settles and takes flight, like a bird.⁶ The Irish believed that 'a curse once uttered must alight on something.'⁷ 'To take an oath of any

sort is always a matter of great concern among the Bedouins. It seems as if they attached to an oath consequences of a supernatural kind.¹ An oath must be taken at a distance from the encampment, 'because the magical nature of the oath might prove pernicious to the general body of Arabs.'² 'The curse,' says Westermarck, 'is looked upon as a baneful substance, as a miasma which injures or destroys anybody to whom it cleaves.'³ Therefore Arabs, 'when being cursed, sometimes lay themselves down on the ground so that the curse, instead of hitting them, may fly over their bodies.'³

'The punishing power of a word is particularly conspicuous in the case of an oath,'⁴ and its contagious character resembles that which is attributed to tabued persons and things, and it acts mechanically.

Berbers undress when about to take an oath, and Westermarck concludes that the real reason is 'a vague idea that the absence of all clothes will prevent the oath from clinging to themselves. They say that it is bad not only to swear, but even to be present when an oath is taken by somebody else.'⁵

Passing from the oath 'on' the swearer's self, we come to what are apparently cases of substitution. An intermediate stage is swearing on this or that part of the swearer's person.

In Samoa a man says, 'Touch your eyes if what you say is true.'⁶ This is putting a conditional curse on his eyes. So the Romans swore by eyes and head.⁷

When a man swears to his truthfulness or innocence 'on' another person, the oath may be a conditional curse on that person, as a substitute for the swearer, or as if the swearer had insured that person's life, especially if held in reverence.

Thus, it is common for a man to swear on his children or parents. The Tungus swears, 'May I lose my children and my cattle!'⁸ The same oath is found in Mirzapur, and is common in the N.W. Provinces of India. Men swear on the heads of their children, or hold a child in their arms. 'May my children die if I lie!' says the Kol.⁹ In Ashanti a criminal may swear on the king's life, and is then pardoned, or harm would result to the king.¹⁰ The Hottentots hold that the highest oath that a man can take is 'by his eldest sister.'¹¹

2. The embodied oath.—The largest class of oaths in the early and middle cultures, continuing also into the higher, is that in which the swearer swears 'by' or 'on' some object, powerful, dangerous, or sacred, or some person or animal with like qualities. This form of oath involves some questions of theory which will be discussed after some typical examples have been submitted.

In N.W. India a cock is killed and, as the blood is poured on the ground, the oath is taken 'over it.'¹² The Khond swears on a tiger-skin, praying for death from a tiger if he lies, upon a lizard-skin 'whose scalliness they pray may be their lot if forsworn,' or upon an ant-hill 'that they may be reduced to powder.'¹³ The Naga of Assam stands within a circle of rope, praying that he may rot as a rope rots, or he holds a gun-barrel, a spear, or a tiger's tooth, saying, 'If I do not faithfully perform my promise, may I fall by this!'¹⁴ The Ostyak imitates the act of eating and calls on a bear to devour him.¹⁵ 'The Iowa have a mysterious iron or stone, wrapped in seven skins, by which they make men swear to speak the truth. The people of Kesam . . . swear by an old sacred knife, the Bataks of South Toba on their village idols, the Ostyaks on the nose of a bear.'¹⁶ The Moors lend efficacy to an oath by placing it in contact with, or making it in the presence of, 'any lifeless object, animal, or person endowed with *baraka*, or holiness, such as a saint-house or a mosque, corn or wool, a flock of sheep or a horse, or a shereef.'¹⁷ The last is a comprehensive example. The oath upon sacred relics was prevalent in medieval Christendom, and 'so little respect was felt for the simple oath that the adjuncts came to be looked upon as the essential feature, and the imprecation itself to be divested of binding force without them.'¹⁸

The Latins swore by *Jupiter lapis*, holding the sacred stone in the hand.¹ The Athenian archons stood on a sacred stone and swore to rule righteously.² The ancient Danes swore on stones, and the same oath is recorded of the islanders of Iona.³ In Samoa the accused lays his hand on the sacred stone of the village, and says, 'I lay hand on the stone. If I stole the thing, may I speedily die!'⁴ The Old Prussians placed the right hand on the neck and the left on the holy oak, saying, 'May Perkun (the thunder-god) destroy me!'⁵ The Lombards swore 'lesser' oaths on consecrated weapons, 'greater' on the Gospels.⁶ The chief oath of the Danes was on a sacred ring; their oath to Alfred was taken on this.⁷ The Ksatryia swore by his weapons or his horse.⁸ The mediæval knight swore 'super arma.'⁹ Achilles swore by his sceptre.¹⁰ Mediæval theory distinguished the written or spoken oath from that which was ratified by contact with or inspection of a sacred object. The latter was a corporal or bodily oath, and the sacred object was a 'haldomc.'¹¹ A frequent oath among the Bedāwin was 'to take hold with one band of the *wasat*, or middle tent-pole, and to swear by the life of this tent, and its owners.'¹² The most stringent oath among Hindus is that in which water of the Ganges is held in the hand.¹³ Similarly, the Homeric gods swore by the river Styx.¹⁴ Other natural forces, such as the sun and moon, are frequently sworn by,¹⁵ as Westermarck supposes, because of 'their superior knowledge' as all-seeing.

Arabs swore by dipping hands in the blood of a camel. The Sānsiya swear over the blood of a cock. The Homeric oath, given by Tyndareus for the defence of Helen, was taken standing on a sacrificed steed.¹⁶ The old Danish ring held during the oath was sprinkled with the blood of a bull.¹⁷ Hannibal's famous oath, or vow, against Rome was taken 'tactus sacris'; and the Homeric Greeks laid the hand on the sacrifice,¹⁸ as the mediæval European touched the altar or the relics. So Harold is depicted in the Bayeux tapestry.¹⁹ Another method of the Nāgas of Assam (involving a mutual oath) is for the two men to hold a dog which is chopped in two; this is emblematic of the fate which will befall the perjurer.²⁰ According to one interpretation of a Roman oath, the swearer invoked the heaven god, while a hog was slain with the sacred flint-stone, representing the god's thunderbolt, and he prayed, 'So smite the Roman people if they break the oath!'²¹ 'The Tungus brandishes a knife before the sun, saying, "If I lie may the sun plunge sickness into my entrails like this knife."'²²

It is perhaps in accordance with primitive thought at one stage of its development that the strongest of all oaths is that in which the sacred object, or medium, is eaten or drunk.

Frazer regards this process as being the differentia of the 'Aino sacrament.'²³ The Tenimberese dip a sword in their own blood and drink it, praying for death if they are forsworn.²⁴ So, in Malaysia, water is drunk in which daggers, spears, or bullets have been dipped; 'May I be eaten up by this dagger or spear!' is the formula.²⁵ The Tunguses have another oath, in which the swearer drinks the blood of a dog, the throat of which has been cut and its flesh cut up. The swearer says, 'I speak the truth, and that is as true as it is that I drink this blood. If I lie, let me perish, burn, or be dried up like this dog.'²⁶ The Chuvashes place bread and salt in the mouth, and pray, 'May I be in want of these, if I say not true!'²⁷ The 'great oath' of the Tibetans includes the eating of a portion of an ox's heart.²⁸ The Masal drinks blood, saying, 'If I have done this deed, may God kill me!' If he is innocent, no harm happens; if guilty, it is expected that he should die in a fortnight.²⁹ On the Gold Coast a man taking an oath eats or drinks something which has a connexion with a deity, who is invoked to punish him if he forswears himself.³⁰ Elsewhere on the Gold Coast an accused man had to drink the 'oath-draught' and pray that the fetish may slay him if guilty.³¹ 'If I have been guilty of this crime, then,

Mblam i thou deal with me!', swears the accused in Calabar,¹ after drinking filth and blood, the ju-ju drink, *mblam*. So with the majority of ordeale, their essence being an oath, a self-imposed imprecation.²

3. Psychology of the oath.—The above-cited examples illustrate the more primitive forms of oath. It seems probable that eating or drinking the 'oath' is the latest of these forms, and that the earliest is the merely verbal self-imprecation. As for the original meaning of the employment of a concrete object, sacred or otherwise, which itself comes to be regarded as the 'oath,'³ containing, as it does, the words or the power of the curse, ready to act with mechanical precision if the swearer has lied, the principle is clearly magical, passing into symbolism as the belief in magic decays. But the question remains as to what psychological process developed the employment of a concrete object.

'Sometimes,' says Westermarck, 'the person who takes the oath puts himself in contact with some object which represents the estate referred to in the oath, so that the oath may absorb, as it were, its quality and communicate it to the perjurer.' 'In other cases the person . . . takes hold of a certain object and calls it to inflict on him some injury if he perjure himself.'⁴ Again, 'another method of charging an oath with supernatural energy is to touch, or to establish some kind of contact with, a holy object on the occasion when the oath is taken.' Such are some of the methods of increasing the magical power 'inherent in the cursing words.'⁵

At a stage of religious evolution when sacred objects are in being, it is natural that they should be employed to strengthen the oath. Later still, the oath is strengthened by contact with a god, or his name is invoked, or a sacrifice is made. But in earlier stages, when the object or medium is not sacred of itself, but indifferent, how came it to be used in a magical way and on magical principles? A large proportion of primitive oaths are cases of imitative magic. The swearer, for instance, may apply a spear to his body and pray that he may be slain by the spear if he is forsworn. But is such ritual due to a belief in imitative magic? It seems more probable that an act of pre-imitation (so characteristic of early psychology) came to be employed as a mode of realizing the nature of an oath, and that from this was developed the magical force of the embodied words. Pantomime led to imitative magic, not *vice versa*. In such cases as where a man stands on a stone and the strength of stone adds confirmation to his words,⁶ there is natural association of ideas, which may lead to a belief in a magical connexion.

4. The oath and the god.—When the theistic stage of religion is reached, and the god subsumes in his own person a multitude of holy lines of force, the oath is brought into connexion with the god. But even here the connexion remains magical for a considerable time, before it decays into a symbolic relation or is changed into that between offender and punisher.

'The oaths which the Moors swear by Allah are otherwise exactly similar in nature to those in which he is not mentioned at all. But the more the belief in magic was shaken, the more the spoken word was divested of that mysterious power which had been attributed to it by minds too apt to confound words with facts, the more prominent became the religious element in the oath. The fulfilment of the self-imprecation was made dependent upon the free will of the deity appealed to, and was regarded as the punishment for an offence committed by the perjurer against the god himself.'⁷

When the god is appealed to, the appeal may be for his help or his witness; or, again, his divine name may be invoked, and in case of perjury the power of the name, thus wrongly used, will punish the forswearer. In many cases there is merely an

act of transference; the swearer, so to say, hands his oath over to the god, who will deal with it according to the innocence or guilt of the swearer.

The god Mwetyi, in S. Guinea, is 'invoked as a witness, and is commissioned with the duty of visiting vengeance upon the party who shall violate the agreement.'¹ The Comanche Indian calls upon the great spirit and earth to testify to the truth of his oath.² The Solomon Islander swears by a *tindalo*, 'spirit.'³ The Greek said, 'Let God know,' 'Let Zeus know'; the Latin, 'I call to witness,' among other things, the ashes of his forefathers. The Egyptian called Thoth to witness;⁴ he would also swear by the name of the Pharaoh.⁵

The ordinary 'invocation' of a deity is a vague appeal,⁶ but it seems that the phrases corresponding to 'by,'⁷ common in most languages, imply that the god is a helper or a guarantor.

When contact is established between the swearer and objects belonging to or representative of the deity, the principles of magic apply, for the punishment is mechanically administered by means of the sacred object. Traces of the emotion which prompts these ideas may be found even when magic is superseded by symbolism or mere reverence.

Laying the hand on the altar, the sacrifice, or the sacred relics is a regular method where these holy paraphernalia are existent.⁸

The Iranian swore before a bowl of water containing incense, brimstone, and one *danak* of molten gold.⁹ 'To make an oath binding,' the Gold Coast people give the swearer 'something to eat or drink which in some way appertains to a deity, who is then invoked to visit a breach of faith with punishment.'¹⁰ So in mediæval Europe the host was eaten, and the swearer prayed that it might choke him, if he lied.¹¹

When the priesthood is influential, an oath may be made on the priestly person, as by the Hindu touching the legs of a Brâhman.¹²

By far the most usual medium in the higher religions is to touch, hold, or kiss the sacred books of the faith.

The Hindu swears on the Sanskrit *Hari vanâ*; the Muhammadan on the Qur'an; the Jew on the Hebrew Bible; the Christian on the 'book,' viz. the New Testament.¹³ The old Lombards swore the 'greater oath' on the Gospels.¹⁴ The Sikh swears on the Granth; the Iranian on the Avesta.¹⁵ In mediæval Europe the book was laid on the altar.¹⁶ The words of Chrysostom show an early development in the Christian Church, possibly due to the Jewish practice, which itself has been said to be a loan from the Roman.¹⁷ He writes: 'Do thou, if nothing else, at least reverence the very book thou holdest forth to be sworn by, open the Gospel thou takest in thy hands to administer the oath, and, hearing what Christ therein saith of oaths, tremble and delect.'¹⁸ The practice of kissing the book appears quite early in the Middle Ages.

5. Various rituals.—The ritual and rules of oath have interesting varieties.

Greeks and Latins distinguished between the sexes in the oaths proper to each. Both Greek and Jew lifted up the hand. The French and the Scots raise the right hand, saying respectively, 'Je jure,' and 'I swear by Almighty God.'¹⁹

Among formulæ there is as early as Justinian the lengthy invocation:

'I swear by God Almighty, and His only begotten Son our Lord Jesus Christ, and the Holy Ghost, and the Most Holy Glorious Mother of God and ever Virgin Mary, and by the Four Gospels which I hold in my hand, and by the Holy Archangels Michael and Gabriel,' etc.²⁰

Derived from Latin idiom, the phrase, 'So help me God!' and its varieties have persisted. 'Sic me adjuvet Deus!' was used in Charlemagne's

days; old French had 'Si m'ait Dex'; German, 'So mir Gott helfe.' Hebrew variations were, 'As the Lord liveth and as thy soul liveth,' 'By the life of,' 'So do God to me and more also!'

The selection of an object to swear by has given play to the imagination, and in other cases has been determined by special circumstances.

Instead of swearing by the *genius* of the emperor, the early Christians swore by his safety, to avoid possible idolatry.¹ The Brāhman swore by truth, or by his own good deeds;² Telemachus by the sorrows of his father.³ In mediæval Europe a man swore by his beard or his name, or by the head of God. There was a 'great oath' 'per Regiam majestatem.' William the Conqueror swore 'by the splendour of God,' the most magnificent oath in history;⁴ also 'per creaturas.' Rufus swore 'per hoc et per hoc'; Richard I. by God's legs; John Lackland by God's teeth.⁵

The profane oath, used to emphasize an asseveration, has many quaint varieties in all languages.

The Latin was fond of *me hercle*!; the Italian is addicted to *per Bacco*. The Elizabethan English used many curious conversational oaths, mostly modelled on the official formula, such as 'Zounds' ('God's wounds'), 'Odsbodkins' ('God's body'), 'Sdeath' ('God's death'). A pious instinct prompted substitution, to avoid using the sacred name, hence *morbleu* ('mort Dieu'). Similarly Socrates swore 'by the dog,' 'by the cabbage,' and 'by the —'; Lampon 'by the goose,' as did Socrates also.

6. Penalty of false oath.—Whatever the ritual and formula of the oath, or the nature of the object with which the oath is brought into contact, the practical sense is the conditional punishment for perjury. The fear of magic power in the primitive mind has the same value as the fear of God; behind both is the fear of retribution. It was psychologically inevitable that the oath should come to be based on the moral resentment of a deity. Even in the case of the African swearing by a fetish or the New Hebridean invoking punishment from the spirits, man's personal responsibility puts itself in the hands of a retributory power. And from the earliest stages the community, in some way or other, has made real the supernatural penalty, either by shamanistic terrorizing or by prosecution for perjury.

If, as Westermarck holds, the god in early thought is, even though appealed to, 'a mere tool in the hand of the person invoking him,' since the efficacy of an oath is magical,⁶ yet the fear of retribution is still present, and in the highest cultures this conception probably overrides the idea of 'the moral nature of the Divinity' being depreciated. This view of the god's relation to perjury, as to other crimes, is clearly a late sophistication, without any practical social meaning. Grotius was therefore mistaken when he wrote that even the man swearing by false gods is bound by his oath 'because, though under false notions, he refers to the general idea of godhead, and therefore the true God will interpret it as a wrong to himself if perjury be committed.'⁷ God and His equivalents are the supreme and supernatural sanction of the judgments of the social organism. It is precisely because of this principle that the gods have come to be regarded as all-good no less than all-powerful.

'If, e.g., Westermarck notes, 'a god is frequently appealed to in oaths, a general hatred of lying and unfaithfulness may become one of his attributes. . . . There is every reason to believe that a god is not, in the first place, appealed to because he is looked upon as a guardian of veracity and good faith, but that he has come to be looked upon as a guardian of these duties because he has been frequently appealed to in connection with them.'⁸

In turn the god's perfect veracity and hatred of a lie make the supernatural sanction stronger.

The process by which an oath becomes personified into an oath-deity presents no psychological difficulty, nor that by which a god, like Zeus, sub-

sumes the attribute of an avenger of perjury. The Erinyes of the Greeks were personified oaths and curses; so, too, were the Arai. It is significant, however, that Horkos hardly became a deity; the oath-object was too much of a fetish to develop independently into anything higher.

Owing to its invocation of supernatural sanction, perjury is considered the most heinous of all acts of falsehood.⁹ Like all gross crimes, it is supposed to disseminate a contagious miasma.² The Greeks held that, if not punished in this life, it would be after death.³ Such cases as are extant of its being ignored by custom or law are probably due to some transitional stage in the social régime, when, e.g., custom was giving place to law, or to a certain decadence. Westermarck quotes the Rejangs of Java, some Battak of Sumatra, early Greeks, Hebrews, and Teutons, as having no penalty for perjury.⁴ There are indications that the early Romans also ignored the crime. But, as Westermarck adds, if not regarded as a crime, it was regarded as a sin, in which case the shamanistic machine would effectively carry out the required retribution.

Kafirs and Malays punish it severely. The old Hindus banished or fined the perjurer. The cutting off of the right hand, uplifted during the oath, was the penalty among the ancient Scandinavians and Teutons, and lasted into the Middle Ages, and beyond.⁵

7. Applications of oath.—Among the applications of the oath and the institutions which essentially involve it, the following may be noted briefly, in order to illustrate the general range of the oath:

Early kings, especially of the magical type, may have been constrained by some form of shamanistic engagement. The kings of Mexico swore to make the sun to shine, the rain to fall, and the crops to grow.⁶ On similar principles gods were believed to swear among Hindus, Hebrews, Greeks, and Romans.⁷ Gods swore in human fashion, lifting up the right hand.⁸ A Homeric god, forsworn by the Stygian oath, was exiled for nine years.⁹

The archons, generals, and other officials of Athens swore oaths on taking office. The official oath was more prominent there, it seems, than in Rome. The emphasis placed upon the oath in mediæval Christian theory seems to have developed the coronation-oath, which also brought the monarch, in a sense, into responsible contact with the Church. This oath still survives in constitutional and other monarchical régimes. Both Greek and Roman soldiers took an oath. The Roman *sacramentum* included an *execratio*, but Tylor traces it to the Roman legal wager, according to which each party to a suit paid money into court, forfeiting his pledge in case of defeat.¹⁰ Originally this legal *sacramentum* may have been accompanied by a self-imprecation. It is supposed that the military *sacramentum* developed into an oath of fealty to the emperor.¹¹ In the Athenian *ἀνάκρισις*, preliminary stage of a suit, each party swore.¹²

Primitive examples of the oath at law are not wanting. On the Slave Coast of W. Africa the god Mawu is appealed to not only by the parties, but by the judge.¹³

The majority of ordeals are really concrete oaths taken by the accused party, and the self-imprecation is realized immediately. In modern law the legal oath is taken by witnesses alone, though the juror's oath survives. This is in direct opposition to the mediæval principle, which developed considerable abuses in the practice of compurgation (*q.v.*). Evidence was not wanted; only proofs were asked for, and, in default of proof, an oath. This could be multiplied by one or more *compurgatores*, practically witnesses to the truth of the party's oath of innocence or right. When unsupported, the party swore 'sua manu.' According to the number of his *compurgatores*, he swore by any number of 'hands.' A bishop of Ely swore 'centesima manu,' and as many as 300 are recorded. The *compurgatores* laid their hands on the *pyz*.

Mblam! thou deal with me!', swears the accused in Calahar,¹ after drinking filth and blood, the ju-ju drink, *mblam*. So with the majority of ordeals, their essence being an oath, a self-imposed imprecation.²

3. Psychology of the oath.—The above-cited examples illustrate the more primitive forms of oath. It seems probable that eating or drinking the 'oath' is the latest of these forms, and that the earliest is the merely verbal self-imprecation. As for the original meaning of the employment of a concrete object, sacred or otherwise, which itself comes to be regarded as the 'oath,'³ containing, as it does, the words or the power of the curse, ready to act with mechanical precision if the swearer has lied, the principle is clearly magical, passing into symbolism as the belief in magic decays. But the question remains as to what psychological process developed the employment of a concrete object.

'Sometimes,' says Westermarck, 'the person who takes the oath puts himself in contact with some object which represents the state referred to in the oath, so that the oath may absorb, as it were, its quality and communicate it to the perjurer.' 'In other cases the person . . . takes hold of a certain object and calls it to inflict on him some injury if he perjure himself.'⁴ Again, 'another method of charging an oath with supernatural energy is to touch, or to establish some kind of contact with, a holy object on the occasion when the oath is taken.' Such are some of the methods of increasing the magical power 'inherent in the cursing words.'⁵

At a stage of religious evolution when sacred objects are in being, it is natural that they should be employed to strengthen the oath. Later still, the oath is strengthened by contact with a god, or his name is invoked, or a sacrifice is made. But in earlier stages, when the object or medium is not sacred of itself, but indifferent, how came it to be used in a magical way and on magical principles? A large proportion of primitive oaths are cases of imitative magic. The swearer, for instance, may apply a spear to his body and pray that he may be slain by the spear if he is forsworn. But is such ritual due to a belief in imitative magic? It seems more probable that an act of pre-imitation (so characteristic of early psychology) came to be employed as a mode of realizing the nature of an oath, and that from this was developed the magical force of the embodied words. Pantomime led to imitative magic, not *vice versa*. In such cases as where a man stands on a stone and the strength of stone adds confirmation to his words,⁶ there is natural association of ideas, which may lead to a belief in a magical connexion.

4. The oath and the god.—When the theistic stage of religion is reached, and the god subsumes in his own person a multitude of holy lines of force, the oath is brought into connexion with the god. But even here the connexion remains magical for a considerable time, before it decays into a symbolic relation or is changed into that between offender and punisher.

'The oaths which the Moors swear by Allah are otherwise exactly similar in nature to those in which he is not mentioned at all. But the more the belief in magic was shaken, the more the spoken word was divested of that mysterious power which had been attributed to it by minds too apt to confound words with facts, the more prominent became the religious element in the oath. The fulfilment of the self-imprecation was made dependent upon the free will of the deity appealed to, and was regarded as the punishment for an offence committed by the perjurer against the god himself.'⁷

When the god is appealed to, the appeal may be for his help or his witness; or, again, his divine name may be invoked, and in case of perjury the power of the name, thus wrongly used, will punish the forswearer. In many cases there is merely an

act of transference; the swearer, so to say, hands his oath over to the god, who will deal with it according to the innocence or guilt of the swearer.

The god Mwetyi, in S. Guinea, is 'invoked as a witness, and is commissioned with the duty of visiting vengeance upon the party who shall violate the agreement.'¹ The Comanche Indian calls upon the great spirit and earth to testify to the truth of his oath.² The Solomon Islander swears by a *indalo*, 'spirit.'³ The Greek said, 'Let God know,' 'Let Zeus know'; the Latin, 'I call to witness,' among other things, the ashes of his forefathers. The Egyptian called Thôth to witness;⁴ he would also swear by the name of the Pharaoh.⁵

The ordinary 'invocation' of a deity is a vague appeal,⁶ but it seems that the phrases corresponding to 'by,'⁷ common in most languages, imply that the god is a helper or a guarantor.

When contact is established between the swearer and objects belonging to or representative of the deity, the principles of magic apply, for the punishment is mechanically administered by means of the sacred object. Traces of the emotion which prompts these ideas may be found even when magic is superseded by symbolism or mere reverence.

Laying the hand on the altar, the sacrifice, or the sacred relics is a regular method where these holy paraphernalia are existent.⁸

The Iranian swore before a bowl of water containing incense, brimstone, and one *danak* of molten gold.⁹ 'To make an oath binding,' the Gold Coast people give the swearer 'something to eat or drink which in some way appertains to a deity, who is then invoked to visit a breach of faith with punishment.'¹⁰ So in mediæval Europe the host was eaten, and the swearer prayed that it might choke him, if he lied.¹¹

When the priesthood is influential, an oath may be made on the priestly person, as by the Hindu touching the legs of a Brâhman.¹²

By far the most usual medium in the higher religions is to touch, hold, or kiss the sacred books of the faith.

The Hindu swears on the Sanskrit *Harivamśa*; the Muhammadan on the Qur'an; the Jew on the Hebrew Bible; the Christian on the 'book,' viz. the New Testament.¹³ The old Lombards swore the 'greater oath' on the Gospels.¹⁴ The Sikh swears on the Granth; the Iranian on the Avesta.¹⁵ In mediæval Europe the book was laid on the altar.¹⁶ The words of Chrysostom show an early development in the Christian Church, possibly due to the Jewish practice, which itself has been said to be a loan from the Roman.¹⁷ He writes: 'Do thou, if nothing else, at least reverence the very book thou holdest forth to be sworn by, open the Gospel thou takest in thy hands to administer the oath, and, hearing what Christ therein saith of oaths, tremble and desist.'¹⁸ The practice of kissing the book appears quite early in the Middle Ages.

5. Various rituals.—The ritual and rules of oath have interesting varieties.

Greeks and Latins distinguished between the sexes in the oaths proper to each. Both Greek and Jew lifted up the hand. The French and the Scots raise the right hand, saying respectively, 'Je jure,' and 'I swear by Almighty God.'¹⁹

Among formulæ there is as early as Justinian the lengthy invocation:

'I swear by God Almighty, and His only begotten Son our Lord Jesus Christ, and the Holy Ghost, and the Most Holy Glorious Mother of God and ever Virgin Mary, and by the Four Gospels which I hold in my hand, and by the Holy Archangels Michael and Gabriel,' etc.²⁰

Derived from Latin idiom, the phrase, 'So help me God!' and its varieties have persisted. 'Sic me adjuvet Dens!' was used in Charlemagne's

days; old French had 'Si m'ait Dex'; German, 'So mir Gott helfe.' Hebrew variations were, 'As the Lord liveth and as thy soul liveth,' 'By the life of,' 'So do God to me and more also!'

The selection of an object to swear by has given play to the imagination, and in other cases has been determined by special circumstances.

Instead of swearing by the *genius* of the emperor, the early Christians swore by his safety, to avoid possible idolatry.¹ The Brāhman swore by truth, or by his own good deeds;² Telemachus by the sorrows of his father.³ In mediæval Europe a man swore by his beard or his name, or by the head of God. There was a 'great oath' 'per Regiam majestatem.' William the Conqueror swore 'by the splendour of God,' the most magnificent oath in history;⁴ also 'per creaturas.' Rufus swore 'per hoc et per hoc'; Richard I. by God's legs; John Lackland by God's teeth.⁵

The profane oath, used to emphasize an asseveration, has many quaint varieties in all languages.

The Latin was fond of *me hercle*!; the Italian is addicted to *per Bacco*. The Elizabethan English used many curious conversational oaths, mostly modelled on the official formulae, such as 'Zounds' ('God's wounds'), 'Odsbodkins' ('God's body'), 'Sdeath' ('God's death'). A pious instinct prompted substitution, to avoid using the sacred name, hence *morbleu* ('mort Dieu'). Similarly Socrates swore 'by the dog,' 'by the cabbage,' and 'by the —'; Lampon 'by the goose,' as did Socrates also.

6. Penalty of false oath.—Whatever the ritual and formula of the oath, or the nature of the object with which the oath is brought into contact, the practical sense is the conditional punishment for perjury. The fear of magic power in the primitive mind has the same value as the fear of God; behind both is the fear of retribution. It was psychologically inevitable that the oath should come to be based on the moral resentment of a deity. Even in the case of the African swearing by a fetish or the New Hebridean invoking punishment from the spirits, man's personal responsibility puts itself in the hands of a retributory power. And from the earliest stages the community, in some way or other, has made real the supernatural penalty, either by shamanistic terrorizing or by prosecution for perjury.

If, as Westermarck holds, the god in early thought is, even though appealed to, 'a mere tool in the hand of the person invoking him,' since the efficacy of an oath is magical,⁶ yet the fear of retribution is still present, and in the highest cultures this conception probably overrides the idea of 'the moral nature of the Divinity' being depreciated. This view of the god's relation to perjury, as to other crimes, is clearly a late sophistication, without any practical social meaning. Grotius was therefore mistaken when he wrote that even the man swearing by false gods is bound by his oath 'because, though under false notions, he refers to the general idea of godhead, and therefore the true God will interpret it as a wrong to himself if perjury be committed.'⁷ God and His equivalents are the supreme and supernatural sanction of the judgments of the social organism. It is precisely because of this principle that the gods have come to be regarded as all-good no less than all-powerful.

If, e.g., Westermarck notes, 'a god is frequently appealed to in oaths, a general hatred of lying and unfaithfulness may become one of his attributes. . . . There is every reason to believe that a god is not, in the first place, appealed to because he is looked upon as a guardian of veracity and good faith, but that he has come to be looked upon as a guardian of these duties because he has been frequently appealed to in connection with them.'⁸

In turn the god's perfect veracity and hatred of a lie make the supernatural sanction stronger.

The process by which an oath becomes personified into an oath-deity presents no psychological difficulty, nor that by which a god, like Zeus, sub-

sumes the attribute of an avenger of perjury. The Erinyes of the Greeks were personified oaths and curses; so, too, were the Arni. It is significant, however, that Horkos hardly became a deity; the oath-object was too much of a fetish to develop independently into anything higher.

Owing to its invocation of supernatural sanction, perjury is considered the most heinous of all acts of falsehood.¹ Like all gross crimes, it is supposed to disseminate a contagious miasma.² The Greeks held that, if not punished in this life, it would be after death.³ Such cases as are extant of its being ignored by custom or law are probably due to some transitional stage in the social régime, when, e.g., custom was giving place to law, or to a certain decadence. Westermarck quotes the Rejangs of Java, some Battak of Sumatra, early Greeks, Hebrews, and Teutons, as having no penalty for perjury.⁴ There are indications that the early Romans also ignored the crime. But, as Westermarck adds, if not regarded as a crime, it was regarded as a sin, in which case the shamanistic machine would effectively carry out the required retribution.

Kafirs and Malays punish it severely. The old Hindus banished or fined the perjurer. The cutting off of the right hand, uplifted during the oath, was the penalty among the ancient Scandinavians and Teutons, and lasted into the Middle Ages, and beyond.⁵

7. Applications of oath.—Among the applications of the oath and the institutions which essentially involve it, the following may be noted briefly, in order to illustrate the general range of the oath:

Early kings, especially of the magical type, may have been constrained by some form of shamanistic engagement. The kings of Mexico swore to make the sun to shine, the rain to fall, and the crops to grow.⁶ On similar principles gods were believed to swear among Hindus, Hebrews, Greeks, and Romans.⁷ Gods swore in human fashion, lifting up the right hand.⁸ A Homeric god, forsworn by the Stygian oath, was exiled for nine years.⁹

The archons, generals, and other officials of Athens swore oaths on taking office. The official oath was more prominent there, it seems, than in Rome. The emphasis placed upon the oath in mediæval Christian theory seems to have developed the coronation-oath, which also brought the monarch, in a sense, into responsible contact with the Church. This oath still survives in constitutional and other monarchical régimes. Both Greek and Roman soldiers took an oath. The Roman *sacramentum* included an *execratio*, but Tylor traces it to the Roman legal wager, according to which each party to a suit paid money into court, forfeiting his pledge in case of defeat.¹⁰ Originally this legal *sacramentum* may have been accompanied by a self-imprecation. It is supposed that the military *sacramentum* developed into an oath of fealty to the emperor.¹¹ In the Athenian *ἀνάκρισις*, preliminary stage of a suit, each party swore.¹²

Primitive examples of the oath at law are not wanting. On the Slave Coast of W. Africa the god Mawu is appealed to not only by the parties, but by the judge.¹³

The majority of ordeals are really concrete oaths taken by the accused party, and the self-imprecation is realized immediately. In modern law the legal oath is taken by witnesses alone, though the juror's oath survives. This is in direct opposition to the mediæval principle, which developed considerable abuses in the practice of compurgation (*g.v.*). Evidence was not wanted; only proofs were asked for, and, in default of proof, an oath. This could be multiplied by one or more *compurgatores*, practically witnesses to the truth of the party's oath of innocence or right. When unsupported, the party swore 'sua manu.' According to the number of his *compurgatores*, he swore by any number of 'hands.' A bishop of Ely swore 'centesima manu,' and as many as 300 are recorded. The *compurgatores* laid their hands on the *pyz*.

and the accused laid his hand upon theirs.¹ One attempted remedy for the abuse was the judicial duel, wager of battle.² The final remedy was found in confining the privilege of oath to the witnesses.

The essence of ordeals is the oath, though the fact is obscured by the unfair incidence of the physical result. Hindu theory recognized the essential connexion; the word *śpatha* connotes both 'oath' and 'ordeal.' Oaths were used for lesser offences, ordeals for heavy crimes.³ The mediæval wager of battle was a mutual ordeal, each party taking an oath (see ORDEAL).⁴

The covenant and the treaty have been largely based on the mutual oath, until signatures replaced the spoken word.

The Greeks and Romans ratified their treaties by oaths, the text of which was inscribed in the official inscriptions.

In primitive ritual the mutual oath was strengthened by various imitative and magical methods.⁵ The blood-covenant is 'regularly accompanied by curses or self-imprecations.' Similarly with other forms of compact.⁶ Tylor notes the differentia, which also applies to the vow, in the following typical cases:

Grasping hands, putting one hand between the hands of another, are compacts, not oaths. The hand 'under the thigh' is a rite of covenant. Mixing blood or drinking one another's blood is not an oath unless there is a mutual self-imprecation, such as dipping weapons in the blood.⁷

8. Prohibition of oath.—Certain sacred persons are prohibited from incurring the dangerous risks of an oath.

Such was the *flamen* of Juppiter, and Plutarch suggests that the reason was that otherwise 'the peril of perjury would reach in common to the whole commonwealth, if a wicked, godless, and forsworn person should have the charge and superintendence of the prayers, vows, and sacrifices made in the behalf of the city.'⁸ Nor might the Vestal Virgins take an oath.⁹

The sect of the Essenes were averse from the oath; they prided themselves on their truthfulness; they argued that those who could not be believed without swearing were self-condemned.¹⁰ Christ taught, 'Swear not at all.'¹¹ His exponents have explained the precept to refer to profane and frivolous oaths alone. But the teaching, 'Let your yea be yea and your nay nay,' is clearly inclusive, and of the same character as the Essene doctrine. The Anabaptists and, later, the Quakers refused oath-taking. The latter have argued that, 'If on any particular occasion a man swear in addition to his yea or no, in order to make it more obligatory or convincing, its force becomes comparatively weak at other times when it receives no such confirmation.'¹²

But this argument neglects the power (apart from that of superstition or religious feeling) of ceremony, which is practically the imperious gesture of the social body. Charles Bradlaugh initiated the right of affirmation in place of the oath.

LITERATURE.—This is quoted throughout the article. See also E. von Lasaulx, *Der Eid bei den Römern*, Würzburg, 1844.

A. E. CRAWLEY.

OATH (NT and Christian).—I. NT times.—The true starting-point of our investigation of the place of the oath in the new régime initiated by Christ must of necessity be found in the *ipsissima verba* of the Master Himself. Here, at the outset, we are met by a difficulty; for, on the face of things, the almost universal practice of Christendom appears to be in flagrant disregard of an explicit injunction of Christ, whose words on this subject, taken by themselves, seem to amount to nothing less than an absolute prohibition of the oath under any circumstances or in any form (Mt 5³⁴⁻³⁷; cf. also Ja 5¹²). But a final conclusion upon this matter is not so simple as appears on the surface.

It is evident that, if Christ's admonition be interpreted as an absolute prohibition, some of His early followers, who had the best opportunities for knowing His mind and what the modern logician would describe as His 'universe of discourse,' were in serious error as to the meaning of His words. St. Paul, e.g., again and again expresses himself in terms that are indistinguishable from the oath (cf. 1 Th 2⁵, 2 Co 1²³, Gal 1²⁰, Ro 1⁹); the writer of the Epistle to the Hebrews makes use of language which bears unmistakable witness that he also was unaware that the practice of swearing had ceased to be legitimate (6¹⁶, 7²⁰); and the seer of the Apocalypse does not hesitate to put an oath into the mouth of the angel-representative of the Eternal (10²¹). Christ Himself, moreover, to all intents and purposes submitted to be sworn (Mt 26⁶³); and His ἀμὴν, ἀμήν, is almost, if not quite, an oath. In view of these facts, our Lord's apparent prohibition should not be regarded as being too explicit to be discussed; it rather demands careful consideration in relation to NT teaching as a whole, if haply superficial contradictions may be resolved.

The classic passage—a very interesting section of the Sermon on the Mount—that constitutes the inevitable starting-point of any discussion of the lawfulness or otherwise of the Christian oath forms one of a series of illustrations of the contrast between the new life in Christ and the old Hebrew ideal of religious living. That the Christian man should always abide by his word is the real burden of Christ's injunction, which was in truth greatly needed. For the Jews held that only oaths, as distinguished from the mere promise, and only some of these, need be kept. An elaborate system of distinctions between oaths, which would have moved the admiration of a mediæval casuist, had been gradually evolved; a lie was not held to be sinful unless sworn to, and even perjury itself was at worst venial, unless the broken oath had been taken in a particular form. Such a system necessarily cut at the root of that good faith apart from which a well-ordered social organism becomes impossible, and in foreign relations could not fail to bring upon a people who practised it a very bad name. This is what actually came to pass; and it was the fate of the Jews to be generally regarded with suspicion and dislike not only in the time of Christ, but also for many centuries to follow. Herein also may be found an explanation, at any rate in part, of the oppression to which the Jew was normally subject throughout the Middle Ages, and from which he is not entirely free even to-day. So great, indeed, did this anti-social trifling with the plighted word become that the Talmud laid down that, if repeated (as in Mt 5³⁷), a simple 'Yes' or 'No' ought to be regarded as being as binding as an oath. It should also not be overlooked that Christ did not exactly say that anything beyond a simple statement is absolutely evil, but that it springs from evil—a delicate distinction, perhaps, but a real one none the less. In an ideal condition of society absolute truthfulness and perfect sincerity would prevail in all personal relations. The oath would naturally disappear, inasmuch as a simple 'Yes' or 'No' would afford adequate assurance of good faith. That more than this is required in practice is entirely due to the imperfection of all human society; whence it follows that the oath, whether absolutely evil or not, certainly springs out of evil, i.e. out of that ill condition of social relations which demands more than a simple affirmation or denial as a guarantee of truth in statement or honest performance of promise (cf. Clem. Alex. *Strom.* vii. 8).

Though, on the face of it, Christ's statement (Mt 5³⁴) has all the appearance of an absolute prohibition, it is difficult, in view of the practice of

His immediate followers and His own apparent recognition of the legal oath, not to suppose that it was meant, and was at the time understood, to be limited in its reference. The fact that the oaths mentioned in this prohibition, in which there is no specific citation of the Divine Name, are typical examples of just the kind of oath that many Jews of that day lightly took, and broke without scruple, renders it not improbable that what our Lord had in mind was not so much the oath seriously taken and honourably observed as the light swearing and the casuistical distinctions (cf. Mt 23¹⁶⁻²²) that all too frequently degraded the oath into a form as useless as it was profane.

These considerations should at least warn us against hastily accepting a theory based upon a single passage regarded in isolation from the teaching of the NT as a whole. We may, however, conclude with assurance that Christ sought to impress upon the minds of His hearers not merely that playing fast and loose with the oath was an offence in the sight of God, but that the absence of an oath in no way lessened man's obligation at all times to speak the truth.

2. **Early Church.**—However unnecessary it might be in an ideal society, this has ever been so far from realization in practice that the carrying over of the oath into the newly-established Christian system will commend itself to the reason of most men. The age was an illiterate one, and illiteracy remained the rule for many centuries after Christ. In a community among the members of which writing was a rare accomplishment the oath contributed to fill the place occupied in a society such as our own by the written as compared with the merely verbal agreement. It is not, however, altogether a matter for surprise that, custom, convenience, and the practice of the Apostolic Church being on the one side, and the apparently express prohibition of Christ on the other, there was much difference of opinion, in the early Church, as to the lawfulness or otherwise of the oath. This is apparent to any one who has even a nodding acquaintance with Patristic literature. A few illustrative examples, culled almost at random from the writings of the Fathers, are all that can be given here. Conspicuous among the advocates of prohibition was Chrysostom, for whom the oath was nothing less than 'a snare of Satan,' and by all means to be avoided (*Serm. ad pop. Ant. hom. xv., in Acta Apost. hom. viii. f.*; cf. also *hom. x.*; on the same side see also *Clem. Hom. iii. 55, xix. 2*; Justin Martyr, *Apol. i. 16*; *Clem. Alex. Strom. v. 14*; cf. also *vii. 8*). Augustine also disliked the oath, not so much on the ground of divine prohibition as through fear of perjury (*Enarr. in Ps. lxxxviii. (lxxxix.) 4, de Mend. 28*; cf. also *Ep. xlvii. 2*). As against these views, while trifling or profane swearing was universally condemned, it was argued by others, on the ground of NT usage in general and the example of St. Paul in particular, that Christ could not have intended to put completely under the ban the serious use of the oath. As a conspicuous exponent of this view of the case, we may mention Athanasius, whose practice certainly squared with his theory (cf. *Apol. ad Imp. Const. 3*).

3. **Middle Ages.**—By the time that Christianity had established itself as the religion of the empire, there was really little to differentiate Christian and pagan circles in the matter of the oath. Christian imperial legal procedure required that witnesses should be sworn (*Cod. Theod. xi. 39*; *Cod. Just. iv. 20, 59*)—a practice that has been maintained until our day. As time went on, the oath, in ever growing measure, became a factor in almost every social relationship; e.g., in addition to the judicial oath, guaranteeing truth, may be mentioned

those pledges of fidelity, the oath of fealty, the coronation oath, and the oath of office generally. This was the case in ecclesiastical no less than in civil life, as witness ordination oaths, monastic and crusaders' vows. Not only did the oath prevail beyond all precedent in mediæval religious circles, but the Church was at pains to take the oath generally into her keeping and control (*Decret. Grat. can. xxii.*), and claimed as her peculiar prerogative the right of absolving from performance of an oath duly sworn. The Christian oath rested ultimately upon a religious basis; this the Church held to justify her claim, as the earthly representative of Him to whom the actual or implied appeal of the swearer had been addressed, and who, as she at any rate believed (cf. *Eus. HE vi. 9*), did not on occasion disdain to visit with material penalty abusers of the oath.

For an oath to be valid the Church required (1) *veritas in mente*—the words used must be a straightforward expression of what the swearer means to do or to assert; (2) *judicium in jurante*—clear understanding of what is involved in taking an oath, for lack of which idiots, children, atheists, and convicted perjurers were held incapable of being sworn; and (3) *justitia in objecto*—the object of the oath must be legitimate, for even an oath cannot bind a man to do the forbidden or to commit sin, a classic example being found in Herod's oath, which is quoted again and again in Patristic and early Christian literature. It was under the last head that the Church especially claimed her right to determine in respect of the oath, as being in most cases the only competent judge of *justitia in objecto*, whence it followed as a matter of course that to her appertained the right of annulment.

In spite of the prevalence of the oath in Christian circles generally, communities have existed from early times which, whether attributing an absolute prohibition to Christ, or shrinking from the responsibility of the act, have made it a matter of conscience to avoid the oath in any shape or form. As these communities have often been small, both in numbers and in historical importance, it will suffice to name the Waldenses, Hussites, Mennonites, Anabaptists, Moravians, and Friends (*qq.v.*).

4. **Modern.**—Though the Reformation changed many things, it retained the oath as a recognized and serviceable social institution. Art. xxxix. of the Church of England, e.g., embodies a formula which may be accepted as a fair statement of Protestant opinion with reference to the use of the oath as conformable to religion and common sense. For, while the assertion of untruth is always a sin, it is manifestly impracticable that it should always be treated as a legal crime. But the well-being of the community, the maintenance of an ordered state of society, demands that, under certain circumstances, it should be treated as such. The legal oath secures this; perjury is a crime, for which due penalty may be exacted. That the oath is not the only means of securing this end is, of course, true; this has been publicly recognized in the Oaths Act, 1888, in which provision was made for those who, like the Quakers, on conscientious grounds decline to swear or, as non-Christians, decline to take the Christian oath. But, allowing this, the oath generally meets the case; it has, moreover, acquired associations and a religious sanction which add to its effectiveness; it has on historic grounds become an integral part of the apparatus of social life; there appears, therefore, to be no sufficient warrant for discontinuing its use, though, of course, its abuse cannot be deprecated too strongly. Yet, in the last resort, it must be admitted that the very existence of a need for the oath or some equivalent for it is due solely to

the imperfect Christianity of Christian people at the present day as throughout the past. If the ideal of living set up by Christ were actually realized in practice, the oath would forthwith become superfluous; for lying and ill faith would be unknown, a simple affirmation or denial would meet all needs, and a promise would require no further guarantee. Unhappily this is far from being the case; and, society being what it is, the retention of the Christian oath appears to be entirely justified, alike on the grounds of religion, ethics, common sense, and practical convenience.

LITERATURE.—Among the not over-numerous works dealing with the oath in general the following may be named: E. Coke, *Institutes of the Laws of England*, ed. F. Hargrave and C. Butler, London, 1759; *The Book of Oaths* (anonymous), do. 1649; C. F. Stäudlin, *Gesch. der Vorstellungen und Lehren vom Eide*, Göttingen, 1824; J. E. Tyler, *Oaths: their Origin, Nature, and History*, London, 1835; K. F. Göschel, *Der Eid*, Berlin, 1837; F. A. Stringer, *Oaths and Affirmations*³, London, 1910; C. Ford, *On Oaths*, do. 1903. There is much matter bearing on the subject in commentaries on Holy Scripture, readily available; in the writings of the Fathers, and later ecclesiastical literature, partial reference to which has been given in the text; and in more official documents, such as certain of the Papal Decretals, and so forth. For the practical study of the institution in detail, reference may be made to the *Histories*, primary and secondary, which are too numerous to mention here.

W. ERNEST BREYER.

OATH (Semitic).—Oaths are very common in Semitic speech, particularly in Arabic. This need not imply that the ordinary assertions of a Semite could not or cannot be trusted, though the Arabs have a bad reputation in this respect.¹ It may point rather to a fondness for emphatic speech. In the case of the Hebrews much of this particular kind of emphasis may have been lost in editorial refinements and manipulations; but the use in Hebrew of such syntactical constructions as those with the infinitive absolute and with the perfect of certitude may be taken to indicate that emphatic utterance was characteristic of the people and the language. When, therefore, the oath as a solemn asseveration came into use, its growth on such soil would be rapid and luxuriant. But in its more original form the oath was more an action than an utterance. It was part of the ceremony of a compact or agreement. Such ceremonies, more or less elaborate at first, gradually become modified and simplified until only a gesture may remain. In the judicial oath, which is usually for the most part a form of words, we have the later or latest development. It implies considerable progress both in law and in religion.² The oath is still of the nature of a compact or agreement.³ Hebrew and Arabic philology may be said clearly to indicate the ceremonial origin of the oath among the Semites. Some of the words for oath—Heb. *šebhu'ah*; Arab. *yamin* and *qasam*—imply ceremonies. The Heb. *šebhu'ah* is connected with the word for 'seven' (*šebba'*); and 'to swear' (*nishba'*) is literally 'to do things by sevens' or 'to come under the influence of seven things'.⁴ Seven was a sacred number among the Semites (cf. Gn 33³, Lv 4⁶, Nu 23¹, Jos 6⁴, etc.; Qur'an, ii. 27, xxiii. 17, xv. 44, 87, xxxi. 26,

etc.). It probably had magical significance.¹ In any case, certain narratives confirm the view that some action by sevens was the primary idea. Thus seven ewe lambs figure in the oath regarding a well made between Abraham and Abimelech (Gn 21³¹), and on this account the place is said to have been called Beer-sheba, 'Well of Seven'.² Again, Herodotus describes an Arabian oath of covenant (iii. 8) in which seven stones are smeared with blood (cf. Hom. *Il.* xix. 243 ff.; Paus. iii. xx. 9). The Arab. word *qasam*, used of the judicial oath, is derived from a root which in its simple form means 'to divide into parts' (*qasama*; iv. 'aqsama, 'to swear'). Here again some magical ceremony may be implied;³ and we are again helped by an OT narrative. In Gn 15^{10, 17} we have a story of the making of a compact in which certain animals are cut up and the pieces arranged in a particular way. At sunset a smoking oven and a flaming torch pass between the pieces (cf. Jer 34^{18f.}). In this narrative, which is composite and confused, there is a hint of some ancient and rather elaborate ceremony (probably magical). We need not think of a sacrifice; and originally no doubt it was the contracting parties who passed between the pieces.⁴ The significance of the pieces or parts is doubtful.⁵ But, in any case, just as the Heb. word has some such primary idea as 'to do a thing by sevens,' the Arab. word would seem to denote primarily 'to do a thing by parts.' The Arab. word *yamin* really means 'the right hand.' Since the right hand was much used in contract or oath ceremonies, the same word came to denote an oath.⁶ The Arabs give the hand in swearing. There is reference to the same action among the Hebrews as well. In 2 K 10¹⁵ the giving of the hand is an indication of loyalty (cf. La 5⁸, 2 Ch 30⁹). In Ezr 10¹⁹ the expression is equivalent to 'promise' or almost to 'swear'.⁷ In 1 Ch 29²⁴, where RV has 'submitted themselves unto Solomon the king,' the Heb. text has 'gave the hand under Solomon.' This was perhaps the more original form of the expression. The person who swore put the hand or hands under the person to whom the oath was sworn. In the Qur'an (xlviii. 10) we find the words:

'In truth, they who plighted fealty to thee, really plighted that fealty to God: the hand of God was over their hands.'

The original ceremony may have been something like that described in Gn 24²⁻⁹. When Abraham makes his servant swear, he directs him at the same time to put his hand under his (Abraham's)

¹ Cf. R. C. Thompson, *Semitic Magic*, London, 1903, p. 104 ff., etc.; W. W. Skeat, *Malay Magic*, do. 1900, p. 225 f.; also GDB, pt. ii., *Taboo and the Perils of the Soul*, do. 1911, p. 305 f.

² This is no doubt the meaning, though the name might be explained 'well of the oath,' or even 'well of Sheba.' O. F. Burney (*JThSt* xii. [1910] 118 f.) explains Sheba as the god Seven; but, since in Assyrian *mamitu*, 'oath,' occurs as the name of a goddess (Mercer, *The Oath in Babylonian and Assyrian Literature*, p. 27), Sheba here may be the oath personified (cf. the personification of Gr. *ἔπος*). *Mamitu* is never mentioned in oath formulae; but we find reference to 'the mistress (goddess) of the oath' as witness to a treaty (Mercer, p. 28). Of course the story in Genesis may be only a popular etymology invented to explain an already existing name; but in any case it throws light on the primary idea in the Heb. word 'to swear.'

³ Especially as other forms of the same Arab. root are used of practising divination (see F. Brown, S. R. Driver, and C. A. Briggs, *A Heb. and Eng. Lexicon of the OT*, Oxford, 1891 ff., s.v. *ḥṣṣ*, and Wellhausen, p. 133 f.).

⁴ Not 'as a symbol that they were taken within the mystical life of the victim' (W. Robertson Smith, *Rel. Sem.* 2, p. 480 f.). This idea is hardly primitive enough.

⁵ Mercer (p. 40 f.) finds an interesting analogy in an Assyrian inscription of the time of Ašur-nirāri ii. (754-745 B.C. (Mercer)) in which a treaty between Ašur-nirāri, king of Assyria, and Matī'ilu, ruler of a district west of Hama, occurs. A ram was taken from the herd and beheaded. According to Mercer, this was done, not as an offering or sacrifice, but to typify what would be the fate of the perjurer.

⁶ Possibly the same word in Hebrew should sometimes be translated 'oath.' In Ps 144⁸, e.g., we might translate 'their oath is a false oath.'

⁷ The same thing is expressed by the 'striking of hands' in Job 17³, Pr 6¹ 11¹⁵ 17¹⁸ 22²⁵.

¹ Cf. C. M. Doughty, *Wanderings in Arabia*, i. 110: 'To speak of the Arabs at the worst, in one word, the month of the Arabs is full of cursing and lies and prayers; their heart is a deceitful labyrinth.'

² time mur. Babylonians as early as 2000 B.C.

³ It always implies as its full form a conditional sentence. Indeed, the simplest oath, judicial or otherwise, may be said to do this. Perjury is a repudiation of sacred things, a violation of religion. When a modern Arab swears by God, *Wallahi* or *Wallahi-Billahi* or *Wallah-Ballah* (Doughty, i. 110), the original implication is: 'If I perjure myself, I am false to my belief that God is the living God, and I call down upon myself the punishment due to such infidelity.'

⁴ Wellhausen (*Reste*, p. 150) thinks that the word may imply a sevenfold repetition. But the repetition of a formula is probably a later idea.

thigh.¹ This suggests that originally the hand was placed under the most sacred part of the person, the seat of a mysterious, awe-inspiring, life-giving force.² We may suppose that in course of time instead of this the hand of one person was placed under the hand of the other. Out of this practice grew a still simpler action, first a kind of handshake, and then a mere lifting of the hand. Thus 'to lift the hand' became equivalent to 'to swear' (Gn 14²², Dt 32⁴⁰, Ex 6⁸, Ps 106²⁶).³

The judicial oath, unless followed by an ordeal, is more a form of words. But various other ceremonies have been noted in connexion with oaths, judicial or otherwise. Doughty (i. 110) speaks of a faithful form of swearing among the Arabs called *halif yemîn*:

'One takes a grass stalk in his fist, and his words are *Wa hydt hâtha el-âad*, By the life of this stem, *wa'r rubb el-mabûd*, and the adorable Lord.'⁴

Burckhardt mentions others. One of the most common in ordinary life is to take hold of the *wasat*, or middle tent-pole, with one hand and to swear 'by the life of this tent and its owners.' A more serious oath, used only in exceptional cases, is called *yemîn el-khet*, the 'oath of the cross lines.' The account of this oath may be given in Burckhardt's words:

'Thus, if a Bedouin accuses his neighbour of a considerable theft, and cannot prove the fact by witnesses, the plaintiff takes the defendant before the sheikh, or kady, and calls upon him to swear in his defence whatever oath he may choose to demand from him. If he complies readily, his accuser leads him to a certain distance from the camp, because the magical nature of the oath might prove pernicious to the general body of Arabs, were it to take place in their vicinity. He then with his *sekin*, or crooked knife, draws on the sand a large circle, with many cross lines inside it. He obliges the defendant to place his right foot within the circle, he himself doing the same, and addressing him in the following words, which the accused is obliged to repeat—"By God, and in God, and through God, (I swear) I did not take it, and it is not in my possession." Some persons enter the circle with both feet. It is said that Mohammed once made use of this oath, and to swear falsely by it would for ever disgrace an Arab. To make it still more solemn, a *shemle* (or camel's udder-bag) and an ant (*el nemle*) are placed together within the circle; indicating that the accused swears by the hope of never being deprived of his camel's udder, and of never experiencing a time when he should want even the winter provision of an ant' (ii. 127 f.).

In this form the oath is called the *yemîn el shemle wa nemle*, or 'oath of the *shemle* and *nemle*.'

In Babylonian and Assyrian contract-tablets and inscriptions there are many references to mere oaths of attestation, from the early days of Baby-

¹ Mercer (p. 89) thinks that this narrative can be paralleled by a passage from the Nimrod Epos (xl. no. 70, l. 210): *il-pu-ut pu-ut-ni ma iz-za-az ina bi-ri-in-ni i-ka-ra-ban-na-si*, '(he made my wife kneel down by my side) touched our foreside, walking in between and blessing us.' He gives reasons for thinking that *il-pu-ut pu-ut-ni* may be translated here 'he touched (in oath) our foreside (i.e. our privy parts)', and compares the common phrase *istên pit šant naši*, 'one lifts the forepart of another,' i.e. 'one answers for another.'

² We might think of phallic worship here (cf. Holzinger on Gn 24⁷); but this is not necessary. The genital organs (represented by the thigh) are regarded simply as the instruments of a kind of divine power. The conception was wide-spread; and there are traces of the same kind of ceremony in various parts of the world (see H. Ewald, *Allerthümer des Volkes Israel*,³ Göttingen, 1860, p. 26, and note particularly the Australian parallel cited by G. J. Spurrell, *Notes on the Text of Genesis*², Oxford, 1896, p. 218). Other explanations have been offered. Dillmann explains by the fact that (avenging) descendants proceed from the loins (Gn 46²⁶, Ex 16, Jg 8³⁰). Others (Targum Jon., Rashi) think that the generative organ was considered sacred because sanctified by circumcision. A. J. N. Tremearne (*The Ban of the Bori*, London, 1914, p. 62), in reference to this explanation, adds: 'Perhaps a survival of this is seen in the practice found amongst certain West African tribes of passing a knife or other piece of iron between the legs when taking an oath.'

³ The Assyrian word *nîš*, 'oath,' is from the verb *našu* (Heb. *nâšâ*), which means 'to lift up (the band),' especially as a gesture in taking an oath (Mercer, p. 29).

⁴ According to Burckhardt, the 'oath of the wood' is often taken before a judge. His account of the oath is as follows. A small piece of wood (or some straw) is taken up from the ground and presented to the person who is to swear. He is requested to 'take the wood and swear by God and the life of him who caused it to be green and dried it up' (*Notes on the Bedouins and Wahabys*, ii. 127).

lonian business life down to the Persian period. These are interesting as giving often the occasion, place, time, and general circumstances of the oath. It appears that the Babylonians and Assyrians went to the temple to take their oaths (cf. the expression 'before the god'). A very common place was the 'gate' of the temple; but other places also are mentioned.¹ In contracts dating from the second part of the so-called dynasty of Ur oaths are taken in the temple of Nin-mar-ki by the name of the king with or without witnesses; or by the name of the king with witnesses and before certain named persons; or without invoking any one and with or without witnesses. In the contracts from the Hammurabi dynasty the oaths are with or without witnesses. They are by the name of the god and the king, and sometimes also of the city; e.g., we find invocation of 'Shamash and the king,' 'Shamash, Marduk, and the king,' 'Shamash, Marduk, the king, and the city of Sippar,' etc. (Mercer, p. 7).² These are the two gods most frequently invoked. With them is generally associated the reigning king. In contracts of the Cassite dynasty the oath is sworn by En-lil, Ninib, Nusku, and the king. But in this dynasty the custom of taking the oath seems to be less common, and in subsequent periods it falls more and more into disuse. In treaties the oath figures as early as c. 2900 B.C. (treaty made by E-an-na-tum, king of Lagaš or Sirpulla; see Mercer, p. 21). There are several references in the Tell-el-Amarna tablets (29, 67, 148, 149, 164) and in Assyrian inscriptions (Mercer, p. 22).

Among Hebrews, Babylonians, and Arabs the ordinary judicial oath has much in common. The Hammurabi Code in the case of grievous assault demands an oath of lack of malice and payment of the doctor. As Johns points out, Exodus (21¹⁸) omits the oath and orders payment for loss of time. If the injured man dies, the Hammurabi Code allows an oath of want of malice to be taken (§ 207), and accepts compensation. The same Code requires a person accused of incest either to take a solemn oath or to submit to an ordeal, as the case may require. In Nu 5¹¹⁻³¹ a woman accused of incest has to take an oath and to submit to an ordeal as well. Among the ancient Arabs a wife suspected of infidelity had to ride on a camel between two sacks of dung to the sanctuary and there swear seventy times that the suspicion rested upon calumny. The requirement of the Qur'ān is simpler.³ If a man accuses his wife of infidelity, he must swear four times that he speaks the truth, and then ask that the curse⁴ of God may fall upon him if he lies. The woman can meet this by swearing four times that he lies and then calling down upon herself the anger of God if he speaks the truth. In Ex 22¹⁰ it is ordered that, if an animal has been entrusted to a man, and it die or be hurt or be driven away, the man to whom it was entrusted

¹ Whether *Šurînnu*, which is often mentioned, was a place (Muss-Arnott, 'column'), an 'emblem' (Thureau-Dangin), or the receptacle of the oath-emblems, is doubtful; but at any rate it seems to belong to the temple (Mercer, p. 35).

² Certain parts of the temple are mentioned as the place of attestation. Sometimes the parties are said to go to 'the divine emblem' (KU. 715; see Mercer, p. 11 f.).

³ D. S. Margoliouth (*The Early Development of Mohammedanism*, London, 1914, p. 48 f.) points out that the ruling of the Qur'ān in the matter of oaths reveals the development of a change of attitude. In xvi. 93 there is a command to keep oaths. In v. 91 the principle of compensation is introduced: an oath may be violated, and atonement made by some other performance. In xvi. the new principle is confirmed. The tendency is towards laxity; 'and it has had the decidedly serious result that there appears to be no mode known to Mohammedan law whereby an oath can be made legally binding.'

⁴ As Wellhausen says, the oath is always eventually a curse. The Heb. word for 'a curse,' *ālāh*, is often translated 'oath.' Where *ālāh* and the more usual word for oath, *šebhu'āh*, are combined, the severity of the eventual curse is increased and emphasized (see Nu 5³¹; and cf. 1 K 8³¹, 2 Ch 6², Neh 10²², Dn 9¹¹).

may clear himself by taking a solemn oath. This is the oath of purgation (cf. 1 K 8³¹). The same provision is made in the Hammurabi Code (cf. S. R. Driver, *Exodus*, Cambridge, 1911, p. 423). Among the Arabs it is still possible for a person suspected of theft to clear himself by taking a solemn oath (see Burckhardt, i. 126-129; Doughty, i. 267; and cf. E. W. Lane, *Modern Egyptians*⁵, London, 1871, i. 384). According to Dt 21¹⁶, when a man was found slain, the elders of the place had to swear that their people were guiltless of the murder. Robertson Smith (p. 64) thinks that exactly the same custom prevailed in Arabia (cf., however, Wellhausen, p. 189, n. 1).

Several oath formulæ are mentioned in the OT—e.g., 'God do so to so and so and more also' (1 S 14⁴ 25²², 2 S 3⁹ 35, 1 K 2²³); 'As Jahweh liveth!' (1 S 14³⁹ 19⁶); 'As Jahweh liveth and as thou thyself (thy soul) livest' (1 S 20³); 'As Jahweh liveth and as my lord the king liveth' (2 S 15²¹); 'Jahweh is a witness between me and thee for ever' (1 S 20²³, inserting 'ēdh after *Jahweh*; or 'Jahweh is an everlasting witness,' reading simply 'ēdh *ōlām*); 'By myself have I sworn' (Gn 22¹⁶, Jahweh being the speaker). Among Arabic examples are the following: 'By what this (copy of the Qur'an) contains of the word of God'; 'I impose upon myself divorcement'; 'I impose upon myself a triple divorcement'; 'I impose upon myself interdiction'; 'By God the Great'; 'As the Lord liveth' (*Wa hyāt Ullah*); 'As I live' (*Aly lahyaty*). The Jews swore by the Temple (Jer 7⁴) as well as by persons. They are said to have sworn also by heaven (cf. G. H. Dalman, *Worte Jesu*, Leipzig, 1898, i. 163 f.), by the earth, by the sun, by Jerusalem (see *Shēbū'ōth*, iv. 2; Mt 5³⁴ 23¹⁶; *Brāk'hōth*, 55; *Qiddūshīn*, 71a; Maimonides, *Yad Ha-Hazakā*, *Hil'koth Shēbū'ōth*, 12). The modern Arabs swear by the life of persons or parts of a person (e.g., the head, the beard; see Lane, *Modern Egyptians*⁵, i. 349), and even of things (e.g., fire, coffee, etc.; see Doughty, *Arabia Deserta*, Cambridge, 1888, i. 269). According to S. I. Curtiss (*Primitive Semitic Religion To-day*, London, 1902, p. 113 f.), Muhammadans at Hamath, in N. Syria, swear by God's phallus.

'In the village of Bludan, about twenty-five miles west from Damascus, which is composed of Greek Christians of a very low type, the same oath is heard on the lips of women. . . . Another form of oath of a similar sort may be heard in Nebk, in the Syrian desert, and at Zebedan.'²

Muhammadans are said also to swear by the sacred pilgrimage route to Mecca. If the text of Am 8¹⁴ is correct, the Israelites used the same kind of oath: 'As the way of Beersheba liveth.' But the oath is peculiar and without parallel in Heb., and the text is perhaps corrupt.³ The pilgrimage

¹ The word translated 'as liveth' has been less correctly rendered 'by the life of.' It is an adjective, and is pointed differently by the Massorettes (e.g., in 2 S 16²¹) to distinguish oaths sworn by Jahweh from oaths sworn by false gods and other non-enduring persons and things. If Hos 4¹⁵ has preserved the true text, the Israelites are forbidden there to swear 'As the Lord liveth!' This prohibition, however, is very unlikely. W. R. Harper (*Amos and Hosea* [ICC], Edinburgh, 1905, p. 263 f.) is probably right in conjecturing (with Wellhausen, Nowack, and G. A. Smith) that 'in Beersheba' has fallen out. Read: 'And swear not in Beersheba, "As Jahweh liveth!"' This oath was permitted (Jer 42 35¹⁰), and at a later date was even commanded (Dt 6¹³ 10²⁰).

² The use of this oath may be taken perhaps to imply phallic worship as its origin. Or it may be due to the kind of tradition that makes certain persons the offspring of a divine father. The stories of the opening of Leah's womb (Gn 29³¹) and of the visit of the angel of Jahweh to Samson's mother (Jg 13⁷) have been referred to in this connexion (see R. C. Thompson, *Semitic Magic*, p. 78).

³ It has been suggested that *we-hē derek* should be read *we-hē dōdeka*, *dōd*, literally 'darling,' being used here in the sense of patronage. Thus *we-hē derek* = 'as the darling of the Lord liveth.' And as liveth thy patron, . . . *dglossen*, v. [Leipzig, 1912] 252) even conjectures that there is no oath

to Mecca is of such importance that it is natural to find this and other oaths associated with it. Thus the sanctity of him who instituted it, or of him in whose honour it is made, is, of course, a sanctity by which to swear. In Hariri's *Magāmah* of Alexandria (as rendered by T. Preston, *Makamat of Al Hariri of Basra*, London, 1850) occur the

nes: 'Lo! here I swear by Mecca's Lord divine,

Whose pilgrims, sped by camels, seek his shrine' (p. 108).

Preston compares a similar asseveration in the poem of Nabegra: 'By the eternity of Him to whom I have gone on pilgrimage of the Hadj!' In the *Magāmah* of Koufa we have (Preston, p. 218): 'By the sanctity of the Shaikh (Abraham) who ordained the hospitable meal and founded the place to which the hadj is made (the Kaaba) in the mother of towns.'

The Essenes refrained altogether from swearing (Jos. BJ II. viii. 6). It has been thought that even in Ec 9² the taking of an oath is regarded as objectionable.¹ In any case the Jews came to regard the taking of an oath as a very serious matter. The general principle is, 'Let thy yea be yea and thy nay be nay' (*Bābhā M'ēa*, 49a); for he who utters an untruth is excluded from the divine presence (*Sōtāh*, 42a). There are many passages in Rabbinic literature which express abhorrence of false or vain oaths. Such falsehood is one of the seven capital sins which provoke God's severest judgment on the world (*Abhōth*, v.). A false oath, even if made unconsciously, involves a man in sin, and is punished as such (*Gittin*, 35a). The oath or vow which a man was charged to make by a Jewish court of justice could be absolved by no Rabbi or Rabbinical tribunal. Oaths uttered over the Scroll of the Law were particularly sacred. In the age of the Geonim no dissolution of business contracts made on oath was permitted (cf. E. Landau, *Responsen*, Prague, 1776, 21810-11, p. 123).²

MAURICE A. CANNEY.

OBEDIENCE.—In the sphere of ethics the term 'obedience' signifies the practical submission to an authority regarded as universally valid or to an authority of a concrete or provisional character. In the former case it stands opposed to disobedience; in the latter to self-determination, culminating in complete personal autonomy, which, however, must be distinguished from romantic caprice.

1. Obedience as an ethico-religious principle.—Unconditional obedience is demanded in certain stages of religion—in those, namely, which are characterized by the enunciation of positive laws. The laws in question may be grounded on ancient custom, priestly enactment, or the ordinances of sacred books. The motives for obedience, too, may be of the most varied kind, such as convention, fear, hope of reward, and even belief in the real excellence of the law, and trust in the authority here at all. For *hē* he would read in both clauses 'ē, and, for *we-hē derek*, *we-ē derek*: 'And they shall say, Where is thy God, Dan? and Where is thy Spring, Beersheba?'

¹ But this is probably due to a wrong interpretation. Rather one who takes an oath and loyally keeps it is contrasted with one who is afraid to take an oath or to keep it.

² For the Rabbinic references the writer is indebted to Maurice H. Farbridge, M.A., Faulkner Fellow in Manchester University.

behind it. In no case, however, is the individual really free, for, while he is regarded as sufficiently intelligent to propose tasks for his own will, he is assumed to be still spiritually dependent and immature.

To begin with, there are religions in which obedience to the deity takes the form of obedience to particular laws. Instances of this attitude are found in the law-book of Manu, in the religions of Egypt, Babylonia, and Persia, in Judaism, and in Muhammadanism. The inevitable result of this is a constant increase in the number of particular commandments, and a corresponding tendency to casuistry, as seen in Judaism, especially in the *Halakhā*. External scrupulosity is here conjoined with a decline in ethical feeling, though it is true that feeling itself is sometimes brought under law, as when the Jesuits ask how often one must love God—if, e.g., twice a day will suffice. The laws may vary greatly in their subject-matter, but this is of less importance than the fact that laws have actually been given. A characteristic feature of this stage of development is that each law tends to stand by itself, and there is also a tendency to separate the works of the law from the individual doer, as in the Parsi religion (cf. the *Thesaurus operum* of Roman Catholicism), though it should be noted that in Parsiism purity of thought is demanded no less than purity of word and action.

Nevertheless, it is impossible, in these forms of religion, to bring the inward spirit and the outward action into complete harmony, for the spirit enjoined is simply that of readiness to obey. Moreover, as the laws are regarded as ordinances of the deity and therefore unchangeable, they often, as, e.g., in Islām, become a clog upon moral development, though it is true that the Jesuits, who make obedience a principle of ethics, have in the clergy an authority which decides each case by itself.

The doctrine of absolute obedience presupposes that there are some who command and some who obey. The latter are those who are assumed to be spiritually in their nonage. They are free in a purely formal sense, i.e. either to obey or to disobey, but not to reason why. In fact, the more rigorous the demand for obedience, the less possible is it for them to perceive the goodness of the law, so that their obedience itself becomes purely formal, and tends to degenerate into spiritual indifference, while in turn the commanding authority becomes in its decisions more and more inclined to mere caprice (cf. the probabilism of the Jesuits). At this stage disobedience may be simply an act of will in conflict with a particular law, or it may be a fundamental revolt against mere submission, in which case it is construed by the authority as rebellion against God. But, while such revolt may rest upon self-will and arrogance, it may sometimes proceed from doubt as to the divine character and origin of the law enjoined, and this doubt may even prompt the question whether the individual ought to be permanently treated as spiritually immature. Thus disobedience and doubt may usher in a higher movement—a process of development transcending the standpoint of absolute submission to authority.

This process, again, exhibits various stages. The advance can be traced to some extent in several of the Aryan religions. Brāhmanism insists upon the law of caste and the authority of the Vedas, but accords perfect freedom to those who are absorbed in the contemplation of Brahman. Buddhism in time re-instituted the distinction between monk and layman, and prescribed laws for each, but still asserted that redemption was for all, and that the more passive virtues of pity and contemplation should rest upon individual initiative. It

was in Greek ethics, however, that the principle of obedience was more fully transcended. The Sophists, applying the solvent of doubt to convention and tradition, founded moral laws on *deus*, voluntary determination. In the *Republic* of Plato the classes corresponding to 'appetite' and 'courage' are certainly pledged to obedience, but those representing 'reason' are to act from their intuition of the Idea of the Good. A still greater measure of spontaneity and independence appears in Aristotle's doctrine of virtue and the cosmopolitanism of the Stoics.

Christianity, again, in so far as it is linked with the OT law, still retains a certain authoritative tendency, but in reality, as Christ proclaimed a free interpretation of the law, its characteristic attitude is fundamentally different. While the law still stands, the Holy Spirit is given to the Christian; love is the fulfilling of the law; the spiritual man judges all things. In its historical development, however, Christianity assumed a more statutory character as regards both doctrine and practice. In the Greek Church the authority set up was more of a doctrinal nature; in the Roman the laity became wholly dependent upon the ecclesiastical institution. It is true that, originally, Protestantism urged the rights of personality in the religious sphere, but neither in doctrine nor in ethics did it free itself fully from the standpoint of obedience. The authority of the Scriptures and of the Decalogue was maintained, and that of the confessions was added to it; and, in short, submission to the Church met with more approval than the denial of papal infallibility might lead one to expect. Official Protestantism, in fact, is a transitional stage in which the religion of obedience and the religion of freedom have each a place. The same thing appears in recent Protestant ethics, which at once recognizes secular morality, and seeks to base morality upon Scripture and even upon the Church (J. Weiss, F. H. R. Frank, C. E. Luthardt). All along, however, there were thinkers to whom Christianity was essentially the religion of freedom, who either, like Clement and Origen, distinguished between popular faith and knowledge, and found the source of a free and rational morality in a voluntary union with the Logos, or interpreted Christianity as a form of mysticism, whether of a more contemplative or a more ethical character, as, e.g., in Dionysius the Areopagite and in the *German Theology* (ed. F. Pfeiffer, Gütersloh, 1875) respectively. In Reformation times we find a broader conception of ethics among certain dissenters, while subsequently the Quakers appealed to the Inner Light, the testimony of the spirit, in every heart.

Within Christianity there has also been a rationalistic tendency which based ethics less upon obedience than upon action regulated by personal insight. Spinoza, who, though he did not belong to the Church, was in his ethics anything but a Jew, held that man shares in the divine activity, and so acts freely in the various relations of life. The English deists, notably Herbert of Cherbury, advocated a morality founded upon universal consent, virtue being thus based upon natural reason. But the most pronounced opponent of statutory obedience was Kant, who founded ethics on the autonomy of the practical reason. He rejected all attempts to find a basis for morality in authority of any kind, and, in particular, in religious authority. Religion itself, he holds, rests upon morality: we postulate God simply as the guarantee that the moral law and the law of nature are ultimately one. The moral law is to be obeyed, however, because it is in itself good, and not on the ground of its divine origin. Nietzsche, too, asserts that authority and tradition must be transformed

into freedom, and that we must recognize ourselves as organs of divine Providence and as able to grasp the content of moral law by intellectual intuition. Hegel likewise brings morality under the standpoint of freedom, the final stage of this being the *Sittlichkeit* in which the human spirit comes into complete harmony with the moral content revealing itself in the family, civil life, and the State. Autonomy of a kind is found also in the religious ethics of Schleiermacher: the divine spirit acts in man as the incentive to moral conduct, and knowledge of moral content is drawn from the Christian consciousness and from the moral reason, so that ethical action is free, resting upon religious impulse and personal insight.

The results of the foregoing survey may be set forth as follows. As long as the individual falls short of complete self-mastery, he is dependent upon the community for his ethical conceptions, these being usually represented as of divine origin; at this stage his normal practice is simply obedience. A further point is reached when he asks for the grounds on which obedience is demanded. Here obedience may still be counselled—as the more profitable course. But this is not an ethical solution at all, and the next step is to inquire into the content of the moral law. Should obedience still be enforced, the individual begins to question the rightness of the law, and his mind oscillates between doubt and submission. The highest stage of moral life is reached when the subject not only acts from an ethical motive, but feels responsible for his knowledge of moral content, *i.e.* claims the right to test that content in each particular case.

2. Obedience in practical life.—It is obvious, however, that in certain phases of social life obedience to a concrete authority, *i.e.* the subordination of private judgment and private choice to the expressed will of others, may rightly be demanded. These phases may be enumerated as follows: (1) the training of children—the necessity of obedience to parents or their representatives; (2) the married state—the position of the wife in relation to her husband; (3) domestic and industrial arrangements, or the hierarchy of private or public service—the servant's submission to the master, or that of the subordinate to the superior official; (4) the Church—the duty of the members to the constituted authority; and (5) the State—the relation of the subject to the law. With the exception of (3) these are dealt with in some detail in the art. EMANCIPATION (vol. v. p. 270 ff., esp. § 2), and, more generally, also in the art. AUTHORITY (vol. ii. p. 249 ff.). For (3)—in part—see artt. EMPLOYERS, EMPLOYMENT (vol. v. pp. 295 f., 297 ff.); here it need only be noted that the relation of master and servant, now that civilization has passed beyond the stage of slavery, is in essence a contract, that the servant's obedience is simply his faithfulness to an agreement which was voluntarily entered into and may be voluntarily dissolved, and that the relation may become an ideally ethical one when both employer and employee take a kindly human interest in the concerns and welfare of each other. In the public service, again, the obedience of the inferior to the superior official would seem to be absolutely necessary for the sake of order, and the question here is how the inferior is to preserve his moral responsibility when commanded to do what offends his moral judgment. For him to abandon the service might mean that the State thus lost its most conscientious officials, while to leave the responsibility of his conduct to his superior would be to reduce himself to a moral cipher. The practical solution of the problem is probably to be found in the right of free discussion: the inferior must be at liberty to lay his objections before the

higher authority, and the latter must be willing to discuss them; but in the last resort the conscientious objector, if still unsatisfied, should have the power of relinquishing his office. This case bears some affinity to that between subject and State (5). Here, however, another factor presents itself, viz. that in a free State the subject has a share in making the laws which he is asked to obey. He has the right to challenge any part of the established order, and to work for its reform, and accordingly it would seem that until the desired reform has been instituted it is his duty to obey.

3. Obedience and freedom.—The fact that in certain concrete relationships obedience may be justly required is not in any real sense incompatible with the fundamental personal freedom to which our inquiry in § 1 led us. In that inquiry we saw that the individual must attain to a sense of complete responsibility as regards his moral task. But it is a necessary condition of that task that, so far from being an isolated individuality, he is connected with other individuals, and stands with them in a vast complex of relations. His freedom is thus to be realized, not by breaking away from such order as has been established, but rather by exercising his inherent right to test all the laws, institutions, and counsels that constitute the established system of things. In this way his obedience is as far from blind submission as his freedom is from mere caprice.

In any existing system of social relations the possibility of improvement and progress depends in the ultimate upon free criticism. If the convictions of the individual are not at variance with the existent order, his obedience to it is obviously free action. Should there be antagonism, however, between his convictions and the course of action demanded of him, he must be at liberty to state his views publicly, while, similarly, the authority claiming his obedience must be prepared to set forth the other side, and must not fall back upon any arbitrary dictum or ancient convention. In such conditions the individual should submit to the established order until it is abrogated. His obedience will then be no abandonment of the duty of forming and defending his own convictions; on the contrary, it will rest upon a recognition of the fact that statutory laws are essential to the existence of a community, and especially of the State—essential, that is, to the preservation and extension of freedom itself. Cf. also the artt. EDUCATION, ETHICS AND MORALITY, FILIAL PIETY, FREE WILL, LOYALTY, SLAVERY, etc.

LITERATURE.—The more important works relating to the subject are given in the literature to the artt. AUTHORITY and EMANCIPATION, to which may be added A. Dörner, *Philosophische Ethik*, Berlin, 1895, pp. 437 ff., 657 ff., 407 ff., 503 ff., 469 ff., 717 ff.

OBI.—See VAUDOUX.

OBJECT, OBJECTIVE.—Whatever the mind can hold before it—attend to, think of, perceive, or contemplate—is called an 'object' of the mind; and this content of the mind's interest is said to be 'objective.'

The term 'object' has been used in philosophical discussions loosely and ambiguously; and in recent discussions the attempt is made to give it the consistent though very general meaning formulated in the definition above (cf. *DPHP*, s.v.). The principal confusion has arisen from the use of 'object' for 'external object' or physical thing, the 'objective' world being the 'physical' world. This is very inadequate for two reasons.

(1) To identify the objective with the physical is to limit the process by which the mind apprehends objects or contents generally to a single case, the

external. This is quite illegitimate. The process of the objectifying of contents is one which arises genetically very early in conscious life and develops through a series of stages in which objects of many sorts are constructed — objects of perception (things), of memory (images), of fancy, of imagination, of play, of thought. There are religious and æsthetic objects, mental no less than physical, fancied and imagined no less than seen and felt objects. The self is an object as the other person is; the 'castle in Spain' and the imagined thought or idea. The absurd, the visionary, the impossible, all become mental objects when set up in consciousness for inspection, thought, or contemplation (cf. A. Meinong, *Gegenstandstheorie*, Leipzig, 1907, and J. M. Baldwin, *Thought and Things*, 3 vols., London and New York, 1906-11).

The external or physical thing, therefore, is only one among many 'objects,' each having its own characters or 'co-efficients,' upon which the mind proceeds in giving it its place and mode of reality.

(2) A second reason for rejecting the usage which makes the objective co-extensive with the external arises from the consideration of the dualism between subjective and objective. This dualism appeared late in the history of reflexion, as it arises late also in the development of the individual. It requires the separation from each other of the two spheres of existence or reality as distinct worlds, one of experience, the other of that which is the cause or occasion of experience. But, before this is attained, the dualism of internal and external is already in force. From the rise of competent perception the external world is distinguished from the world of persons, and things are foreign to the observer and actor. Accordingly we have to say that the external thing takes on a new phase when it becomes an 'object' to the mind that perceives it, a phase in which it is recognized as being not only a thing but also an element in experience and in so far a mental state. These two meanings are clearly distinguishable, as they are not always co-extensive; hallucination shows the objective wrongly treated as external, and certain illusions such as those of persecution show the external endowed with properties which, while objective in force, are subjective in origin.

In brief, then, the objective is a sphere within experience; and, in a given case, the object may or may not have external value as well.

There are, therefore, strong reasons supporting the definition given above. It enables us to consider objectivity and externality as two relatively distinct problems. In the analysis of mature consciousness it is important that the question of epistemology—what is the meaning of the external?—should not be embarrassed by complications arising from the problem of the objective.

LITERATURE.—See the classic discussions of theory of knowledge by Locke, Hume, Berkeley, etc., and the chapters on 'Knowledge' in the principal systematic treatises on psychology.

OBLIGATION.—See MORAL OBLIGATION.

OBSCENITY.—The definition of obscenity both in language and in law is vague.

The OED, s.v. 'Obsceno,' says: 'ad. L. *obscenus*, *obscænus*, adverse, inauspicious, ill-omened; trans. abominable, disgusting, filthy, indecent; of doubtful etymology.' 'The precise meaning,' says Craies, 'is decidedly ambiguous,' but 'the test of criminality . . . is whether the exhibition or matter tends to deprave.'

In Craies's definition not only is it necessary to define 'deprave,'¹ but it is extremely improbable that the original intention of the law was this alone. The law merely codifies social resentment, but why social opinion originally resented 'obscenity' is a difficult question of psychology. Mean-

¹ W. F. Craies, *EEA* l xix. 953.

while, with regard to the meaning of the idea and the etymology of the Latin term, it is to be noted that the differentia of obscene things, acts, and words is, negatively, concealment, or, positively, publication. In other words, to take a considerable percentage of obscene matter, this consists of natural acts and terms, and the exploitation of the organs from which they are derived, which, on being made public, offend social opinion. Thus, a plausible derivation of the word connects it with Latin *obscurus*, 'concealed,' and terms in various languages corroborate this. But the primary meaning of the Latin word seems to have been 'inauspicious,' 'ill-omened,' and the Latins resented obscenity just for this reason of ill-omen.¹ A parallel to this is the social objection to profane swearing. The most probable derivation, therefore, is perhaps that of Littré and Skeat:² connected with the Lat. *scævus*, 'left,' 'left-handed,' and 'inauspicious,' the word *obscænus*, *obscænus*, may presuppose *obscævinus*, on the strength of the verb *obscavare*, found in Plautus.³

The things, acts, or words which when published constitute obscenity cannot produce social resentment on one ground alone. There is, e.g., a tendency to explain the modern feeling as a development from a primitive magical use of the sexual and excretory areas. Thus, Ellis suggests that the universal gesture of contempt by exposure was originally magical and intended to drive away evil spirits, the evil eye, and the like.⁴ But it is difficult to see how a gesture of magical potency should have substituted for this the quality of contempt, based, as it here is, upon excretory relations. Again, the idea of obscenity is fully developed among primitive peoples, and they show no trace of the magical meaning, though the suggestion of filthiness is frequent. On the other hand, though the psychology of sex is always complicated by the excretory relations, it is impossible to refer obscenity to the latter sphere alone.⁵ Again, it is doubtful whether even in the Greek and Roman use of the phallus as an *ἀπορροῖον*, *fascinum*, amulet against evil and the evil eye,⁶ the original potency of the charm was 'magical.' The erect form of it, as, e.g., in the statues of Priapus which protected gardens, rather suggests contempt, based upon sexual power. Vague magical ideas would naturally attach themselves later.

The application of obscenity as a form of abuse, among both primitive and civilized peoples, and certain facts of sexual and excretory mental pathology, throw light upon the whole subject of the psychical bases of the idea of obscenity. The simpler societies, as, e.g., those of the Dutch East Indies, are familiar with the idea and practice of obscenity. They chiefly use it, as do the children of European peasants, by way of opprobrium and insult. Exposure, gestures, and language include both the sexual and excretory spheres. Natural modesty is violated, contempt is expressed, and there is a minor form of curse, consisting in a wish that the victim may break this or that sexual tabu—in other words, commit this or that form of incest or self-abuse.⁷ The only trace of a super-

³ *Asinaria*, ii. l. 18.

⁴ *Studies in the Psychology of Sex*, v., *Erotic Symbolism*, Philadelphia, 1906, p. 1001.

⁵ As E. Fuchs, *Das erotische Element in der Karikatur*, Munich, 1912, p. 26, quoted by Ellis, *Studies in the Psychology of Sex*, iv., *Sexual Selection in Man*, Philadelphia, 1905, p. 47.

⁶ *Fascinum* means both the evil eye and the charm, in shape of the phallus, worn by children to protect them against it (W. Smith, *Dict. of Gr. and Rom. Antiquities*, London, 1890-91, i. 827).

⁷ J. G. F. Riedel, *De sluit- en kroescharige rassen tuschen Seles en Papua*, The Hague, 1886, p. 43.

stitious or magical content is in reference to the menses. But the so-called 'horror' of this function is probably in origin based upon disgust at excretory phenomena, magical ideas following as usual.

The obsession known as 'exhibitionism' illustrates what may be called the tendency to obscenity, which seems to be connected with a self-feeling based upon sex.¹ Similarly, the obsession known as 'befouling' is a pathological replica of the normal method of expressing contempt by an obscene act.

Some typical expressions of social practice and theory may here be noted. In common with civilized peoples generally the natives of N.W. Central Queensland employ two vocabularies for the sexual organs, a 'decent' and an 'indecent.'² Throughout human history there has persisted some form of veneration for the organs which perpetuate the race. Greek religion had its *phallophoria*,³ and Indian religion has from the earliest times had its veneration or worship of the *linga* and *yoni*. The British *raj* has made special exemptions for representations in temples or in processions of idols which to the European might appear obscene.⁴ Respect for the genital organs has, to the credit of humanity, prevailed over disgust, and the so-called 'phallic worship' of early investigators was a fact, though misconstrued (see PHALLISM).⁵

The employment of sexual functions as a magical method of stimulating the growth of vegetation has been illustrated by Frazer.⁶ This and the similar practice of exposing the person in agricultural ritual constitute a sort of legalized obscenity. In saturnalian proceedings also obscenity, especially of language, is enjoined. Similarly on other occasions obscene language is allowed to women if they are interrupted by men in their own rites.⁷

Whether ritual obscenity in agricultural magic is based on the idea of homeopathy, and is originally to stimulate growth, is very doubtful. Many cases seem to have the character of the *fascinum*, and to be intended to drive away evil influences. There are many others also which are not concerned with agriculture. *A priori*, it would be expected that obscenity legalized in ritual should retain the meaning of obscenity in general, and a comparison of these ritual uses seems to show the same conclusion.

LITERATURE.—Besides the works cited in the article see J. G. Bourke, *Sexual Rites of all Nations*, Washington and London, 1891.

OBSCURANTISM.—The significance of this term is moral rather than intellectual, the state of darkness which it denotes being the result not merely of unenlightenment, but also and far more of opposition to the light (Is 50³ 'Woe unto them that put darkness for light, and light for darkness'; Lk 11³² 'Ye have taken away the key of knowledge').

'For the true *obscurantists* are the passions, the prejudices, the blinding delusions of our nature, warped by evil habits and self-indulgence; the real *obscurantism* is bigotry, in all its forms, which are many and even opposite' (J. O. Hare, in *Guesses at Truth by Two Brothers*, London, 1897, 2nd ser., p. 501 f.).

As regards the sphere of its operation, however, *obscurantism* is a term of intellectual import, since it has reference to the interests of knowledge rather than to those of practical life.

The name owes its origin to the mediævalizing tendency prevalent in Europe during the earlier part of the 19th century.

Then 'the world, as that generation dreamed, was to be made young again,—not by drinking, where Wordsworth led, from the fresh springs of nature,—but by an elixir distilled from the withered flowers of mediæval Catholicism and chivalry, and even from the old roots of primeval wisdom' (W. Wallace, *The Logic of Hegel*, Oxford, 1874, p. xxx).

On this subject the writer of the passage already quoted from *Guesses at Truth* had remarked just before:

'People have been sounding the alarm for many years past all over Europe against what they call *obscurantism* and *obscurantists*; that is, against a supposed plot to extinguish all the new lights of our days, and to draw down the night of the middle ages on the awakening eyes of mankind' (p. 501).

Probably he has in view the ecclesiastical as well as the literary movements of the century, but in any case the attempted revival of mediævalism gave rise to the employment of the term. At the present time *obscurantism*, so far as it is not used in a general sense as signifying opposition to inquiry and enlightenment, suggests mediæval associations in their more historical connexion rather than their revival in the 19th century. As thus understood, however, the term always should be, though it by no means always is, applied not so much to what went on during the Middle Ages as to what went on at their close. For it was not until scholasticism, *e.g.* (which is most often the reference intended), had ceased to serve its purpose that it could with justice be described as *obscurantism*; *i.e.*, it was not until then that it could truly be said to be injurious to intellectual interests from an ethical point of view. In other words, *obscurantism* can be rightly ascribed to mediæval thought only when the latter, in the days of its decline, came to stand in direct opposition to humanism. The humanistic movement was no doubt primarily directed to the removal of intellectual hindrances, such, *e.g.*, as those enumerated by Bacon in his list of *idola* (cf., however, *Novum Organum*, bk. I., aphorisms lxx., lxxxix., and xc., for some of the more strictly *obscurantist* impedimenta). But, besides thus contributing to the progress of knowledge, humanism also acted as a purifying influence with respect to that corruption proceeding from moral causes which had been produced by mediæval *obscurantism*, and especially it served this purpose with respect to the revival of the sense of truth.¹

The impulse to *obscurantism* in its more general signification arises from a deeply-rooted, if not inherent, tendency of human nature to distrust knowledge. This tendency is especially liable to become aggravated when it operates in the sphere of religion:

in the religious world generally, an uneasy suspicion of knowledge and its results, of intellect and its cultivation, 'a mistrust not of any result of science, but of science itself, a disaffection not to this or that critical investigation, but to the inquiring mind,' 'a sentiment of jealousy towards intelligence, as something not wholly good in its nature' (Mark Pattison, *Sermons*, London, 1885, p. 188 f.; sermons vi. and vii. are both, in fact, directed against *obscurantism*).

Obscurantism, when it is wide-spread, commonly makes its appearance in a decadent state of society and under conditions favourable to the growth of professional or class exclusiveness. As thus considered, it is the vice of a select body which stands in no relation to the common conscience and the light of day.

The more exclusive the professional class becomes, the more separate, collectively, from the body of the Church, the more serious is this danger. Not even Christianity 'could have been preserved from moral dissolution but for the incessant revolt from beneath of the unsophisticated conscience of the multitudes. . . . It is an ominous symptom in a Church when it is content to look upon the masses in darkness, when it discourages every attempt to make their share in the common

¹ 'The revival of the sense of Truth was due to the secular philosophers of the seventeenth century—men like Bacon, Descartes, and Locke' (W. E. H. Lecky, *Spirit of Rationalism in Europe*, London, 1866, II. 400)—an overstatement, but one which is perhaps not surprising, having regard to the nature and extent of the effects produced (for a presentation of these in a popular form see Edith Sichel, *The Renaissance*, London, n.d.).

heritage accessible to them, when it sets itself to thwart upward movements' (J. Denney, 'The Dissolution of Religion,' in *Exp* v. iv. [1896] 265, 267 f.).

The forms which obscurantism assumes are many and various. Not unfrequently it endeavours to prevent the truth from coming to light by means of a studied ambiguity, resorting for this purpose to unmeaning phrases, undefined issues, and Rabbinical subtleties. Or, again, sometimes the obscurantist, taking advantage of the undoubted fact that 'the background of thought is . . . a mystery for all of us, a realm of things which even if known cannot be fully expressed' (H. M. Gwatkin, *The Knowledge of God*, Edinburgh, 1908, ii. 314), misrepresents this truth so as to make it serve for the purpose of excluding from the province of legitimate inquiry matters which, within limits, admit of investigation as likewise of intelligible explanation. Or, once more, a kindred distortion of the moral sense is evidenced by the unwholesome preference of obscurantists for that which is secondary and derivative as contrasted with that which is primary and fundamental, for the accretions and embellishments of truth as contrasted with the sources of its inspiration, for the peculiarities of practice and doctrine as contrasted with the obligations which are universally binding.

Thus, it was the complaint urged by his contemporaries against the prophet Isaiah that 'the general truths of spiritual religion' which he proclaimed were of the nature of 'common-place repetitions':—"precept upon precept, precept upon precept, line upon line, line upon line . . ." . . . the complaint of the hblers of Ephesus against S. John, the protest of all scholastic and pedantic systems against the freeness and the breadth of a Greater than John or Isaiah' (A. P. Stanley, *Lect. on the Hist. of the Jewish Church*, ed. London, 1889, ii. 335).

Lastly, this dislike of simplicity and of those common moralities which are always the soul of religion usually takes practical effect in the substitution of mechanism and authority for the seeing eye and sympathetic heart, the result being a gradually diminishing respect for truth and a total absence of enthusiasm on its behalf.

Obscurantism always sooner or later provokes a reaction, the presence of which makes itself felt sometimes negatively—e.g., in a sense of dissatisfaction and state of unrest—at other times in positive and constructive efforts such as the reconsideration of the standards of faith or the revision of formularies and Church government. The methods adopted by obscurantism for the purpose of suppressing such manifestations resemble those previously adopted by it for the purpose of preventing them from making their appearance.

Thus, 'what was meant innocently, though, perhaps, without due regard for the consequences,' is by the obscurantist represented as 'a conspiracy, a rebellion, an attempt to overthrow the faith' (ib. i. 195).

Or, it may be, the obscurantist canonizes the dead prophets whom his prototypes in the past persecuted, whilst living prophets are persecuted by himself.

But, though obscurantism is possessed of almost unlimited resources, and though its intensive power is only increased owing to its being compelled by the progressive tendencies of modern civilization to work beneath the surface, we may remember for our comfort, on the other hand, that the really notable thing that has been achieved during the last three centuries is not so much any addition which has been made to our knowledge, or any result of inventive skill or industrial effort, as rather the education of precisely those truth-loving propensities of human nature which are most likely to be of service in the struggle against obscurantist influences. Thus, what most counts now in religious inquiry, philanthropy, and physical science (to take only three examples) is the *spirit* which prevails in these spheres, and this spirit will

be found in each case to have been acquired as the result of an evolution by antagonism to such influences through long ages. There are, however, other more specific encouragements which we may likewise cherish—e.g., the love of publicity in the modern world, the growth of sympathy, the spread of democracy, the more critical spirit in which estimates and claims once taken for granted are now examined. These remedies have their value and are in their measure efficacious, but it should never be forgotten that obscurantism is due to a deliberate intention and cannot therefore be successfully combated merely by those agencies which are designed for the removal of error or ignorance.

LITERATURE.—The literature, involving, as it does, references to text-books on the reactionary movements in history and to miscellaneous works illustrative of the anti-progressive tendencies in human nature, is too comprehensive to be here summarized. More specific references which may be found useful (in addition to those mentioned in the article) are the following: Plato, *Phaedrus*, 272 to end, *Republic*, 382 ff. (and cf. *ὑποκρισόμενοι* in 400 E), *Laus*, 876; Thucydides, iii. 82; Abelard, *Introd. ad Theologiam* (*Opera*, ed. A. Duchesne, Paris, 1616, p. 1046 [on the depreciation of religious knowledge]); C. Werner, *Die Scholastik des späteren Mittelalters*, Vienna, 1831-87, ii.; A. Harnack, *Hist. of Dogma*, Eng. tr., London, 1894-99, vi. 161 (on the decline of scholasticism), vii. 108 (on Liguori); C. Beard, *Port Royal*, ed. 1873, vol. i. bk. ii. chs. ii., iv. f., vol. ii. bk. iii. ch. ii.; J. Tulloch, *Hist. of Rational Theology and Christian Philosophy in England in the 17th Century*, Edinburgh, 1872, i. 381.; C. J. Abhey and J. H. Overton, *The English Church in the 18th Century*, London, 1878, i. 297-300 (on the conditions which give rise to obscurantism); I. A. Dorner, *Hist. of Protestant Theology*, Eng. tr., Edinburgh, 1871, ii. 77, 256; A. Plummer, 'Recollections of Dr. Dollinger,' in *Exp* iv. i. [1890] 274 f. (three admirable examples); B. Jowett, *Thessalonians, Galatians, Romans*, London, 1894, esp. 'Dissertation on Casuistry'; G. Tyrrell, *Medievalism*, London, 1905; G. Salmon, *Infallibility of the Church*, do.; and a great number of others, though by many who make use of the term it is understood merely in their own sense and is applied merely for their own point of view.

OBSSESSIONS.—See **INSANITY**.

OCCASIONALISM.—Occasionalism, or the doctrine of occasional causes, is a theory which was propounded in the Cartesian school in order to explain the relation between soul and body. Pre-Cartesian (scholastic) philosophers had believed in a reciprocal causal relation between body and mind, a natural or physical interaction, consisting in the passage of substance from the one to the other (*influxus physicus*). But the extreme dualism of Descartes (1596-1650), according to which matter and mind were absolutely independent and disparate substances, rendered such an explanation impossible for himself. He believed in interaction, but was unable to explain it in terms of anything known. He could only regard it as a unique fact; and he left the problem which it implied without any satisfactory solution.

Here lay one of the most obvious weaknesses of the Cartesian system, and Descartes's followers were not slow in realizing it and endeavouring to remove it. Descartes himself had spoken of mind and matter as alike dependent on nothing but the 'ordinary co-operation' of God. This suggestion was seized by several of his disciples. Louis de la Forge declared the relation between body and soul to be explicable only on the supposition that they had been originally united by God. J. Clauberg (1622-65) denied that body could influence mind, though he did not deny the reverse action, and taught that bodily events are only the occasions, not the causes, of mental. G. de Cordemoy (1620-84), on the other hand, held that, without divine intervention, it is as impossible for the soul to receive new ideas as for the body to receive new motions: on the occasion of a bodily change God produces the corresponding 'idea' in the soul, and on the occasion of our willing God moves our limb. S. Régis (1632-1707), another Cartesian, reached

the inference that God is the only truly efficient cause.

These doctrines were developed and systematically formulated as a coherent theory by Arnold Geulincx (1623-69), a Cartesian of the Netherlands; he, therefore, is usually regarded as the founder of occasionalism. Geulincx held that self-activity cannot be unconscious; that one can do nothing without being conscious of how the action is performed; for whatever is produced from the mental substance must be produced clearly and distinctly. From this he deduced that the body is beyond control; we are only spectators of its motions; it is managed by the Deity. And, if mind cannot be conceived as working the body, much less can the material thing be capable of influencing the mental. Finite beings, then, are only occasions or instruments for the activity of God. The correspondence between the series of bodily movements and the series of volitions and ideas was illustrated by analogy with two clocks which keep time, not because the one affects the other, but because they are the work of one and the same maker. Such occasionalism does not, as is often supposed, imply the arbitrary intervention of a *Deus ex machina* or universal special providence. The correspondence between the bodily and the mental series is ruled by general laws ordained by God. The correlation is thus pre-established, not the result of perpetual isolated miracles. But Geulincx does not ground the concomitance and correspondence between the bodily and mental in the real nature of the material and spiritual substances; he recognizes immanent causality no more than transeunt.

In these respects Geulincx's theory is to be distinguished from Leibniz's (1646-1716) doctrine of pre-established harmony, with which it has much in common. Indeed, the Leibnizian doctrine grew out of, and was intended to replace, occasionalism. But, whereas the theory of Geulincx made the connexion between body and soul, and their concomitant phenomena, merely arbitrary, Leibniz's pre-established harmony was rational, in that each monad was supposed to unfold its series of states in an intelligible order.

The extreme development of occasionalism is to be found in Malebranche (1638-1715), whose *La Recherche de la vérité* appeared about nine years later than the *Ethica* of Geulincx. Occasionalism was first intended as a theory of the relation between body and soul, such as should obviate the necessity of asserting their interaction. Its application was extended, however, to causation in general, and it culminated in the denial of transeunt, or efficient, or, indeed, of any kind of secondary causes. In denying necessary connexion between two events which we relate as cause and effect, Malebranche foreshadowed part of Hume's doctrine. Further, Malebranche gives the doctrine an epistemological significance. Not only can mind and matter not interact; mind cannot even know matter. We 'see things in God'; i.e., apart from our connexion with Him and His activity upon us, we can neither perceive nor will. As God is the only cause, so is He the only source of all our knowledge. Matter is thus only the 'occasion' of our knowledge. Our knowledge of nature is fully explained by God's working in us. Logically, Malebranche should have abolished one of the 'substances' of Cartesian dualism or else have applied extension to the nature of God, as did Spinoza. It is interesting to see that Berkeley (1684-1753), who did take the former of these alternative steps, arrived by a different road at the main result of the occasionalists—that there is no secondary efficient causality. The 'occasional causes' of Geulincx and Malebranche are the equivalents of Berkeley's 'signs.' Had Geulincx

and Malebranche not been restrained from following out the latent consequences of their occasionalism by their devotion to the Christian religion, they would inevitably have been led on to Spinozism. Their theory supplied them with a regular and orderly world, with its necessary connexions. But these necessary connexions did not inhere in things; they inhered solely in the will of God. That the world is a cosmos, not a chaos, is due, for them, to the uniformity of God's will. This uniformity is merely postulated. Moreover, it is such that Malebranche can call it 'usual' only; he thus seeks an opening for miracle and divine personality. A little more rigour in logicity, and these premisses yield the conclusion of Spinozism.

The rise of occasionalism (a solution of causality on theistic lines) involved the emergence of 'the causal problem' (see CAUSE, CAUSALITY). The Cartesian school prepared the way for Hume. But, since the 17th cent., occasionalism has been of little more than historical interest.

LITERATURE.—R. Descartes, *Meditations*, tr. J. Veitch⁹, London, 1837, v. and vi., *Passions de l'Âme*, etc.; A. Geulincx, *Ethica*, 1665, p. 113, and *Metaph. vera*, 1691, i. 5-8; N. Malebranche, *Entretiens sur la métaph. et sur la religion* (dial. vii.), and *Recherche de la vérité*, v., vi., etc. (*Œuvres*, ed. J. Simon, Paris, 1842-53); G. V. 11-end; G. Berke *Hylas and Philono* Histories of Philosophy—e.g., A. H. Ritter (Eng. tr., Oxford, 1838-46), F. C. A. Schwegler (Eng. tr., Edinburgh, 1867), F. Ueberweg (Eng. tr., London, 1885), J. E. Erdmann (Eng. tr., do. 1890), W. Windelband (Eng. tr., New York, 1893), H. Höfding (Eng. tr., London, 1900). For Clauberg see *Dict. des Sciences philos.*, par une société de professeurs de philos., Paris, 1844, i. 523. F. R. TENNANT.

OCCULTISM.—'Occultism' is a term of recent invention; it is unknown to most dictionaries. Popular use, however, is apparently tending to give it both a general and a special meaning. It purports generally to signify the doctrines, practices, and rites of things hidden and mysterious, and thus extends its meaning to cover the realms of magic and mystery, marvel and miracle of every kind; not only so, but it would further claim for itself authority in the well-nigh limitless regions of abnormal psychical phenomena, and even those of religious experience. It thus aspires to embrace so vast a field of such varied phenomena that it has all the appearance of being a vague generalization of no scientific value; and it seems highly improbable that it will maintain its own lofty claims against the popular hardening of its meaning into a more special sense. This popular restricted meaning associates occultism with the occult sciences and their study; the term should therefore be more particularly confined to the claim that there are really such sciences, and that the rumours of them are not due solely to the vivid imagination of the credulous or to the modern uncritical revival of superstitions from a pre-scientific age. The *OED* implies this when in such reference it gives 'occult' the signification 'of the nature of or pertaining to the ancient and mediæval reputed sciences (or their modern representatives) held to involve the knowledge or use of agencies of a secret or mysterious nature (as magic, alchemy, astrology, theosophy and the like).' The open verifiable human knowledge to which the name 'science' is reserved by general use has, as every one knows, gradually encroached upon the one-time private preserves of the artificially occult. It is not only that chemistry, e.g., has superseded alchemy, and astronomy astrology, so that the occultist, in defence of the ancient claims of these once reputed sciences, has to withdraw to psychic ground and the subjectivism of symbolism, but also that a whole world of psychical phenomena, some of which, consciously or unconsciously, formed

the main stock-in-trade of the magicians and psychic initiates of the past, are now being openly experimented with by scientific methods of observation and description. In the phenomena of hypnosis and suggestion, of abnormal psychology and psychical research, we are gradually acquiring a vast territory from the hitherto occult and mapping it out, and it is on this common ground of so-called 'borderland' science that the claims of occultism are being, and will continue to be, scientifically tested. The special meaning of 'occultism,' then, as found in current literature dealing with psychism and allied subjects, is the claim to knowledge of a scientific nature which is inaccessible to the accepted methods of positive objective scientific research.

That there are innumerable physical and psychical secrets of nature and man still to be discovered no one will deny; that there are phenomena which it is the habit of scientific men not to admit until compelled to do so those acquainted with the history of so-called mesmerism and of the opposition to the work of even organized psychical research will find little difficulty in acknowledging. But the claim of the occultist goes far beyond this; his claim is that the perfect science of all these matters not only already exists in the divine mind or even in the minds of superhuman intelligences, but that it is possessed actually here and now by certain perfected individuals of human lineage—that there already exists a secret science of nature and of man to which access can be gained only by the duly initiated. Occultism thus stakes its all on the claim of being science; it is neither religion nor religious mysticism, neither philosophy nor art. An occultist in any precise sense of the word is one who claims to be an initiated pupil of the adepts or secret holders and dispensers of this reputed precise, hidden knowledge of nature and of man.

There is, of course, nothing new in all this, except that the modern claims are vastly greater than those of antiquity and of the Middle Ages. In the past, in all ages and climes, there have been persistent rumours of secret knowledge and claims to the possession of secret powers. Indeed, secrecy was for long the general condition of all special knowledge. From the primitive magician and medicine-man onwards, manifold reports of secret societies and associations, of mystery-institutions, of initiation and adeptship, are recorded throughout the centuries. A generation ago it was supposed that positive science had put an end to all such pretensions and extravagances. But to-day we have a marked renaissance of these rumours and a widely-spreading interest in everything connected with the idea of initiation. In some circles claims that beggar the proudest boasts of the past are openly advanced; and it is asserted that the government of the world, if not of the universe, is in the hands of those who know the inner nature and secrets of the cosmos, and who constitute a hierarchy of ever loftier grades reaching even up to deity itself. These reputed perfected men claim to be the masters of inexhaustible sources of occult scientific knowledge attained by means of laboriously and carefully trained psychical and spiritual powers, the nature of the lowest of which may be deduced from a study of abnormal psychical phenomena and of the traditional systems of psychology and mental discipline in India and other Eastern lands.

The general tenor of the claims of occultism is thus seen to be that there is an indefinitely extensible domain of the secret science of inner things or of occult causation; that this knowledge is far more accurate and detailed than that of the open sciences of material and mental phenomena, which deal solely with normally accessible data and their inter-

relations and, therefore, at best with secondary causes; and that such knowledge may be acquired by definite methods of training and research under the direction of those who have been already initiated into these reputed mysteries. In the first place, we are asked to believe that there is a wealth of as yet profanely undiscovered physical facts which are already known to the adepts of occult science—facts which can and will be gradually discovered by the normal progress of open scientific research and its continually improving methods and instruments. In the second, we are told that these secrets are otherwise learned by the occultist, who holds that all physical facts and forces are mainly, if not exclusively, determined and ruled from within by means of psychical facts and forces. The immediate instruments of his science, he asserts, are therefore necessarily psychical—extensions by psychical intensification of the normal range of physical sensation and the development of new organs, or the actualizing of latent or potential organs and orders of sense, and of a great variety of psychic and mental powers.

The contention, therefore, is that the science of inner nature is not an arbitrary withholding of knowledge, but a natural secret, and necessarily so, because the means of research are not normally possessed by mankind. Open science is confined to accurate observation and description of phenomena by the normal powers of sense and mind, aided by delicate instruments of research perfected by human ingenuity to extend the range and correct the inaccuracy of the normal senses. The claim of occultism, on the contrary, is that the range of the senses can be enormously extended psychically, and so the imperfection and inaccuracies of the normal senses can be progressively corrected by the natural development of the powers of the human organism itself; and, as these are said to be indefinitely, if not infinitely, developable, the knowledge so acquired can, *ex hypothesi*, become more and more perfect, not only as to the superficial observation and cataloguing of physical facts, but also in the more immediate observation of mental and spiritual processes and realities. And, such being the conditions of research, it follows inevitably, it is said, that this order of science must necessarily be secret; for it can be proved and authenticated only by those and to those who are possessed of such powers. Thus, *e.g.*, with regard to purely physical phenomena, a man, it is claimed, can become, as it were, his own microscope and telescope psychically. It is further asserted that the range and accuracy of such psychical powers, when properly trained, can be so extended as to make the most powerful and delicate instruments known to physical science appear, in comparison, as crude and clumsy as the implements of the stone age alongside of a 15-in. gun or the most delicate chemical balance.

Occultism sharply distinguishes itself from mediumship or from passive sensitivity, as seen in the phenomena of spiritism or of hypnotism, suggestion and auto-suggestion, and, indeed, from any and every form of sporadic and uncontrolled automatism or psychical sensitivity or activity. There are, as all who have studied the subject are well aware, many cases of healthy natural sensitivity and also innumerable cases of abnormal sensitivity, of hyperæsthesia, anaesthesia, and telæsthesia due to disease or morbid and hysterical states. These are very probably indications of psychical capacities normally latent in all men and manifested in the case of such sensitives, subjects, and patients in an embryonic stage. The occultist claims that these latent capacities can be developed and made usable at will, so that they can be as fully controlled as, or even more so than, the normal powers of

sense and mind; that beyond these extensions there are other orders of powers and capacities, of which mediumship and other observable psychical phenomena can give no indication; that along this way there opens up a path of ascent to ever higher powers; and that these orders of powers are the keys which open the gates of progressive initiation into ever deeper or more exalted orders of knowledge. An initiate into even the lowest of the grades of occultism, it is claimed, is not a medium or hypnotic subject to be used by profane experimenters or even controlled by invisible intelligences, but always a self-conscious and self-controlled individual using his self-developed powers at will.

With regard to modern occultism, extravagant ancient pretensions of every sort and kind have been disinterred, not only from the accessible memory of the past, but also from what may be called the subconscious of history, and uncritically heaped together and embellished with all the glamour which the garish borrowed trappings of a modern scientific terminology can lend them. The modern occultist professes to bring into the field of the fully conscious, not only what the scientist regards as still in the unfocused marginal consciousness of present scientific observation, but also dim impressions from the foreconscious of ancestral memory and the mass impulses of general human subconsciousness. Claims which have been put forward for mysticism in the domain of religion are now advanced for occultism in the province of science. Now, the philosophical problems raised with regard to genuine mysticism are already of very great and grave importance.

To mention only one of them: Is religion in the best sense dependent on the possession of mystical gifts? In other words, Is mystical experience the test of spiritual achievement? Must the saint necessarily be a mystic? If so, it is evident that the non-mystic can never attain to the height of sanctity and the realization of spiritual verities. He is barred by his mystical incapacity, and not by his moral worth, from such an achievement. From this view both the common sense and the moral intuition of religion strongly dissent; and this is perhaps one of the main reasons why mysticism has been and still is regarded with suspicion by many sincerely religious minds. They ask, Is religion essentially spiritual, and therefore open to all who wholeheartedly turn to God and practise the commandments of the good law, or is it an art, such as painting, sculpture, or music, which depends upon natural talents quite apart from any moral qualification? The contention is that the man who lives a good life is nearer and dearer to God, and therefore more really than any other knows what is worth knowing. To live a good life, it is said, is open to all; it is a question of conversion of the will and not of the possession of any special powers of sense or understanding; it is not dependent on a special gift or talent other than that of the general grace of God. There is not a gift of goodness in the same sense that there are gifts of vision or of mathematical ability and the rest. Goodness belongs to another order of things; it belongs to the moral and therefore genuinely spiritual and divine order of realization. The powers of the spirit are the virtues. To this the defender of mysticism in a spiritual sense replies that the doing of the will is truly the pre-requisite of the knowing of the doctrine; but this knowing of the doctrine is a vital spiritual knowledge—so much so that to the doer of the will all things are added—and therefore the genuine mystics are not necessarily those possessed of a natural talent for mysticism from the start, but rather those who by living the spiritual religious life necessarily attain to a knowledge of spiritual verities, and spiritual verities are synthetic and naturally include all other orders of truth. Here goodness is set before knowledge, doing rightly before understanding correctly.

Science in the ordinary sense of the term, on the contrary, has no necessary connexion with goodness; a man may be an excellent chemist or mathematician, and at the same time live viciously. It is true that it is hoped by many that in proportion as science extends its conquests general ethics will improve; but there is little to show that this must necessarily be so; we may at any moment find ourselves involved in a period of scientific barbarism as the result of the extension of purely intellectual progress. Now, in so far as occultism claims to be possessed of scientific knowledge, it is evident that the possession of occult knowledge is no guarantee whatever of moral goodness; and

this is freely admitted in all the literature of the subject.

It is true that the natural instinct of mankind has ever been to keep secret any knowledge that it might possess in order to use it for its own advantage; but from the beginning the spirit of modern science has been opposed to secrecy. The test of its facts is that they can be openly verified. It has therefore been opposed to such antitheses as esoteric and exoteric, initiated and profane. The occultist retorts that he has not made the distinction, but finds it in nature. To this the scientist rejoins that, in proportion as open science has won territory from the occult, it has proved the emptiness of these claims. Our struggle is not only with nature, whose secrets we admit as something which patient research will gradually reveal, but also with unscientific human nature whose formerly professed 'secrets' we have scientifically proved to be in general arbitrary pretensions to real knowledge. The experience of history and the history of experience justify us in rejecting the division of mankind into the initiated and the profane in the traditional sense of these terms, and we refuse to believe that the men who have added to human knowledge by careful observation, by workable hypotheses and openly verifiable methods, are as if they knew nothing in comparison with initiates into the mysteries of a secret knowledge.

But, on the other hand, science has to be true to herself and to her highest ideals. Contemptuous denial of the very existence of so-called occult phenomena, and not only of the claims of the occultist about them, which till recently dismissed the whole subject as utterly unworthy of serious consideration, has at length had to be modified; and it is now recognized by a not inconsiderable number of open-minded scientific investigators that these exaggerated claims are due to the uncritical acceptance of a large mass of psychical phenomena which demand careful investigation. The work that has already been done points to such a wide extension of scientific research into hitherto obscure and unrecognized facts of consciousness and psycho-physical and psychical activity as to promise to future generations the possibility of getting to know the mind of man almost as intimately and precisely as the science of the present day knows the physical facts of nature. That, however, any but the most modest claims of the occultist will be justified is highly improbable; it is far more likely that his present secret science of mind, if he possesses one, will be found to involve as many crudities as ancient alchemy when compared with modern chemistry.

The battle must naturally be first fought out over such classes of psychical phenomena as are controllable and whose veridical nature is susceptible of definite proof or disproof—namely those dealing with verifiable facts which are beyond the range of normal sensation and outside the prior knowledge of all concerned. Take, e.g., clairvoyance and clairaudience, not simply visual and auditory hyperesthesia at short distances where acute normal sight or hearing might be held to afford sufficient explanation, but at long distances or through obstacles impenetrable to the most acute normal powers of sense. There is already a mass of evidence which has established the possibility of such genuine clairvoyance and clairaudience to the satisfaction of many careful observers as belonging to a class of phenomena entirely distinct from those subsumed under the much abused term 'telepathy,' which signifies the intercommunication between two or more minds under conditions which exclude all known physical connexion. A clairvoyant is supposed to see independently of any other mind. Here, then, for many investigators

there is a class of phenomena of immense importance for an extended science of mind. Such extensions of physical sense, however, are apparently sporadic, occasional, and beyond the control of the will. Yet on this limited basis of fact the occultist erects a vast structure of assertion. He asserts that by training it is possible to be clairvoyant and clairaudient at will; that all physical phenomena, no matter at what distance, can be deliberately investigated by the adept clairvoyant as immediately and minutely as the scientist can observe things within the normal range of vision or in his laboratory aided by the most delicate instruments. It is further asserted that there are modes of clairvoyance that go far beyond this and are incapable of objective proof for the profane. But with regard to this physical clairvoyance, at least within certain limits, we have a claim susceptible of definite proof or disproof, phenomena that can be controlled by methods of scientific research open to every careful observer. So far, however, scientific psychical research has had to be content with cases of telepathy and clairvoyance that are of the 'hit and miss' variety, the least successful results, indeed, being attained when deliberate experiments have been attempted. Nevertheless, if clairvoyance of even the limited nature referred to above is a fact—and it seems to be so—reason also leads us to believe that the possibility is open for clairvoyance extending beyond the earth and its atmosphere; but an open-minded admission of possibility is a very different thing from proved fact. The evidence required for the proof of extra-terrestrial clairvoyance must be ample and, above all, consistent; and no item of evidence has so far been brought into court, nor, indeed, has any attempt been made to adduce it.

So, too, with regard to the phenomena of psychometry, as it is called, where a series of impressions, representations, or pictures is subjectively felt by or presented to a sensitive from contact with a physical object, such, *e.g.*, as a letter or a piece of worked or natural metal or stone, with which the subject has never had previous contact. Sometimes these impressions or pictures can be proved to be fairly accurate, and in some cases astonishingly so. Here we have another class of psychical phenomena which deserves the most searching investigation of science. But here also the occultist avers, not only that the whole past history of the successive environments of any physical object—say, *e.g.*, a celt from the stone age—can be accurately read in subjective picturings by the trained possessor of this psychometric capacity, but also that such limited psychometry is a very small thing for the occultist, and simply one of the many indications that there is an objective world-memory, or what he would call the etheric record, of everything that has ever happened; also that this memory of inner nature is accessible at will to the trained occultist, who can thus check and correct all history and supplement it indefinitely right back to the very beginning of things.

The phenomena of clairvoyance and psychometry that fall within the region of controllable physical fact are susceptible of exact research and form part of the subject-matter of scientific psychical investigation; but modern occultism lays claim to far more extended powers of physical vision than these. It claims, *e.g.*, to be able at will to analyze the theoretical units of matter, whether atoms or electrons. By the use of this extended power of sight, it is asserted, an atom can be magnified to any extent, and analyzed, not only into a system of electrons, but into successively extended complexities of contents far beyond its electronic constitution. Though, of course, in the nature of the

case there is no direct means of controlling such statements, they can be indirectly dealt with; for, precisely because the assertions of what is called 'occult chemistry' agree more or less with the general data of recent scientific hypotheses, there is more than a suspicion that such statements are constructs of the imagination of natural visualizers, conditioned by what is already the common knowledge of every student of chemistry and physics. If, however, it were a fact that a number of clairvoyant occultists, independently of one another, had arrived at the same results, then there would be an intensely interesting problem to consider. But at present there is no evidence of such genuinely independent experiments having been attempted; though such claims have been made, they have been found on investigation to depend on the 'clairvoyant observation' of two or three at most, and in every case the two or three were together and not isolated, and the investigation was determined by the predominant psychism of one individual. What, moreover, the makers of such claims do not explain is that not a syllable of such notions was breathed by occultists before science had announced its facts and enunciated its hypotheses.

Again, with regard to the phenomena of modern spiritism that depend on mediumship, and are believed by convinced spiritists to be determined by invisible intelligences—and those, too, for the most part incarnate human beings—occultism admits the phenomena and the existence of the spirits, but it deprecates mediumship and professes to be able to communicate at will directly with the invisible world and its inhabitants. The method that occultism advocates—and, if it is based on fact, few will deny that it is to be commended as preferable—is not to bring the dead back to earthly conditions, but for the living to develop the power of consciously entering into the state of the departed in order to establish communication with them. These mediumistic phenomena are common ground, not only for the spiritist and occultist, but also for the student of abnormal psychology and psychical research.

With regard to the 'powers' which it is the main object of the occultist to develop, there is an enormous field of research in the literature and traditions of the East, as well as of Western antiquity and mediævalism, that has so far scarcely at all engaged the attention of modern scientific inquiry. It is a slight acquaintance with this vast literature and with some of the many practices recorded in it that has suggested and encouraged most of the occult claims. Accordingly, occultists are confident that, before their claims can be disposed of, the psychical science of the West will have to reckon with these Eastern traditions, which consistently aver that the various abnormal capacities now definitely proved by the modern study of psychical phenomena to be possessed in some degree by certain hypersensitive individuals have been not only known in the Orient for many generations, but also in some circles systematically developed and studied. This is more or less historically true, and, whether or not the occultists themselves who make the claims will ever be thought worthy of serious scientific attention, one of the chief psychological tasks of the future will, in all likelihood, have to be a methodical re-investigation on scientific lines of these accomplishments of Eastern genius, with a view to seeing what objective truth and utility they possess; and then, indeed, it may possibly be found that by this revision and re-experimentation a science of mind will gradually be built up that will be a worthy counterpart and complement to those high achievements of physical science

which have indubitably inaugurated a new age of genuine knowledge such as the world had not previously dreamed of. Whether the mental science of the future will as far surpass the psychical knowledge of the past, including what is best in Eastern and especially Indian tradition, as our present-day physical science transcends the fondest dreams of the ancients is upon the knees of the gods. But there seems no sufficient reason to doubt that, as the West is at last beginning to take an interest in the world-old problem of 'self-knowledge,' its energy and industry and the fearlessness of its open research will carry it far into the region of the hitherto unknown in its pursuit of objective truth. And the further it goes the more will occultism be driven to seek refuge in the pure subjectivism of personal psychism and the boundless realms of the uncriticized imagination. This much virtue, however, will have to be allowed it, that in the welter of its extravagant claims it has advertised the existence of some things at least that undoubtedly deserve the most serious attention and careful investigation of the best trained minds that we possess.

LITERATURE.—The literature is copious and of an exceedingly diversified character. Among special books on the subject are the following: A. Besant, *Essays and Addresses*, iii., 'Evolution and Occultism,' London, 1913; *Occultism, Semi-Occultism, and Pseudo-Occultism*, do. 1899; *Cambridge Encyclopedia of Esoteric Subjects*, New York, 1903-05; J. H. Dewey, *New Testament Occultism*, do. 1895; J. W. Frings, *The Occult Arts*, London, 1913; D. P. Hatch, *Scientific Occultism*, Los Angeles, 1905; L. Jacolliot, *Occult Science in India and among the Ancients*, New York, 1900; K. Kiesewetter, *Der Occultismus des Alterthums*, Leipzig, 1896, *Gesch. des modernen Occultismus*, Berlin, 1889; A. Lang, *Magic and Religion*, London, 1901; C. W. Leadbeater, *Some Glimpses of Occultism, Ancient and Modern*, Chicago, 1903; F. Lenormant, *Les Sciences occultes en Asie*, Paris, 1874; J. P. Migne, *Encyclopédie théologique*, Paris, 1844-06, 1st ser., vols. 48 and 49 ('Sciences occultes'); E. O'Donnell, *Ghostly Phenomena*, London, 1910; 'Papus' (G. Encausse), *L'Occultisme*, Paris, 1902, *Traité élémentaire de science occulte*, do. 1903, *Qu'est-ce que l'occultisme?*, do. 1905; E. B. Salverte, *Des Sciences occultes*, do. 1850; 'Sephariel,' *A Manual of Occultism*, London, 1910; A. P. Sinnett, *The Occult World*, do. 1881, *Occult Essays*, New York, 1906; J. B. Tissandier, *Des Sciences occultes et du spiritisme*, Paris, 1866; A. E. Waite, *The Occult Sciences*, London, 1891; B. Wilson, *Occultism and Common Sense*, do. 1903. Some aspects of the subject will be found treated under CHARMs AND AMULETS, CRYSTAL-GAZING, DEMONS AND SPIRITS, DIVINATION, HYPNOTISM, MAGIO, PSYCHICAL RESEARCH, SPIRITISM, THEOSOPHY.

OCEANIA.—See AUSTRALASIA, MELANESIA, POLYNESIA.

ODDFELLOWS.—During the first half of the 18th cent. the popularity of Freemasonry led to the establishment of similar secret societies, partly convivial and partly charitable. R. W. Moffrey, who is a past Grand Master of the Manchester Unity of Oddfellows and writes with authority, suggests that, while the Masonic Order was founded on the traditions of the craft-gild of the masons, there were other crafts which were not strong enough to establish an order of their own, and that a combination of these crafts formed themselves into an order, and adopted the title of 'Oddfellows' (*Oddfellows' Magazine*, Sept. 1888, and *A Century of Oddfellowship*, p. 16). Spry (*Hist. of Oddfellowship*) gives minutes of a meeting of a 'lodge,' no. 9 of the Order of Oddfellows, dated 12th March 1748, from which it would seem that eight previous lodges had been established before that date. A quotation by the same authority of a supposed reference to Oddfellows' lodges as social institutions in the *Gentleman's Magazine* for 1745 has not been verified, and is thought to be erroneous. The Freemasons secured as members several noblemen and gentlemen of the best rank, and along that line their evolution proceeded. The Oddfellows had more self-reliance or less success in attracting patronage, and hence

their evolution has proceeded along lines which have led to their developing into a number of large Friendly Societies (*q.v.*), one of which is now the greatest Friendly Society in the world. Some Oddfellows are not contented with this plain story of their origin, and claim that their order was founded in A.D. 55, in the reign of Nero, and that the title of 'Oddfellows' was bestowed upon it by Titus. An Ancient Order of Oddfellows and a Patriotic Order of Oddfellows existed in the 18th cent., and appear to have become part of the Grand United Order, which may thus probably be entitled to be considered the oldest order of Oddfellows in existence. The ritual of the Patriotic Order of Oddfellows describes the proceedings at the initiation of a member.

Every brother present wore a mask, and the presiding officer a long white band and wig, and an apron of white leather bound in scarlet. The candidate for membership was led into the lodge-room carefully blindfolded. After an interval of absolute silence, he was ordered to stand, and noises were made by rattling heavy chains and otherwise. He was then tumbled in among brushwood, or soured over the head in a large tub. On the bandage being suddenly removed, he found a person presenting a sword at his breast. He was then shown a transparency representing a skeleton, and a charge was delivered to him (J. F. Wilkinson, *Mutual Thrift*, p. 14).

The practice of all these absurdities indicates that the main function of these lodges was conviviality, and the incidental application of funds to benevolent purposes continued until the early part of the 19th cent., when lodges began to be established promising definite allowances in sickness in return for fixed contributions. At first the conditions under which benefits were assured were framed without any real knowledge of the nature and extent of the burden which the lodges were undertaking. The contributions were not graduated according to age, and the benefits promised were the same for every member, whatever his age at entry may have been. In this respect the lodges were in the same condition of ignorance as the early life assurance companies, which insured every person at a 'flat rate' of £5 per cent. The history of Oddfellowship after that early day has been one of steady and continuous improvement. Moffrey (*Century*, p. 18) fixes the year 1810 as that in which the Manchester Unity of Oddfellows started, though it was not till 1814 that the minutes of its Grand Committees began to be printed. These bodies, which afterwards became the Annual Moveable Committees and ultimately the Annual Moveable Conferences, have been the principal organs of the successive reforms that have taken place. In 1815 it was resolved that each lodge should relieve its own sick (*ib.* p. 22) and that every member should subscribe one shilling towards a funeral fund in the hands of the Grand Master of the order. Gradually the system of districts grew up, as intermediaries between the lodges and the order. In 1825 returns of the number of members were called for from each lodge, for the purpose of seeing whether the order in general was in a state of prosperity or not (*ib.* p. 29). At that time, however, 'the bond of union with the Order was frail.' In 1827 the Board of Directors was established. In 1828 a graduated scale of initiation fees was adopted, and it was resolved that no person should be initiated above 45 years of age. In 1844 an annual financial statement was required from every lodge, and graduated tables of contributions prepared by G. Davies, an eminent actuary, were circulated. As the returns of lodges showed many irregularities, a first step towards financial improvement was taken in 1845 by an arrangement that separate funds should be provided for management and other expenscs. In 1850 Henry Ratcliffe, the secretary of the order, published his *Observations on the Rate of Mortality and Sickness*, derived

from the returns of the lodges, and in 1853 a system of graduated contributions according to age at admission was adopted. In 1864 tables founded upon Ratchliffe's observations were accepted, and in 1867 it was unanimously resolved that these tables, and others that the directors might certify to be equivalent, should be made part of the general rules of the order, and adopted in its several districts. In 1871 it was resolved that every lodge in the Unity should be valued and the results tabulated and laid before the society. It was also resolved that every lodge should be registered under the Friendly Societies Acts. By the Act of 1875 the valuations upon which the order had insisted for its lodges in 1871 were made obligatory on all Friendly Societies, and returns of them were required to be made to the registrar. In 1879 R. Watson was appointed actuary to the order, to supervise these valuations. In 1882 a Unity Superannuation Fund was established. In 1884 the practice of raising funeral funds by an equal levy was abolished. In 1890 the central fund required by the Act of 1875 to be raised in every order was so organized as to provide relief to lodges in distressed circumstances. In 1891 it was resolved that that relief might take the form of guaranteeing by the Unity the funeral benefits. In 1893 branches to consist of female members were authorized, but they were not fully recognized until 1898. In 1895 the rules relating to secession were revised and made more stringent, so as to provide that a seceding lodge with a surplus should contribute towards any deficiency which might exist in the funds of the district to which it had belonged. In 1909 it was resolved that no lodge having surplus capital should be allowed to appropriate that surplus to the benefit of its own members without setting aside at least 5 per cent of the amount for the relief of other lodges having a deficiency. By the voluntary efforts of this great order there had been built up an organization which had gradually been improved and rendered more stable, until it might have been thought that the goal of absolute solvency in every branch and a federal guarantee of the benefits of all the branches by the Unity were within sight, when in 1911 the Legislature intervened and, by the passing of the National Health Insurance Act, substituted for the voluntary principle, which had been so fruitful in good results, a system of compulsory insurance. It will be convenient, therefore, to review the position of Oddfellows' societies, in the first instance, as they were before the passing of that Act, and then to consider the influence which that Act is likely to have on their voluntary work.

The position of Friendly Societies generally before the introduction of national insurance is shown in the report of the Chief Registrar of Friendly Societies for the year ending 31st Dec. 1906 (*Parliamentary Papers* of session 1907, no. 49, xi. pp. 16-81). If we extract from that report the details relating to Societies of Oddfellows, it appears that there were 46 orders of Oddfellows then in existence, but 10 of them had only a single branch, and are therefore hardly qualified to be recognized as orders. Others had only a small number of members. These orders had 6990 branches and, on the average of the whole, each branch had 148 members, the total membership being 1,035,785. The income of the benefit funds was £1,703,674, or £1 12s. 11d. per member, and the payments out of those funds aggregated £1,307,814, which was equivalent to £1 5s. 3d. per head. The difference between the income and the payments was £395,860. This went to increase the total assets, which amounted to £12,483,004, or on the average to £12 1s. per

member, or to 7½ years' income of the benefit funds.

In many respects the Oddfellows compare favourably with other orders, in which the number of members of each branch was 122 only, the income of the benefit funds £1 6s. 8d. per member, the payments out of those funds £1 1s. per member, and the total assets £7 0s. 6d. per member, or 5½ years' income of the benefit funds, and also, with the societies not having branches, in which the income from benefit funds was £1 0s. 8d. per member, the payments out of those funds 17s. 10d. per member, and the total assets £5 12s. 5d. per member, or 5½ years' income of the benefit funds. So great, however, is the variety of the benefits assured by different societies that these figures are not in all respects comparable. Among the Oddfellows' societies the Manchester Unity far out-distanced every other, having 60 per cent of the total number of lodges, 73 per cent of the members, 80 per cent of the benefit income, 77 per cent of the benefit payments, and 88 per cent of the accumulated funds of all the orders of Oddfellows. Each of its lodges had on the average 180 members; the income of the benefit funds was £1 16s. per member, the payments out of them £1 6s. 7d., the total assets £14 10s. per member, or 8 years' income of the benefit funds. In every respect, therefore, it had the advantage over other societies. Six other orders of Oddfellows had each more than 100 lodges and more than 10,000 members and £10,000 income with assets ranging from £50,000 to nearly £500,000. The rest were very small in comparison. Manchester is the seat not only of the Manchester Unity, but of the next two largest orders in succession—the Grand United Order of Oddfellows and the National Independent Order of Oddfellows.

A comparison of the Chief Registrar's return for 1906, so far as regards the orders of Oddfellows, with a similar return for five years earlier shows an increase of 52,865 in the number of members, of £41,721 in the surplus benefit income of the year, and of £2,317,343 in the total assets. These increases appear to have taken place in the smaller orders as well as in the Manchester Unity, and support the inference that under the voluntary system there had been a gradual improvement going on among all the societies of Oddfellows which went far to justify them in their instinctive resistance to any proposal of State control or State interference with the working of Friendly Societies. It had been the wise policy from the first of the various Acts of Parliament dealing with Friendly Societies to respect and maintain this freedom of action in many matters which in other countries would be regulated by authority.

With regard to the position of Oddfellows' societies as affected by the National Insurance Act, 1911, reference may be made to statements by Sir Alfred W. Watson, the actuary to the Insurance Commissioners, who was formerly actuary to the Manchester Unity. The principal orders of Oddfellows have become 'approved Societies' under that Act.

'Parliament, in incorporating the Friendly Societies in the new work of National Insurance, did not intend to interfere with their private enterprises. It might happen, in the course of years, that a great deal of what would have been private enterprise of the Societies would come to be State business; and, therefore, in the course of time, the complete liberty which the Societies enjoyed would extend, proportionately, to a smaller part of their affairs than it did at present. But with regard to the voluntary business of the Societies, whether obtained before or after the passing of the Insurance Act, they were left with almost the same amount of unfettered freedom as they possessed before the Insurance Act was passed. The rules which the Societies must make to the satisfaction of the Insurance Commissioners mean the rules for the transaction of their business under the Act. For the transaction of their voluntary business they might make any rules they pleased.

and the Commissioners had practically no concern with those rules. So far as the valuations of the Societies outside the Act were concerned, that is, the valuations of their voluntary funds, they made those valuations at the same time and in the same way as they previously made them. They employed whom they liked, and they had absolute freedom to act or not to act upon the advice which the valuer tendered to them. Each Society under the Act was valued as though it were an absolutely independent unit. If, however, it had fewer than 5000 members and it had a surplus, one-third of that surplus was carried to the county pool, the other two-thirds being absolutely its own for its disposal in its own way, subject to the provisions of the Act and the sanction of the Commissioners. The object of that transference of surplus was to enable the pool to make good the deficiencies in other Societies connected with the pool, up to a limit, in the normal case, of three-fourths of the deficiency; so that the pooling referred to was only intended to correct the fluctuations due to a limited membership. The separation of accounts as between male and female members was only partial. If the rules of a Society enabled or required the contributions of men and women to be paid into the same fund, no separate account keeping was called for. Under Section 72 of the Insurance Act every registered Friendly Society which provided benefits similar to those of the Act . . . had to make a scheme dealing with the contributions and benefits of its members on the voluntary side. But Parliament had been so careful to refrain from interfering with the private contracts of Societies and their members, that it had laid it down that the scheme might provide for the continuance of the existing contributions and benefits; it might provide, in fact, for the reduction of the contributions and benefits, or for their continuance, as the Society determined. The primary purpose of the insistence on a scheme was, therefore, to bring home to the members the fact that a change had taken place, and that National Insurance extended to the majority of them; and to cause them to apply their minds to the problem whether their Friendly Society should continue to maintain its old contracts to their full extent, or whether it was desirable that some modification should be made. The whole thing was in the hands of the Society, and it was a matter of great interest, and to some a matter of great surprise, that the vast majority of the Societies had allowed their members to determine for themselves whether they would continue their old contracts or accept a reduction of contributions and benefits on the private side. The great majority of the members, certainly as many as 80 per cent., taking all Societies together, had decided that they would continue their old contracts. The result was that, in respect of several millions of people, from 1912 onwards the contribution of each person for provident purposes was increased by about 3d. a week, not 4d., the insured person's share of the contribution under the Insurance Act, because a person did not require two doctors, and generally the members had reduced their contribution by a penny a week, which was about the sum they used to pay to the doctor. But in the case of several million people, the contributions had been increased since 1912 by 3d. a week, and the sickness benefit by 10s. a week. As a consequence, an enormous number of people were now insured for amounts which approximated far more closely to their wages than anything which previously had been regarded as practicable in sickness insurance. That fact might be connected with the large increase in the rate of sickness which several Friendly Societies had reported since 1913. It was an interesting circumstance that rather than reduce their contracts in their private Friendly Societies, the vast majority of people who had entered into Friendly Society membership had elected to take the obligations of the Insurance Act, and get the benefits of the Insurance Act, in addition to their previously existing arrangements with their Societies. When regard to the Manchester Unity of Oddfellows, the largest of them, it was an indication of the extent to which progress was being made, that, although in 1900 the Society had a balance of assets and liabilities, the valuation showing an equality of surpluses and deficiencies, the Society in 1905 had a surplus of nearly half a million. In 1911, when it had taken courage, and had resolved to be valued on a modern basis obtained from its own experience, a decision which added many hundreds of thousands of pounds to the estimate of its liabilities, the valuation showed again an almost exact balance of assets and liabilities. Making due allowances for the change of valuation basis, this meant that that Society was not only solvent on the strongest test that had ever been applied to any Friendly Society, but that it had made great progress during the preceding five years, as it was shown to have done during the five years before that' (*Journ. Royal Statistical Society*, lxxviii. 433-438).

Reference may also be made to the answer to Sir Alfred W. Watson's statements made on the same occasion by the writer of this article (*ib.* pp. 443-445), who takes a less hopeful view of the probable effect of the Act on the voluntary work of the societies.

With regard to the relation of Oddfellows' societies to the European war, it was estimated in 1915 that more than 100,000 members of the Manchester Unity were in the fighting line or in training. At an early stage the Annual Conference

decided to pay the contributions of members on active service, but it was probably not then contemplated how numerous they would be or how heavy would be the burden thus assumed. In 1915 a further step was taken by the establishment of a War Mutual Liability Fund of the order for the purpose of assisting lodges to meet their liabilities in respect of members serving as soldiers or sailors. This fund is to be supported by a levy upon every lodge in proportion to the number of its members. As one obvious result of the war will be to increase the burden upon the lodges arising from sickness, disability, and death, the foresight with which the Oddfellows have determined to spread that burden over their whole Unity is much to be commended.

OFFERINGS.—See SACRIFICE.

OFFICE, THE HOLY.—This name, which is now the formal title of the Roman Congregation created in the 16th cent. to watch over the purity of the faith, seems to be due to the former technical association of the word *officium* with the function of detecting and repressing heresy. In the ecclesiastical courts causes of 'instance' were opposed to causes of 'office,' the former consisting of actions for the recovery of legal rights, the latter of proceedings by way of accusation, denunciation, or inquisition. Roughly speaking, therefore, the word 'office' was used specially in connexion with the criminal, as opposed to the civil, jurisdiction of an ecclesiastical judge. In any case there is no doubt that the phrase '*officium inquisitionis haereticae pravitatis*' had become stereotyped among the canonists long before the close of the 15th century. Torquemada, the first Inquisitor General of Spain (1483-98), was himself accustomed, if we may trust the text of his *Instructions* printed in 1576, to refer compendiously to the tribunal over which he presided as *El Sancto Oficio* without any further addition.

In tracing the history of the name one may remark how Sixtus iv., in a bull of 1484, directs that any Spanish bishop who might be of Jewish descent was not to act himself, but to be represented by an *officialis*, in all those matters 'quae Inquisitionis haereticae pravitatis officium concernunt' (see F. Fita, in *Boletín de la Real Academia de la Historia*, Madrid, xv. 475, and cf. pp. 476, 477, 478, etc.). Both the name '*officialis*' as applied to the chief legal functionary who represented a bishop (the judge of the Arches Court of Canterbury is to this day designated '*Official Principal*' in the patent by which he is appointed) and the oath *ex officio*, only abolished in England by statute in 1640 (16 Carol. i. c. 11), probably find their explanation in this technical meaning of the word '*office*.' Cf. some of the decretals of Innocent iii. in the *Corpus Juris*, c. 31, X. v. 3 and c. 10, X. v. 34, also one of Clement iv. (1265) in the *Sext.*, cc. 10 and 11, in *VI^o v. 2*.

The medieval procedure employed in the detection of heretical pravity having been dealt with in the art. INQUISITION, it remains to treat of the later developments of the same movement commonly known as the Spanish Inquisition and the Roman Congregation of the Holy Office.

1. The Spanish Inquisition.—(*a*) *History*.—When Spain under the rule of Ferdinand and Isabella became in a sense one kingdom, conditions prevailed which seemed to demand exceptional legislation. All through the 12th and 13th cen-

tures the large Jewish population of the peninsula had grown in numbers and importance. On their part usurious practices and a certain love of display, on the part of their enemies envy and such wicked calumnies as the ritual murder charge, had helped to keep alive the blind religious prejudices of the Christians, which every now and then were fanned into a flame by some fanatical preacher. A particularly violent outburst of anti-Semitic hatred took place in 1390-91. Vast numbers of the Jews, whom prosperity had probably robbed of their staunchness, were cowed into seeking baptism, and many more were won over a few years later by the extraordinary eloquence of the Dominican St. Vincent Ferrer. But, as a body, these converts, known to their Jewish fellow-countrymen as Marranos (a word which also means 'swine'), were inconstant and at best only half-hearted. In many cases they still maintained in secret the practices distinctive of their race.

'The insincerity of the conversion of a large portion of the Marranos was incontestable' (Lea, *Inquisition in Spain*, i. 150).

This constituted a danger alike to Church and State, the more so that the highest offices in both were frequently filled by men of Jewish descent. There is evidence that Pope Sixtus IV. suggested the introduction of an organized inquisition in 1474, proposing N. Franco, who was then acting as papal legate, for inquisitor. But Ferdinand had no wish to sanction an institution which would be almost entirely controlled by the Holy See. He wanted an inquisition of his own, and after some negotiation a bull was procured from Sixtus in 1478 which empowered the sovereigns to nominate either two or three inquisitors who should be men over forty, of blameless life, and of attested learning (the bull is printed by Fita, *Boletín*, xv. 450 f.). A beginning was made at Seville, where 'Judaizing,' i.e. relapse into Jewish practices, was believed to be most rife, in Dec. 1480. Here from the outset the two Dominican inquisitors conducted the proceedings with a ferocity which outraged all the conventions prescribed even by the common (ecclesiastical) law of those days to secure justice for the accused. Complaint was made to Rome, and Sixtus remonstrated with vigour in letters addressed to the sovereigns. Dollinger (*Kleinere Schriften*, p. 330 f.) has mocked at the vacillations of this intervention, but it is a fact that the pope did intervene and that as a consequence the grosser forms of abuse seem to have been checked, while substantial changes were made in the whole organization (see Grisar, *ZKT* iii. 561-563). On the other hand, Sixtus undoubtedly sanctioned soon afterwards the extension of inquisitorial proceedings to Aragon, Catalonia, Valencia, and Majorca. There were disputes over the question of the appeals which the victims of the tribunals of the Holy Office addressed to Rome in great numbers, but some sort of final settlement was arrived at by the appointment of the Dominican Thomas de Torquemada, formerly Isabella's confessor, a man of mortified life and strong religious convictions, however fanatical his zeal, to the newly-created office of Inquisitor General. Torquemada's personal austerity is admitted even by such writers as Llorente and Sabatini. Under Torquemada a code of *Instructions* was issued which secured uniformity of practice in the tribunals of the Holy Office, and the institution was extended to the whole of Spain. There can be no doubt that in these early years the proceedings against the unfortunate Judaizers were of frightful severity. A great deal of Llorente's partisan history has been controverted, and the documents from which he worked, notably those connected with the Inquisition of Seville, have

been destroyed, but there are plenty of materials surviving which leave room for no illusions as to the merciless character of the whole organization. The account given by Sebastian de Orozco, a contemporary and eye-witness, of the proceedings of the Inquisition of Toledo from 1485 to the end of the century has been printed entire by Fita (*Boletín*, xi. 296 ff.). On an average some twenty relapsed Judaizers were annually burned at Toledo in those early years, and many thousands were penanced, though even this savagery does not quite bear out the exaggerated pictures of blood-thirstiness drawn by such writers as Amador de los Rios or W. H. Rule. The Toledo tribunal supplanted one that had been previously established at Villa Real (the modern Ciudad Real), but this and Seville were only two out of eight or ten great centres of inquisitorial activity which the ample powers accorded to Torquemada enabled him to set up. There were others at Cordova, Murcia, Llerena, Jaen, Saragossa, Valencia, Barcelona, Majorca, etc., and their sphere of action was continually extending. It may be said that the earlier history of the Spanish Inquisition culminated in the expulsion of the Jews, first from Andalusia and then in 1492 from the whole of Spain. This expulsion was, of course, a political measure carried out by the sovereigns and the Cortes, but undoubtedly their action had been much influenced by Torquemada and by the famous inquisition process following upon the supposed ritual murder of a child afterwards venerated as El santo Niño de la Guardia. It is noteworthy that even so severe a critic of the Holy Office as R. Sabatini (*Torquemada*, pp. 271-355) finds it impossible, after an elaborate study of the documents of the process, to arrive at any satisfactory explanation of this mysterious murder. He admits the fact that the child was put to death, and he acquits Torquemada of any foul play or forgery of documents, thus rejecting the solution of such Jewish apologists as M. Loeb (*REJ* xv. [1887] 203-232). The original depositions from the Inquisition records have been printed by Fita (*Boletín*, xi. 7-160). Anti-Jewish feeling undoubtedly ran very high at this period, and economic conditions, as may be inferred from the terms of the *Pragmatica* published by the sovereigns on 30th March 1492, largely contributed to it. Nor was this hatred of the Jews confined to Spain or to the adherents of the papacy. Luther, at any rate in his later years, held anti-Jewish views quite as uncompromising as those of Torquemada.

'Their synagogues,' he declared, 'ought to be razed to the ground, their houses destroyed, their books, including the Talmud and even the Old Testament, taken from them and their rabbis compelled to earn their bread by hard labour' (see *JE*, s.v. 'Luther,' where full references are given).

Partly perhaps as a result of the expulsion which must have cowed the Marranos and weakened Jewish influences, the violence of the inquisitorial persecution declined during the first quarter of the 16th century. Cardinal Ximenez, who was Grand Inquisitor of Castille from 1507 to 1517, was by nature humane and just, so that he is commended for many things even by Llorente, notably for his prosecution of the iniquitous inquisitor Lucero. So, again, in reference to the successor of Ximenez E. Armstrong remarks:

'Hitherto under the influence of Adrian of Utrecht the Holy Office had shown singular moderation towards the Moorish or Morisco population. The King had given up the proceeds of confiscation to build churches for the converts, the term within which relapsed heretics might be reconciled to the Church was extended, the obligation of wearing the *sanbenito* after public abjuration was no longer imposed' (*The Emperor Charles V.*, new ed., London, 1910, i. 100).

There can be no doubt also that during all this period considerable influence was exercised by the Holy See in restraining the excesses of the inquisi-

tors. Alexander VI., Julius II., Leo X., and Clement VII. all at different times found themselves in conflict with the officials of the Spanish Holy Office. The history of the introduction of the Inquisition into Portugal, which after six years of negotiation was only brought about under Paul III. in 1536, is particularly significant. All the delay was caused practically by the limitations imposed by the papacy with the view of obtaining more merciful treatment for the new Christians, who, as the victims themselves protested, had been converted by force from the Judaism or Muhammadanism which they formerly professed.

From about the middle of the reign of Charles V. there was a change in the main direction of the activities of the Holy Office. Spain, and especially certain districts on the east coast, had not altogether escaped the influence of the new learning. In some places the doctrines of the Reformers were discussed and secretly propagated, while elsewhere the religious unrest of men's minds found expression in extravagant forms of mysticism. It may be said, then, that during the greater part of the 16th cent. it was the Protestants and *alumbrados* ('illuminated'), rather than the converted Jews and Moors, who principally attracted the attention of the Inquisition. Both St. Ignatius Loyola and St. Theresa in their different periods fell under suspicion and were made the subjects of inquisition proceedings. The works of the celebrated ascetical writer Luis of Grenada were for a long time under discussion. The famous process of Bartholomew de Carranza, archbishop of Toledo, lasted seventeen years, and only the revocation of the cause to Rome by Pius V. saved him from what must now seem most unjust and arbitrary condemnation. It would not be quite fair to lay directly at the door of the Inquisition the expulsion of the Moors in 1609. Political reasons—e.g., their connivance with the Barbary rovers in kidnapping Christians, and their engaging in political intrigues with the Sultan—were put forward in the edicts of Philip II., 10th Dec. 1567, and Philip III., 9th Dec. 1609 (these are printed by Balmez, *El Protestantismo comparado*, French tr., in vol. ii. appendix), but undoubtedly the facts, or supposed facts, elicited under torture in the Inquisition trials had much to do with the decision arrived at. The whole matter has been very fully and straightforwardly dealt with by P. Boronat y Barrachina, *Los Moriscos Españoles y su Expulsion* (Valencia, 1901), who, in spite of strong national and religious sympathy with the Inquisition, fully admits the expulsion to have been economically disastrous for Spain. It had, however, the approval of many enlightened contemporaries—e.g., Cervantes. In the 17th and 18th centuries the action of the Holy Office undoubtedly grew much milder, and at this stage a good deal of its energy was spent in investigating cases of atheism or blasphemy and also the conduct of ecclesiastics accused of offences against morality. The Holy Office in Spain, revived in 1814 after a temporary eclipse under Napoleonic influences, was formally and finally suppressed in 1820.

(b) *Distinctive features.*—A prevalent view of the Spanish Inquisition, and one much favoured by Roman Catholic apologists such as J. de Maistre, C. J. von Hefele, J. Hergenröther, A. Knöpfler, etc., holds that the Holy Office in Spain was a State institution. To this L. von Ranke has lent countenance by calling it 'a royal tribunal equipped with spiritual weapons' (*Die spanische Monarchie*, in *Werke*, xxv., [Leipzig, 1877] 195). The truer statement, as H. Grisar has pointed out, would be the converse. It was really a spiritual court invested with royal authority. The situation in Spain (see K. Benrath, in *PRE* ix. 158–161) was very much akin to that in Venice. There

also the State was thoroughly willing to co-operate in the work of suppressing heresy, but only on condition that the control of the tribunal was not taken out of its hands. Whether the establishment of the Inquisition in 1478 owed anything to the initiative of the Holy See seems doubtful. But, on the other hand, it was from the pope from first to last that the Holy Office derived its powers. The peculiarity of the Spanish tribunal lay in its centralization, i.e. in the appointment of a single Inquisitor General, and, though this office was for a brief space entrusted to a commission of four, and although under Ximenez a separate Grand Inquisitor was named for Aragon, the institution for more than three centuries possessed a unity of organization which inevitably made it an instrument of great power in the hands of the crown. In practice the sovereign nominated the Inquisitor General, though it would be wrong to infer that it was customary to appoint any but men of recognizedly high character. Some of them, like Ximenez and Adrian of Utrecht (afterwards Pope Adrian VI.), were ecclesiastics not only of ability but also of the sincerest piety. Another distinctive feature was the council of the 'Suprema'—a body which in 1483, under the designation of the 'Consejo de la Suprema y General Inquisicion,' was added to the four royal councils already existing. The number of members, at first uncertain, came to consist of five, besides the Inquisitor General, and to these Philip II. added two from the Council of Castile. These were sometimes laymen, and, as the king nominated, even though the names were submitted to him by the board itself, the influence exerted by the civil power was enormously great. The Suprema (see Lea, *Inquisition in Spain*, ii. 166 f.) gradually gained influence at the expense of the Inquisitor General, but it was through the latter that the members of the council as well as all subordinate officials of the Holy Office formally derived the spiritual powers with which they were invested. The Suprema also acted as a court of appeal with respect to the local tribunals.

As regards procedure the Spanish Inquisition does not appear to have differed materially from what has been already described in the art. INQUISITION (vol. vii. p. 330 f.). It need only be said here that the practice was by no means so arbitrary or even so unfair as the reader would infer from the accounts given by Lea and other critics, all of them quite unacquainted with the technicalities of the canon law upon which the procedure of the Holy Office was based. While there is much—particularly the use of torture and the inadequate representation of the accused by counsel—which every right-thinking man must condemn, there is no sufficient ground for saying that the Spanish inquisitors as a body were intent only on securing a conviction without regard for either truth or justice. The Holy Office, in fact, contrasts favourably so far as concerns the observance of forms of law with the secular tribunals of other countries, notably those English courts which pronounced sentence upon religious dissentients tried for high treason during the reigns of Henry VIII. and Elizabeth. Lea does not deny (sec. c.g., iii. 43–52) the existence and formal recognition of certain safeguards to protect the accused, but he declares them to have been mere affectations which were of no practical avail. It is to be regretted that he has not printed in *extenso* a few of the processes upon which his verdict is based, so that the trained canonist might be in a position to judge of the evidence for this very unfavourable view.

As for the terrible barbarities committed by the Spanish tribunals in torturing suspects and relaxing, i.e. requiring the secular arm to burn the

condemned, there is unfortunately no room for doubt of their reality. At the same time it should in fairness be remembered that as late as 1784 a woman was burned at the stake at Portsmouth for murdering her husband (see L. O. Pike, *Hist. of Crime in England*, London, 1876, ii. 379), and that about 1735 such executions by fire simply for uttering counterfeit coin were common in England, often numbering as many as half a dozen in a year.

Of the frequency of relaxations to the secular arm in the early days of the Inquisition it is difficult to obtain an impartial estimate. Llorente, whose figures have too often been accepted without discussion, is certainly untrustworthy wherever the numbers given are merely a matter of speculation.

'There is no question,' says Lea (iv. 517), 'that the number of these [Inquisition victims] has been greatly exaggerated in popular belief, an exaggeration to which Llorente has largely contributed by his absurd method of computation on an arbitrary assumption of a certain annual average for each tribunal in successive periods.'

The most striking example quoted by Lea is that of the Canaries, where Llorente estimates the number of persons burned at 1118, whereas we now know the actual number to have been exactly eleven; but this misrepresentation, of course, is quite exceptional. Down to the death of Torquemada in 1498, according to Llorente, 8800 persons were burned. The true number is probably not many more than the quarter of that, but, on the other hand, Rodrigo's estimate of 400 is absurdly below the mark. In the absence of the Seville records no accurate computation can be attempted. What we know for certain is that in the following centuries the numbers steadily diminished. Probably no calculations have been more carefully made from first-hand sources than those of Schäfer. According to him (*Beiträge zur Gesch. des span. Protestantismus und der Inquisition*, i. 156f.), the estimates of Inquisition victims made by such writers as Fliedner and Llorente, at any rate as regards the punishment of Protestants, are enormously exaggerated. Out of 2100 persons indicted for Protestantism whose processes are preserved, only about 220 were burned in person, and 120 in effigy, and these figures include the great antos of Valladolid and Seville, which alone account for 70 burnings in person and 30 in effigy. Moreover, many who suffered in this way were admittedly foreigners.

However much the Inquisition and its methods may run counter to modern feeling, there is force in the contention 'No Church, no morals; no dogma, no Church; therefore purity of faith is of supreme importance.' It is this conviction that has led such straightforward and patriotic Spaniards as J. L. Balmez and Menendez y Pelayo to urge that there may still be something to admire in this unpopular institution. In any case those who can see in it nothing but a brutal and mercenary organization to fill the coffers of the State and the pockets of the inquisitors have certainly misread the facts. We shall not have a trustworthy and impartial history of the Inquisition until the point is grasped that there are many men, not only among the simple but also among the learned, worldly-minded as well as spiritual, who conscientiously hold that orthodox dogmatic belief is the pearl of great price for which all other things in the world ought to be sacrificed.

2. The Holy Office in Rome.—This does not call for very full treatment. The bull of Pope Paul III., *Licet ab initio*, anticipating in some sense the action of the long-looked-for Council of Reform, nominated in 1542 a congregation of six cardinals to watch over the purity of the faith, gravely imperilled in that time of religious unrest. No very sensational developments followed. Al-

though by an obscurantist policy which Pastor has not hesitated (*Gesch. der Päpste*, Eng. tr., xii. 507) to denounce in outspoken language the Holy Office still refuses all direct access to its Roman archives, and although the best sources of information, even though many have perished, are thereby withheld from students, still a good deal of valuable material has been collected *aliunde* by Buschbell (*Reformation und Inquisition in Italien*) and others. Buschbell makes it clear that in the early years—at any rate until the pontificate of Paul IV.—much humanity was shown to the Inquisition prisoners in Italy. Consideration was shown to the sick, strict confinement was enforced only in a few extreme cases, the use of torture was rare, and the inquisitors were personally merciful (pp. 219-222). Proceedings in the south of France were much more severe at the same epoch (c. 1545). This moderation, however, was not maintained during the pontificate of Paul IV. (G. P. Caraffa, 1555-59). In spite of his violent anti-Spanish bias, he is believed to have brought from Spain, where he was legate, strong convictions as to the need of severity in dealing with heretics. The Roman Inquisition was stimulated to an activity which even the most earnest and orthodox condemned. It has often been maintained by Roman Catholic apologists, such as Lacordaire or even Balmez, that the Roman Inquisition never pronounced a capital sentence. Fuller investigation has shown that this is untrue. In 1556 twelve (some say twenty-four) Marranos were burned at Ancona after trial by the Holy Office, and other condemned persons were executed at the stake even in Rome itself (see Pastor, German edition, vi. 507, 518). Many of those delayed and imprisoned at this period were afterwards declared free from the slightest taint of heresy. The case of Cardinal Morone (and we might add that of Cardinal Pole) was a conspicuous example of such injustice. Popular feeling raged so high that at the death of Paul IV. the Inquisition buildings were sacked and many of its records destroyed. Paul IV. also introduced in Rome the Index of forbidden books. Undoubtedly the severity shown at this time, which lasted on, though with mitigated activity, during the reigns of such pontiffs as Pius V. and Sixtus V., did have an effect in checking the progress of Protestantism and in restoring a more austere standard of morals than had prevailed during the Renaissance period, but the milder attitude of most succeeding popes showed that they regarded these extreme measures as justified only by some crisis exceptionally menacing to the purity of the faith. Taken as a whole, and considered in comparison with the action of the tribunals of the Inquisition in other parts of the world, the Roman Congregation of the Holy Office has throughout its history conspicuously shown a spirit of moderation. It has lately been reconstituted by Pope Pius X., and it still takes the first place among the Roman Congregations, having now added to its duties the decision of all questions arising out of the doctrine and practice of Indulgences. In its judicial capacity, as need hardly be said, the Holy Office now enforces none but what are, practically speaking, spiritual penalties.

3. The Holy Office elsewhere.—The activities of the tribunals of the Inquisition, always deriving their jurisdiction mediately or immediately from the Roman pontiffs, in various other parts of the world have been chronicled by many different investigators. Benrath, e.g., has occupied himself more particularly with the Inquisition in Venice, especially during the 16th century. Here, as in Spain, the secular power exercised many checks upon the freedom of the inquisitors, and here capital punishment, when inflicted, took the form

not of burning the culprit, but of drowning him in one of the lagoons, in itself certainly a more merciful procedure. In a summary of the 16th cent. cases which he has investigated Benrath tells us that there were 803 processes for Lutheranism, 5 for Calvinism, 35 for Anabaptism, 43 for Judaizing, 65 for blasphemy, 148 for the possession of heretical books, 199 for sorcery (involving more particularly sacrilege with consecrated hosts), 22 for perjury in Inquisition trials, 23 for grosser forms of immorality, 20 for clerical concubinage, 45 for contempt of religion, and 27 for disregard of the laws of fasting and abstinence. In the 17th cent. the number of prosecutions was much less on all counts. As regards the Netherlands, P. Frédéricq has produced five volumes of his *Corpus Documentorum* dealing with the Inquisition trials. The Holy Office during the 16th cent. was very active and created much popular resentment. It was here that, on 1st July 1523, two Augustinian monks were burned—the first victims who suffered for Lutheranism—at the Grand' Place of Brussels. It was on this occasion that Luther composed the hymn, or, more correctly, the historical ballad, beginning: 'Ein neues Lied wir heben an.' Throughout the Spanish dependencies tribunals for the detection of heretical pravity were introduced almost as soon as any settled ecclesiastical government had been established. A Chilean scholar, J. T. Medina, has devoted much labour to investigating the past history of the Inquisition not only in his own country, but also in Cartagena, La Plata, Mexico, Lima in Peru, and the Philippines. Quite recently he has published a volume on the very early days of the institution in America, pointing out that, while inquisitorial powers were still left in the hands of the ordinary bishops, abuses and excesses were more rife than when, as happened later, special inquisitors were appointed for the purpose. It is generally admitted that in many cases the inquisitors, who claimed no jurisdiction over the natives themselves, as long as they were unbaptized, proved to be true friends to the unfortunate aborigines and stood between them and the brutal oppression of their conquerors.

LITERATURE.—I. SPAIN.—The subject has been most fully dealt with in modern times by H. C. Lea, *Hist. of the Inquisition in Spain*, 4 vols., New York, 1900-07, *The Inquisition in the Spanish Dependencies*, do. 1903, and *The Moriscos of Spain, Conversion and Expulsion*, do. 1901; P. M. Baumgarten, *Die Werke von Henry Charles Lea*, Münster, 1903, criticizes Lea's bias and inaccuracies, but without giving special prominence to these volumes. In *Boletín de la Real Academia de la Historia*, Madrid, Fidel Fita has published a large number of documents connected with the Inquisition, notably in vols. v., vi., ix., xv., xvi., xliii., etc. For the history of Protestantism the best work is E. Schäfer, *Beiträge zur Gesch. des spanischen Protestantismus und der Inquisition*, 3 vols., Gütersloh, 1902. Among older books may be mentioned: L. a Paramo, *De Origine et Progressu Off. S. Inquis.*, Madrid, 1693; P. a Limboreh, *Hist. Inquisitionis*, Amsterdam, 1692, Eng. tr., London, 1731; J. A. Llorente, *Hist. Crítica de la Inquisición de España*, 10 vols., Madrid, 1822, abridged Eng. tr., *Hist. of the Inquisition of Spain*, London, 1826. Cf. also: J. Amador de los Rios, *Hist. de los Judíos de España y Portugal*, 3 vols., Madrid, 1876; J. Orti y Lara, *La Inquisición*, do. 1877; F. J. García Rodríguez, *Hist. verdadera de la Inquisición*, 3 vols., do. 1876-77; P. Boronat y Barradina, *Los Moriscos Españoles y su Expulsion*, 2 vols., Valencia, 1901; R. Sabatini, *Torquemada and the Spanish Inquisition*, London, 1913; H. Grisar, in *KEZ* iii. (1879) 548-578; M. Menéndez y Pelayo, *Hist. de los Heterodoxos Españoles*, 3 vols., Madrid, 1880-82; I. Melgares Marín, *Procedimientos de la Inquisición*, 2 vols., do. 1886; J. L. Balmez, *El Protestantismo comparado*, do. 1846, most conveniently consulted in the French and English translations (Eng. tr., *Protestantism and Catholicity*, 3 vols., London, 1849); C. J. von Hefele, *Life of Card. Ximenez*, Eng. tr., London, 1860.

II. ITALY AND ELSEWHERE.—G. Benschbell, *Reformation and Inquisition in Italien*, Paderborn, 1910; L. von Pastor, *Gesch. der Päpste*, 6 vols., Freiburg, 1886-1910, esp. vols. v. and vi., Eng. tr., *Hist. of the Popes from the Close of the Middle Ages*, 12 vols., London, 1891-1912; P. Tacchi Venturi, *Storia de la Comp. di Gesù in Italia*, vol. i., Milan, 1910; K. Benrath, art. 'Inquisition', in *PREZ*, and *Gesch. der Reform. in Venedig*, Halle, 1867; L. Amabile, *Il Santo Ufficio della Inquisizione in*

Napoli, 2 vols., Citta di Castello, 1892; P. Frédéricq, *Corpus Documentorum Inquisitionis haeret. pravit. Neerlandicae*, 5 vols., Ghent and The Hague, 1889-1903; J. J. I. von Dollinger, *Kleinere Schriften*, Stuttgart, 1890; J. T. Medina, *La Primitiva Inquisición Americana, 1493-1563*, Santiago de Chile, 1914 (the same author, as mentioned in the text, has also compiled a number of other Inquisition monographs); A. Millares, *Hist. de la Inquis. en las Islas Canarias*, Las Palmas, 1874; L. de Alberti and B. W. Chapman, *English Merchants and the Spanish Inquisition in the Canaries* (Royal Historical Society), London, 1912.

HERBERT THURSTON.

OIL.—See ANOINTING.

OJIBWA.—The Ojibwa (Ojibway, Chippewa) are an Algonquian tribe scattered over a region extending 1000 miles from east to west, and including both shores of Lake Huron and Lake Superior, with the Turtle Mountains of N. Dakota approximately marking their western limit. Naturally, the bond connecting groups spread over this immense area is linguistic and cultural rather than political; and even culturally there has been an appreciable degree of local differentiation, so that it would be permissible to speak of several distinct tribal groups. The westernmost Ojibwa outposts, transcending the boundaries given above, viz. the Saulteaux and Bungi of S. Manitoba and Saskatchewan, have in considerable measure assimilated features of Plains Indian (*q.v.*) life as opposed to the Woodland culture connected with their pristine habitat. The total number of the Ojibwa may be set at 35,000, of whom about 15,000 reside in Canada. In the United States (Census of 1910) there were 20,214 Ojibwa, of whom, however, only 34.5 per cent were full-bloods.

Linguistically the Ojibwa are very closely related to the Ottawa and Pottawatomi, with whom the groups south of Lake Superior formed a loose confederacy, while the bands to the north have affiliated and almost merged with the Cree. Historically the S. Ojibwa have played a more important part than their northern kinsmen. Having secured firearms before the other tribes west of Lake Michigan, they waged successful wars against the Foxes and E. Sioux, driving the latter westward towards the Plains and forcing the Foxes to unite with the Sauk Indians.

Apart from the characteristics due to contact with the Plains, the Ojibwa represent a typical form of the 'Eastern Woodland culture' of American ethnographers.

I. Material culture.—The Ojibwa were essentially hunters, and in a minor way fishermen, but south of the Straits of Mackinaw and Lake Superior they also cultivated the soil for maize, pumpkins, and beans, and gathered wild rice. Their style of habitation varied locally and seasonally. The principal types were (1) a rectangular lodge covered with the bark of elm or cedar trees, the roof being oval or gabled; and (2) a dome-shaped structure, used especially in cold weather, which was covered with flag-reed mats or sheets of birch-bark. In addition there were conical lodges like those of the Plains and a long lean-to similar to the bark house, but lower, longer, and with a double entrance. Clothing was made from the dressed skins of deer, moose, elk, and caribou. The men wore loose shirts, breech-clouts, leggings extending nearly to the hip, and moccasins. The women wore a belted dress reaching below the knee and open at the neck and arms, or a skirt with a short loose jacket. They also had moccasins and leggings, but the latter barely reached up to the knee. Both sexes had skin robes with the hair left on. Fire was made by twirling a stick in the socket of a block of wood with the aid of a bow, or by striking one piece of flint against another. Water transportation was mainly in birch-bark canoes, though south of the Straits of Mackinaw

dug-out canoes were employed. In the winter toboggans were used, sometimes with dogs. The bow and arrow formed the principal weapon, to which was added a war-club. There is traditional evidence for the use of pottery cooking vessels, but the principal arts were matting and weaving. Bags woven from cord made from the inner bark of bass or cedar and from wild hemp fibre were often decorated with beautiful geometric designs. On account of the ease with which vessels of all sorts could be fashioned of birch-bark, neither basketry nor wood-carving was well developed, though checkerwork baskets and wooden spoons are found. For amusement the Ojibwa had a great variety of games, both of chance and of an athletic character; of the latter may be mentioned lacrosse, which has since been borrowed by the Whites.

2. Social and political organization. — The Ojibwa are divided into a large number of exogamous clans, or (in the nomenclature of American ethnologists) gentes, descent being in the paternal line. While transgressions of exogamy in a number of other American tribes were disapproved rather than strictly punished, as, say, in Australia, there is evidence that the Ojibwa exercised greater rigour and punished offenders with death.¹ The kinship terminology, though varying in minor points in the several bands, conforms to the classificatory type that, according to W. H. R. Rivers, may be expected in a tribe with exogamous subdivisions. The gentes, of which there were more than twenty, bear animal names, some of the most important in numbers and prestige being the Crane, Catfish, Bear, Marten, Wolf, and Loon gentes. In the native traditions the original number is set at five, the eponymic ancestors being described as suddenly appearing from the depths of the ocean. While the term 'totem' is of Ojibwa origin and while totemic features naturally occur, the religious elements of totemism do not seem to be fully developed. We learn, e.g., that members of the Bear gens resembled their ancestor in their pugnacity and bad temper, but we do not know whether the bear was tabu to the totemites or was the object of a distinctively totemic cult. The totem-animal was, however, pictorially represented to indicate an individual gentile affiliation.² There is some indication that at one time the individual names were associated with the individual's gens; but in recent times the custom has been for the parents to select a sponsor, who gives the child a name in no way related to its gens, but referring to his own personal *manitu* (see below, p. 456^a).³

The gentes were grouped together in a number of feeble phratries of obscure function. Thus, we learn that the Noka phratry was once composed of gentes named after parts of the bear's body, and later of two divisions affiliated, respectively, with the common and the grizzly bear. In several of the phratries one gens seems to have been the predominant one. Whether all the phratries, like the gentes, bore animal names remains undecided; and we are also left in doubt as to whether the phratries were exogamous. The only functions specifically ascribed to them are of a political character: the Crane and Awaase 'were first in council, and the brave and unflinching warriors of the Bear family defended them from the inroads of their numerous and powerful enemies.'⁴ Moreover,

to the Bear phratry was entrusted the guardianship of the war-pipe and war-club.

The political organization was loose even in the early days. There was a general council of adult males with somewhat vague powers, which selected the chief, whose office was nevertheless in a measure hereditary, since there was a tendency to choose a chief's son provided he gave any evidence of ability. The incumbent of this office likewise had rather vague functions, his influence depending on his personal qualities rather than on his station. A chief usually had an adjutant, whom he might request to speak for him and send on errands.¹ Different bands had distinct councils and chiefs; there was no confederacy uniting all the Ojibwa under a single executive or legislative head. Among the W. Ojibwa there was the characteristically Plains Indian feature of a soldier organization of tried warriors who controlled the buffalo-hunt and also acted as a police body in camp.

Among the Timiskamig Ojibwa of N. Ontario, and probably other bands as well, each family had a distinct hunting territory, which must not be trespassed upon by other families, offences being sometimes punished with death and more frequently by evil magic directed against the offender.²

3. Miscellaneous social customs. — Certain social usages must be referred to on account of their ethnological importance. The method of giving names has already been described. The Ojibwa had the reluctance shared by many tribes to mention their personal names, though they did not object to others doing so in their presence. Husband and wife never mentioned each other's name, nor did a mother-in-law utter her son-in-law's name.³ The latter circumstance deserves mention, since we are positively assured that the Ojibwa lacked the familiar mother-in-law tabu.⁴ As among the Dakota, two young men frequently adopted each other as special friends or comrades for life, in which case they exchanged gifts and thereafter always shared their property if either was in want.⁵

In so warlike a tribe feats of arms were, of course, highly esteemed, and at festive gatherings each warrior recounted his exploits, which were also symbolically represented by feathers worn in the head, as among the Sioux. To boast of deeds not actually performed was to lose social prestige in the tribe.⁶

The mode of disposing of the dead and relevant customs may be treated under this head, though there is, of course, a religious aspect to these usages. The body was interred with the belongings of the dead, and over it was placed a wooden covering with a hole in the side, where the relatives placed food and tobacco. Pictographic drawings were sometimes traced on a board serving as a tombstone, to indicate, e.g., the buried warrior's gens and his martial deeds. A funeral feast occurred with singing and drumming to cheer up the mourners, and an offering of food and drink was made to the dead. When the corpse was removed from the lodge for burial, it was never carried out of the doorway, but through a hole cut out in the bark in the lodge. The entire lodge was pulled down and the fire extinguished. By way of mourning the relatives blackened their faces with charcoal, tied leather strips round their wrists and ankles, cut off their hair, and assumed

the most unsightly clothing possible; laceration was also practised by running knives and thorns through the flesh. During the period of mourning, which lasted for a whole year, daily offerings were made to the dead by putting a portion of food into the fire, and during occasional visits to the grave feasts and offerings, including tobacco, were made in honour of the departed spirit. Widows and bereaved parents were wont to fashion a doll-like parcel of clothes representing the deceased and carry it about for the entire year on all their travels.¹

4. Religion.—(a) *Manitu concept.*—The centre of Ojibwa religious life is occupied by the *manitu* concept, which corresponds fairly closely to the *wakanda* of the Dakota and the *orenda* of the Iroquois. In the interpretation of William Jones,² which, in view of his Algonquian lineage, combined as it was with anthropological training, is entitled to special consideration, *manitu* (q.v.) is 'a cosmic, mysterious property which is believed to be existing everywhere in nature,' and with which the individual sought to enter into personal relation. In the trance induced by the rigorous fast to which he subjected himself, he might be 'fortunate enough to experience a mystic transport at the sight of something animate or inanimate,' then that object would probably become one of religious veneration to be supplanted in the critical times of life. The essential point in this interpretation is the abstract character of the *manitu*; according to Jones, the various spirits or deities are such in so far as they are endowed with common mystic property, being differentiated by the varying degrees in which they participated in this essence. As for the individual reaction, the emphasis is placed on the peculiar and overwhelming emotional thrill that invests an experience with the quality of the uncannily strange. Thus, we have the case of an Ojibwa who in a state of fatigue lay down facing a huge boulder. As he looked at it, it seemed to oscillate, advance towards him, make a bow and then return to its former position. The Indian at once felt the greatest veneration for the rock, regarded it as his tutelary god, and never thereafter passed by without leaving a tobacco offering.³ The rock did not become supernatural, according to the view expounded, because of any spirit residing there or controlling it, but simply because the psychological experiences connected with it led the individual to associate it automatically with the unindividualized concept of the mysterious, i.e. *manitu*.

Jones's interpretation has been generally accepted by American ethnologists, with whose observations among other tribes it seems to harmonize admirably, but was recently challenged by another field worker among the Ojibwa. According to P. Radin,⁴ the accepted view suffers from the over-systematization of observers imbued with Caucasian metaphysics, and does not correctly represent the attitude of the Indian mind. *Manitu*, he insists, always refers 'to definite spirits, not necessarily definite in shape.' An arrow possesses specific virtue because it is a transformed spirit or the seat of a spirit; a peculiar object receives offerings because it belongs to a spirit or is similarly possessed by it. *Manitu* as an essence distinct from definite spirits, Radin concludes, is 'an abstraction created by investigators.'

Radin's critique undoubtedly has the merit of crystallizing discussion of the subject, but it

cannot be said to have shaken the older interpretation. The danger of over-systematization, of attributing to the Indian a philosophical belief in a definite force immanent in the cosmos, seems illusory, since Jones himself emphasizes the unsystematic character of the belief. Accounts of Indian visions fairly bristle with experiences of precisely the type cited above from Kohl's work. Pacc Radin, there is not the slightest evidence that many of these rocks, trees, charms, etc., derive their sacred character from a spirit already existing for the religious consciousness and subsequently associated with these objects. *Manitu* remains, accordingly, the concept of a cosmic force, unanalyzed, not nearly so definite as corresponding concepts of our science and philosophy, but comparable to the vague folk-generalizations familiar to the student of language and denoting the objective basis of the specifically religious emotions.

(b) *Visions.*—The deliberate quest of supernatural power is one of the most wide-spread features of N. American religious life, but among the Ojibwa it was characterized by a distinctive peculiarity—the extraordinary extent to which the procedure was regulated by the older members of the visionary's family. At the age of puberty or, as would appear from some authorities, rather before it, a boy was ordered by his parents, or preferably his grandparents, to retire to a secluded spot, abstain from food and drink, and await a supernatural revelation. If, after several days' abstention, he succumbed to temptation, all his efforts went for naught and he was obliged to begin again, his actions being watched by his elders. Nor were his reactions to the mystic experience a purely individual affair; he was warned to decline certain evil revelations vouchsafed by malignant *manitu* powers that might lead to his destruction. Thus, one of Radin's informants had rejected the blessing of a chickadee in accordance with his grandmother's injunctions and only accepted the subsequent revelation of a white loon, which offered him long life and immunity from disease. In short, we are not dealing with a simple psychological experience or with that experience as moulded by the tribal pattern for visions, which would operate automatically under any circumstances; we have in addition the far-reaching conscious control of the situation by the individuality of the supervising elder. Practically everything is pre-determined, something sharply defined is expected by the prospective visionary, and the interpretation of the vision is cast in a pre-existing mould. It is clear that in this way a virtual inheritance of shamanistic power is rendered possible since the elder prescribes the content of the vision.¹

Visions were not restricted to the time of puberty, though those seen then were of the greatest importance, and, as illustrated by the case of the swaying rock, were not confined to deliberate quests. Women were not barred from either mode of communication with the world of mystery.

The vision secured by an individual was likely to shape the future course of his life: the promise that he was to become a famous hunter would make him specialize in that direction, the sight of some object held in reverence by the members of the Midé society might lead the visionary to seek admission, and so forth.

(c) *Mythology.*—While the number of *manitu* beings was indefinite, embracing at least potentially the entire animate and inanimate universe, there were among them not a few clearly individualized and localized deities, some of them doubtless of significance only in the theoretical speculations of

the shamans, while others played a dominant part in the everyday life of the people. Of great interest is the dualistic conception of a Great Spirit or Master of Life, Kitchi-Manitu, opposed to an evil divinity, Matchi-Manitu, that controls all the bad spirits. That missionary influences have affected this belief is the impression of both W. Jones and Radin. On the other hand, it is by no means certain that the conception was created by Christian doctrine, which may merely have had the effect of emphasizing the ethical motive involved. It is important to note that, while Kitchi-Manitu is continually referred to in the sacred festivals, he corresponds otherwise to Andrew Lang's notion of an otiose high god, being completely overshadowed in practical life by the lesser *manitus* and in mythological folklore by Nenebojo (known among the several local groups and in the orthography of different writers as Nānabneco, Minalhojo, Menaboju, etc.).

Nenebojo, who impressed some observers as an intermediary between the higher deities and mankind, as a sort of Prometheus or Hercules, seems, in fact, the supreme figure of Ojibwa mythology. Great social and ceremonial institutions were traced to him as their founder, and even such material possessions as the canoe were derived from his inventive genius.¹ He was miraculously conceived through a girl's facing west contrary to her mother's warnings, and thus falling a prey to the west wind. He spent his boyhood with his grandmother, then began to travel through the country, meeting with innumerable adventures in the course of his journeyings. In many of these Nenebojo figures as an unscrupulous trickster, who stops at nothing to attain his ends.

Thus, when in need of food he offers to teach the ducks a new dance during which they are to close their eyes; when they unsuspectingly obey his instructions, he wrings their necks, one after another.

Frequently, as in the story cited, he is not permitted to enjoy the fruits of his cunning, but is beaten at his own game by some being of superior shrewdness. The disharmony between the heroic features revealed in some of the myths and the dastardly and deceitful character that appears in others is not a distinctively Ojibwa problem, but presents itself in many of the N. American mythologies.

One of the most important tales deals with his exploits against the water-spirits, who had slain his brother (nephew or grandson in other versions), a fox or wolf, which subsequently comes to preside over the spirits of the deceased. Lying in ambush, Nenebojo succeeds in badly wounding one of the enemies' chiefs, then slays an old woman, puts on her skin, and pretends to doctor the patient, whom, of course, he destroys. The other water-spirits cause a general deluge, which threatens to overwhelm him though he flees to the highest summits. He constructs a raft, however, and not only saves himself and all the animals that he meets, but re-creates the world from a little earth brought up by the musk-rat, which he ordered to dive for some.²

Of the other *manitus* the Thunder is of considerable importance, being the patron of one class of shamans, the *jessakid* (see below). Four great deities are believed to occupy, respectively, the four corners of the earth. Finally, mention must be made of the Windigo, a term extended in recent times to human cannibals, but primarily designating a race of gigantic ogres who fed on human flesh.

The Ojibwa conception of a future life is devoid of the notion of reward or punishment for earthly activities, and centres largely in the picturing of serious dangers that menace the soul on its way to the spirit land, which lies in the west.

The souls are obliged to travel along a path in the centre of which they are tempted by an enormous strawberry, to eat of

which involves instant destruction. After proceeding for several days they encounter a broad river, only partly spanned by what appears to be a vibrating log, which bars the way. In reality it is a snake, and the wanderers are obliged to leap across the gap on to its head. If they jump short or fall from the bridge into the water, they are transformed into toads or fishes; hence the special grief over the death of little children, who are deemed unable to make the difficult crossing unless escorted by an older friend or relative.

The goal of the souls is familiar from the accounts of seers and of those who have died and come to life again, the spirits deeming that their time had not yet come and accordingly sending them back to earth again. In the land of spirits every one is happy; there is no strife, labour, or hunting, but a continual round of pleasure with drumming, singing, and feasting.³

(d) *Shamanism and magic*.—During the puberty fast the Thunder occasionally blesses an individual with the gift of prophecy and certain other supernatural powers. Such persons are known as *jessakids* (*teisa'kiwin*), and are quite unorganized, each practising his profession independently of the others. The *jessakid* foretells the success or misfortune of hunters and warriors, predicts the recovery or death of a patient, announces where game can be found, whether distant friends are yet living, and the like. These prophecies are delivered from within a roofless, cylindrical, chimney-like structure covered with bark or robes. When the *jessakid* had seated himself inside the structure, it began to sway violently from side to side, and strange voices, interpreted as those of the *manitus*, became audible to the crowd without. In addition to the Thunder, the Great Turtle is mentioned as a leading spirit in this performance. A *jessakid* also exorcizes demons and, more particularly, sucks out pathogenic spirits from the patient's body by means of tubular bones, swallows them, and ultimately vomits them out.⁴

Another type of shaman is represented by the *wabano*, who likewise become such as the result of a vision. They, also, are not organized into a society. A *wabano* furnishes hunting and love medicines, but his distinctive power consists in his immunity from the effects of fire and heat, which is demonstrated in public performances. A shaman of this class will pick up red-hot stones and coals, or plunge his hand into a kettle of boiling water and extract the head of the animal cooked.⁵ The last-mentioned feat is probably historically connected with the Hot Dance of the Mandan, Hidatsa, and Arikara, and part of the Heyoka cult of the Dakota.

A third class of shamans corresponds more closely to the ordinary medicine-men. These are medical practitioners cognizant of the mysterious curative properties of roots and herbs, administered after the chanting of sacred incantations. According to W. Jones, they also practise the *jessakid* trick of sucking out malignant spirits by the aid of round, slender bones.⁶

Magical practices are not by any means the exclusive prerogative of a favoured class of shamans. The laity avail themselves in part of the same principles, viz. those of sympathetic and imitative magic. Thus, when a man desires to bring grief upon another, he makes a small image of the enemy and pierces its head or heart, causing an affliction of that part; if the desire is to kill, the effigy is buried or burned amidst magic spells. A corresponding device is employed to ensure success in the chase, the game animals being sketched on

birch-bark or carved in wood. The incantations associated with these rites bear reference primarily to the mythological character Nenebojo. They, as well as the songs of the Midé'wiwin, were represented pictographically by realistic images drawn on birch-bark; these were mnemonic in character, a single sign often helping to recall a group of ideas and the air of a song.¹ Sympathetic magic is also used to induce love on the part of a beloved woman; the magician in such a case uses carved effigies of himself and his beloved, with mysterious powders in bags fastened with a lock of hair. By piercing the heart with a needle dipped into the several powders, various results may be effected, such as the relenting of the woman to the extent of pining for her admirer or her punishment for spurning his offers.²

While the shamanistic performances hitherto treated are manifestations of individual power or knowledge, the Midé'wiwin was a secret society, composed of both men and women. Magical practices of the type described above were by no means dissociated from this organization, but its special function was concerned with life after death. Since, according to Ojibwa eschatology, the souls of the deceased encounter various dangers, the object of the Midé'wiwin is to overcome these obstacles by the use of formulæ known exclusively to the members. Initiation follows only after a long period of instruction, and the fees required are very considerable. Among some of the Ojibwa there are no fewer than four degrees of initiation, and from other groups as many as eight are reported. Foremost among the rites of initiation is the 'shooting ceremony,' in which the leader points a medicine-bag at the novice, who falls prone upon the ground, rendered unconscious by a magic shell that is believed to have entered him. When restored to life, he shows his newly-acquired powers as a member by similarly shooting those of older standing in the society. Admission is sought

either because of a vision suggesting it to the candidate or in order that he may replace an individual who died during the time of preparation. As Radin points out, the essential secret knowledge is imparted by the novice's individual preceptor during the preparatory period; it is then that he receives instruction in the specific teachings of the Midé'wiwin and learns to interpret the symbolic birch-bark records. While the Midé'wiwin is undoubtedly a definite organization, the individual element is thus nevertheless of great significance from the subjective point of view.¹ From the point of view of the tribe at large the Midé'wiwin performances constitute the one ceremony of overshadowing importance, comparable to the Sundance of the Plains. The membership was numerous, while the unassociated shamans of the other groups never comprised more than a few isolated individuals.

(e) *Various religious practices.*—A number of religious practices, while less impressive than the rites of the Midé'wiwin and the shamanistic performances already described, are nevertheless of great importance in the daily life of the people. In this connexion may be mentioned the constant offering of tobacco to all sorts of objects viewed with religious veneration and sacrifice of dogs at religious festivals.² Like the majority of the N. American Indians, the Ojibwa indulged in sweat baths, not from purely hygienic motives, but as a religious rite accompanied with sacred songs.³

Among the W. Ojibwa the Sun-dance of the Plains Indians, though an intrusive feature, was prominent. They also had a Windigokan, or cannibal cult, shared with the Assiniboin and Cree, in which masked clowns performed ludicrous rites, expressing the opposite of their intended meaning, and exorcized disease-causing demons.⁴

OLD AGE (Psychological).—If we should follow the custom of dividing life into the traditional seven ages, as is not infrequently done, the period of old age would cover the last two ages—elderliness, from about 55 or 60 to about 70 years, and senescence, which moves progressively from 70 towards 'second childhood and mere oblivion' (E. C. Sanford, 'Mental Growth and Decay,' *AJP's* xiii. [1902] 426-449). Both ages are alike in marking a decline from the physical vigour and mental acumen which characterize the middle years of life. The essential underlying condition of the transition to the state of age has usually been supposed to be the decline and, later, the termination of the reproductive functions. This notion harmonizes many of the phenomena of age, including the fact that its inception among women is from five to ten years earlier than among men. It has been much discredited, however, by recent researches.

1. Symptoms.—In enumerating the marks of approaching age it is of the utmost importance to distinguish between the fundamental and ac-

cidental, and between the normal and pathological. It has been altogether too common in the discussions of this period to hit upon the superficial changes that easily strike the attention, and to overlook the deeper-lying events. Among the marks that indicate the normal approach of senescence are: transfer of interest away from things of sense to those of deeper human concern; moving past the technique of science to its higher meanings (Socrates' confession in Plato, *Phædo*); seeing things in perspective (Tennyson, in *Locksley Hall*, *Sixty Years After*); lack of originality in discovering new interests, but greater enthusiasm for old ones—even old aversions and pessimisms (Schopenhauer); freedom from the stress of passion, and the transfer of energy to higher loves (Tolstoi, *Augustine*); fixity of habit of thought, giving,

within a certain range, poise and stability of judgment (Darwin, Huxley, Kant).

Age suffers losses, even among the normal, that are irrevocable. The senses are less delicate. Memory for details is gone past recovery. The bent form, the shrivelled bulk, the halting step, the tremulous hand, the falling teeth, the wrinkled skin, the whitened hair, and the corresponding internal changes, even within the central nervous system, with its disrupted nuclei, its pigmented and shrunken tissues, and its depleted cellular substance—all these are unmistakable signs of physical degeneration, which increases until at last the organism must pay its full debt to nature.

Are these the marks merely of progressive degeneration of the entire personality? Are they the characteristics of age, or its necessary accident? Are the relatively few instances of men and women who appear to grow in grace, wisdom, and power to the very end of life merely the exceptions to the rule of senescent decline? Or do they represent the norm? In order to escape a hasty judgment, it is well to keep in mind the law of progressive variation, among individuals of the same species or genus, along with increasing years. During foetal life and early infancy individuals are much alike. Heredity and selection have busied themselves cutting off the variants and fixing stable lines of inheritance. From babyhood on through life there is, however, an ever-increasing departure from the central highway of development. In other words, the average deviation in the species from the norm increases more and more, until at last there are relatively few persons who are true to type. Their sparseness is no necessary sign of eccentricity.

2. The origin of senescence.—A positive answer to the questions raised can be approached by raising another—Why did old age and death come into the world? Among many of the lower kinds such a fate is not always necessary. Single-celled organisms that propagate themselves by cell-division enjoy, barring fatalities, a sort of terrestrial immortality. When one organism splits, in order to pass on into two others (to the extent that they are 'others'), it cannot be said to die, although in a sense the original structure disappears, for 'there is nothing left to bury.'

Living forms soon discovered the utility of union and co-operation. They colonized. The result was an organism. This arose through division of labour among the various cells, and the consequent specialization of structure and function. Some of the cells wore out faster than others, while many of them, as always happens in a democracy, built themselves up at the expense of their fellows. The colony was soon full of discord. It was, furthermore, a charnel-house of worn-out units. It had to clean house and start afresh. As a colony, it broke up. The organism died. Our first result is that 'death was the price paid for a body' (P. Geddes and J. A. Thomson, *Evolution*, London, 1911, p. 88). The debt is paid in instalments; and the period of old age is the time allowed for the settlement of all arrears.

Old age may, however, be interpreted in terms of life as truly as in terms of death. Nature as a whole seems to behave like an organism, and to have a passion for continuance and progress. She is full of resources. She is a shrewd bargainer. She pawned individual deathlessness for a body, but the body was only a means to an end—that of higher biological efficiency. By 'scrapping' the worn-out organism frequently, and starting afresh, there is no sacrifice, if only the successes and acquirements of each generation can be conserved in every succeeding one. This was provided for by the fact of heredity, both 'blood' and 'social.'

Indeed there is a total gain, since each fresh individual, like Nature herself, having the obsession for progress, can profit by its own experience, discover new adjustments, and thus add a little to its own original capital. This exchange of individual terrestrial immortality for biological conservation and improvement lies, surely, at the very heart of racial progress. So clear is its truth that an ageing person, if only he thinks in terms of life as a whole, might, as his end draws near, cheerfully 'lay him down with a will,' knowing that his demise is part of a plan of higher fulfilment. He could at least accept gracefully that which Nature bestows graciously.

Nature's problem has always been, and is, at death to discover ways of saving, from the rubbish of the old organism, the elements for the rebuilding of a new one, and a better than the old. She has found no fewer than five ways of sloughing off old bodies and reconstructing along better lines. All five methods centre in the fact of reproduction. They stand for a series of movements biologically in two directions, one of which is progressively fatal to the cosmic individual, while the other is progressively beneficial to the race, seemingly at the expense of the individual. On the one hand, they have planted the fact of old age and death so deep within the laws of life that among higher kinds it is inviolable and irrevocable; on the other hand, they are but five discoveries of ways, not only of progress, but of the liberation of intellectual and spiritual values. The first method is that of 'regeneration,' involving dedifferentiation and rejuvenescence. By this means of reproduction almost any fragment of the original organism can reproduce its kind, as when a 'cutting' from a rose-stem or grass-root, or a fragment of an earth-worm or planarium, is sufficient for the regeneration of a new adult structure true to type. The various cells or cell-groups in the organism somehow, strangely, completely reflect within themselves its entire composite life (according to Weismann and his school, the fragments contain original, changeless germ-plasm, out of which the new organism develops). The sequent or fragment goes through a process of reduction or simplification or dedifferentiation, along with increased metabolism, and rediscovers the road leading to a repetition of the life-cycle. The process of dedifferentiation, which is an act of ageing, is an anticipatory step towards a rejuvenescence. Among these kinds senescence is a utility—that of 'scrapping' and renewal—though not a necessity. It is a function of metabolism. If the relation between nutrition and repair, on the one hand, and waste and decay, on the other, can be kept constant, the age-cycle can be eliminated, and terrestrial immortality is attained. C. M. Child has kept *planaria velata*, whose life-cycle, with abundant feeding, is three or four weeks, in a state of perpetual youth, by giving them a quantity of food just sufficient to prevent reduction, and not sufficient to permit growth (Child, *Senescence and Rejuvenescence*, Chicago, 1915, p. 167f.). At the end of three years the animals showed all the signs of health and youth, and none of the marks of age.

Three other methods of reproduction, which progressively emphasize the life-cycle, are 'budding,' 'sporulation,' and 'parthenogenesis' (q.v.), the first two being asexual, and the other standing at the parting of the ways between the several lower types of perpetuation of the species and the highest mode, the sexual.

Many of the lower species have employed the sexual mode of reproduction on occasion, as when the aphid multiplies its numbers all the summer long by parthenogenesis, and then, in autumn, leaps the winter by the aid of sex. But now at

last have come the species that have burned all bridges behind them, and have depended solely upon the one biologically successful method of reproduction. Up to the time of implicit dependence upon sexual reproduction Nature was more concerned with the amount of life in the world than with its quality. Henceforth she prized quality even at the expense of amount.

There have been many gains from depending exclusively at last upon the accident of sexual reproduction. Important among them is the increased variation among offspring that has resulted from the crossing of strains through mating, and consequently the enrichment of the individual, and also indefinitely greater adaptation from generation to generation. But the supreme advantage has arisen through the complete establishment of the life-cycle ending in old age and death. Out of this single biological fact have radiated innumerable resultants, most of them representing the lines of liberation of essentially all the higher mental and spiritual values that make man that which he distinctively is. Among the gains, in addition to the priceless one of starting each generation with a clean slate and also with the refined and corrected wisdom of the race as its dowry, are the following: the care of offspring, resulting in the spirit of kindness; warm-bloodedness and increased metabolism, with corresponding mental alacrity and acumen; helpless babyhood and lengthened infancy, demanding even greater love, wisdom, and purpose; colonization, in the family and larger groups, and the full birth of sympathy, co-operation, and other social virtues; the habit of adjustment, the habit of learning, the habit of growth, which contain the secret of progress and development. Progressively, among all kinds above the protozoa, terrestrial immortality has been sacrificed for sympathy, intelligence, and appreciation.

Old age, as the termination of the physiological cycle, has gained psychologically in many ways: enrichment to itself, through giving its wisdom back to the rising generation; greater eagerness to make the most of life while it lasts; in facing the fact of change and dissolution the more careful re-evaluation of all values in the quest of the changeless; the intensification of values, as the individual is caught between life and death, between love and sorrow. Other mental compensations centre in the fact of senile rejuvenescence, and will be described below.

3. Causes of old age.—It has ever been one of the lively problems of physiology to determine the direct contributing factors involved in bodily decline. None of the theories seems as yet altogether satisfactory. Most of them are but statements in other words of the fact of senility, or of the accompanying conditions of old age, rather than of underlying causes.

It is due to the wearing out of the organism (Lotze, *Microcosmus*, Eng. tr., Edinburgh, 1897, i. 50-62); to a 'vital ferment' in the organism (O. Bütschli, 'Gedanken über Leben und Tod,' *Zoolog. Anzeiger*, xv. [1892]); to a progressive decrease in the metabolism of the body (A. Bühler, 'Alter und Tod,' *Biolog. Centralblatt*, xiv. [1904]); to 'greater stability of the organism along with decreased dynamic activity' (Child, p. 459); to the incapacity of cells to reproduce for replacement of worn-out tissues (A. Weismann, *Über Leben und Tod*, Jena, 1884, *Das Keimplasma*, do. 1892); to increased cell-differentiation at the expense of recuperation (H. S. Jennings, *Popular Science Monthly*, lxxx. [1912] 563 f.); to the increase and differentiation of the cytoplasm of cells at the expense of nuclear substance (C. S. Minot, *The Problem of Age, Growth, and Death*, New York, 1908). There is a bewildering array of other 'causes,' entangling themselves with biological reproduction, chemical inhibitors, colloidal substrata, and autocatalyzers.

Whatever be the more intimate processes involved, it seems clear that senescence is accompanied by a break-down of the physiological mechanism at some vital spot. It is well known that the

brain substance is intimately concerned in the process (H. H. Donaldson, *The Growth of the Brain*, New York, 1909, ch. xvii.; M. Mühlmann, 'Beiträge zur Frage nach der Ursache des Todes,' *Arch. für Path. (Virchow)*, cxv. [1914]) and that it suffers a disappearance of nuclei and a depletion of cytoplasmic substance.

One of the most highly popularized notions is that of E. Metchnikoff (*The Nature of Man*, Eng. tr., London, 1903, *The Prolongation of Life*, Eng. tr., do. 1907). Senility is due, according to Metchnikoff, to the auto-intoxication of the organism through poisoning from the bacteria cultured chiefly (for man) in the superfluous sack, the large intestine. As a result of the poisoning, the phagocytes, or white corpuscles of the blood, are diverted from their normal function of protection against the invasion of harmful bacteria, and themselves attack the tissues of muscles, bones, arteries, and brain, bringing about their final destruction. The theory has found small acceptance so far among biologists. Old age is clearly an older fact biologically than Metchnikoff treats under that caption.

Perhaps the most intimate and minutely critical study of the problem to date is that of C. M. Child. He shows that senescence is relatively independent of sexual reproduction, and that both are organically bound up as utilities within the biological processes, which move rhythmically through a neat balancing of the processes of expenditure and recuperation, of differentiation and dedifferentiation, of progression and regression, combined with an act of rejuvenescence.

'Death is the inevitable end of the process of senescence when regression and rejuvenescence do not occur' (p. 461).

4. Interpretation of the state of age.—As seen and felt from within; what meanings and values really characterize the last years of life? The answers are varied in the extreme. In boldest outline it will be sufficient to mention three types of attitude, the first two more or less fatalistic, the third genial, perhaps idealistic.

(a) *Degeneration*.—The marks of senescence are physiological disintegration and mental decline. This conception draws largely from the two sources of physiology and pathology. It is true in the majority of instances of senility. The various powers or functions do not age equally rapidly among themselves (Minot, p. 249), nor are any two persons alike in the date, rate, or order of weakening. There is, accordingly, a vast variety of spiritual attitudes of senescents towards the approaching state of age.

Classic instances are: graceful acceptance of the result by Cicero in *de Senectute*; the superior disregard of death by Epicurus; the Stoic acceptance of the order of Nature by Marcus Aurelius; the pathetic disillusionment about the vanity of all things by the writer of *Ecclesiastes*; the warm sunset afterglow in *Over the Teacups* (1890) of Oliver Wendell Holmes; the frank pessimism of O. R. E. von Hartmann, whose soul finds consolation in a 'philosophy of the unconscious' (*Philosophy of the Unconscious*, Eng. tr., London, 1884); and the sombre passion of the tragically musical dirge of Matthew Arnold, who finds at the close of the act of 'growing old' 'a hollow ghost,' 'immured in the hot prison of the present,' adding 'month to month with weary pain' (*Growing Old*).

Unless there is found some new centre around which later life reconstructs itself, or some old love or present enthusiasm or new hope that springs up, the usual outcome of senescence is a total decline of body and mind. On the pathology of senility there has grown up an extended literature (see *DPhP*, s.v. 'Senescence'; also J. Nötzel, *Über Dementia Senilis*, Zürich, 1895).

(b) *Reversion, or retrogression, leading to a 'second childhood'*.—This theory is a refinement of the preceding through discovering a law which seeks to determine the nature of senescent decline, some of its stages, and its final quality. The law is that the procedure from the period of highest

power, efficiency, and insight of the forties and fifties is the exact reversal, step by step, of the processes of upbuilding from childhood to the height of attainment. A convenient comparison, though something more than a mere analogy, since it suggests a fundamental law of development, is that of the growth of a fruit-bearing tree. It first shows a stalk or trunk, then branches and leaves; soon it bears blossoms without fruit, then fruit, and finally a rising curve of quantity of fruit. The fruitage then begins to decline; then come blossoms without fruit, leaves without blossoms, leafless twigs, twigless branches, and at last only a trunk, which stands as a relic of a departed glory and a symbol of a completed cycle.

There is much in the psychology and the pathology of old age to fortify this law. T. Ribot has shown that in the diseases of the will 'dissolution always follows the inverse order of evolution,' and that 'the complex manifestations of will disappear before the simpler ones, and the more simple ones before automatic activity' (*The Diseases of the Will*, Eng. tr., Chicago, 1896, p. 114). He has demonstrated a similar law in maladies of memory (*Les Maladies de la mémoire*, Paris, 1881, p. 119 ff.). It is a matter of common observation that very old people enjoy most the reminiscences of very early life, and that their memories of childhood are extremely vivid. It is more than a figure of speech that designates extreme old age as a 'second childhood.'

In so far as this law of reversion is true, it is clear that the quality of mentality of extreme age, and of its pathologies, will be determined by the release of those instincts and impulses that are biologically old, and by those tastes and aptitudes peculiar to the early years of each individual.

(c) *Rejuvenescence and the attainment of full spiritual majority.*—The conviction has been rather wide-spread that the maturest wisdom and the highest spiritual satisfactions belong to the closing years of life. Indeed, a considerable number of the world's most productive geniuses have borne testimony to that fact. In early India it appears that the fourth and last stage of life was regarded as the choicest of all periods, and was anticipated with eagerness (Max Müller, *Three Lectures on the Vedānta Philosophy*, London, 1894, pp. 18-20). This notion has been most successfully immortalized in the familiar lines of *Rabbi Ben Ezra*, of Robert Browning.

Are the instances of sober, creative old age the exceptions that prove the rule of senile degeneration, or do they obey a higher law? Is the renewed spiritual serenity that often attends extreme age born out of a gratuitous optimism, or is it the natural flavour of a ripened insight? The answer to these questions has many conditions. Has one by good fortune, or by the grace of a good judgment, found and kept 'the middle way,' 'the golden mean,' 'the straight and narrow way,' that leads progressively onward? The chances are against it. It seems to be the rule that, after the passing of the middle years of productivity, men and women fall into something of a slough of despond. Do they then look backward, and seek to cultivate still the athletic powers, the mental acumen, and the lively sentiments of the glorious middle years of life? That way leads to despair and defeat. Do they, on the contrary, look onward to the pleasures and satisfactions peculiar to old age? Much depends, apparently, on the mental attitude in such matters. Often the secret of deliverance from the valley of discouragement lies in a wrestling of soul, like that of Tolstoi, when he had completed his first successful career, to gain a hold upon the things of permanent worth and value. Then began the real Tolstoi. If one can safely

'cross the dead-line' that lies in the bottom of the valley, then the hills of a higher perfection rise more clearly into view.

There are a good many lines of evidence, apart from the biographical and autobiographical, that there may be a genuine rejuvenescence in extreme age, with a rebirth upon higher levels of mentality.

(1) *Delayed senescence of the central nervous system.*—The central nervous system, the mechanism particularly concerned with mentality, is the most stable tissue of the body. Its cells persist throughout life. It resists exhaustion even at the expense of other tissues. It is the last to give way under starvation. It has a delayed senescence as compared with the rest of the organism. The rest of the bodily functions have been placed progressively, biologically, at the disposal of the brain for a copious supply of blood, to furnish it with nourishment, and to wash it free of toxic products through a generous supply of adrenaline. Towards the close of life the central neural processes become the ruling power in the original democracy of functions.

(2) *Mental rejuvenescence.*—Just as among lower organisms some fragment of the body can be a nucleus for the re-centring of all the life processes in a new young creature true to type, so in a growing individual it is possible for a functionally young part of the mechanism to form a centre of healthy reconstruction, giving a fresh lease of life. So true is this law that Child remarks:

'These experiments leave no basis for the contention that the organism or the cell cannot become young after it has once undergone senescence, and that the only source of youth is an undifferentiated germ-plasm' (p. 179).

The central nervous system, which has resisted most successfully the processes of decline, becomes naturally the centre of reformation. The consequence is a fresh psychic release. From this standpoint one can understand better the successive rebirths after pessimisms of Goethe, who wrote to Zeller in his eighty-third year:

'I am delighted to find that even at my great age, ideas come to me, the pursuit and development of which would require a second life' (for a study of Goethe's old age see Metchnikoff, pp. 270-300).

(3) *Refinement, in the new nucleus, of original endowments.*—It is evident from the foregoing that the secret of senile rejuvenescence, when it occurs, is the formation of a new nucleus of self-hood on higher levels of mentality. It arises in part from the refinement, or 'sublimination,' of native instincts and impulses. In the case of Swedenborg, e.g., the condition of 'crossing the dead-line' and of progressive renewal during later years seems to have been the re-awakening and release, on spiritual levels of his nature, of the two native instincts of self-regard, resulting in a sense of divine leadership, and of sex, which culminated in the passion of 'divine love.' The ingredients which enter into the final complex of refined instincts and secondary characters, that constitute the final 'spiritualized' self-hood, vary greatly in different individuals.

(4) *Enrichments through contact with life and through conservation of experiences.*—Each person at any point in his career is 'part of all he has met.' If the course of his life has proceeded normally, the stream of life widens, the judgments are more tried and trustworthy, the perspective clearer, with each succeeding stage. Even the sub-conscious experiences, from earliest childhood throughout, it has been amply proven, are indelibly stamped upon the character, and are 'conserved' as active elements in later mentality (consult, e.g., Morton Prince, *The Unconscious*, New York, 1914). Furthermore, the processes of selection and rejection, of discrimination and

last have come the species that have burned all bridges behind them, and have depended solely upon the one biologically successful method of reproduction. Up to the time of implicit dependence upon sexual reproduction Nature was more concerned with the amount of life in the world than with its quality. Henceforth she prized quality even at the expense of amount.

There have been many gains from depending exclusively at last upon the accident of sexual reproduction. Important among them is the increased variation among offspring that has resulted from the crossing of strains through mating, and consequently the enrichment of the individual, and also indefinitely greater adaptation from generation to generation. But the supreme advantage has arisen through the complete establishment of the life-cycle ending in old age and death. Out of this single biological fact have radiated innumerable resultants, most of them representing the lines of liberation of essentially all the higher mental and spiritual values that make man that which he distinctively is. Among the gains, in addition to the priceless one of starting each generation with a clean slate and also with the refined and corrected wisdom of the race as its dowry, are the following: the care of offspring, resulting in the spirit of kindness; warm-bloodedness and increased metabolism, with corresponding mental alacrity and acumen; helpless babyhood and lengthened infancy, demanding even greater love, wisdom, and purpose; colonization, in the family and larger groups, and the full birth of sympathy, co-operation, and other social virtues; the habit of adjustment, the habit of learning, the habit of growth, which contain the secret of progress and development. Progressively, among all kinds above the protozoa, terrestrial immortality has been sacrificed for sympathy, intelligence, and appreciation.

Old age, as the termination of the physiological cycle, has gained psychologically in many ways: enrichment to itself, through giving its wisdom back to the rising generation; greater eagerness to make the most of life while it lasts; in facing the fact of change and dissolution the more careful re-evaluation of all values in the quest of the changeless; the intensification of values, as the individual is caught between life and death, between love and sorrow. Other mental compensations centre in the fact of senile rejuvenescence, and will be described below.

3. Causes of old age.—It has ever been one of the lively problems of physiology to determine the direct contributing factors involved in bodily decline. None of the theories seems as yet altogether satisfactory. Most of them are but statements in other words of the fact of senility, or of the accompanying conditions of old age, rather than of underlying causes.

It is due to the wearing out of the organism (Lotze, *Microcosmus*, Eng. tr., Edinburgh, 1897, i. 50-62); to a 'vital ferment' in the organism (O. Bütschli, 'Gedanken über Leben und Tod,' *Zoolog. Anzeiger*, xv. [1892]); to a progressive decrease in the metabolism of the body (A. Bühler, 'Alter und Tod,' *Biolog. Centralblatt*, xiv. [1904]); to 'greater stability of the organism along with decreased dynamic activity' (Child, p. 459); to the incapacity of cells to reproduce for replacement of worn-out tissues (A. Weismann, *Über Leben und Tod*, Jena, 1884, *Das Keimplasma*, do. 1892); to increased cell-differentiation at the expense of recuperation (H. S. Jennings, *Popular Science Monthly*, lxxx. [1912] 563f.); to the increase and differentiation of the cytoplasm of cells at the expense of nuclear substance (C. S. Minot, *The Problem of Age, Growth, and Death*, New York, 1908). There is a bewildering array of other 'causes,' entangling themselves with biological reproduction, chemical inhibitors, colloidal substrata, and auto-catalyzers.

Whatever be the more intimate processes involved, it seems clear that senescence is accompanied by a break-down of the physiological mechanism at some vital spot. It is well known that the

brain substance is intimately concerned in the process (H. H. Donaldson, *The Growth of the Brain*, New York, 1909, ch. xvii.; M. Mühlmann, 'Beiträge zur Frage nach der Ursache des Todes,' *Arch. für Path.* (Virchow), cxv. [1914]) and that it suffers a disappearance of nuclei and a depletion of cytoplasmic substance.

One of the most highly popularized notions is that of E. Metchnikoff (*The Nature of Man*, Eng. tr., London, 1903, *The Prolongation of Life*, Eng. tr., do. 1907). Senility is due, according to Metchnikoff, to the auto-intoxication of the organism through poisoning from the bacteria cultured chiefly (for man) in the superfluous sack, the large intestine. As a result of the poisoning, the phagocytes, or white corpuscles of the blood, are diverted from their normal function of protection against the invasion of harmful bacteria, and themselves attack the tissues of muscles, bones, arteries, and brain, bringing about their final destruction. The theory has found small acceptance so far among biologists. Old age is clearly an older fact biologically than Metchnikoff treats under that caption.

Perhaps the most intimate and minutely critical study of the problem to date is that of C. M. Child. He shows that senescence is relatively independent of sexual reproduction, and that both are organically bound up as utilities within the biological processes, which move rhythmically through a neat balancing of the processes of expenditure and recuperation, of differentiation and dedifferentiation, of progression and regression, combined with an act of rejuvenescence.

'Death is the inevitable end of the process of senescence when regression and rejuvenescence do not occur' (p. 461).

4. Interpretation of the state of age.—As seen and felt from within; what meanings and values really characterize the last years of life? The answers are varied in the extreme. In boldest outline it will be sufficient to mention three types of attitude, the first two more or less fatalistic, the third genial, perhaps idealistic.

(a) *Degeneration*.—The marks of senescence are physiological disintegration and mental decline. This conception draws largely from the two sources of physiology and pathology. It is true in the majority of instances of senility. The various powers or functions do not age equally rapidly among themselves (Minot, p. 249), nor are any two persons alike in the date, rate, or order of weakening. There is, accordingly, a vast variety of spiritual attitudes of senescents towards the approaching state of age.

Classic instances are: graceful acceptance of the result by Cicero in *de Senectute*; the superior disregard of death by Epicurus; the Stoic acceptance of the order of Nature by Marcus Aurelius; the pathetic disillusionment about the vanity of all things by the writer of *Ecclesiastes*; the warm sunset afterglow in *Over the Teacups* (1890) of Oliver Wendell Holmes; the frank pessimism of O. R. E. von Hartmann, whose soul finds consolation in a 'philosophy of the unconscious' (*Philosophy of the Unconscious*, Eng. tr., London, 1884); and the sombre passion of the tragically musical dirge of Matthew Arnold, who finds at the close of the act of 'growing old' 'a hollow ghost,' 'immured in the hot prison of the present,' adding 'month to month with weary pain' (*Growing Old*).

Unless there is found some new centre around which later life reconstructs itself, or some old love or present enthusiasm or new hope that springs up, the usual outcome of senescence is a total decline of body and mind. On the pathology of senility there has grown up an extended literature (see *DPhP*, s.v. 'Senescence'; also J. Nötzli, *Über Dementia Senilis*, Zürich, 1895).

(b) *Reversion, or retrogression, leading to a 'second childhood'*.—This theory is a refinement of the preceding through discovering a law which seeks to determine the nature of senescent decline, some of its stages, and its final quality. The law is that the procedure from the period of highest

power, efficiency, and insight of the forties and fifties is the exact reversal, step by step, of the processes of upbuilding from childhood to the height of attainment. A convenient comparison, though something more than a mere analogy, since it suggests a fundamental law of development, is that of the growth of a fruit-bearing tree. It first shows a stalk or trunk, then branches and leaves; soon it bears blossoms without fruit, then fruit, and finally a rising curve of quantity of fruit. The fruitage then begins to decline; then come blossoms without fruit, leaves without blossoms, leafless twigs, twigless branches, and at last only a trunk, which stands as a relic of a departed glory and a symbol of a completed cycle.

There is much in the psychology and the pathology of old age to fortify this law. T. Ribot has shown that in the diseases of the will 'dissolution always follows the inverse order of evolution,' and that 'the complex manifestations of will disappear before the simpler ones, and the more simple ones before automatic activity' (*The Diseases of the Will*, Eng. tr., Chicago, 1896, p. 114). He has demonstrated a similar law in maladies of memory (*Les Maladies de la mémoire*, Paris, 1881, p. 119 ff.). It is a matter of common observation that very old people enjoy most the reminiscences of very early life, and that their memories of childhood are extremely vivid. It is more than a figure of speech that designates extreme old age as a 'second childhood.'

In so far as this law of reversion is true, it is clear that the quality of mentality of extreme age, and of its pathologies, will be determined by the release of those instincts and impulses that are biologically old, and by those tastes and aptitudes peculiar to the early years of each individual.

(c) *Rejuvenescence and the attainment of full spiritual majority.*—The conviction has been rather wide-spread that the maturest wisdom and the highest spiritual satisfactions belong to the closing years of life. Indeed, a considerable number of the world's most productive geniuses have borne testimony to that fact. In early India it appears that the fourth and last stage of life was regarded as the choicest of all periods, and was anticipated with eagerness (Max Müller, *Three Lectures on the Vedānta Philosophy*, London, 1894, pp. 18-20). This notion has been most successfully immortalized in the familiar lines of *Rabbi Ben Ezra*, of Robert Browning.

Are the instances of sober, creative old age the exceptions that prove the rule of senile degeneration, or do they obey a higher law? Is the renewed spiritual serenity that often attends extreme age born out of a gratuitous optimism, or is it the natural flavour of a ripened insight? The answer to these questions has many conditions. Has one by good fortune, or by the grace of a good judgment, found and kept 'the middle way,' 'the golden mean,' 'the straight and narrow way,' that leads progressively onward? The chances are against it. It seems to be the rule that, after the passing of the middle years of productivity, men and women fall into something of a slough of despond. Do they then look backward, and seek to cultivate still the athletic powers, the mental acumen, and the lively sentiments of the glorious middle years of life? That way leads to despair and defeat. Do they, on the contrary, look onward to the pleasures and satisfactions peculiar to old age? Much depends, apparently, on the mental attitude in such matters. Often the secret of deliverance from the valley of discouragement lies in a wrestling of soul, like that of Tolstoi, when he had completed his first successful career, to gain a hold upon the things of permanent worth and value. Then began the real Tolstoi. If one can safely

'cross the dead-line' that lies in the bottom of the valley, then the hills of a higher perfection rise more clearly into view.

There are a good many lines of evidence, apart from the biographical and autobiographical, that there may be a genuine rejuvenescence in extreme age, with a rebirth upon higher levels of mentality.

(1) *Delayed senescence of the central nervous system.*—The central nervous system, the mechanism particularly concerned with mentality, is the most stable tissue of the body. Its cells persist throughout life. It resists exhaustion even at the expense of other tissues. It is the last to give way under starvation. It has a delayed senescence as compared with the rest of the organism. The rest of the bodily functions have been placed progressively, biologically, at the disposal of the brain for a copious supply of blood, to furnish it with nourishment, and to wash it free of toxic products through a generous supply of adrenaline. Towards the close of life the central neural processes become the ruling power in the original democracy of functions.

(2) *Mental rejuvenescence.*—Just as among lower organisms some fragment of the body can be a nucleus for the re-centring of all the life processes in a new young creature true to type, so in a growing individual it is possible for a functionally young part of the mechanism to form a centre of healthy reconstruction, giving a fresh lease of life. So true is this law that Child remarks:

'These experiments leave no basis for the contention that the organism or the cell cannot become young after it has once undergone senescence, and that the only source of youth is an undifferentiated germ-plasm' (p. 179).

The central nervous system, which has resisted most successfully the processes of decline, becomes naturally the centre of reformation. The consequence is a fresh psychic release. From this standpoint one can understand better the successive rebirths after pessimisms of Goethe, who wrote to Zeller in his eighty-third year:

'I am delighted to find that even at my great age, ideas come to me, the pursuit and development of which would require a second life' (for a study of Goethe's old age see Metchnikoff, pp. 270-300).

(3) *Refinement, in the new nucleus, of original endowments.*—It is evident from the foregoing that the secret of senile rejuvenescence, when it occurs, is the formation of a new nucleus of selfhood on higher levels of mentality. It arises in part from the refinement, or 'sublimation,' of native instincts and impulses. In the case of Swedenborg, e.g., the condition of 'crossing the dead-line' and of progressive renewal during later years seems to have been the re-awakening and release, on spiritual levels of his nature, of the two native instincts of self-regard, resulting in a sense of divine leadership, and of sex, which culminated in the passion of 'divine love.' The ingredients which enter into the final complex of refined instincts and secondary characters, that constitute the final 'spiritualized' selfhood, vary greatly in different individuals.

(4) *Enrichments through contact with life and through conservation of experiences.*—Each person at any point in his career is 'part of all he has met.' If the course of his life has proceeded normally, the stream of life widens, the judgments are more tried and trustworthy, the perspective clearer, with each succeeding stage. Even the subconscious experiences, from earliest childhood throughout, it has been amply proven, are indelibly stamped upon the character, and are 'conserved' as active elements in later mentality (consult, e.g., Morton Prince, *The Unconscious*, New York, 1914). Furthermore, the processes of selection and rejection, of discrimination and

association, of analysis and synthesis—in short, the gaining of wisdom through experience—go on as truly in the subconscious life as in the conscious. Senescence, accordingly, may enjoy the cumulative wisdom of the years.

As has been indicated, the progress towards extreme age is marked by the progressive suppression, in reverse order, of later acquisitions. The first rejections are, therefore, those things that are relatively secondary, accidental, and accessory; but they have not been weakened until they have poured their riches into the channels of expression and thought that are more primary and fundamental. On the basis of the initial and original, enriched by all later acquisitions, life is simplified and clarified; its wisdom is a disciplined insight into that which has the more abiding worth. The dross is thrown off; 'what remains is gold.'

(5) *Recentring the personal life within the biological norm.*—The return to a 'second childhood,' transfigured and spiritualized, as it now is through its contact with life, is, at the same time, a return to the central highway of racial progress. There is a profound truth in the statement of Havelock Ellis that the progress from childhood to maturity is a growth in degeneration (*Man and Woman*⁵, London, 1914, p. 26). It is equally true that the movement towards normal old age is a progress in the direction of the biologically stable and the psychologically fit.

The foregoing facts, seen in relation, show that the losses in advancing from the sixties to the eighties or nineties, may be so far counter-balanced by gains as to leave a clear profit. An analogy will help. The fineness and accuracy of the special senses improve, on the average, through childhood years, and reach their highest point during the middle teens. From that point on there is a gradual decline in sensory efficiency during the late teens and twenties. Nature has been bartering that sort of skill for the more profitable acquisition of guidance by ideas. Shall we not say that she has, at a much later period, exchanged knowledge for insight, and insight for the appreciation of spiritual values?

The entire meaning of normal senescence, its rejuvenescence, and its transfiguration, is fittingly symbolized in the following confession of Wa-su-Luta, a Sioux Indian of 83 years, that the Rev. Dr. A. McG. Beede, of Cannon Bell, N. Dakota, has allowed the writer to use from his large collection:

'I was getting old,' said Wa-su-Luta, 'I wanted the Living Ones (Woniga) to come to me and give me new life. I was discouraged. I had been a wicked man, worse than men were before the white man came. I went out on to a hill and prayed: "Great Spirit, pity me and make me new before I die." I prayed this over and over until I was discouraged. Then a bird came near me and sang, "Easy, easy, easy." I thought awhile and then I said, "If it is so easy, it must be something that a child may do." So I let the child-man in me come out of me. When I saw the child-man that was there by my side, he looked so sinless and happy that I cried. Then the Living Ones came floating over the hill like undulating zephyrs (Wasieu). New life came into me. I could see Great Spirit's kingdom. I saw His home everywhere in the Earth and Heavens, the same as my grandfather saw it before they initiated him into the White Lodge. I was glad.'

The third, or optimistic, view of old age is clearly more than an apologetic for the seeming richness and serenity of the ripper years. Only a mechanistic or materialistic philosophy could look upon the end of life without finding in it a possible rich compensation. If one combines the conception of old age viewed simply in the personal life with the notion, to which the entire developmental scheme bears much evidence, that, in the world order, spiritual values are being conserved, it is evident why the 'declining years' are so often approached in a spirit of gratitude for their profounder satisfac-

tions, and of renewed consecration to a Higher Wisdom.

EDWIN D. STARBUCK.

OLD AGE (Introductory and Primitive).—
I. Variance of view as to the old.—'There is,' writes Sir Henry Maine,¹ 'a story of a New Zealand chief who, questioned as to the fortunes of a fellow-tribesman long ago well known to the inquirer, answered, "He gave us so much good advice that we put him mercifully to death." The reply, if it was ever given, combines the two views which barbarous men appear to have taken at different times of the aged. At first they are useless, burdensome, and importunate, and they fare accordingly. But at a later period a new sense of the value of wisdom and counsel raises them to the highest honour. Their long life comes to be recognised as one way of preserving experience.'² It seems, however, to be hardly accurate to regard these views as respectively earlier and later in point of time, for in not a few instances they co-exist. It is not the number of their years that determines the position of the aged, but the degree of their weakness and helplessness. So long as they can work and fight, they have little to fear; but, so soon as they become unfitted for these pursuits, longer life is a calamity, unless their family and clan regard the value of their wisdom as outweighing the burden of their support. It is the advance of culture that first ameliorates their lot. But this law of progress, if law it can be called, is subject to many important exceptions. Sometimes the restless nomad, dependent upon scanty means of support, and feeling, by reason of his manner of life, the full weight which the maintenance and conveyance of the sick and old impose upon him, treats them with care and listens to them with respect. And sometimes peoples on a far higher plane of civilization than his neglect, ill-use, and despise them.³ In short, the treatment accorded to old age differs widely in different cases. It is affected by many influences, such as the natural disposition of a people, the circumstances of its daily life, and the nature of its religious views. Sometimes more than one of these elements are found in conjunct operation, and sometimes a diversity of usage prevails among near neighbours or even within a single people.

Thus, certain tribes in Central Africa show every kindness to the aged in order to secure their good will after death, while adjoining tribes cast out their old people as food for wild beasts.⁴ A similar divergence is found among the Banaka and Bapuku—peoples of the Cameroons—who treat old people well, while some of the neighbouring tribes spear or abandon them.⁵ Some of the Namaquas are kindly to the aged and infirm, while others, when they are about to change their camp, put their old fathers and mothers into small enclosures of bushes, with some food and water, and leave them there to die.⁶ Agalo, A. Macenzie,⁷ in writing of the Chippewas, says that the practice of abandoning the old and feeble was not in general use; and a somewhat similar statement is made regarding the Caribs.⁸

2. Respect and kindness towards the old.—By

¹ *Dissertations on Early Law and Custom*, London, 1833, p. 23 f.

² This seems the best explanation of the vast authority which, in the infancy of civilisation, was assigned to assemblies of aged men, independently of their physical power or military prowess' (*ib.* p. 24). Maine cites Freeman as giving 'a long list of honorific names belonging to classes or institutions, which indicate the value once set by advancing societies on the judgment of the old. Among them are, Senate, *γερουσία* (the Spartan Senate), *ἐμπροσθεν* (its Homeric equivalent), *ἐπὶ τοὺς ἀμπαδωτάδους*, Eldorman, Elder, Presbyter, Monsieigneur, Seigneur, Sire, Sir, and Sheikh' (*ib.* p. 23). many of the rudest peoples old age is held in high respect.

Among the Andaman Islanders the sick, the aged, and the helpless receive every attention;¹ and in the Nichahars the old are allowed to live out their lives, and are invariably treated with kindness and consideration.² The Patagonians are said to show deference to age;³ and among the Fuegians the word of an old man was accepted by the younger people as law, and his authority was never disputed.⁴ This statement is, however, to be read along with that of Bridges, who says of the Yahgan of Cape Horn that, while they are bound to maintain their aged parents, they often neglect them, and sometimes use them cruelly, and that cases are not unknown in which they have killed them, when they have grown weary of the burden of attending to them.⁵ Von Martius observes that the Botocudos exhibited a tenderness towards helpless age hardly to be expected of them;⁶ while Ehrenreich gives an instance of their neglect of a man totally blind who was left without guidance or assistance to follow the tribe as best he could.⁷ The first duty inculcated upon their children by the Ainu of Japan is deference to parents, a careful regard for their elder brother, and reverence for the old men of their village.⁸ The Kamilaroi youth⁹ and the novices at Tutu and Mahua¹⁰ are instructed to support the old and infirm; and a somewhat similar account is given of the Aetas of the Philippines.¹¹ Respect to the aged is paid by the Bogotos of S. Mindanao,¹² and by the inhabitants of Ceram and many of the islands and archipelagoes described by Riedel;¹³ by the Barea and Kunama,¹⁴ the Jekris¹⁵ and the Wagogo.¹⁶ The Ovambo tend and nurse the old and the crippled;¹⁷ and, among some of the tribes of Togoland, those of the old people who are in poverty or unable to provide for themselves are supported by their relatives.¹⁸ The Malagasy respect the aged, and care for the infirm and the sick;¹⁹ a similar account is given of the Chinooks,²⁰ Botocudos,²¹ and Samoans;²² and the Kurile Islanders treat the aged with reverence.²³ Among the Mandingoes an old man is never found in destitution. They hold it to be a son's duty to provide for his aged father; and, indeed, if a son has lost his father, it is very likely that he will look out for some childless old man, and support and care for him. 'There is no nation,' writes Laing,²⁴ 'with which I am acquainted, where age is treated with so much respect and deference.' The Aleuts provide the sick and old with food when they have nothing of their own, and love and reverence their parents, grandparents, and near relatives. Sons sacrifice their prospects in order to care for them in old age, and it is a thing unheard of that a son or daughter should maltreat a parent.²⁵ Among the tribes of the Caucasus old age is revered. The Ossetes show the strongest love for their parents

and the greatest deference to age.¹ The Circassians treat old people with respect, and whoever insults or maltreats an old man or woman is by law made liable to severe punishment.² Among the Khevsures of Georgia respect for age is required to a degree quite remarkable;³ and to yield it is a universal custom among the Avars, a Lezghian tribe. Indeed, among the latter the will of a parent is so sacred that the child would die rather than disobey.⁴ The Reindeer Chukchis show considerable deference to their old people; and among the coast Chukchis the aged who cannot walk are carried by their relatives.⁵

Deference to the old is in many instances attributable not to reverence for age in itself, but to age and the wisdom, knowledge, and experience which are deemed to be its almost invariable accompaniments.

Thus, Loskiel says of the Iroquois and Delawares that 'age is everywhere respected, for long life and wisdom are regarded as always conneeced';⁶ and, according to Carver, 'the words of the ancient part of the community are esteemed by the young as oracles.'⁷ Among the natives of Toogatahoo old age and its attendant experience are highly respected;⁸ the Eskimos of Behring Strait⁹ and Point Barrow¹⁰ defer to the opinion of the aged, whether men or women; and a very similar account is given of the Veddas of Ceylon.¹¹ Among the Gilyaks the 'old men' of the clan decide questions of cult and clanship. They are the repositories of clan customs, genealogies, and traditions, and in such matters are of high authority.¹² The 'old man' of the Yukaghir, who is generally the oldest member of the community, regulates war and fishing and hunting expeditions, selects the resting-places of the group during its wanderings, sacrifices to the clan ancestor, presides at festivals, and enforces obedience to established custom, while his wife holds a somewhat similar position among the women.¹³ It has been said of the Kurnai that among them 'age was held in reverence, and a man's authority increased with years. If he, even without being aged, had naturally intelligence, cunning and courage, beyond his fellows, he might become a man of note, weighty in council, and a leader in war; but such a case was exceptional and, as a rule, authority and age went together. The authority of age also attached to certain women who had gained the confidence of their tribespeople. Such women were consulted by the men, and had great weight and authority in the tribe. . . . Together with the old men, they were the depositaries of the tribal legends and customs, and they kept alive the stringent marriage rules. . . . thus influencing public opinion very strongly.'¹⁴ The old men get the best food,¹⁵ and, in N. Queensland, they 'have the youngest and best looking wives, while a young man must count himself fortunate if he can get an old woman.'¹⁶ 'There is no such thing as doing away with aged and infirm people; on the contrary, they are treated with especial kindness, receiving a share of the food which they are unable to procure for themselves.'¹⁷ The truth of this tribute and its general applicability to the natives of Australia are amply attested by other authorities.¹⁸

3. Influence of nomadic life on treatment of the old.—Eyre observes of the tribes with which he was acquainted that, while the blind and infirm were well treated when young, they were left to perish as soon as age added to the burden of caring for them.¹ This change of attitude has been observed to prevail among many nomadic peoples, and, indeed, is an almost necessary consequence of their habits of life.

Thus, the Sioux and Assinibolins abandoned those who were no longer able to follow the wanderings of their tribe; and it seems that a similar practice was followed by the Minnetarees, Ricaræ, and others, who, when living in settled villages, treated their old people with kindness.² Catlin observes that this custom was common to all the tribes who roamed the prairies;³ it was followed by many of the northern Indians;⁴ and it was found not only among the nomadic Ahts, but among those who were settled on the coast.⁵ In Rotuma the aged were well cared for, but, as soon as they were seized with illness, they were much neglected, and even allowed to die unnoticed;⁶ the Lenguas attend to their old people with care, except in cases of incurable sickness, when, after they have employed in vain every means of cure, they abandon or even strangle them.⁷ The Eskimos of Greenland do not exhibit any pronounced reverence for the aged. They honour them so long as they are able to work, and are subject to their influence if they have sons and were good hunters in their day. Even a woman of advanced years, if she has able-bodied sons, is respected. But, when men or women become too old to take care of themselves, they receive scant consideration, and are sometimes even treated with ridicule.⁸ A similar account is given of the Thonga of E. Africa.⁹

4. Place of the old in tribal ceremonies.—In numerous instances the old people of a tribe take a prominent part in the performance of its ceremonies.¹⁰

Thus Kosa boys, after they have undergone circumcision, are instructed by an old man as to their duties as tribesmen;¹¹ and, in the case of the Larakia tribe near Port Darwin, the old men school the youths on their arriving at puberty in endurance, by imposing on them heavy tasks accompanied with kicks and blows.¹² An old woman plays an important rôle in the puberty rites observed by the girls of the Tanganyika plateau,¹³ and ornaments the marriageable girls of the Ahipones by pricking the skin with thorns and rubbing ashes into the bleeding wounds.¹⁴

5. Special employments of the old.—In some cases special employments are assigned to the aged when they are no longer able to fight or engage in hard work.

Thus, among some of the Californian tribes the old warrior has to carry as best he can without assistance the game which his son has killed, or is compelled to do menial work under the superintendence of the women.¹ In Ceram the old man who can no longer work acts as the nurse of little children;² and by order of one of the Yncas such a person was employed to scare birds from the crops.³

As to the place of old people in the organization of primitive society see art. SOCIAL ORGANIZATION.

6. Contempt and ill-treatment of the old.—In some instances old age is despised.

Thus, among the Hupa, Pomo, and Gallnomero tribes of California the aged were treated with the greatest contumely.⁴ At Tahiti no respect is accorded to old people. They are thrust aside and receive little attention.⁵ In Fiji they excite contempt;⁶ and in some of the Solomon Islands they are, along with the sick, the objects of ridicule.⁷ The Lapps are said to be undutiful to their aged parents;⁸ and a similar account is given of the Yakuts, among whom parents who are decrepit and of feeble understanding are especially the object of ill-treatment.⁹ The Kagoro show little reverence for age except in the case of their chief and an important official (*meakwep*), who administers ordeals and leads them in all sacred ceremonies;¹⁰ the Bechuanas¹¹ and the Indians of British Guiana despise old people.¹²

In some cases the old suffer from mere neglect; in others they are cruelly used, abandoned, or even killed.

By the Kutchins of the Yukon they are simply neglected;¹³ among the Ba-Huana they are often subject to ill-treatment.¹⁴ By the Yahgan of Cape Horn they are often much neglected and even cruelly handled, and, in some instances, they have been killed by their own children who had grown weary of tending them.¹⁵ At Huahine the aged received little attention in illness, many died as much from hunger as from disease, and sometimes, if there was but faint prospect of their recovery, they were clubbed to death, speared, or hurled alive.¹⁶ In the Island of Pines all aged and decrepit persons, and those who were suffering from protracted illness, were either put to death by their relatives or conveyed to one of the small islands and left to starve;¹⁷ and in olden times the Koryaks killed all their aged parents.¹⁸ The Corannas, like the Bushmen, expose their old people to be devoured by wild beasts.¹⁹ The Bechuanas pay so little regard to them that they are sometimes allowed to starve or to be eaten by dogs;²⁰ the Damaras kill useless and worn out people, and even sons smother their sick fathers.²¹ A very similar account is given of the Nukkas,²² and of the Gallnomeros of California.²³ Old age is but little respected among the Thetans of Kokonor. Indeed, it is by no means an infrequent case when the son kills the father who has become a burden.²⁴ At Fazolq on the Blue Nile old people were hurled alive; and the same custom is said to have existed among the Negro

tribes south of Kordofan.¹ It is said to be the practice of a dwarfish people in Timor for sons to force their aged fathers to join a foray, and, having slain them in combat, to claim the reward for their heads.²

7. Voluntary death of the old.—The burden of old age is felt in many instances to render longer life so undesirable that the aged ask to be put to death or at all events are content to die at the hands of their relatives.

Among the Payaguas of Brazil men offered themselves to be buried alive when weary of life by reason of old age, decrepitude, illness, or tedium.³ Among the Koryaks death at the hands of their fellow-tribesmen was accepted as the natural end of life;⁴ and in N. America the aged of the prairie tribes acquiesced in their abandonment.⁵ In some of the northern islands of the Solomon group those who are too old to work or fight are put to death, as it seems, with their own consent.⁶ The burying alive of parents who had become burdensome was of almost daily occurrence among the Fijians,⁷ and was understood by the people themselves, who thought they would be vigorous in the

to the west of Hudson Bay those who were too old to support themselves requested their children to strangle them. A grave was dug, in which the old man placed himself, and, when he had signified that he was ready, two of his children strangled him with a tbong.⁸ In Fate, one of the New Hebrides, the aged were buried alive at their own request. It was even considered a disgrace to the family of an aged chief that he should meet his end in any other manner.⁹ A somewhat different account is given of the fate of the old at Malekula, another island of the same group. There a person who is old and decrepit is informed that his or her burial will take place on a certain day. Sometimes he or she is buried alive, and sometimes strangled before burial.¹⁰ In Mota, Pentecost, and Leper's Island the sick and aged are buried alive out of kindness. It is a common thing for them to beg their friends to put them out of their misery.¹¹ The Caribs, at the request of their parents, slew them, believing that they did a good work in delivering them from the weariness and misery of old age. The practice was not, however, a general one.¹² Among some of the tribes of Florida children killed their parents on the ground that they were useless and a burden to themselves, and considered that in so acting they showed a sort of religious and pious affection.¹³ The Hottentots abandon aged and helpless persons, so that they may not linger on in misery.¹⁴ With the Chukchis voluntary death is a regular custom. The old people are killed at their own request by some near relative, or shooting. Before the ceremony is performed, after which no retreat is promised and will be heard the death is the work of evil spirits (*kelet*), and these are escaped by voluntary death; and those who have ended life in this way have the best abode in the future life.¹⁵ This voluntary death is said to prevail among the Eskimos of the Alaskan shore,¹⁶ and was practised by the natives of Kamtschatka¹⁷ and the Yakut.¹⁸

8. Cannibal practices in regard to the old.—In many instances old people are not only killed, but eaten.

The stock instance of this practice is that of the Battak of Sumatra, who, according to Leyden, eat their parents when aged and infirm, not so much to gratify their appetites as to perform a pious ceremony. When a man becomes old and

weary of the world, he is said to invite his own children to eat him. He ascends a tree round which his friends and family gather, and, as they shake the tree, they join in a funeral dirge, of which the import is, 'The season is come, the fruit is ripe, and it must descend.' The old man comes down from the tree and his relatives put him to death and eat him.¹ Yule was told almost exactly the same story of some wild tribes of Arakan.² Oederic says of the Tibetans that they eat their parents out of respect for their memory,³ and Ruhrquius and Carpini gave the same account.⁴ Barbosa gives a like report of certain tribes in the interior of Siam;⁵ and several non-Aryan peoples, such as the Massagetas, the Padai, and the Issedones,⁶ the Birbors of Central India,⁷ and certain wild tribes of Kweichan,⁸ have been credited with the practice. The Samoyedes and Ostiaks themselves admit that formerly old parents unfit for work were killed and eaten by their children in the expectation that after death they would fare better;⁹ a somewhat similar account is given of the Cachibos of Brazil,¹⁰ and the Tupis are said to eat their dead as a last demonstration of affection.¹¹

9. Motives impelling to voluntary death and cannibalism.—Frazer has pointed out that among many peoples the belief prevails that a man will enter upon the future life with precisely the same powers and capacities as those of which he was possessed at the time of his death;¹² and it is to this belief that the practice of voluntary death in use among the Fijians has been attributed.¹³ Another motive to such an act is fear of the contempt which attaches to physical weakness among a nation of warriors;¹⁴ and, no doubt, views such as these may incline old people to acquiesce in or even desire death while still in the enjoyment of health and vigor. On the other hand, those who kill or kill and eat their old people not infrequently represent their practice as an act of kindness, as a pious ceremony, or as an honourable burial.¹⁵ Westermarck, however, observes with great cogency that usages such as these, 'like so many other funeral customs which are supposed to comfort the dead, may be the survival of a practice which was originally intended to promote the selfish interests of the living.'¹⁶

3. Influence of nomadic life on treatment of the old.—Eyre observes of the tribes with which he was acquainted that, while the blind and infirm were well treated when young, they were left to perish as soon as age added to the burden of caring for them.¹ This change of attitude has been observed to prevail among many nomadic peoples, and, indeed, is an almost necessary consequence of their habits of life.

Thus, the Sioux and Assiniboin abandoned those who were no longer able to follow the wanderings of their tribe; and it seems that a similar practice was followed by the Minnetarees, Ricaras, and others, who, when living in settled villages, treated their old people with kindness.² Catlin observes that this custom was common to all the tribes who roamed the prairies;³ it was followed by many of the northern Indians;⁴ and it was found not only among the nomadic Ahts, but among those who were settled on the coast.⁵ In Rotuma the aged were well cared for, but, as soon as they were seized with illness, they were much neglected, and even allowed to die unnoticed;⁶ the Lenguas attend to their old people with care, except in cases of incurable sickness, when, after they have employed in vain every means of cure, they abandon or even strangle them.⁷ The Eskimos of Greenland do not exhibit any pronounced reverence for the aged. They honour them so long as they are able to work, and are subject to their influence if they have sons and were good hunters in their day. Even a woman of advanced years, if she has able-bodied sons, is respected. But, when men or women become too old to take care of themselves, they receive scant consideration, and are sometimes even treated with ridicule.⁸ A similar account is given of the Thonga of E. Africa.⁹

4. Place of the old in tribal ceremonies.—In numerous instances the old people of a tribe take a prominent part in the performance of its ceremonies.¹⁰

Thus Kosa boys, after they have undergone circumcision, are instructed by an old man as to their duties as tribesmen;¹¹ and, in the case of the Larakia tribe near Port Darwin, the old men school the youths on their arriving at puberty in endurance, by imposing on them heavy tasks accompanied with kicks and blows.¹² An old woman plays an important rôle in the puberty rites observed by the girls of the Tanganyika plateau,¹³ and ornaments the marriageable girls of the Abipones by pricking the skin with thorns and rubbing ashes into the bleeding wounds.¹⁴

5. Special employments of the old.—In some cases special employments are assigned to the aged when they are no longer able to fight or engage in hard work.

Thus, among some of the Californian tribes the old warrior has to carry as best he can without assistance the game which his son has killed, or is compelled to do menial work under the superintendence of the women.¹ In Ceram the old man who can no longer work acts as the nurse of little children;² and by order of one of the Yncas such a person was employed to scare birds from the crops.³

As to the place of old people in the organization of primitive society see art. SOCIAL ORGANIZATION.

6. Contempt and ill-treatment of the old.—In some instances old age is despised.

Thus, among the Hupa, Pomo, and Gallinero tribes of California the aged were treated with the greatest contumely.⁴ At Tahiti no respect is accorded to old people. They are thrust aside and receive little attention.⁵ In Fiji they excite contempt;⁶ and in some of the Solomon Islands they are, along with the sick, the objects of ridicule.⁷ The Lapps are said to be undutiful to their aged parents;⁸ and a similar account is given of the Yakuts, among whom parents who are decrepit and of feeble understanding are especially the object of ill-treatment.⁹ The Kagoro show little reverence for age except in the case of their chief and an important official (*mekwao*), who administers ordeals and leads them in all sacred ceremonies;¹⁰ the Bechuanas¹¹ and the Indians of British Guiana despise old people.¹²

In some cases the old suffer from mere neglect; in others they are cruelly used, abandoned, or even killed.

By the Kutchins of the Yukon they are simply neglected;¹³ among the Ba-Huana they are often subject to ill-treatment.¹⁴ By the Yahgan of Cape Horn they are often much neglected and even cruelly handled, and, in some instances, they have been killed by their own children who had grown weary of tending them.¹⁵ At Huahine the aged received little attention in illness, many died as much from hunger as from disease, and sometimes, if there was but faint prospect of their recovery, they were clubbed to death, speared, or buried alive.¹⁶ In the Island of Pines all aged and decrepit persons, and those who were suffering from protracted illness, were either put to death by their relatives or conveyed to one of the small islands and left to starve;¹⁷ and in olden times the Koryaks killed all their aged parents.¹⁸ The Corannas, like the Bushmen, expose their old people to be devoured by wild beasts.¹⁹ The Bechuanas pay so little regard to them that they are sometimes allowed to starve or to be eaten by dogs;²⁰ the Damaras kill useless and worn out people, and even sons smother their sick fathers.²¹ A very similar account is given of the Nukkas,²² and of the Gallineros of California.²³ Old age is but little respected among the Tibetans of Kokonor. Indeed, it is by no means an infrequent case when the son kills the father who has become a burden.²⁴ At Fazolq on the Blue Nile old people were buried alive; and the same custom is said to have existed among the Negro

tribes south of Kordofan.¹ It is said to be the practice of a dwarfish people in Timor for sons to force their aged fathers to join a foray, and, having slain them in combat, to claim the reward for their heads.²

7. Voluntary death of the old.—The burden of old age is felt in many instances to render longer life so undesirable that the aged ask to be put to death or at all events are content to die at the hands of their relatives.

Among the Payaguas of Brazil men offered themselves to be hurried alive when weary of life by reason of old age, decrepitude, illness, or tedium.³ Among the Koryaks death at the hands of their fellow-tribesmen was accepted as the natural end of life;⁴ and in N. America the aged of the prairie tribes acquiesced in their abandonment.⁵ In some of the northern islands of the Solomon group those who are too old to work or fight are put to death, as it seems, with their own consent.⁶ The burying alive of parents who had become burdensome was of almost daily occurrence among the Fijians,⁷ and was undertaken at the instance of the old people themselves, who thought that, if they died while vigorous, they would be vigorous in the future life.⁸ Among the Indians to the west of Hudson Bay those who were too old to support themselves requested their children to strangle them. A grave was dug, in which the old man placed himself, and, when he had signified that he was ready, two of his children strangled him with a thong.⁹ In Fate, one of the New Hebrides, the aged were hurried alive at their own request. It was even considered a disgrace to the family of an aged chief that he should meet his end in any other manner.¹⁰ A somewhat different account is given of the fate of the old at Malekula, another island of the same group. There a person who is old and decrepit is informed that his or her burial will take place on a certain day. Sometimes he or she is buried alive, and sometimes strangled before burial.¹¹ In Mota, Pentecost, and Leper's Island the sick and aged are buried alive out of kindness. It is a common thing for them to beg their friends to put them out of their misery.¹² The Caribs, at the request of their parents, slew them, believing that they did a good work in delivering them from the weariness and misery of old age. The practice was not, however, a general one.¹³ Among some of the tribes of Florida children killed their parents on the ground that they were useless and a burden to themselves, and considered that in so acting they showed a sort of religious and pious affection.¹⁴ The Hottentots abandon aged and helpless persons, so that they may not linger on in misery.¹⁵ With the Chukchis voluntary death is a regular custom. The old people are killed at their own request by some near relative, by shooting, or by poisoning.¹⁶ In the case of the Eskimos, the aged are sometimes killed at their own request by some near relative, by shooting, or by poisoning.¹⁷ The natives of Kamtschatka¹⁸ and the Yakut.¹⁹

8. Cannibal practices in regard to the old.—In many instances old people are not only killed, but eaten.

The stock instance of this practice is that of the Battak of Sumatra, who, according to Leyden, eat their parents when aged and infirm, not so much to gratify their appetites as to perform a pious ceremony. When a man becomes old and

weary of the world, he is said to invite his own children to eat him. He ascends a tree round which his friends and family gather, and, as they shake the tree, they join in a funeral dirge, of which the import is, 'The season is come, the fruit is ripe, and it must descend.' The old man comes down from the tree and his relatives put him to death and eat him.¹ Yule was told almost exactly the same story of some wild tribes of Arakan.² Oederic says of the Tibetans that they eat their parents out of respect for their memory,³ and Rührig and Carpi gave the same account.⁴ Barbosa gives a like report of certain tribes in the interior of Siam;⁵ and several non-Aryan peoples, such as the Massagets, the Padari, and the Issedones,⁶ the Bihors of Central India,⁷ and certain wild tribes of Kweichow,⁸ have been credited with the practice. The Samoyedes and Ostiaks themselves admit that formerly old parents unfit for work were killed and eaten by their children in the expectation that after death they would fare better;⁹ a somewhat similar account is given of the Cachibos of Brazil;¹⁰ and the Tupis are said to eat their dead as a last demonstration of affection.¹¹

9. Motives impelling to voluntary death and cannibalism.—Frazer has pointed out that among many peoples the belief prevails that a man will enter upon the future life with precisely the same powers and capacities as those of which he was possessed at the time of his death;¹² and it is to this belief that the practice of voluntary death in use among the Fijians has been attributed.¹³ Another motive to such an act is fear of the contempt which attaches to physical weakness among a nation of warriors;¹⁴ and, no doubt, views such as these may incline old people to acquiesce in or even desire death while still in the enjoyment of health and vigour. On the other hand, those who kill or kill and eat their old people not infrequently represent their practice as an act of kindness, as a pious ceremony, or as an honourable burial.¹⁵ Westermarck, however, observes with great cogency that usages such as these, 'like so many other funeral customs which are supposed to comfort the dead, may be the survival of a practice which was originally intended to promote the selfish interests of the living.'¹⁶

The Gallineros of California behaved towards the old with utter contempt, forcing even aged warriors to do the most menial work under the supervision of women. Aged parents were killed by the same tribe, and among the Lower Californians the aged were neglected and put to death if ill for a long time. In like manner, the old were abandoned by the Shoshones when they became a nuisance. Turning to the Algonquian and kindred stocks, we find that the condition of the aged was, on the whole, apparently preferable to their lot in the west. It is true that the *Jesuit Relations* represent the Hurons as intending to kill a certain old man, and as abandoning two sick and aged women, whom, however, they were glad to receive back when the Jesuit missionaries succeeded in restoring them to health (*Jesuit Relations and Allied Documents*, ed. R. G. Thwaites, Cleveland, 1896-1901, xx. 239, xxx. 135-137). It is expressly stated that at Three Rivers, Quebec, 'old age and poverty are held in the utmost contempt by the savages' (*ib.* xlv. 128), a condition which is quite analogous to the western Yuma contempt for the aged (H. H. Bancroft, *NR* i. 515). The Jesuit missionary G. Lalemant makes the following statement of the Iroquois near Quebec:

They were accustomed 'to kill their fathers and mothers when they are so old that they can walk no longer, thinking that they are thus doing them a good service; for otherwise they would be compelled to die of hunger, as they have become unable to follow the others when they change their location' (*Jes. Rel.* iv. 189).

Herein lies the clue to the retention of the practice of abandoning or killing the aged among relatively advanced American Indian tribes. It was regarded as an act of mercy, and there is little doubt, in view of the conditions under which these tribes lived, that this view was correct (cf. also T. Waitz, *Anthropologie der Naturvölker*, Leipzig, 1860-77, iii. 116). Honour and respect for the old were by no means unknown, as is clear from the repeated ascription of these virtues to the Hurons, as well as to the Abenakis of New Brunswick (*Jes. Rel.* ii. 212, xiii. 37, xlv. 174), while among the western Koluschans honour towards parents was a duty obligatory on children (H. Ploss, *Das Kind*², Leipzig, 1884, ii. 409).

2. Central America.—Among the sessile population of Central America the aged were held in high esteem. The Zapotecs regarded old age with the utmost reverence (*NR* i. 661), and the ancient Mexicans and Peruvians did equal homage to their elders.

3. South America.—In S. America the aged seem to fare better than in the more rigorous northern part of the continent. Yet their fate is scarcely enviable among tribes such as are described by E. F. im Thurn in Guiana:

'Powerless old age meets with no respect. When old and past work, they are indeed allowed to remain in their hammocks in the houses which once, perhaps, belonged to them, and are fed by their younger relations in a rough and grudging manner; but no further care or kindness is shown to them' (*Among the Indians of Guiana*, London, 1883, p. 224).

The practice of putting the aged to death when hopelessly ill is also known in S. America, even among tribes which hold the old in high honour, so that W. B. Grubb writes:

'The aged are well cared for, no neglect being shown except in cases of incurable sickness, when, after every effort to cure them has been made in vain, they are abandoned, or even suffocated or strangled' (*Among the Indians of the Paraguayan Chaco*, London, 1904, p. 75).

LOUIS H. GRAY.

OLD AGE (Chinese).—Among the innumerable mottoes expressive of hopes and good wishes which are to be seen pasted over the doorways of Chinese houses none is commoner than a scroll consisting

of four characters which mean 'May this house be visited by the Five Blessings.' These blessings are long life, worldly prosperity, health, love of virtue, and a natural death. The first is popularly regarded as the most important; for the others, as the practical Chinese mind argues, necessarily presuppose the maintenance of life, and, so long as life lasts, there is always room for hope that the other blessings will be added.

The conviction that a long life is eminently desirable is carried to its logical result in that reverence for age which is perhaps one of the most remarkable and beautiful characteristics of the Chinese people. In no country in the world are the aged treated with more courtesy, respect, and deference than in China.

Among the Chinese reverence for age is essentially connected not merely with the traditions of social practice, but also with ethical theory. All the Confucian classics lay emphasis on the duty of treating the aged with respect. The 'Book of Rites' tells us that the ethical standards of the Yü, Hsia, Yin, and Chou dynasties were not identical in respect of all the things which they held in honour; but that, whereas virtue was honoured by the Yü sovereigns, rank by the Hsia, riches by the Yin, and kinship by the Chou, all four dynasties gave honour to old age.¹ Mencius says that 'the proper object of the loyalty of virtuous men is the prince who knows how to provide for the welfare of the aged.'² King Wên, to whose efforts the foundation of the Chou dynasty (12th cent. B.C.) was mainly due, was regarded as a model prince, because (among other reasons) he was one of those who 'knew how to provide for the welfare of the aged.' Mencius observes that 'the people whom we described as starved and famished are those who lack food, and warmth, but among the subjects of King Wên there were no old people to whom food and warmth were lacking.'³ Confucius himself is said to have declared that one of his chief desires was to secure rest and peace for the aged.⁴

The 'Book of Rites' gives instances of the manner in which the royal sages of olden times proved their moral worthiness by their respect for old age. Among persons of the same rank at court precedence was accorded to the eldest. Aged ministers and officials were granted various special privileges. Under the rule of these kings 'residents in the country took their places according to their age, and the old and poor were not neglected, nor did the strong come into collision with the weak.'⁵ After the royal hunting expeditions the largest share of game went to the aged. When the king gave audience to a minister who was seventy years of age, the minister was privileged to sit in the royal presence. If the king wished to consult a minister or ex-minister who had attained a very great age, it was unnecessary for the latter to come to court; the king himself would go to his house and would bring the old man presents of delicate food.⁶ When the king went forth on ceremonial journeys, or to perform the customary rites at the sacred mountains, he would make inquiries about the local princes and chiefs who had reached extreme old age, and would visit them in their own homes.⁷

A certain amount of scepticism as to whether the monarchs of ancient China were really in the habit of treating old men with all these marks of

deference is perhaps permissible. But it is easy to see why the early recorders of law and custom in China should have attributed such conduct to the semi-mythical sovereigns of the Chinese 'golden age.' Just as the Hebrews and other ancient peoples enormously enhanced the influence and prestige of their moral codes by attributing them to divine inspiration or to 'the finger of God,' so the old Chinese moralists sought to sanctify the highest ethical ideals and principles known to their own race by tracing them to the almost supernatural wisdom and virtue of their ancient holy kings. In describing what was assumed to have been the ethical standard of the royal founders of Chinese civilization, the moralists aimed at setting an ideal before the rulers and people of their own time. They always professed not to be inculcating a new or a higher morality than that hitherto practised, but to be merely reaffirming the teachings of past ages. Confucius himself repudiated all claims to originality: he was no innovator—merely a 'transmitter.'

Whatever may have been the true history of the origin and development of the moral ideas of the Chinese, we have ample evidence that reverence for age has been one of their most conspicuous and characteristic moral qualities from the earliest days of which we have authentic record. This reverence was by no means confined in its manifestations to acts of a merely ceremonial nature. That it also had a thoroughly practical side is shown in the legal provision which exempted (and still exempts) old men from severe forms of punishment in the law-courts.¹ Under the semi-socialistic system of ancient China tenderness for age is also shown in the acceptance by the State of full responsibility for the proper care and nourishment of old people. There were several classes of persons who received regular subsistence-allowances. Among these were young orphans, childless old men, old widowers, and old widows. Chinese sympathy and charity were not, indeed, directed towards the alleviation of the needs of only these; for provision was also made for the dumb, deaf, lame, blind, crippled, and deformed, and for supernannuated government officials and the parents and grandparents of those who had died in their country's service.² But it was in connexion with the needs and claims of the aged that the State regulations reached their highest degree of elaboration. The old-age pensions were paid in kind, not in money; they consisted, however, not merely of grain and other food-stuffs, but also of various useful articles, such as benches and walking-sticks.³ We are told of a very remarkable custom whereby the aged pensioners were entertained as guests of the State in the government schools.⁴ Thus the very young and the very old were brought together in circumstances which cannot have failed to strike the youthful imagination and to exercise a highly beneficial influence on the development of the moral sentiments. That children should treat their elders with respect was, indeed, impressed upon them by their schoolmasters in the ordinary course of the scholastic routine.

'Let careful attention,' says Mencius, 'be paid to education in schools. Above all, let emphasis be laid on the filial and fraternal duties. If that is done properly, we shall not see, on our public roads, grey-haired old men carrying burdens on their backs or on their heads.'⁵

¹ This is referred to in the 'Book of Rites' (*SBE* xxvii. 66); but it is also a well-known provision of the criminal law. The exemption is not, of course, absolute; but, even when convicted of murder, old men have been treated with extraordinary leniency (see E. Ahabaster, *Notes and Commentaries on Chinese Criminal Law*, London, 1899, pp. 93 f., 103).

² See *SBE* xxvii. 240-244, 444 f.; and E. Biot, *Le Tchou-Li*, Paris, 1851, i. 82 f., 287, 411.

⁴ *Id.* xxvii. 242; see also Legge, ii. 243 (footnote).

⁵ Legge, ii. 213 f.; see also p. 149.

But the impression made on youthful minds by the striking example set them by the State itself in its public demonstrations of respect for age must have been far deeper and more lasting than any which can have been made by the mere force of pedagogic precept. The 'Book of Rites' tells us that the king personally presided at the entertainment of the pensioners and superintended the distribution of food and drink.¹ No doubt these duties were, in practice, usually carried out by deputy; in any case the royal share in the proceedings would necessarily become, or tend to become, formal or symbolical. It may be compared, perhaps, with that venerable custom whereby the emperor of China ploughed three furrows in front of the Altar of Agriculture, thus setting an example of industry to his people and dignifying the labours of the millions who toil in the fields.

Seventy was the age at which officials were entitled to claim release from the cares of office.² When the ex-official reached the age of eighty, one of his official friends was released from public duties for the express purpose of attending on him. When he attained his ninetieth year, all members of his family employed by government were allowed unlimited leave of absence so that they might devote themselves to the old man's welfare.³

The Chinese moral code contains various rules and suggestions as to the etiquette which should govern the relations between old and young.

We are told, e.g., that a man should treat those who are twice as old as himself with the same kind of deference as he would show to his father, and he should treat one who is ten years older than himself as he would treat an elder brother. In the company of one who is senior by five years he should not walk abreast with him, but a little way behind him. When a group of men of various ages are sitting together, the eldest should be allowed to take the seat of honour.⁴ If an old man and a young man are walking together, and each carries a burden, the young man should take the old man's burden in addition to his own, if he is physically able to do so; if he is not able to carry both burdens, he should carry the heavier of the two. An elderly man should not be expected or allowed to carry a burden which is too heavy to be carried in one hand.⁵ When a death occurs in a family, the aged survivors are not expected to carry out the full rites of mourning. This is because the privations and fasts which are necessary in the case of young mourners might be injurious to an old man's health.⁶

Though the attainment of old age is regarded as a matter for congratulation, it is necessary to avoid direct and pointed references to the advanced age of those whom one is addressing. In this matter tact and discretion are as necessary in China as they are in Europe; and only long experience of Chinese social conventions, and a delicate appreciation of the circumstances of each individual case, will save the well-meaning European from unconsciously offending against Chinese canons of good taste. The 'Book of Rites' tells us that, when a man is addressing his parents, he must not remind them of their age;⁷ and in the 'Twenty-four Examples of Filial Piety' this precept is illustrated in somewhat grotesque fashion by the story of the elderly man who, in order to divert the thoughts of his venerable parents from decay and death, played and gambolled in their presence as though he were still the darling of their early wedded life.⁸ But old age has been treated by poets and essayists in a much more serious manner than this; and, indeed, a very attractive anthology might be made of the graceful and touching utterances of Chinese writers on the different aspects of this subject. If they love to dwell on the tranquillity and beauty which mark the evening of a

well-ordered life, they do not ignore the weariness and pain, the vain regrets and wistful longings, from which old age is rarely free. 'Dust thou art and unto dust shalt thou return' is a truth which the religious and ethical teachers of China make no attempt to conceal; indeed, they themselves have given expression to it in precisely the same language.¹

The Chinese ideograph which stands for 'long life' or 'old age' is very frequently brought into artistic association with that which stands for 'happiness.' These two characters have been written in innumerable fanciful ways, for artistic reputations can be won and lost, in China, by the degree of skill or ingenuity which a calligraphist displays in his treatment of these almost sacred symbols. The Chinese, as is well known, regard their wonderful system of ideographic writing with feelings akin to reverence; but among all the thousands of existing characters none occupies a more exalted place in popular esteem than the two which stand for 'long life' and 'happiness.' They meet the traveller's eye wherever he goes, though sometimes they are so fantastically written as to be almost unrecognizable. He will find them carved on the rugged boulder that crowns the summit of some sacred mountain—and will learn, perhaps, that they reproduce in facsimile the handwriting of some famous calligraphist of a thousand years ago; and he will find them embossed on the buckles and napkin-rings that are manufactured for Western 'globe-trotters' by the Chinese silver-smiths of to-day.

But it is not only in the written ideographs that the ideas of long life and happiness find artistic expression. Many evergreen trees are regarded as symbolical of longevity, and a fir-tree with snow upon its branches is an emblem of a happy and serene old age. Similar ideas are associated with the bamboo. Among animals the crane and the tortoise are universally recognized in China as emblematic of longevity and immortality. These animals frequently appear in the paintings and embroideries which are presented to old people on their birthdays and other anniversaries. When used in this symbolic way, the tortoise is often represented as having a row of tails. This is based on an old fancy that, until a tortoise passes its hundredth year, it possesses only one tail, but that by the time it has reached the age of a thousand it has ten tails. Perhaps it might be a difficult task to disprove this.

The Chinese reverence for age rests to a great extent on the sound principle that there is no period of human life which cannot furnish its appropriate contribution towards the development of the complete man. That character is something which each man builds up for himself throughout the whole course of his life is a belief which is no less clearly recognized by Confucianism than it is by modern psychology in the West. Old age is revered in others and desired for oneself; for it is believed by the Chinese that the normal lifetime of a man, from childhood to old age, is no longer than is necessary for the full realization of a man's moral and spiritual capacities. The Chinese divide life into various stages, and it is not till he has arrived at the age of sixty that a man is supposed to have reached the stage of moral and intellectual development that entitles him to be described as a person of 'wisdom and experience.'²

¹ The passage occurs in a Chinese commentary on the 'Book of Rites.' *Hsing shêng yü t'u erh fan yü t'u*, 'the body takes its rise from the earth and will return to the earth.' The Chinese say that, when the white hair turns yellow (in extreme old age), this is a sign that the bodily organism (*hsing*) is about to return to the place whence it sprang (its *pên*, or origin)—namely, the earth; for yellow is the colour with which, in China, earth is symbolically associated.

² *SBE* xxvii. 65 f., 478 f.

The Confucian conception of the normal stages of moral growth, under the most favourable conditions, may be learned from a well-known passage in the *Analeets*, which tells us that Confucius, at the age of fifteen, was bent on acquiring knowledge; at thirty he 'stood firm'; at forty he had 'no doubts'—i.e., he had tested his own capacities and had defined his relationship to the world; ¹ at fifty he 'knew the decrees of heaven'—i.e., he had developed the spiritual side of his nature; at sixty his ears were 'attentive to the truth'; at seventy he could follow the impulses of his heart without going wrong.² As Confucius died at the age of seventy-two, we find from this analysis that the development of his character was practically continuous throughout all the years of his life. From the biographical point of view, the passage is not without interest; but it is valuable mainly as an early and instructive example of introspective psychology, and as implying a recognition by the Chinese of the important fact that no period of human life—not even the period of physical decay—is necessarily unprogressive or sterile. It is not till he has safely arrived at the haven of old age—an old age that has been preceded by strenuous and continuous moral activity—that man can hope (theoretically at least) to 'follow the impulses of his heart without going wrong.'³

Confucian psychology in this respect is by no means contradicted by that of 20th-century Europe. William MacDougall describes how, after repeated moral conflicts, resulting in the acquirement of 'the irresistible strength of a fixed and consolidated habit' of right doing, the self may come 'to rule supreme over conduct.' The individual has at least the potential capacity of rising above moral warfare; 'he attains character in the fullest sense and a completely generalized will, and exhibits to the world that finest flower of moral growth, serenity.'⁴ It is interesting, in the same connexion, to note that the crowning spiritual experience of some of the Christian mystics seems to have been a sense of complete liberation from the state of moral unrest and strife.

'"La guerra è terminata," all the energy of a strong nature flows freely in the new channels, and modification ceases, mechanically, to be possible to the now unified or "regenerated" self,' writes E. Underhill, with special reference to the case of St. Catherine of Genoa.⁵

In spite of the fact that many of the customs recorded in the 'Book of Rites' have long been obsolete, the moral sentiments of the Chinese with regard to old age have undergone no material alteration. The modifications which have taken place in outward observances may be traced to a variety of causes, of which the most important is the crystallization of the rules and duties relating to the cult of ancestors. If in normal circumstances the State no longer provides for the necessities of old men and women, this is because the care of the aged is a responsibility which is assumed as a matter of course by sons and other relatives. The State recognition of the mutual claims and responsibilities of parents and sons is illustrated in a striking way by the frequent reduction or remission of sentences imposed on criminals on the ground that the accused persons were the sole support of their aged parents. Such pleas are often advanced in the law-courts, and always receive careful con-

¹ We are told on Confucius's authority that 'a man who is unpopular at forty will always be unpopular'—i.e., that such further development as may take place after that age will proceed along lines which have been already laid down (*Legge*, i. 320).

² See *Legge*, i. 146 f.

³ Confucius realized, of course, that old age is liable to certain moral perils which may be regarded as peculiarly its own. He pointed to poverty as one of these (*ib.* p. 313).

⁴ *Social Psychology*, London, 1913, pp. 261-263.

⁵ *Mysticism*, London, 1912, p. 264; see also W. B. Inge, *Personal Idealism and Mysticism*, do. 1907, p. 16.

sideration.¹ The ethical basis of the Chinese social system is filial piety, and the duties and obligations as well as the rights and privileges of every member of a Chinese family are so clearly defined and so rarely repudiated that only in quite exceptional circumstances (such as those brought about by famine, plague, floods, earthquakes, and war) are old men and women liable to become dependents on private charity or the bounty of the State.

'If it be objected,' writes an English-educated Chinese student of sociology, 'that the burden of the family drags down individuals from self-development, at least it is true that publicly organized relief is a much less urgent problem with us than it is in England.'²

It may not be out of place to mention that in the territory of Wei-hai-wei, now under British rule, there is not, among the 150,000 inhabitants, a single individual who requires to look elsewhere than to his or her own family-group for the means of support in old age.

Young China is showing many signs of restiveness under the social and ethical restraints of the old order, and it is not unreasonable to question whether respect for old age will, in the future, be as conspicuous a feature of the Chinese character as it has been in the past. Fortunately, however, the old ways have not yet fallen into oblivion, and even among the ardent young patriots of the New China there are many who believe that the regeneration of their country is not by any means contingent upon the wholesale surrender of all that has contributed to China's moral greatness in the past.

As an interesting indication of President Yuan Shih-k'ai's determination not to give up the old customs whereby public homage was rendered to virtuous old age, we may cite a Presidential mandate which was published in Peking as recently as 6th Jan. 1915.

This mandate refers to the fact that the mother of Lieut-General Liu Hsien-heng had reached the age of one hundred years. This lady, it continues, is noted for her admirable personal qualities and for the unwearying devotion which she showed in the education of her distinguished son. In spite of her advanced age, it is gratifying to learn that her health and good spirits are by no means impaired. 'She is indeed a person of whom the State may well be proud.' The mandate concludes by specifying the honours that are to be conferred upon the old lady. These are to include a *pien* (honorific tablet) bearing the four characters *Shu T'z' Ch'ü Nien*, 'Womanly Virtue and Venerable Age.' This tablet is to be hung on the walls of her home as a perpetual token of the State's recognition of her virtues and in commemoration of her attainment of a great age.

It will be noticed that in this mandate (which is typical of multitudes of similar decrees that have been issued by Chinese emperors in past centuries) emphasis is laid, not merely on the age of the person concerned, but also on the fact that her life has been well spent. That the good sometimes die young is a lamentable fact which the Chinese know as well as we do; but they love to think that a virtuous life receives its appropriate reward in a serene and happy old age; and nothing gives greater satisfaction to their ethical sensibilities than the contemplation of cases in which the ideal combination of exalted virtue and great age has been attained in real life. Thus it is that many of the virtuous kings of ancient times are credited with abnormally long lives.³ Even in later and more degenerate times it was supposed that the proper span of a good man's life was a hundred years. It is largely because a long life is believed to be one of the rewards of virtue that the funeral of an old man (especially if he has left behind him a large and prosperous family of descendants) is

regarded as a congratulatory festival rather than as an occasion for sorrowing and condolence.¹

There is a story told of an elderly English admiral who, while walking with a fellow-countryman in the streets of Canton, unexpectedly found himself surrounded and threatened by an excited and turbulent mob of anti-foreign Chinese. Acting on the suggestion of his companion, who knew the Chinese character, the admiral removed his hat and displayed his grey locks; whereupon the angry crowd immediately fell back in abashed silence, and the Englishmen proceeded on their way unharmed.

This story may be apocryphal; but, so long as the telling of such stories in illustration of the Chinese character continues, as at present, to be deserved by the Chinese people, it will be impossible for Western critics to withhold from the civilization of China a high tribute of respect and admiration.

LITERATURE.—This has been indicated in the article.

R. FLEMING JOHNSTON.

OLD AGE (Greek).—The ordinary Athenian view of old age is well summed up by the aged Kephalos at the opening of Plato's *Republic*:

'Old men flock together; they are birds of a feather, as the proverb says; and at our meetings the tale of my acquaintance commonly is—I cannot eat, I cannot drink; the pleasures of youth and love are fled away: there was a good time once, but that is gone, and now life is no longer life. Some of them lament over the slights which are put upon them by relations, and then they tell you plaintively of how many evils their old age is the cause' (*Rep.* 320A, tr. B. Jowett, Oxford, 1881).

The speaker indeed goes on to say that the real cause of this discontent lay not in old age *per se*, but in the individual character (doubtless Plato's own view), and the testimony of the aged poet Sophocles is quoted in witness of the blessed calm and freedom of old age from the tyranny of the passions; but Greek literature of all periods is far too thickly strewn with obviously sincere dispraise of age to permit us to doubt that it was wholly hateful to the average Greek. No Greek writer has surpassed Sophocles himself, the *Republic* notwithstanding, in the bitterness of his references to old age—and that in the latest of his tragedies:

'For when he hath seen youth go by, with its light follies, what troublous affliction is strange to his lot, what suffering is not therein?—envy, factions, strife, battles and slaughters; and, last of all, age claims him for her own,—age, dispraised, infirm, unsocial, unfriended, with whom all woe of woes abides' (*Ed. Col.* 1230 ff., tr. R. C. Jebb, Cambridge, 1900).

At the other end of the scale, Aristotle, in a long passage unrivalled for the cruel ruthlessness of its characterization, gives a picture of old age in the same pessimistic style (*Rhet.* ii. 13=1389^b 13). An 'ingrained horror against the condition of life which destroys beauty and mars enjoyment,'² and the haunting thought of the two inevitable demons (Keres [*g.v.*] of Age and Death, ever waiting in the background of life, came near to poisoning the springs of happiness for the Greeks.³ The vanishing of youth like a sunbeam, and the pains of age (*frag.* i. 5: *δδυστηρόν γῆρας*; v. 5: *ἀργαλέον καὶ ἀμορφόν γῆρας*) which make a man ugly (*αἰσχρόν*) and wretched (i. 6), and death more tolerable than life (ii. 10), is the burden of Mimmemos. Even Aeschylus hardly finds anything better to say of a man stricken in years than that 'his leaf is withered, and with his three feet he wanders weak as a child, a day-lit dream' (*Agam.* 79 ff., tr. A. W. Verrall, London, 1889). Euripides in the same vein contrasts youth and age in a great ode that sounds like the swan-song of his own golden youth (*Herc. Fur.* 637 ff.). For Pindar, the poet of the 'delightful things in Hellas' (*τὰ περὶνὰ ἐν Ἑλλάδι*), the very heart of life lay in wealth, strength, and

³ For statements to this effect cf. the *Shu King* (Legge, vol. iii, pt. 1, pp. 25 and 51, pt. ii, p. 4661.); cf. also *SBE* xxvii. 344, and Wang Ch'ung, *Lun Heng*, tr. A. Forke, i. (London, 1907) 818-817, 825 f.

beauty, and in 'glorious-limbed youth' (ἀγλαόθυμος ἦβα [*Nem.* vii. 5]). The Athenian Solon really stands on the same plane, in his definition of the happy man as one who is 'whole of limb, free from disease, a stranger to misfortune, happy in his children, and comely to look upon, and who shall also end his life well' (Herod. i. 32).¹

In a word, the ancient Athenian knew little of the art of growing old gracefully;² nowhere is Greek literature so querulous, so wanting in dignity, as in dealing with age and its disabilities; while, conversely, the glory of youth, especially in its purely physical aspect, is the dynamic impulse of Greek art in all its forms, especially in sculpture. Mimermos prays that free of disease and sorrow he may die at the age of sixty years. We are not surprised to read that the old people of Keos, when they reached the age of sixty or upwards and felt their powers decaying, put themselves quietly out of the way with a draught of hemlock—being indeed compelled by law to do so, in order that there might be a sufficient maintenance left for others, and that they themselves might not suffer from sickness and weakness of extreme old age (Strabo, p. 438: προσέταρτε γὰρ, ὡς εἴκεν, ὁ νόμος τοὺς ὑπὲρ ἑξήκοντα ἔτη γεγονότας κωνεῖν ἑσθαι καὶ τοῦ διαρκεῖν τοῖς ἄλλοις τὴν τροφήν. And see the story there told in reference to τοὺς πρεσβυτάτους. Cf. *Ælian, Var. Hist.* iii. 37; *Heraci. Pont.* in Müller, *FGH* ii. 215).

It seems clear that, while the Athenians, in theory, respected and honoured the old, the facts of life were hardly in harmony with theory.³ Thorough, and perhaps supersensitive, humanists as they were, the actual objective aspect of old age seems to have been repulsive to them; involving, as a rule, enfeebled powers of enjoyment of most forms of social intercourse, it was *per se* a hateful thing, and its victims were regarded with at best a half-contemptuous tolerance as living a very death in life.⁴ Notwithstanding some examples and utterances in a contrary sense (e.g., in literature, the tendence of *Œdipus* by *Antigone* [*Soph. Œd. Col.* 347f.: δέλεοι ἡμῶν δύσμορος πλανωμένη, γερωνταγωγεί]), the general sentiment and conduct towards the aged, in historical Athens, fell far short of that kindliness which must be regarded as a touchstone of social progress, a derivative of that whole attitude towards the weak and the helpless, the young and the suffering, which is one of the prime distinctions between modern and ancient times. The truth is that under the strenuous conditions of ancient life, in which one must be either hammer or anvil, there was but little room for the claims that might be urged by age on the ground of long and varied experience; and this impatience of age in the political sphere reacted upon the general social conception, being reinforced also by that intense selfishness which so deeply stained the national character.

In this respect, as in most other things, Sparta stood in conspicuous contrast with Athens; and, while Athenians did not hesitate to applaud the Spartan practice as a matter of principle, they made little attempt to imitate it—for all their own altar of Compassion in the Agora (cf. *Xen. Resp. Lac.* x. 8: καὶ γὰρ τὸ πέντον θαυμαστάτατον ἐπαυνοῦσι μὲν πάντες τὰ τοιαῦτα ἐπιτρέψματα, μισοῦσι δὲ αὐτὰ οὐδεμία πόλις ἐθέλει).⁵ There lies probably some deep significance behind the fact that it was in Sparta that honour to the aged as such was a fundamental of the social system (cf. *ib.* x. 2: θεῖς γὰρ τοὺς γέροντας κυρίου τοῦ περὶ τῆς ψυχῆς ἀγῶνος διεπράξεν ἐντιμώτερον εἶναι τὸ γῆρας τῶν ἀκαζόντων ῥώμης). Herod. ii. 80 remarks that Egypt and

Sparta agreed in the respect paid to age; it evidently struck him as very strange. Here we may recall the hackneyed anecdote of Cicero (*de Senect.* xviii. 63f.) of the aged man to whom the Lacedæmonian ambassadors in the Athenian theatre offered a seat—and brought down the house—*disixisse ex his quendam, Athenienses scire quare recta essent, sed facere nolle.* For the respect paid to the old by the young in Sparta see the anecdote in *Plut. Lyc.* 15.

Perhaps the early decay of respect for the aged is in part traceable to the fiery experiences of the migratory age, which must have destroyed many of the finer elements in civilization (cf. G. Murray, *Rise of the Greek Epic*, p. 101). Partly also, perhaps, it was a natural result in military societies, where with decay of bodily powers practical fighting value disappeared—the universally recognized limit of age for active military service in Greece was sixty years. How far, if at all, it is to be brought into relation with the primitive practice of slaying the man-god as soon as he exhibited symptoms of failing powers, in order to transfer his spirit with unimpaired vigour to a successor—a practice and belief which undoubtedly took a broader sweep, beyond the circle of rulers, and affected the general sentiment touching bodily decay and death in the case of ordinary folk—must be left here undetermined (see J. G. Frazer, on the preference for a violent death, in *GB*, pt. iii., *The Dying God*, London, 1911, p. 9 ff.). Certain is it that, apart from the example of Sparta, there is ample evidence of a time when the aged counted for more in public life than was the case generally in Athens.

A reminiscence of the pristine status of the aged lingers in the use of the word πρέσβεις = 'ambassadors.' The use of the term τὰ πάτρια to express 'ancient law,' 'the way of ancestors,' is derived from a time when the old men of the tribe (οἱ γέροντες) were the repositories of the sacred tradition or institutions of the community (cf. G. Murray, *Four Stages of Greek Religion*, New York, 1912, p. 51). This was an actual working fact at Sparta, where the γεροντοκρατία of twenty-eight men over sixty years of age,¹ in conjunction with the two kings, was the guardian of the custom of the State, and 'in case the people decided crookedly the senate with the kings were to reverse their decision' (*Plut. Lyc.* 6: αἱ δὲ σκολιὰν ὁ δῆμος λήστω, τοὺς πρεσβυγενεῖας, καὶ ἀρχαίτας ἀποστατήρας ἡμῶν—τοῖς ἐστὶ μὴ κυροῦν, ἀλλ' ὅλους ἀφίστασθαι καὶ διαλέγειν τὸν δῆμον). The constitution of Sparta was in this respect a survival from a time when an oligarchy of old men decided all matters of importance, to the practical exclusion of the younger men, who in general assembly (Apella or Agora) had merely a right of acceptance or rejection of definite proposals, without power of amendment or discussion (cf. *Thuc.* i. 87). In Athens a similar council also existed, a mere shadow of its former self, in the shape of the once venerable Areopagus, which under the developed democracy was entirely cut off from all direction of political affairs. Only when the policy of the younger men had brought the State to the brink of ruin, by the failure of the expedition to Sicily, in 413 B.C., was recourse had once more to the counsel of the old, to save it that were still possible (*Thuc.* viii. 1: καὶ ἀρχὴν τινα πρεσβυτέρων ἀνδρῶν εἰλίσθαι, οἵτινες περὶ τῶν παρόντων ὡς ἂν καιρὸς ἢ προβουλευσούσι).

Even in Homer the precariousness of the rights of the aged as against the young and lusty is clearly evident through the glamour of courtly and heroic life and poetry. Nestor is no real exception, for, besides having plenty of sons to champion him, he is represented as more than merely old—he has lived so far beyond the usual span of life that he enjoys the prestige of a sort of sanctity for his very age; and, besides, he is deliberately treated by the poet as a privileged figure.² With Pelus, for all that he is mated with an immortal, the case is very different. Achilles in the under world puts the anxious question to Odysseus:

¹ Cf. *Tyrt. ap. Plut. Lyc.* 6: πρεσβύτας γέροντας as an element of the Spartan constitution. In the light of his observation of the ill effects of life-tenure by men of advanced age in oligarchically organized States, Aristotle criticizes this, especially in respect of the judicial functions of the Spartan Gerusia; for there is, he says, an old age of the mind, as well as of the body (*Pol.* ii. 9. 25 = 1270b). On the same lines, he would not approve of the life-tenure of the members of the Athenian Areopagus. The best men in his ideal State become priests in advanced age. And Plato is of much the same opinion (*Lysis*, 755 A, 923 B).

² Cf. A. Lang, *Homer and his Age*, London, 1903, p. 234: 'Of all the characters in Homer that of Nestor is most familiar to the unlearned world, merely because Nestor's is a "character part," very broadly drawn.'

¹ Aristotle, *Rhet.* i. 5 = 1360b 14 ff., says almost exactly the same thing, with some amplifications.

² For Sparta cf. *Plut. An seni sit ger. resp.* 24: ὁ Ἀντισθένης εἶπεν, ὡς ἐν Λακεδαιμονίᾳ κάλλιστα γῆρας.

³ In his *Rise of the Greek Epic*, Oxford, 1911, p. 107, G. Murray says: 'Any sympathetic reader of early Greek poetry will have noticed the importance, almost the sanctity, attached to three classes of human beings: strangers, suppliants, and old people.' He is referring, of course, chiefly to Hesiod, *Works and Days*, 331 (see below), but he certainly exaggerates—in regard to the last class, at any rate.

⁴ Cf. *Semon. frag.* 71: τίς γὰρ ἀδονᾶς ἀτερ | θνατῶν βίος ποιεῖνός; *Soph. Ant.* 1165 ff.: τὰς γὰρ ἡδονὰς | ὅταν προδῶσιν ἄνδρες, οὐ τίμη' ἐγὼ | ζῆν τοῖτον, ἀλλ' ἐμψυχον ἡγούμεαι νεκρόν.

⁵ Cf. *Paus.* i. xvii. 1: Ἐλέον βωμόν, ὃ, μάλιστα θεῶν ἐς ἀνθρώπων βίον καὶ μεταβολὰς πραγμάτων ὅτι ὠφέλιμον, μόνον τιμὰς Ἑλλήνων νέμονται Ἀθηναῖοι. He goes on to mention an altar of Αἰδώς also. At the best it was allowed that age brings wisdom (cf. *Hom. Il.* iii. 103f.). But the characteristic of Athenian democracy is expressed in the complaint of the Erinyes—ἐπεὶ καθιπτάξει με πρεσβύτερος νέος (*Æsch. Eum.* 734).

'Tell me of noble Peleus—is he yet held in honour among the Myrmidons, or do they set him at naught from Hellas to Phthia, for that old age blinds his hand and foot? For I am no longer his champion under the sun' (*Od.* xi. 484 ff.).

And the father of Odysseus himself is fain to betake himself to his distant farm 'withered, unkempt, and clad unseemly' (*Od.* xi. 187 ff., xxiv. 225 ff.).

Hesiod, in his fanciful sketch of the evolution of the world through the various ages, imagines a first or golden age in which men did not grow old, but passed away without pain or decay, as if falling on sleep (*Works and Days*, 113 ff.). The fifth or iron age of the poet's own time is one which, as it passes gradually into the sixth age, will exhibit a progressive depravity, among the marks of which will be that children dishonour their ageing parents and set at naught their admonitions (182 ff.). Hesiod's catalogue of deadly sins includes, along with injuries done to suppliants, guests, or orphans, harsh words to aged parents (331 ff.). The limitation or narrowness of range here observable is found in later Athenian society; for in Athens also the obligation of reverence or kindness towards the old tended to be thrown entirely upon the family group, and to be confined to the special relationship obtaining between parents and children. The very insistence of Greek lawgivers upon this specific form of the obligation may well raise a suspicion that, even as thus limited, it was by no means universally honoured in practice. Among the Athenians, in fact, it was a counsel of perfection for the individual member of the family rather than, as in Sparta, a general attitude of society, binding without further question, even where the narrower relationship did not exist.¹ We are thus compelled to make special reference to this particular form of obligation, as dealt with in Athens.

The general term was *γροτροφείν* or *γροβοσκείν*. The law compelling children to nurture and protect their parents in old age (ὁ τῆς κακώσεως νόμος, in *Is.* viii. 32, where the speaker is at pains to insist that it covered also grandfather and great-grandfather)² was, of course, attributed to Solon (*Aristoph. Birds*, 1354 ff.: ἐν ταῖς τῶν πελαγῶν κύβερσιν; *Dem.* xxiv. 103). It seems to have specified four forms of breach—ill-usage, refusal of bed or of board, and neglect of funeral rites (τὰ νομίζοντα; see *Lys.* xlii. 51; *Dem.* xxiv. 107; *Aristoph. Birds* 767). It was enforced by a γραφή γονέων κακώσεως, which came before the chief Archon (*Arist. Ath. Pol.* lvi. 6; *Hyper. Pro Euxen.* 6: φαυλὸς ἐστὶ πρὸς τοὺς ἐάντους γονεῖς ὁ ἀρχὼν ἐπὶ τούτῳ καθήκει). In accord with his own exalted conception of filial duty (see the remarkable passage in *Laws*, 931 A: πατήρ οὐδ' ὅτε καὶ μήτηρ ἢ τούτων πατέρες ἢ μητέρες ἐν οἴκῳ κείνται κειμήλιοι ἀπεριχρήστος γῆρας, μηδὲς διανοηθῆναι ποτὶ ἀγῶμα αὐτῶν, τοιοῦτον ἐξέστιον ἴδρυμα ἐν οἴκῳ ἔχειν, μάλλον κύριον εὐσεβεῖν), Plato prescribes as penalty for its violation perpetual exile and exclusion from the temples (*Laws*, 881 E). His penalties are sterner than those actually in use. At Athens a son convicted of maltreatment of parents became ἀτιμία τὸ σῶμα (but without confiscation [*Andoc.* i. 74; see art. *ATIMIA*]). This meant that he was excluded from the Agora, i.e. from the ordinary privileges of civic intercourse, and could not speak in the assembly (*Aeschines*, i. 28: εἰάν τις λέγῃ ἐν τῷ δήμῳ τὸν πατέρα τύπτων ἢ τὴν μητέρα, ἢ μὴ τρέφων, ἢ μὴ παρέχων οἰκτρον³ τούτων οὐκ ἐξ λέγειν). Whether this was the solo penalty is not known. He certainly ran the risk of being excluded from office; for one of the questions put at the 'scrutiny' (δοκιμασία) of a candidate for the Archonship was whether he treated his parents well (*Arist. Ath. Pol.* iv. 3: γονεὺς εὖ ποιεῖ), and a negative proved against him entailed rejection (*Xen. Mem.* ii. 2. 13). The obligation, however, was subject to the proviso that a parent had given his son an education befitting his station in life (*Plut. Sol.* 22: οὐδὲν πρέβειν τὸν πατέρα μὴ διδασκόμενον τέχνην ἐπ' ἀνάγκης μὴ εἶναι).

The provision by which a suit might be instituted by a son against an aged father for mental imbecility, in order to deprive him of the management of his estate, seems sometimes to

have been improperly used (cf. *Plat. Laws*, 928 E: οὐκ ἔστι πατήρ οὐδὲ νόσων ἢ γῆρας διατεθειμένος αἰσχρὸς εἶναι παρανομίας γράφασθαι; *Aristoph. Clouds*, 844 f. The well-known story of the prosecution of the aged Sophocles by his son Iophon is, however, an invention or mere mistake). Socrates was accused of encouraging this undutifulness (*Xen. Mem.* i. 2. 49; cf. the scene in *Aristoph. Clouds* [1321 ff.], in which Pheidippides, represented as a pupil of Socrates, asserts his right to inflict bodily chastisement upon both father and mother). Aristophanes in another play represents an old juror as congratulating himself that his official position and pay enable him to command at least a show of family affection, together with more tangible comforts (*Wasps*, 605 ff.).

It is, of course, not to be gathered from the above that either aged parents or old folk in general were treated as a rule especially badly in Athens. Probably few States in Greece offered as efficient protection to life and limb, personal dignity, and property as was given by the laws of Athens (cf. *Dem. Meid.* 221 ff.); perhaps none provided so ready access to legal protection and redress to even the humblest and most helpless. And, notwithstanding their tendency to a certain smugness of self-glorification on this score,¹ we may readily grant that the public conscience of the Athenians was more tender in regard to breaches of the 'unwritten laws' of mankind (κοινὸς νόμος ὁ κατὰ φύσιν [*Arist. Rhet.* i. 13=1373. 4])² than that of the rest of the Greeks. It still remains a fact, however, that reverence and care for the aged, as such, had in Athens, outside the family relationship, no stronger force behind it than the vague feeling of αἰδώς, 'shame,' the 'unseen barrier' (*G. Murray, Rise of the Greek Epic*, p. 103 f.)—a mere emotion, not organized in a conscious and binding social ordinance. What must have been the disintegrating effect upon this of the not infrequent ruthless enslavement and massacre of whole communities, e.g. Skione (*Thuc.* v. 32: ἀπέκτειναν τοὺς ἡβώνας, παῖδας δὲ καὶ γυναῖκας ἡνδραπόδισαν) and Melos (*Thuc.* v. 116)? The cynical contempt for justice and mercy exhibited in the latter case was indeed symptomatic of a terrible deterioration in Athenian character—a change for the worse which, according to Thucydides, passed like a blight over the whole Greek world in the course of the Peloponnesian war (*Thuc.* iii. 82 f.: καὶ μὴν τὸ ἐγγυγερὲς τοῦ ἐταιρικοῦ ἀλλοτριώτερον ἐγένετο).

LITERATURE.—Beyond a few pages in J. P. Mahaffy, *Social Life in Greece from Homer to Menander*, London, 1898, the subject has apparently not been treated, except by way of mere reference.

W. J. WOODHOUSE.

OLD AGE (Hebrew and Jewish).—For the Biblical writers this earthly life, despite its many inevitable sorrows, is so essentially good that length of days is accounted a blessing. It is one of the rewards promised to righteousness (cf. *Ex* 20¹² 23²⁶, *Dt* 4⁴⁰ 5³³ 11²¹ 22⁷, *Is* 65²⁰, *Ps* 91¹⁸ 92¹⁴, *Pr* 10²⁷ 12²⁸ etc.). 'Despise not thou,' Eliphaz exhorts Job, 'the chastening of the Almighty'; for then 'thou shalt come to thy grave in a full age, like as a shock of corn cometh in in its season' (*Job* 5¹⁷⁻²⁶). A short life is a life ended before its time, an incomplete life. What constitutes old age in the view of the Biblical writers? *Gn* 5 tells of men who lived more than nine centuries, and in *Gn* 6 the divine decree fixes 120 years as the span of human life. But in the books subsequent to the Pentateuch the average duration of life and the corresponding conception of old age are much the same as those of our day. The statement of the Psalmist (*Ps*

¹ Cf. *Xen. Mem.* iii. 5. 15: Ἀγέεις, ἔφη, πόρρω πού εἰναι τῇ πόλει τὴν καλοκάγαθον. ποτὲ γὰρ οὕτως Ἀθηναῖοι, ὥστερ Λακεδαιμόνιοι, ἢ πρεσβυτέρους αἰδοῦντο, οἱ ἀπὸ τῶν πατέρων ἀρχόνται καταφρονεῖν τῶν γεραιτέρων; *Cic. de Senect.* xviii. 63: 'Lacedaemonum esse honestissimum domicilium senectutis; nusquam enim tantum tribuatur aetati, nusquam est senectus honoratior'; cf. an important passage in *Arist. Eth. Nic.* ix. 2. 7 ff.

² But in Attic prose γονεῖς never properly means anything but 'parents' in the strict sense, though Plato also (*Laws*, 931) would extend the range of the law. For Ionic usage cf. *Herod.* i. 91.

¹ Cf. *Thuc.* ii. 37: ἀεροσεί των νόμων, καὶ μάλιστα αὐτῶν ὅσοι τε ἐπ' ὀφελεία των ἀδικουμένων κείνται καὶ ὅσοι ἀγῶροι εἶτες αἰσχύνῃ δημολογουμένην φέρουσι; *Plato, Laws*, 642 D (Athenians the only people who are good by nature, by a dispensation of Providence); *Dem. Meid.* 49; *Paus.* i. xvii. 1: τοῖς τοῖς ἐξ οὗ τὰ ἐξ φιλανθρωπίας μόνον κατέστηκεν, ἀλλὰ καὶ θεοῦ εὐσεβοῦσιν ἄλλων πλέον.

² For the 'unwritten laws' (τὸν Πανελλήνιον νόμον [*Eur. Suppl.* 526]) see *Soph. Ed. Tyr.* 565 ff., and *Xen. Mem.* iv. 4. 10, where Socrates speaks of the ἀγῶροι νόμοι which are ἐν πάσῃ χώρῃ κατὰ ταῦτα νομιζόμενοι, and *Soph. Antig.* 450 f.

90¹⁰) is clear and decisive: 'The days of our years are threescore years and ten, or even by reason of strength fourscore years.' 'At the most,' says Ben Sira (Sir 18⁹), 'the number of man's days are a hundred years.' Nor is there any discrepancy between the two estimates. The first gives the average, the second the extreme, duration of human life. The great personages of the Pentateuch who come after the Deluge—Nahor, Terah, the Patriarchs, Moses, Aaron—live longer than a century. But, as Leopold Löw points out (*Die Lebensalter*, p. 234), 'as regards the post-Mosaic period the Bible names only three persons whose ages exceeded a hundred, viz. Job (a doubtfully historic character), Jehoiada the High Priest, who, according to Chronicles, lived to be 130, and Joshua, who died at 110.' Eli is blind at ninety-eight (1 S 4¹⁵), and is evidently regarded as very old; and Barzillai, at eighty, is described as 'a very aged man,' and as asking, 'Can thy servant taste what I eat or what I drink? can I hear any more the voice of singing men and singing women?' (2 S 19³²⁻³³). Further, as Löw also points out, of the fourteen kings of Judah whose age at death is stated no one reached seventy. Of these Jehoshaphat, Hezekiah, and Josiah are praised as righteous kings, and yet the first died at fifty, the second at fifty-four, and the third before he was forty. According to the view of Maimonides (*Môrêh Nêbîḥūkhîm*, ii. 47), the longevity of the Patriarchs was exceptional; ordinary men and women in their time lived much shorter lives. That even the Pentateuchal writers formed a moderate estimate of the average duration of life is indicated by the laws providing for the compulsory retirement of the Levites from active service on their reaching the age of fifty (Nu 8²³).

In the Bible the disabilities of old age are clearly recognized. The famous passage in Ec 12, with its allusion to the years of which one says, 'I have no pleasure in them,' and its picture of the darkened sun and moon, the trembling keepers of the house, the strong men bent, the diminishing grinders (all images for the physical infirmities of the aged), is typical of the attitude of the OT writers to this aspect of the subject. The thought of the loss of vigour which inevitably accompanies the decline of life is expressed in the Psalmist's prayer (Ps 71⁹; cf. v. 18), 'Cast me not off in the time of old age; forsake me not when my strength faileth.' But over against the physical and other drawbacks of old age are set its moral and spiritual advantages: 'The hoary head is a crown of glory' (Pr 16³¹; cf. 17⁹); it is the embodiment and the symbol of ripe wisdom (Job 12¹³ 32⁷). It is because of such higher attributes as these that old age is honourable and deserving of respect. Mere length of days, which is more or less an accident, does not entitle the aged to consideration. Their real claim to it lies in the intellectual and moral excellences which they have acquired in the course of their long life. 'The hoary head is a crown of glory, if it be found in the way of righteousness' (Pr 16³¹), and 'better is a poor and wise youth than an old and foolish king, who knoweth not how to receive admonition any more' (Ec 4¹³; cf. Job 32⁹). Nevertheless age is, as a rule, the guarantee of experience. A child-ruler is a calamity (Ec 10¹⁶; cf. Is 3⁴), but 'with aged men is wisdom, and in length of days understanding' (Job 12¹²; cf. 15⁹⁻¹⁰). Elihu, however, who is a young man himself, contests the universality of this truth. The spirit of God may give a man understanding independently of his years (Job 32⁷⁻⁹). But, when age goes with wisdom and righteousness, it must be honoured. Not only is it to be regarded respectfully, but it must be treated with outward signs of reverence. 'Thou

shalt rise up before the hoary head' (Lv 19³²)—a command which has for its sanction the warning, 'Thou shalt fear thy God.' He who violates the precept has nothing to fear from the aged; for they are too feeble to avenge the dishonour offered them. But he has to fear God, who protects the weak and makes their cause His (cf. v. 14). Even to interrupt them when they are speaking is improper; Elihu waits before intervening in the famous discussion because the others are 'elder than he' (Job 32⁴). That it is the part of wisdom to listen to the advice of old people in preference to that of the young is implied in the story of Rehoboam (1 K 12; cf. Dt 32⁷). It is a sign of the degeneracy of the times and a cause of impending calamity when youth bears itself insolently towards age (Is 3⁵, La 5¹²). But, even apart from the higher qualities just mentioned, the physical weakness inseparable from old age bespeaks especial consideration for it. To 'nourish' the aged in the wider sense of the term is a duty (Ru 4¹⁵).

The honourableness of old age is set forth in the Apocrypha also. A peculiar charm clings to it: 'As the lamp that shineth upon the holy candlestick, so is the beauty of the face in ripe age' (Sir 26¹⁷). The old must be helped (3¹²); they must not be 'vexed' (*ib.*); their infirmities must be borne with patiently (v. 13). Their society is to be sought out (6³⁴). The aged must not be condemned, 'for some of us also are waxing old' (8⁵). But, again, wisdom and moral worth are the conditions precedent to an honourable old age: 'Understanding is gray hairs unto men, and an unspotted life is ripe old age' (Wis 4⁹). Further, as in Proverbs (32¹⁶), the attainment of old age is made dependent upon a man's way of life (Sir 30²³⁻²⁵).

The doctrine of the Rabbis on this subject is a development of the earlier teaching. They feel the drawbacks of old age as keenly as do the Biblical sages:

'The commonest figs pleased us better when we were young than the costliest peaches do now that we are old' (Jer. *Peḥh*, 20a). 'He that learns when he is young,' the Rabbis say elsewhere (*Abhōth*, iv. 20), 'writes on clear paper; he who learns in old age writes on blotted paper.'

Another saying (*Abhōth d' R. Nathan*, 23) likens the latter to a man who marries when he is old, and to a surgeon who has a knife for his operation, but no ointment with which to close the wound. For the Talmud also long life is the outcome of the well-spent life. Vice ages a man before his time (*Shab*. 152a). He has to pay the penalty for youthful sins in the after years. Needless or excessive physical strain is another agent that shortens life. Thus the Talmud warns us against living in a city set on a hill since it entails toilsome ascents (*Erub*. 56a). In like manner, a Rabbi, questioned as to the reason why he has himself carried to the bath-house, instead of walking to it, answers that he must keep his strength for his declining years (Jer. *Beza*, 60c). What constituted old age for the Talmudic teachers is evident from the saying (*Abhōth*, v. 24) that 'at sixty a man attains old age, at seventy the hoary head.' Death before sixty, they say in another place (*Mo'ed Kaṭon*, 28a), is premature. Some conversations between aged Rabbis and their disciples on the secret of their longevity have been preserved by the Talmud. Each Rabbi accounts for his long life in practically a different way, and assigns more than one reason for it. The explanations range from obedience to the ritual law to the observance of the highest morality:

'I have never risen on the fall of others, or taken with me to my bed the recollection of a wrong done to me during the day'; 'I have never accepted a gift' (i.e. when acting as a judge); 'I have never shown myself angry in my house, or taken pleasure

in the misfortunes of others; nor have I called another by an opprobrious name' (*Meqillāh*, 27b ff.).

The *Midrāsh* (*Midr. Rabbāh* to Lv 14¹) has the story of a man who, masquerading as a mountebank, offers for sale the elixir of life. He gives his customers the verse in Ps 34¹²: 'What man is he that desireth life, and loveth many days . . . ? Keep thy tongue from evil.' Diligent attendance at public worship is another practice conducing to long life (*Brākhōth*, 8a). Physical influences also play their part, especially attention to hygienic rules. Thus the Talmud recommends the habit of eating slowly, due regulation of the bodily functions, bathing, and moderate exercise (*ib.* 54b; *K'thūbhōth*, 77b, 111a). Rabbi Hanina, vigorous at eighty, attributes his strength to his mother's habit of giving him warm baths and anointing his body with oil when he was a child (*Hāllin*, 24b). Maimonides, in his turn, after quoting many dietetic prescriptions from the Talmud, concludes as follows:

'To every man who obeys these rules I guarantee that he will never be ill, but, on the contrary, will achieve old age, need no doctor, and enjoy perfect, uninterrupted health unless he has had a feeble constitution from the beginning, or has been addicted to evil habits from his early years, or is attacked by plague or famine' (*Hil. Deoth*, iv. 20).

A physician, however, Maimonides discerns the powerful influence exerted by the intellectual and the spiritual life upon the physical health, and therefore upon a man's chances of attaining old age. Thus the section (*Hil. Deoth*) of his *Yad* from which the foregoing passage is taken deals as much with morals as with hygiene. He does not stand alone in this respect. Most of the many Jewish aids to right living which have appeared since the close of the Talmud give equal attention to physical and religious wellbeing. For the authors of these manuals the physical life is eminently worth safeguarding as the one certain opportunity for service (see art. LIFE AND DEATH [Jewish]); and, on the other hand, the health of the soul is an essential condition of the bodily health. A typical example is the work entitled *Shebilē Emunah*, written by Meir ibn Aldabi (14th cent.), in which Galen and Hippocrates are placed under contribution equally with the Bible and the Rabbis, and in which disquisitions on anatomy, hygiene, and longevity are inserted between chapters on theological questions. For Jewish teachers, ancient and more modern alike, old age is a good thing; it is the natural rounding off of the physical life. Nevertheless an early death is not necessarily a premature death. A brief life may still be a full life:

'There are those who win their world in a single hour' (*Abōda Zārā*, 10b).

Old age, too, is honourable. The aged have the matured wisdom which youth necessarily lacks.

'He that learns from the young eats unripe grapes, drinks new wine; he that learns from the old eats ripe grapes, drinks old wine' (*Abōth*, iv. 20).

This is said of those who possess both years and learning. As to ordinary folk the Talmud makes a curious discrimination between the sexes. It quotes with approval the current adage, 'An old man in the house is a nuisance, an old woman a treasure' (*Erahin*, 19a). On the other hand, old women are fonder of amusement than old men are:

'A drum sets a woman of sixty jigging as though she were six' (*Moed Kāton*, 9b).

Respect for old age occupies a prominent place in the Talmudic ethics. 'Who is sure of heaven? He that honours the aged' (*Bābhā Bathrā*, 10b). The duty has no limitations of race or religion; it must be practised towards the Gentile (*Qiddūshin*, 33a). On the other hand, moral worth must grace it if it is rightly to claim respect. 'What,' ask the Rabbis (*Midr. Rabbāh* to Gn 24¹), 'is honourable old age?' They answer, 'That which has won

a man both worlds. It is possible to be venerable without being old, and contrariwise. 'Some men are aged, but lack years; others live long, but lack age,' i.e. experience and character; but to be old and venerable is the ideal condition (*ib.*; cf. Wis 4⁹). The Talmud (*Brākhōth*, 28a) tells of a sage (Eleazar ben Azariah) who, appointed head of the Sanhedrin at eighteen, suddenly becomes grey as a sign of his fitness for the high office. For the Talmud, indeed, the learned are always aged, irrespective of their years (*Qiddūshin*, 33a). To them must be shown the deference which is due to old age. The Rabbis lay down detailed rules for their treatment. One must rise before them, reverently salute them, refrain from sitting in their accustomed seats, and from contradicting or interrupting them. They must be addressed respectfully and answered gently (*ib.* 32a, 33a; *Midr. Rabbāh* to Nu 11¹⁶; Maimonides, *Hil. T. Tōrah*, chs. v., vi.). Their advice, even if it be to pull down the Temple, is to be preferred to the opinion of the young, though it be to build it up (*Tosefta*, 'Abōda Zārā, i. 19). Even the old sage who has forgotten his learning must be treated tenderly; for were not the broken tablets of the Law placed in the Ark of the Covenant side by side with the whole tablets (*Brākhōth*, 8b)? So far did some of the Rabbis carry their reverence for age that they would rise before an unlettered old man on the plea that his very longevity necessarily proved that he had merits. A heathen sage was also thus to be honoured, for 'many a sorrow must have lighted upon that grey head' (*Qiddūshin*, 32b, 33a). On the other hand, day-labourers, when at work, are exempt from the duty of rising before the aged, for their time is their money. And the Rabbi is exhorted not needlessly to impose the duty of showing him respect upon the common people. To this end he is counselled to go by unfrequented byways in order to avoid the crowd (*ib.* 33a; Maimonides, *Hil. T. Tōrah*, vi. 2, 3).

Jewish practice is the embodiment of the foregoing precepts. Reverence and tender consideration for old age fill a large place in the Jewish life. The aged who to a long life unite piety and learning are made the object of singular veneration. The chief places in the Sanhedrin and the synagogue, as well as at table, were given to old people. Very aged men, however, were debarred from membership of the Sanhedrin owing to the fear that old age might have blunted their feelings and so made their judgments unduly severe (*Sanh.* 36b; Maimonides, *Sanh.* i. 3). In the charitable domain the old, whether learned or not, are deemed worthy of especial solicitude. The discharge of this obligation was a characteristic feature of the Essenes (Philo [ed. Mangey, London, 1742], ii. 459). Special charities for the relief of the aged have always been a familiar feature in the Jewish communal organization. These took the form of money gifts, but also of institutions called *heqdēsh*, 'the consecrated house'—hospitals in the broadest sense of the term, which offered an asylum not only to the sick, but to strangers and old people. The earliest instance of such an institution known to history is that in Cologne in the 11th century.

Suwalski, *Chayē Hayehudi*, Warsaw, 1893. MORRIS JOSEPH.

OLD AGE (Iranian).—Iranian data concerning the treatment of the aged are curiously meagre. Strabo (p. 517), quoting Onesicritus, who flourished in the time of Alexander the Great, says that

the Bactrians were accustomed to throw those who were worn out with age or infirmity to dogs bred expressly for the purpose; so that the space before the Bactrian metropolis was clean, but the land within the walls was covered with human bones. This barbarous custom, he continues, was stopped by Alexander. A similar statement is made by Porphyrius (*de Abstinencia*, iv. 21), while instances of cold-blooded abandonment of the sick are given by Agathias (ii. 23), who wrote in the 6th cent. A.D. In the Avesta itself there is only a single allusion which can be construed as referring to the treatment of the aged. This is contained in the *Vendidad*, iii. 15-21, which states that one who sears a corpse alone, thus bringing upon himself the most dread of all impure demons, must be placed in a dry and barren spot, where few living creatures pass, and at least thirty paces from fire, water, the barsom, and the faithful Zoroastrian. There he is to be confined in an enclosure, and to be clothed and fed wretchedly until he becomes 'old' (*hana*), 'aged' (*zaurura*), and 'impotent' (*pairistā-æsudra*)—terms which the Pahlavi *Frahang-i Oim* (ed. H. Jamaspji and M. Haug, Bombay, 1867, pp. 5, 48; ed. H. Reichelt, Vienna, 1900, p. 9) explains as connoting respectively 'seventy,' 'fifty,' and 'ninety' years of age, while the Pahlavi commentary on the *Vendidad* passage (ed. F. Spiegel, Vienna, 1853, i. 26; ed. D. P. Sanjana, Bombay, 1895, p. 38) makes the adjectives denote 'fifty,' 'fifty' (doubtless a clerical error for 'sixty'; cf. Spiegel, *Commentar über das Avesta*, Leipzig, 1864, i. 91), and 'seventy.' When the person thus defiled reaches these ages, the Mazdayasnians are directed to send to him a sturdy man, who is to cut off his head and leave his corpse for the vultures, while the executioner repeats the words: 'This man repenteth him of all his evil thoughts, and evil words, and evil deeds.' There is, therefore, a certain degree of confirmation of the Greek statements as to the Persian treatment of the aged, but it must be borne in mind that the cases of such abandonment and putting to death of the old are restricted by the Avesta text to a single case of religious pollution of the utmost gravity, so that to this day the Persian Zoroastrians require two corpse-bearers at the *dakhmahs* ('towers of silence'), while each pair of those who carry the dead body to the tower must be symbolically joined by the *kusti*, or sacred girdle (A. V. W. Jackson, *Persia Past and Present*, New York, 1906, pp. 389, 392).

Despite the statements of Onesicratus and Agathias, and notwithstanding the Avesta passage already discussed, it would seem that the position of the aged in ancient Persia was one of respect, if the general spirit of the sacred books of Iran forms any criterion, and if the affection for children which characterized the Persians, and which usually implies care for the equally helpless aged, be taken into consideration. This is borne out by the *Cyropædia* of Xenophon (i. ii. 13f., viii. vii. 10), which, romance though it be, is perhaps of more value as a source for Persian life than is generally believed; while the Avesta itself (*Vendidad*, xii. 1) requires the children to mourn thirty days for a deceased parent if good (*i.e.* in heaven) or sixty days if evil (*i.e.* in hell). The Pahlavi *Artā-Virāf* (lxv., ed. Haug and E. W. West, Bombay, 1872, pp. 94-95, 188) likewise assigns a distinct punishment in hell for those children who failed to respect their parents; and the classical writers Herodotus (i. 138), Aristotle (*Eth. Nic.* viii. 10), and Quintus Curtius (v. ii. 22) explicitly affirm the reverence of Persian children for their fathers and mothers (A. Rapp, *ZDMG* xx. [1866] 111).

kunde, Leipzig, 1878, iii. 632; B. Brisson, *De regio Persarum principatu*, ed. J. H. Lederlin, Strassburg, 1710, pp. 451-453, 597-598. LOUIS H. GRAY.

OLD AGE (Japanese).—Like other races, the Japanese have always both hoped for and feared old age. In the ancient poems, which give expression to their inmost feelings, we find them wishing for the long life of the crane and tortoise, or envying the thousand-year-old pine-tree (see M. Revon, *Anthologie de la littérature japonaise*, Paris, 1910, pp. 144, 150, 157), but at the same time they lament 'the snow and the waves' which year by year they discover in their bronze mirror, and bewail the rapid course of human life, ephemeral as the foam on the water, like the dew or the convolvulus blossom (*ib.* pp. 145, 246, 338, etc.). Old age with them, however, is singularly softened by the respect which is accorded it, and which is noticeable, with but a few exceptions, throughout the whole history of their civilization.

This arose naturally from the respect for parents which we find as early as the mythological stories.

The emperor Keikō, *e.g.*, terrified at the violent temper of his son, the famous hero, Yamato-dake, sends him, almost alone and unarmed, to fight formidable enemies in all parts of the empire; Yamato-dake does not dream for a moment of disputing his father's orders. This fierce warrior weeps at the thought that his father wishes for his death, but he obeys with absolute submission (see *HEROES AND HERO-GODS* [Japanese], vol. vii. p. 663, and cf. *Kojiki*, tr. B. H. Chamberlain, 2, Tōkyō, 1906, p. 200).

This filial respect gradually extends to others besides parents, to all aged men whose experience and wisdom are appreciated (*e.g.*, *Kojiki*, 147). The emperor himself, in spite of his divine character, willingly renders homage to the superior experience of the aged minister Take-uchi, a Japanese Methuselah (*ib.* 353).

If this was the case in the primitive period, it would be much more so when the development of ancestor-worship, under Chinese influence, and the general advance of society had added to this instinctive respect for the aged and given it a more definite moral significance.

It must be said, however, that at the time of the great civil wars of the Japanese feudality, and as a natural consequence of the brutality which necessarily accompanies the warlike spirit, the aged were not always honoured as they ought to have been. To men who admire power above everything else, the old man appears more or less as a useless dotard.

In a historical work of the 12th cent., towards the end of the Heian period, a young *samurai* of twenty speaks to two centenarians in a tone of presumptuous lightness, which makes one of them reply to him thus: 'The aged guard the memory of the past. Wise emperors used to send for all the old people in the country to ask them about the life in former times, and it was by paying heed to what they said that they governed the people. The aged are therefore venerable beings. Do not scorn them, young men!' (Revon, pp. 228-231).

This germ of irreverence could not help developing in the following period, the gloomy warlike epoch of Kamakura.

In a 13th cent. military history a certain Sanemori, a *samurai* more than septuagenary, relates why he has thought it necessary to dye his beard and hair black: 'Old men who take up their bow and arrow to go and fight must dye their hair with black ink. And this is why. Even in times of peace the young laugh at white hairs; much more on the battle-field. If an old man wishes to advance, they say that he has lost his reason; if he retreats, they insult him, saying that he is a coward; and he does not dare to compete with these young people. As for the enemy, they despise the old as good for nothing. The white hairs of old age are the saddest thing in the world' (*ib.* pp. 211-214).

After this long period of civil wars the great peace of the Tokugawa period was established, and respect for old age, and the happy state resulting from it, again appeared and became fixed with the refinement of civilization. Many proofs of this state of mind are found in the philosophers, especially those of the Chinese school. It will suffice here to draw attention to a Japanese custom which

is specially interesting in this connexion, viz. that of *inkyo*.

To understand this custom it is well to know its historical origin, which lies in the practice of abdication, so wide-spread in Japan. When the custom of abdication itself was introduced, in the 7th cent., it was in consequence of Buddhism, which taught contempt for the world, and advised men, especially those of a certain age, to retire into solitude, there to meditate and prepare themselves for the other life. This religious motive did not altogether cease to exist afterwards, but it yielded to a political reason; for, from the time when the Fujiwara and other great families practically monopolized the imperial power, they acquired the custom of strengthening themselves by not allowing any but quite young emperors to reign, often mere children, whom they forced to abdicate whenever they reached an age when they might have shown a disposition to be independent. For this reason emperors often abdicated about the age of twenty, or even earlier (Rokujo [1166-68], e.g., was made emperor at the age of two and resigned when only four years old). But these retired emperors (*in*) were often older men, who continued to act behind the scenes, and sometimes played a more effective part there than during the time of their nominal sovereignty. Now, in consequence of that spirit of imitation which is one of the most powerful social forces, this system of abdication gradually extended to ministers of State, to officials, and even to the most unassuming heads of families, and it ended in the general custom of *inkyo*.

According to the researches of native philologists, the word *inkyo* originally meant 'concealment'; gradually it was applied to 'retirement to one's native place'; and then it denoted 'the withdrawal from the active management of household or government affairs in favour of a son or relative.' Lastly, it may be translated by 'dwelling in retirement'; and it is used in practice to denote either the fact of abandoning the affairs of one's house in order to retire to private life or the man who retires in this way. In the time of the Tokugawa, and down to the Revolution of 1867, it may be said that this was a custom almost generally followed by the Japanese as soon as they had passed middle life. They left their property to their heirs, gave up their official duties or their business affairs, and, having become *inkyo*, they devoted the remainder of their lives, surrounded by tender care, to pleasant rest or quiet studies.

To-day this custom is gradually disappearing, either on account of new necessities and the harder kind of life consequent on the introduction of Western civilization, or perhaps, in some measure, as a result of the tendency of many modern Japanese to exchange their old national customs, often without sufficient reasons, for foreign usages. Nevertheless it is curious that, while the *inkyo* is severely attacked by the Japanese themselves (see Shigeno An-eki, 'The Evils of Abdication, Heirship, and Adoption,' in *TASJ* xv. i. [1887] 72-82), sensible Europeans praise and envy this custom:

'The new government of Japan is endeavouring to put a stop to the custom of retiring to private life, because not European. . . the contrary, barbarous . . . striving, when past the time of life at which he is fitted to do good work' (B. H. Chamberlain, *Things Japanese*, London, 1893, p. 14).

This view seems most just, when we compare the European system fairly with the old Japanese one. With us the best part of life is lost in vain studies; we begin active life much later and consequently have often to prolong it to the extreme limits of old age. In this way neither young nor old have time to enjoy life properly. The ancient Japanese, on the contrary, began practical work when very young, they founded their families

earlier, and consequently they could very soon leave the place to the young people in order to pass the second half of their lives in peace, while the young men worked eagerly, at the normal age of greatest activity, in view of that happy life which they in their turn were soon going to win. For social utility the result was the same; and, as far as the happiness of individuals was concerned, it was infinitely superior. The civilization which devised the *raku-inkyo*, 'the happy retired one,' certainly deserves a place of honour among truly humane civilizations.

LITERATURE.—This is cited in the article.

M. REYON.

OLD AGE (Roman).—The Latin words connected with old age are two, *senex*, 'an old man,' and *anus*, 'an old woman,' with their respective derivatives. The former comes from a root which is present also in other Indo-European languages, and has in its turn perpetuated itself in the Romance languages in the comparative form *senior* (Fr. *sieur*, *seigneur*; Ital. *signor*; Span. *señor*; Portuguese, *senhor*, etc.). The latter finds its kindred in Germ. *ana*, Armen. *han* ('grand-mother'), and Lith. *anyta* ('mother-in-law'), but has left no trace in the Romance languages, having been killed by the other root. The word *antiquus* tended to become used exclusively of things, and the word *vetus* (*vetulus*, *vetustus*, etc.) refers rather to time (period) than to age, though the Romance words like *vieux* (Fr.) and *viejo* (Span.) show that in speech this adjective was generally applied to old people. Of the derivatives of *senex* not all had precisely the same shade of meaning; e.g., *senectus* meant 'old age as a definite period of life,' while *senium* meant 'old age as bringing infirmity with it, helpless old age' (R. Ogilvie, *Horæ Latinæ*, London, 1901, p. 201). The form *senecta* appears to be a coinage of the poets, as more convenient for their metre than *senectus*, of which it is a real synonym (see below, however). The verb *senescere* habitually carries the idea of the weakness of age. One of the most interesting derivatives is *senatus*, lit. 'a body of old men,' but the analogy of *magistratus* and other words would seem to indicate that originally the word was an abstract noun, meaning 'the duty of an old man' (or 'of old men'). An interesting parallel is to be found in the word *γερονσία*, which first means 'old age,' but comes to be used collectively = 'a body of *γέροντες*.' Such a council is mentioned as early as the Homeric poems, and the word, collectively used, is frequently found in Roman imperial times, though at that date it appears to have lost almost all political significance (Pauly-Wissowa, vii. 1264 ff., art. 'Gerontes, Gerusia'; W. M. Ramsay, *The Cities and Bishoprics of Phrygia*, vol. i. pt. i. [Oxford, 1895] pp. 64, 110, vol. i. pt. ii. [do. 1897] pp. 368, 438, 630). Another parallel, which illustrates the original connexion between old age and the wisdom required for State deliberations, is to be found in the words *πρεσβύτερος*, *πρεσβυτέριον* (see the present writer's *Pocket Lexicon Gr. NT*, Oxford, 1916, s.vv.). Why the comparative was used in this connexion (as also, perhaps on the analogy of the Gr., in the case of the Lat. *senior*, especially in the later period) is uncertain, but the probable reason is that it offered an easy way of distinguishing between those who were actually old (positive) and those who were merely officially old (comparative). We are here concerned only with the fact that the use of words properly associated with old age to indicate members of advisory or legislative councils appears to have been almost, if not quite, universal in Mediterranean lands. This is perhaps the proper place to mention that the Roman senate was sometimes worshipped as divine—e.g., along with the emperor

Tiberius and his mother Livia in A.D. 23 by certain towns in Asia Minor. In that year it was decreed to build a temple in honour of this joint cult, and in A.D. 26 the building was entrusted to the people of Smyrna. Other instances of worship of the Roman senate, one as early as Augustus, are collected in W. H. Roscher, *Ausführliches Lexikon der griechischen und römischen Mythologie*, iv. (Leipzig, 1910) 708 ff., art. 'Senatus.' The senate was represented in art as an old man with a tunic and toga, bordered with purple, and with a wreath on his head (Dio Cass. lxxviii. 1, 5).

Among the many personifications of states or abstract qualities which were deified by the Romans, Senecta or Senectus found a place. Senectus was daughter of a father Erebus and a mother Nox, a gloomy conception of old age which probably came to the Romans through the Greeks (Hyginus, *Fab. præf.* p. 9, 7, ed. M. Schmidt, Jena, 1872). Cicero, in his *de Natura Deorum*, iii. 17, 44, enumerates a long list of feelings, passions, and states which, he says, were personalized by the old genealogizers, Senectus being a sister of Æther and Dies. The qualities enumerated are Amor, Dolus, Metus, Labor, Invidentia, Fatum, Senectus, Mors, Tenebræ, Miseria, Querella, Gratia, Fraus, Pertinacia, Parcæ, Hesperides, Somnia—for the most part a gloomy brood, all of them children of Erebus and Nox. Some of them reappear in Vergil's description of the lower world, as having their quarters in front of the entrance: *tristis* ('gloomy') Old Age is flanked by *Morbi* ('diseases') that make the sufferer sallow, and by *Metus*, in which the fear of death may be comprised (*Æn.* vi. 275). In Lygdamus [Tibullus], iii. 5, 16, Old Age appears with white hair, bent body, and slow-moving feet. In a catalogue of gloomy and evil states or qualities in Silius Italicus (xiii. 583) Old Age appears as *queribunda*, 'full of tearful complaint,' while in a similar list in Seneca (*Hercules Furens*, 696) 'slow-moving Old Age, hidden away in a corner, is aiding her steps with a stick' (see Roscher, iv. 710; H. Usener, *Götternamen*, Bonn, 1896, p. 366; and cf. Pauly-Wissowa, s.v. 'Geras,' as well as art. OLD AGE [Greek]).

From this gloomy side of old age it is a relief to turn to the pages of Cicero's *Cato* or *de Senectute*, the Roman classic on the subject. Cicero did well to choose Cato the Censor as the type of old age, for he was both vigorous and contented. The secret was that he, according to the Stoic teaching, lived in harmony with nature. The faults of old age are generally due to the character of the complainants. Prosperity may make old age easier, but without a well-trained character it is intolerable. Fabius Maximus, Plato, Ennius, and others are instanced to show that old age can be happy. A series of charges against old age is then refuted. These charges are: (a) it unfits men for business; (b) it weakens the bodily powers; (c) it renders men incapable of pleasures; (d) it must be gloomy, because it cannot be free from the anticipation of death. Cato very skillfully rebuts these, and is certainly on strong ground in his insistence that character has most to do with the attitude of the old to their age. The growth of physical weakness is admitted, but it is compensated for by a growth of wisdom, which is above all things necessary to temper the hot-headedness of youth. Any lack of memory in old age is due either to an original defect or to insufficient exercise of the memory. The bodily strength of an old man depends almost entirely on his having lived temperately in youth and manhood. Moreover, he is not expected to exert it. Cases of weakness are due to ill-health, and caution in old age is very helpful (cf. the admirable work of a modern Cato, Henry Thompson, *Diet in Relation to Age*

and Activity, London, 1902). Cato proceeds to argue that physical pleasure is in itself bad, and that we ought to be thankful that old age saves us from its domination. The really lasting pleasures, such as conversation, literature, and agriculture, are open to him, as they are to younger men. He maintains that death cannot in any case be an evil, as the right object is a good, not a long, life. Moreover, death is natural, and what is natural is good. Surely accomplished old men can meet death as calmly as the uncultured young. To Cato, also, death is the entrance on an unending life. From the present life one should be content to depart, once one has had one's full share of it (cf. the introduction to the best ed., that by J. S. Reid, Cambridge, 1879, 1887, and later; the ed. of C. Simbeck, Leipzig, 1912, is important for the text).

Cicero was sixty-two years old when he wrote this treatise, which he intended to be to his friend Atticus and to others, as it had been to himself, a real means of alleviating the burden of old age. He seems to have had also another purpose, namely to point back to the period at which Cato had lived (the 2nd cent. B.C.) as the golden age of Rome's history. Cicero missed in the men of his time the 'serious simplicity, the unswerving adherence to principle, the self-sacrificing patriotism, which were the ideal Roman virtues' (Reid, p. 12). The value of his dialogue as representing the best Roman point of view is at first sight somewhat impaired by the knowledge that it is in part based on Greek sources. Reid has shown in detail that he has used Xenophon's *Economicus* and *Cyropædia*, and Plato's *Republic* and *Phædo*. Moreover, the influence of Aristotle's lost dialogues on the form of Cicero's is apparent. In those nearly all the speaking was done by one person, the interlocutors merely interjecting occasional remarks, and they were more popular than Plato's. It is probable, too, that Cicero used in addition, as the main basis of his tractate, a Greek work on this specific subject, whether that by Aristo of Ceos, a Peripatetic of the 3rd cent. B.C., or that of Theophrastus, or that of Demetrius Phalereus. Nevertheless, the treatise is really Roman. For Cicero, though deeply read in Greek literature, was a real son of the soil, and had been drilled in the Roman native dramatic literature by his father; so that we can after all regard the treatise as in the main an expression of the Roman attitude at its best. And it is fortunate that this is so, because, while there are, of course, many allusions to this subject in Roman literature, no other *specific* Roman treatise on old age has come down to us. Some of these allusions may now be quoted.

An epithet like *silicernium*, 'sack of dry bones' (Terence, *Adelphi*, iv. ii. 48), is a term of abuse, probably translated from the Greek original of the play, and with no significance in the attempt to gauge the general Roman attitude to old age. We are on more secure ground when we come to the well-known description of Horace:

'Many disadvantages surround the old man, both because he seeks rain and (wretched man!) forbears and fears to use what he has and . . . active, eager for longer life, cross-grained, complaining, pining the days of his boyhood, blaming and criticizing the younger generation. The years till one's prime is over bring many advantages with them, but many disappear as we come nearer to the end' (*Arts Poet.* 169-170).

The writings of Seneca abound in references to old age. Some of the more striking or interesting may be translated, and it must be kept in mind that what sounds commonplace to us was not necessarily so to the first readers. Perhaps the most important writings of Seneca on this subject are *Epistles* xxvi., lviii., ci., and cviii. *Ep.* xxvi. was written when Seneca was 'within sight of old

age' (§ 1). He feels the burden of ill-health, and that, while his mind is vigorous, his body is already prematurely aged. He describes it as melting, as having bits plucked from it, and as losing some strength every day. He tries to welcome the prospect of the gradual dissolution, which is after all a natural process. Only death will decide what moral progress he has made. *Ep.* lviii. 30-32 has the following thoughts:

'Plato himself by care prolonged his life to old age. He had indeed been blest with a strong body, and bad got his name from the breadth of his chest, but sea-voyages and perils had greatly impaired his fort-eager him to old way. For reward of his care Plato had the good fortune to reach the age of full eighty-one years. . . . Frugality can prolong old age. It is not I think to be longed for, yet it is not to be rejected either. It is pleasant to have one's own company as long as possible, when one has made one's own company worth enjoying.'

He then goes on to consider the question, natural in a Stoic, whether one ought to cut short one's old age by suicide. In *Ep.* ci. 10-15 he expresses strong disapproval of Mæcenas's sentiment that life is desirable, even if every part of the body be decayed or under torture. From the long *Ep.* cviii. one extract may be given (§ 28):

'The present day is always the best, because diseases come upon one, because old age begins to weigh on us and is over our heads, while we are still thinking of youth. Vergil, it is said, always puts diseases and old age together, assuredly not without reason; for old age is an incurable disease. Besides he has added the epithet *tristis* to it' (*Georg.* iii. 67, *Æn.* vi. 275, then quoted).

In *Ep.* lxxvii. 2 he thanks old age, because it has chained him to his reading-couch, where he can enjoy the letters of his young friend Lucilius, as if he were conversing with him. In *Ep.* xiii. 17 he speaks of old men whom one may meet any day, engaged in the pursuit of ambition, foreign travel, or business.

'What can be more disgraceful,' he says, 'than an old man beginning life?' The same sentiment recurs: 'An old man learning his alphabet is a subject for laughter and contempt' (*Ep.* xxxvi. 4; cf. xxxiii. 7).

In *Ep.* iv. 2 he speaks of the childishness which sometimes persists in old age:

'We have the authority of old men, but the defects of boys, and not only of boys, but even of infants: for the former are afraid of trifles, the latter of boogies, but we are afraid of both.'

'On a courtier being once asked how he had managed to reach old age at court, he replied: "By suffering injuries and giving thanks"' (*de Ira*, n. xxxiii. 2).

Ch. xx. of the *de Breuitate Vitæ* is concerned with the old who will not give up toil.

'Some,' he says, 'in the last stages of old age, yet make arrangements for the attainment of something fresh, as if they were young, and in the midst of undertakings great and evil alike collapse through weakness.'

He tells the story of a certain Turannius, who, being over ninety years old, was excused from the performance of his official duty by the emperor, without having made application for the indulgence. He went to bed, and commanded that he should be mourned as if dead, and remained there until his office was restored to him. In the *de Tranquillitate Animi*, ii. 6, the trite remark occurs that 'old age is slow to make changes.' There is a warning, in the *de Breuitate Vitæ*, ix. 4, for those on whom old age has come unexpectedly, while they have still the minds of boys, and are unprepared and 'unarmed' for it, not having perceived its daily approach.

'Some people hate to hear of old age and grey hairs, etc., and yet these are the very things for which they pray' (*Dial.* n. xvii. 2; cf. Augustine, *Tract.* in Joh. xxxi. 9, in Ps. 26, serm. iii. § 9).

'The most irascible people are little children, old people, and invalids' (*de Ira*, i. xiii. 5). 'Old men are cross-grained and given to complaining, like invalids and the convalescent' (*ib.* ii. xix. 4).

The most striking passage on old age in Latin literature is Juvenal, *Sat.* x. 183-288. Beginning with the universal prayer for length of days, he goes on to describe the crop of serious troubles

which awaits those who reach old age. He gives a loathsome description, with abundance of detail, of the physical unsightliness of many old persons, the decay of the various senses, and the diseases to which they are liable. There is also the loss of memory, he says, leading even to injustice towards one's relatives. It is clear from that part of the satire that he is thinking primarily of the old age of people who have led evil lives. Then there is the distressful state of a man who has survived all his loved ones, illustrated by accounts, mostly imaginary, of the later years of Nestor, Pelens, Laertes, and Priam. Turning to Rome, he writes eloquently of the cases of Marius and Pompey, though the latter, indeed, never reached real old age. J. D. Duff points out that Swift derived some of the details of the Struldbrugs (*Gulliver's Travels*, pt. iii. ch. x.) from this picture by Juvenal. In *Sat.* iv. 97 he mentions how seldom a nobleman reaches old age, because nearly all fall victims to the jealousy and cruelty of emperors (see J. E. B. Mayor's note on this passage and also on line 154; cf. *Sat.* x. 112 f. with notes). The same thought is given expression by other writers like Tacitus, Suetonius, and Dio Cassius, with particular reference to Nero's murders (see the passages in Mayor's Juvenal, i. [London, 1889] 409). The subject of *orbi* (*orbæ*), persons of advanced age without heirs to inherit their wealth, occurs with almost sickening frequency in the literature of the period. These persons were the victims of *captatores* (*heredipetæ*), who courted them and performed every menial service to them on the chance that they might inherit their wealth. The great influence wielded by the *orbi*, and the capricious behaviour which seems to characterize such people, are often mentioned (passages in Mayor's notes on Juvenal, iii. 129, pp. 195, 368, iv. 19, pp. 220, 395). A pleasanter side of old age is revealed in the references to the games played by old men. They were especially fond of games with dice and draughts (Juvenal, xiv. 4, with the note of Mayor).

If we pass to the writings of the 4th cent. A.D., the impressions that we get are on the whole more pleasant. The astrological writer, Julius Firmicus Maternus, who afterwards became a Christian, in the course of his exposition of his subject, conveys to us, by the way, a good deal of information about the manners and morals of his time. Some of it is gruesome enough, but the picture is relieved by such phrases as 'longæ ac beatæ senectutis spatia' (*Mathesis*, III. iii. 15), 'longioris uitæ et bonæ senectutis' (III. x. 9), and 'usque ad mortem felicem senectutem' (III. iii. 6). The Christian heaven had been working for three centuries, and one of the blessings which it brings is beautiful old age. The writings of Ambrose abound in passages illustrating this:

'Aetas senectutis uita est immaculata' (*Cain et Abel*, II. 1). 'Senectus portus debet esse, non uitæ superioris naufragium' (*Jacob*, II. 10). 'In Aetibus Apostolorum Barnabas Marcum adsumpsit, Paulus Silam, Paulus Timotheum, Paulus Titum. Sed illis superioribus uidemus diuina officia, ut seniores consilio præuulerint, luniores ministerio. Plerumque etiam uirtutibus pares, disparis ætatis, sui delectantur copula, sicut delectantur Petrus et Iohannes. Nam adolescentem legimus in euangelio Iohannem, et sua uoce, flect meritis et sapientia nulli fuerit seniorum secundus, erat enim in eo senectus venerabilis morum et cana prudentia. Uita enim immaculata bonæ senectutis stipendium est' (*Off.* II. 20, § 100 L). 'Aetates quædam sunt meritum, nam et senectus morum inuenitur in pueris et innocentia infantum reperitur in senibus,' etc. (*Sermo* lv.).

From Jerome also many passages might be produced in illustration, though his youthful behaviour and the bitterness of his disposition would hardly lead one to expect them. In a remarkable passage of *Ep.* lli. (§ 3), he describes how in the old, while all other virtues wane, that of wisdom alone increases. By the waning virtues he explains that he means that 'cuncta, quæ per corpus

exercentur, fracto corpore minora fiunt.' He admits that in very many old men wisdom itself fades through age. Yet those who have acquired honourable accomplishments in their youth and have studied the law of the Lord day and night (Ps 1²) become more learned with age, more experienced, wiser, and 'reap the sweetest fruits of their old pursuits.' He then proceeds to give a number of instances of Greek philosophers and poets who continued learning to the last, and to these he adds the Roman name of Cato. An exhortation to Furia (*Ep.* liv. 14) gives, by way of warning, the other side of the picture :

'Iam incanuit caput, tremunt genua, dentes cadunt, "et frontem obscenam rugis arat" (Verg. *Æn.* vii. 417), uicina est mors in foribus: designatur rogos prope. Uelimus, nolimus, senes sumus. Paret sibi uitium, quod longo itinere necessarium est. Secum portet, quod inuitus dimissurus est; immo præmittat in caelum, quod, ni cauerit, terra sumptura est.'

Other passages in Jerome bearing on this subject are: in *Ecclesiasten*, xi. (ed. Venice, 1767, iii. (1) 483); *Præf. in lib. ii. Comm. in Amos* (vi. 263, 264), a very important passage; *Ep.* liv. 9 (the diet of the old); *Comm. in Esaiam*, III. v. 2 (iv. 48c, d, e, 49a) (distinction between *senex* and *presbyter*; cf. on v. 4, pp. 53a, 54a); *Comm. in Tit.* ii. 2 (vii. 714b).

At the same period Claudian, who, whether secretly Christian or not, writes in the pagan manner, penned an exquisite little poem on an old man near Verona who never travelled beyond the suburbs of that city (*Carm. Min.* 20 [52], ed. J. Koch, Leipzig, 1893, p. 223). He had passed all his life in the same house. He was not affected by the buffetings of fortune or the discomforts of emigration. He never trembled at danger, like the merchant prince or the soldier or the lawyer. Being in the country, he enjoys the ampler air and counts his years by the seasons. He has seen little of the world, but, possessing splendid physical strength and descendants, he knows more of real life than the man who has journeyed to the ends of the earth. The debt which Claudian here owes to Horace's second *Epode* is evident, but he chooses a different metre, and certain of the details, as well as the local setting, are his own.

The greatest of all Latin writers, Augustine, is full of references to this subject. In commenting on the 70th (71st) Psalm, v.¹⁸, which in his Bible read 'usque in senectam et senium,' he points out that these two words are subdivisions of *senectus*, corresponding respectively to the Greek words *πρεσβύτης* and *γέρων*. He considers that *πρεσβύτης* connotes *gravitas*, and *γέρων* a later stage. Pointing out that the Latin *senex* has to do duty for both of these Greek words, he says that *senectas* indicates the earlier stage of *senectus*, and *senium* the later (cf. *de Genesi contra Manicheos*, I. xxiii. 39). In the *de diuersi: Quæstionibus lxxxiii.*, qu. lviii. § 2, he says that *senectus* comprises as much time as all the other ages put together, because it is said to begin at sixty, and it need not end till one hundred and twenty. A pithy summing up occurs in *Sermo lxxxi.* 8:

'Homo est, nascitur, crescit, senescit. Querellæ multæ in senecta: tussis, pituita, lippitudo, anxietudo, lassitudo inest. Ergo senuit homo; querellis plenus est; senuit mundus; pressuris plenus est.'

He points out in *Tract. in Joh.* xxxii. 9 the folly of praying both for old age and for beauty, as the two are inconsistent. In *Enarr. in Ps.* cxii. 2 occurs the exhortation:

'Sit senectus uestra puerilis, et pueritia senilis; id est, ut nec sapientia uestra sit cum superbia, nec humilitas sine sapientia.'

The sense of *senior* in the Scriptures is expounded in *Locutiones in Heptateuchum*, vi. 29; *Quæstiones in Genesis*, i. 70, is important for the precise sense of the Scriptural words indicating 'old.' In a fine passage of *Sermo cxxviii.* (9, § 11) he says that the

spiritual enemies of the old are wearied, but that they still have to contend with minor enemies who disturb the peace of old age (see also *Catéch. Rud.* xvi. 24).

It will not be necessary here to pass beyond the period of Maximian, a poet of the middle of the 6th cent., who in his first *Elegy*, about 300 lines long, pours forth his soul in a dolorous lament. According to his story, he had every blessing that man could desire in his youth, of which he gives a long and detailed account. Sometimes his conceit is such as to excite laughter in the modern reader (e.g., 59 ff.).

LITERATURE.—Except as a divinity, for which see the art. 'Senectus' in Roscher, the subject has not been, so far as this present writer knows, treated in modern times. The above article has been compiled from the ancient authorities quoted.

A. SOUTER.

OLD AGE (Semitic and Egyptian).—1. Desirability.—In the early times a long life was desired and considered a blessing by all Semites and Egyptians whose thoughts we can trace. This is natural, since all men, when in health, love life and abhor death. A Babylonian king invokes a blessing upon every one who shall respect his decree defining a boundary thus:

'May the river god and Nina, mistress of goddesses, be with him in fidelity and might, with Ea, creator of all, may they fix for him the destiny of life, days of old age, and blissful years may they prolong for him as a gift!'¹

The OT contains many expressions that voice the same point of view on the part of the Hebrews (see 'Hebrew and Jewish' section).

A similar point of view was entertained by the Egyptians. In the *Precepts of Ptahhotep* we read:

'How good it is when a son receives that which his father says. He shall reach advanced age thereby.'²

Ramses IV. inscribed at Abydos a prayer to Osiris in which he says:

'And thou shalt give to me health, life, long existence and a prolonged reign. . . . Thou shalt double for me this long life, the prolonged reign of king Ramses II., the great god.'³

As Ramses II. reigned sixty-seven years, the petition is an appeal for a very long life.

The desirability of a long life led naturally to a longing for immortality. The Egyptian conceptions of the life beyond the grave are fairly well known.⁴ They were transformed, through the influence of faith in Osiris, from belief in a colourless existence in an under world to faith in a bright heavenly hereafter. Although such a faith developed more slowly among the Semites, it is not wanting. The belief that man was denied immortality through divine purpose finds expression both in Gn 3 and in the Babylonian Adapa myth. The Hebrews, however, went farther than the Babylonians. In the period after 200 B.C. they developed a faith in a resurrection to a happy life on the earth for 500 years (*Enoch*, x. 10), and then to an eternal life (Dn 12⁴). This faith was taken over by Muhammad, who apparently had no question either as to the eternity of the bliss of the righteous or as to the torment of the wicked.⁵

2. Traditions of long life.—Among both the Hebrews and the Babylonians traditions were cherished that early men lived much longer than the average of human life in the historic period. The Hebrew tradition is embodied in Gn 5, and is familiar to all. Most of the antediluvian patriarchs were believed to have lived more than 900 years each. A Babylonian tablet in Philadelphia

⁵ See, e.g., Qur'ân, xxii. 20 ff., iv. 60 ff.

contains a list of Babylonian kings who are said to have ruled for a like large number of years. They are as follows:

BABYLONIAN KINGS.
Galumum, 900 (?) years.
Zugagih, 840 (?) years.
Aripi (perhaps read Admê),
720 years.
Etana, the shepherd who
went to heaven, 635 years.
Pilkam, 850 years.
Enmennunna, 611 years.
Melamkish, 900 years.
Barsajnunna, 1200 years.
Ninurta, 905 years.

HEBREW TRADITION.
Adam, 930 years.
Seth, 912 years.
Enosh, 905 years.
Kenan, 910 years.
Mahaiel, 895 years.
Jared, 982 years.
Enoch, 365 years.
Methuselah, 969 years.
Lamech, 777 years.
Noah, 950 years.¹

Gilgamesh, 125 years.

It is the present writer's belief that the antediluvian patriarchs of Gn 5 are transformations of some of these names,² but in any event the names are evidence that the Babylonians shared the belief that early men lived exceedingly long lives. Later Babylonian tradition, as represented by Berossos, increased the length of the reigns of antediluvian kings to many thousands of years each. Among the Hebrews it was believed that the average age of man was gradually reduced. Thus Shem is said to have lived 600 years; Arpachshad, 438 years; Shelah, 433 years; Eber, 464 years; Peleg, 239 years; Ren, 239 years; Serug, 230 years; Nabor, 148 years; Terah, 205 years;³ Abraham, 175 years;⁴ Sarah, 127 years;⁵ Jacob, 147 years;⁶ Joseph, 110 years;⁷ and Moses, 120 years.⁸ The belief in these ages, which are all found in the P document, was doubtless caused by Babylonian influence. A very early tradition embodied in the J document fixes the age of man at 120 years (Gn 6³). The ages reported in the OT after the settlement in Palestine were of normal length. The belief that in the earlier time, the Golden Age of humanity, men lived to such great ages is eloquent testimony to the value which the Semites attached to old age.

3. Honours of age.—Among all Semitic people great honour has been given to old men. This arose in part from the patriarchal honours paid to the head of a family and in part from the semi-democratic organization of the clans. In Semitic patriarchal society sons married young, and brought their wives to the house of their father or grandfather, and the patriarch directed the fortunes of his descendants as long as he lived. The solidarity of the family made him alone responsible. The whole family was held guilty for his deeds. Thus Achan's family were all put to death for his sin (Jos 7). Similarly, the head of a family was responsible for the conduct of its members. Thus in Babylonia we hear of a woman, Belilit, the head of a family, who brought a suit to compel the payment of a debt. The debtor was able to exhibit receipts, showing that he had paid the money to her two sons, who were, apparently, grown men; the sons had embezzled the money. Such was the solidarity of the Babylonian family, however, that Belilit was fined an amount equal to the debt which she had sought to collect.⁹ Such conditions led naturally to the honouring of old men, as well as to the belief that they were

wiser than their juniors. Thus in the book of Job Elihu said:

'I am young, and ye are very old;
Wherefore I held back, and durst not shew you mine opinion.
I said, Days should speak,
And multitude of years should teach wisdom' (32²⁵).

Earlier in the book Eliphaz has said:

'What knowest thou, that we know not?
What understandest thou, which is not in us?
With us are both the grayheaded and the very aged men,
Much elder than thy father' (15⁹).

It was, as some scholars think, in part because of Job's age that he received the honours described in 29⁷, though the honour paid him by other old men was doubtless on account of his wealth and charity. He says:

'When I went forth to the gate unto the city,
When I prepared my seat in the street,
The young men saw me and hid themselves,
And the aged rose up and stood;
The princes refrained talking,
And laid their hand on their mouth;
The voice of the nobles was hushed,
And their tongue cleaved to the roof of their mouth' (29⁷⁻¹⁰).

Since such honours were paid to old men of wealth and character, it was natural to conceive of God as the Supreme Old Man. Thus in Daniel God is called 'Ancient of Days' (7⁹, 18, 22), and in the Enoch parables He is several times referred to as the 'Head of Days,'¹ apparently because He was conceived as a venerable Being with white hair like an old man.

4. Government by old men.—Among all the Semitic clans the government was in the hands of old men or of an old man. This was the natural outcome of the honour in which old men were held. The Arabic term for chieftain is to this day *shaiikh*, which means 'old man.' In the OT there is abundant evidence that in the settled life of Israel the government of the cities was in the hands of the old men; the 'elders'² as rulers are referred to more than a hundred times (e.g., see Dt 21^{2, 3, 4}). That this government was known among the Semites of Babylonia appears from a contract which mentions the 'city and elders' as the source of legal authority.³ Similar testimony is supplied by the Code of Hammurabi, in which *sibu*, or grey-haired men, are frequently mentioned as witnesses (see §§ 10, 13, etc.). In one of the sections erased from the pillar found at Susa, but recently recovered in a copy of the Code from Nippur, they appear in a capacity similar to that of the OT elders. The passage reads:

'If a man borrow grain or money from a merchant and for payment has no grain or money, whatever is in his hand, in the presence of the elders, he shall give to the merchant in place of the debt; the merchant shall not refuse it; he shall receive it.'⁴

Doubtless the Semitic custom of transacting important business in the presence of the elders led to the employment of *sibu* in Babylonia in the sense of 'witness.'

5. Decay in old age.—Late Semitic thought became reflective, and, where not illumined by the hope of a bright hereafter, it lost its delight in old age. Thus Qoheleth says (Ec 11¹⁰):

'Put away vexation from thy heart
And remove misery from thy flesh,—
For youth and prime are vanity.

While the evil days come not,
Nor approach the years of which thou shalt say
I have in them no pleasure;
While the sun be not darkened,
Nor the light and moon and stars,
Nor the clouds return after rain,

⁷ Gn 25⁷.

⁸ Gn 47²³.

⁹ Dt 34⁷.

In the day when the keepers of the house shall tremble
 And the men of valor bend themselves,
 And the grinding-maids cease because they are few.
 And the ladies who look out of the windows are darkened,
 And the doors on the street are shut
 When the sound of the mill is low,
 And he shall rise at the voice of the hird,
 And all the daughters of song are prostrate,—
 Also he is afraid of a height,
 And terror is on the road,
 And the almond-tree blooms,
 And the grasshopper is burdensome,
 And the caper-berry is made ineffectual,
 For man goes to his eternal house,
 And the mourners go around the street;—
 While the silver cord is not severed,
 Nor the golden bowl broken,
 Nor the water-jar be shattered at the spring,
 Nor the wheel broken at the cistern,
 And the dust shall return to the earth as it was,
 And the spirit shall return unto God who gave it.¹

In this passage the decay of the powers in old age is allegorically described, and the description shows that to its author old age had lost its charm.² Kindred to this is a line in the *Mu'allaqāt* of Zuhair:

'I have grown weary of the troubles of life, and he who attains
 To eighty years will grow weary, or mayest thou become
 fatherless!'³

The recognition of the joylessness of age and the swiftness of approaching death led Qoheleth to urge the enjoyment of life while possible. In addition to the passage quoted, Ec 9⁷⁻¹⁰ may be compared. This view had been reached by Babylonians and Egyptians much earlier. A fragment of the Gilgamesh epic reads:

'Since the gods created man,
 Death they ordained for man,
 Life in their hands they hold,
 Thou, O Gilgamesh, fill indeed thy belly,
 Day and night be thou joyful,
 Daily ordain gladness,
 Day and night rage and make merry.
 Let thy garments be bright,
 Thy head purify, wash with water;
 Desire thy children, which thy hand possesses,
 A wife enjoy in thy bosom.'⁴

Similarly an Egyptian poet, probably of the Middle Kingdom, wrote:

'Put spices upon thy head!
 Let thy clothing be byssus
 Expensively dyed
 In observance of the divine behests!
 Outdo thy past joyousness!
 Let not thy heart be anxious!
 Accomplish thy earthly affairs
 According to the desire of thy heart!
 To thee will come that day of lamentation,
 When a paralyzed heart hears not their wailing.
 Not with wine can one compel
 The heart-beat of the man in the grave.'⁵

Not all Egyptian poets looked at the approach of death in this way. Another, who felt the joylessness of life, composed a poem on death which Breasted has entitled 'Death a glad release.' Each stanza expresses by means of a different figure how gladly the writer welcomes death. He concludes:

'Death is before me to-day
 As a man longs to see his house
 When he has spent years in captivity.'⁶

⁶ See Breasted, *Development of Religion and Thought*, p. 195.

been prevalent among the Teutonic races in early times. Procopius¹ tells us that a peculiarity of the Eruli (the latest of the Germanic tribes described by him to accept Christianity) was their practice of putting the aged to death. It behoved any one overtaken by age or disease to ask his relatives to put an end to his life. He was thereupon placed on a funeral pyre, and a man not of his kin stabbed him to death with a dagger, after which the pyre was kindled. In the light of this passage the Scandinavian rite of marking a dying man with the point of a javelin to dedicate him to Oðin may well be a survival from earlier times, when the sick man was actually put to death (H. M. Chadwick, *The Cult of Oðin*, London, 1899, p. 34).

It seems to have been a custom among several Teutonic races for the aged to commit suicide by casting themselves over precipices. It is mentioned in the late *Gautreks Saga* (ch. i.) as regularly adopted by the members of a mythical Swedish family on the approach of age, to relieve their descendants from the burden of their support, and the historian Geijer maintains that the names of many cliffs in Sweden testify to some such custom. Bede² mentions a similar method of self-destruction during a famine in Sussex, and the elder Pliny³ speaks of it as a form of suicide usual among the Hyperboreans on the approach of age. In Iceland we can see the custom gradually falling into desuetude. It is reported that some men cast their aged kinsmen over cliffs in a famine in A.D. 976; but, though the sagas occasionally mention that the suggestion of putting the aged and infirm to death, or of letting them starve, was made under stress of famine, we hear of no other case of the proposal being actually carried out.⁴ The practice of exposing infants long outlasted that of killing the aged. The last trace of any such method of disposing of adults unable to support themselves is found some time after the introduction of Christianity in Norway in the law which enacts that freedmen and freedwomen in want shall be placed in a hole dug in the graveyard and left to die.

A people like the early Scandinavians, who considered it a dishonour to die of disease or age instead of in battle, would not be likely to hold the aged in high honour; but in the period of which most of the sagas treat the old are usually treated with respect, and occasionally looked up to for their wisdom and experience. The god Oðin is thought of as old, and is represented in a poem as advising his listener to heed the words of the aged.

OLD AND NEW TESTAMENTS IN MUHAMMADANISM. — I. Introduction. —

There appears to be no evidence that any portions of the Bible were accessible in Arabic before the prophet Muhammad's time. This is strange, since Christianity had already been accepted by numerous tribes in both N. and S. Arabia, and the tradition connects the origin of the modern Arabic script with the Christian State of Hira; conceivably, however, the closely allied Syriac and Ethiopic dialects may have been considered sufficiently near these idioms respectively to permit of versions in them serving instead of copies in the vernacular. Indeed, here and there both the Qur'an and the Tradition exhibit phrases which owe their origin to one or other of these translations, and of which the sense has sometimes escaped the native commentators; thus the apostles are called

hawāriyyūn (Ethiopic), which the commentators render 'fullers'; the name *masih* (Syriac *mshihā*, 'Christ') is thought to mean 'wanderer'; the Syriac *hāl*, 'sand,' occurs in a tradition about the Red Sea (Ibn Ḥanbal, *Musnad*, Cairo, 1313, i. 245); and *furgān*, 'salvation' (Syriac), is supposed to mean 'discrimination.' It seems clear that, had there been an Arabic version of the Bible at the time, either the sense of these technicalities would have been preserved or Arabic expressions would have been employed to represent them. On the rare occasions on which the Qur'ān quotes the Bible, the nature of the quotation is not such as to suggest that it was derived from a version in the same language. There is a tradition that, when Muhammad came to Medina and came in conflict with the Jews, a member of the latter community prepared a translation of 'the Tōrah' in order to convince the Prophet's followers that his accounts of its contents were untrustworthy; they were not, however, allowed to peruse it. The earliest Biblical quotation found in Arabic literature outside the Qur'ān is in Ibn Ishāq's biography of the Prophet (ed. F. Wüstenfeld, *Das Leben Mohammeds*, Göttingen, 1858, p. 150), viz. Jn 15²²⁻¹⁶; this appears to be translated from the Palestinian Syriac version, whence the rendering *mnahmana* is quoted for the Greek *παράκλητος*. The word doubtless means 'comforter,' and is wrongly rendered 'praised' by Ibn Ishāq.

Since proselytism among Muslims was never permitted in Muslim States, translations of the Bible into Arabic were not made with that object in mediæval times; a demand arose for them among the Christian and the Jewish communities when the language of the Muslim conquerors had been adopted by the former in Syria, Egypt, N. Africa, and elsewhere. Yet, if the Arabic bibliography called *Fihrist* is to be believed, one Ahmad b. Abdallah b. Salām translated the whole Bible from Hebrew and Greek into Arabic for the library of Hārūn al-Rashid (786-809); he also rendered the Ṣābian books from the Ṣābian language. We know from other sources that translation was carried on at this sovereign's court on a great scale, whence it is highly probable that this enterprise was either ordered or encouraged. The translator gives a few words of Hebrew in order to illustrate his method of translation, but they are not actually taken from the Bible. Possibly we have the first chapter of Genesis in this translation in Mutahhar b. Tāhir's *Kitāb al-bad' wa'l-ta'rikh* (ed. C. Huart, *Le Livre de la création et de l'histoire*, Paris, 1901, ii. 3), since Abdallah b. Salām is quoted in the immediate neighbourhood, and the substitution of the father's name for the son's would be a pardonable slip. The OT was often revised or retranslated, and so also was the NT.

The canon given by Ahmad b. Abdallah is curious, as it gives the number of 'revealed books' as 104, commencing with the book of Adam, and proceeding to those of Seth, Enoch, and Abraham; the only others mentioned are those of Moses and David. According to A. Sprenger, *Das Leben und die Lehre des Mohammed*, Berlin, 1869, i. 49, Ibn Munajjim, in 231 A.H., made a list of the canonical Scriptures of the OT and the NT. The *Fihrist* (377 A.H.) contains a list both of the Jewish and of the Christian Scriptures.

2. Place in the Prophet's teaching.—The Qur'ān repeatedly claims that it 'confirms what was before it,' and occasionally gives the names of the books to which this phrase applies. These are the *Rolls of Abraham and Moses*, the *First Rolls*, the *Taurāt*, the *Injil*, the *Zabūr*, and the *Furgān*. There is no difficulty in identifying the four last names respectively with the Tōrah, the *Euangelion*, the *Mazmure* (Syriac name for the Psalms), and the

Pragim (a Rabbinical treatise, *Sayings of the Jewish Fathers*); but the process by which they have assumed these forms is not perfectly clear; popular etymology has probably influenced them all, and, indeed, Arabic etymologies are offered for all four words by those who maintain that the language of the Qur'ān has no foreign elements.

Though actual quotation from these works is unusual, a great deal of the matter which occupies the pages of the Qur'ān is reproduction of the Biblical narratives; being obtained from hearsay, these reproductions are inaccurate, mixed up with apocryphal matter, vague, destitute of chronology, and contradictory. The Qur'ān appears to contain Biblical narratives delivered by the Prophet at all periods of his career; in these errors are at times corrected, or difficulties explained away, yet it is not clear that the writer's command of his subject was at any one time greater than at any other.

In the Prophet's biography we can trace the difference of the standard by which his utterances on these subjects were judged at different times. In a pagan prophet, endeavouring to convert his countrymen to monotheism, a very little knowledge was thought remarkable; hence we may well believe that *sūrah* xix., when communicated to the Abyssinian king, as an apology for the Muslim refugees, won high approval; it certainly displayed some acquaintance with the OT and NT, and the slip by which the Virgin Mary is addressed as 'Sister of Aaron' may have seemed pardonable, like Vergil's 'Inarime.' When, however, Muhammad claimed to lecture Jews and Christians on their sacred history, a very different standard was applied; and the discussions between the Prophet and the Jews after the migration to Medina led to stormy scenes. The differences between their respective versions of the Biblical narratives were explained by Muhammad as due to deliberate corruption of the text by the Jews (ii. 75, v. 44, iv. 45).

The way in which the Bible was utilized by Muhammad determined the attitude which his followers have ever since assumed towards it. That attitude is necessarily one-sided; the older Scriptures may be employed in defence of Islām, but not to its detriment; an appeal was made to them when evidence was required that the matter which the Prophet claimed to have received by revelation was veracious; but, when they were cited in order to expose his errors, they were not to be heard. The formula employed by some Muslim theologians, according to which the earlier Scriptures require confirmation from the Qur'ān, expresses this principle very clearly. Hence, when the evidence of the Qur'ān is quoted in favour of the earlier Scriptures, the Muslim controversialist replies that he recognizes them only to the extent to which the Qur'ān attests them. The famous Mutazilite Abū'l-Hudhail († 226 A.H.) is commended for having silenced a Jew thus (Jauzi, *Kitāb al-Adhkiya*, Cairo, 1306, p. 95).

The tradition ascribes to Muhammad not a few quotations of Biblical passages which are not utilized in the Qur'ān. So, according to Bukhārī (ed. L. Krehl, Leyden, n.d., ii. 224), he told his followers to shoot because their father Ishmael was a shot (Gn 21²⁰). He told (according to the same author, ii. 280) the story of the sun standing still, though without the name of Joshua, and combined with this the enactment of Dt 20⁷. In the *Musnad* of Ibn Ḥanbal (vi. 21) he recommends the Lord's Prayer as a spell. Certain aphorisms which belong to Ecclesiastics are ascribed to him in these collections. The Qur'ān itself, besides reproducing Biblical narratives, at times expresses itself in decidedly Biblical language, and the same is true of matter embodied in the books of tradi-

3. Use of the Bible by historians.—The study of history is, on the whole, popular in Islām, and, although it is chiefly occupied with the national vicissitudes, the need for locating these in the history of the world has led to a certain amount of research—sometimes of a highly creditable kind—into the records of other communities. Since the Qur'ān claims to be a development of the Biblical revelations, it was considered on the whole proper to obtain pre-Islāmic history from the latter, corrected, of course, from the statements of the Qur'ān. Those writers, then, who composed universal histories after the rise of secular prosaic literature, or who compiled compendia of the same, utilized the OT and NT Scriptures for their purpose on those conditions. Works of this sort are the *Chronicle* of Ya'qūbī (250 A.H.), the *Historical Handbook* of Ibn Qutaiba († 270), and the *Chronicle* of Ṭabarī († 310). The first and second of these evidently quote at first hand. A remarkable work in a kindred field is the *Chronology of Ancient Nations* by al-Birūnī († after 422), in which the differences between the chronologies of the Hebrew, the LXX, and the Samaritan copies of the Pentateuch are tabulated. Somewhat earlier is the summary of Israelitish chronology published by Ḥamzah of Isfāhān; he got it in the year 920 from a Jew in Baghdād, who knew by heart twelve Biblical books, whose names are somewhat disfigured in the Arabic transliteration. It is not probable that these extracts ever appealed to large circles of Muslims before imitation of European modes of education became popular. Hence allusions to Biblical history are rarely made, and would not be expected to be understood.

4. Use by preachers.—Although the extent to which the Ṣūfī movement was influenced by Christianity is apt to be exaggerated, it seems clear that there was often identity of aim between the Christian and the Muslim preachers, and that the latter found valuable material in both Testaments. Thus the earliest Ṣūfī writer, Muḥāsibī († 243), uses the parable of the Sower; numerous quotations from Biblical books (sometimes cited as *al-Isrā'īyyat*) are to be found in the *Qūt al-qulūb* of Abu Ṭālib al-Mekki († 386), some of which can be identified with texts in the canonical books, whereas others are clearly apocryphal. The OT (Isaiah) is also used in the *Mukāshafat al-qulūb* of Ghazālī († 505), probably at second hand, since the quotation is very much amplified. Such quotations are much less common in the works of the mystical (as opposed to the homiletic) Ṣūfīs, yet it is noticeable that in the most famous of the former, the *Fuṣūṣ al-Ḥikam* of Ibn al-'Arabī (A.H. 627), the Biblical account of the sacrifice of Abraham, according to which Isaac was the victim, is preferred to that ordinarily got from the Qur'ān, which makes the victim Ishmael; and in the commentary on this work by Dawūd al-Qaisari († 751; Bombay, 1300, p. 71) Jn 14²⁸ is cited as the saying of 'the revealer of the divine secrets, the seal of the universal saintship.'

5. Use in Qur'ānic exegesis.—The employment of the Bible for the elucidation of the Qur'ān is not ordinarily approved; and, indeed, one of the charges brought against Muḥammad b. Ishāq, the Prophet's biographer, is that he adopted this practice (Yāqūt, *Dict. of Learned Men*, ed. D. S. Margoliouth, London, 1913, vi. 401); a certain amount of Biblical matter has, however, got into the most orthodox commentaries, chiefly, it is supposed, through Ka'b al-Aḥbār and Wabḥ b. Munabbih, servants of the first Islāmic century. Thus Baidāwī inserts in his commentary on *sūrah* iii. a genealogy which is taken from that prefixed to the First Gospel. First-hand employment of the Gospels is found in the commentary of Fakhr

al-dīn al-Rāzī († 606), who chiefly employs that of John. His references are respectful, but he does not attempt to harmonize the conflicting statements. In quite recent times, owing to the spread of European education and, with it, of acquaintance with the contents of the Bible, endeavours to explain the discrepancies between it and the Qur'ān and to justify the assertions of the latter have been made on a much more considerable scale. The late Egyptian Mufti Muḥammad Abdo and his disciple Muḥammad Rashīd Riḍa have done more than others in this line, and have come nearer the European treatment of this subject than their predecessors.

6. Use by controversialists.—Although conversion from Islām to other religions was not tolerated in any Muslim State, and conversion to Islām was usually effected by other methods than reasoning, the fact of members of different religious communities mixing on nearly equal terms in lecture-rooms and debating-societies in Baghdād and other Islāmic capitals naturally led to religious controversy; and it was hard to keep it out of discussions on logic or even geometry. Hence works professing to refute the Jewish and Christian systems were produced in a fairly constant series during the 'Abbāsīd Khalīfate, and thence to our own time. In order to attack these systems with success it was necessary to study the Scriptures to a certain extent, and some of the controversialists took considerable pains in the matter. The Prophet's method is generally adopted, but the degree varies very much. The Spanish Zāhirite Ibn Ḥazm († 456) goes the length of treating the OT and NT as impudent forgeries; he denies that we even know the names of the apostles. His studies in the Pentateuch led him to anticipate some of the objections urged by modern critics—e.g., J. W. Colenso. In the polemical work of the Syrian Ibn Taimiyyah († 728) a much more moderate view is taken. He urges, indeed, that the only prophets known to the Muslims are those mentioned in the Qur'ān, and that, as the stream cannot rise higher than the source, belief in these implies belief in Muḥammad; but he is disposed to think that the alterations which the Scriptures have undergone are not very considerable, and he finds a whole series of predictions concerning Muḥammad in the book of Isaiah; and this more nearly approaches the general practice of the controversialists. For the number of passages in the OT and NT which can be interpreted as predictions of the Muslim prophet is very large; and, in order that these may be utilized, a certain amount of authority must be granted the works which contain them. With some of these writers there is a tacit assumption that Arabic is the original language of the Scriptures; and it is sometimes said that the Christian doctrine of the Sonship of Christ is due to the misplacing of points in Ps 27, the words *anta nabī* ('Thou art a prophet') having been misread *anta bunayya* ('Thou art my Son').

7. Use for guidance.—The question is discussed in treatises on the principles of jurisprudence 'whether we are bound by the codes of our predecessors,' and, though it might seem that only parts of the OT and NT had been abrogated, the doctrine of interpolation renders the use of the existing Bible improper in the minds of Muslim authorities; in practice, then, it does not count as a source of law, and reference to it is not approved by legal authorities.

The most curious case recorded in Islāmic history of resort to the Bible for assistance in an emergency is that of one 'Umar b. Bilāl al-Asadi, who was asked by the Umayyad Khalīfah 'Abd al-Malik (683-705) to effect a reconciliation between himself and his queen, 'Atika. This personage borrowed the expedient of the 'wise woman' in 2 S 14¹⁻⁷, and told the same story about his two sons, but deviated slightly

from the precedent in inducing the queen to intercede with the Khalifah that the execution of the supposed murderer should not be carried out (*Aghant*, Cairo, 1285, ii. 140). Cases of this kind are very rare; and it is not probable that, outside the group of specialists noticed, reading of the Bible was ever common among Muslims.

8. Biblical forgeries.—The theory having been accepted that the books in the hands of Jews and Christians are forgeries, it seemed desirable to supply the missing revealed books; and there are a certain number of compositions of this sort in existence, which adopt the literary form of the Qur'an, in which the Deity addresses the prophet in rhyming sentences. A spurious Psalm of this kind is described by S. M. Zwemer in *The Moslem World*, v. [1915] 399-403. Sprenger (i. 51) claims to have discovered a fragment of the *Rolls of Abraham* mentioned in the Qur'an, which doubtless is a fabrication meant to replace them. He quotes Ibn Munajjim († 300) for the identity of a work called *Sham' ata*, in the hands of the Jews but not of the Christians, with the *Rolls of Abraham and Moses*. There is naturally no difficulty in recognizing in this the Talmud, which often uses the word quoted of its contents. In the *Qut al-qulub* there is a quotation from the 'Sirah of Yearning' in the Tōrah, which the author Abu Tālib al-Mekki had himself read; in it the Deity taunts the reader with neglect of His communications, whereas he would stop his business in order to read a letter from a friend. This author appears to have had access to several apocryphal collections of this kind.

Probably the most remarkable among these apocrypha is the *Gospel of Barnabas*, which, after it had been occasionally mentioned for some centuries, was edited in Italian and English from a Vienna MS by Lonsdale and Laura Ragg, Oxford, 1907. Its date is acutely fixed by the editors for A.D. 1500-50 from the mention of 'Jubilee celebrated every hundred years'; and, though the Arabic scribbles on the margin of the MS suggest that Arabic was the original language, the editors are probably right in rejecting this opinion and supposing the Italian to be the original; it seems that a Spanish copy also existed at one time. The work, immediately after its appearance in English, was translated into Arabic for use in anti-Christian controversy; but no reference to its existence in Arabic before that date has been discovered in any Islāmic writer.

Besides apocryphal documents a considerable amount of matter of a similar kind collected round the names of those prophets who are mentioned in the Qur'an; tales of this sort were invented by preachers, and then circulated. Several collections were made bearing the name *Qisaṣ al-Anbiyā*, 'Tales of the Prophets'; the most popular is the '*Arā'is al-Majālis* of Tha'ālībī († 427 A.H.), which has been translated into other Islāmic languages. Much similar matter is to be found in the religious poetry of the Persians—e.g., the *Būstān* of Sa'dī and the *Mathnavī* of Jalāl al-dīn Rūmī.

LITERATURE.—H. Preserved Smith, *The Bible and Islam*, New York, 1897; A. Geiger, *Was hat Mohammed aus dem Judenthum aufgenommen?*, Bonn, 1833, 2Leipzig, 1902; G. Weil, *Biblische Legenden der Muselmänner*, Frankfurt, 1845; M. Lidzbarski, *De prophetis, quae dicuntur, legendis arabicis*, Leipzig, 1893. D. S. MARGOLIOUTH.

OLD CATHOLICISM.—Old Catholicism is the modern revival of Catholicism as it was understood in the first centuries—not an attempt to perpetuate the faults either of doctrines or of works, revealed by history in the Christian Church of the early centuries, but an endeavour, on the part of its supporters, while conforming to their own times and their own countries, to be guided by the spirit of Christ, their only leader, and to

labour, by this spirit, to put an end to the imperfections and vices that have defiled the Church in the course of time.

They are called 'Old,' not to disown the improvements which reason and the gospel declare to be necessary, but to show their fundamental dependence on Christ and His gospel. They have no intention whatever of founding a new religion or of joining one of the sects that dream of a faneiful Christianity in the future; but, faithful to the Church founded by Christ and preached by the apostles, as it appears in the books of the NT and in the Christian writings of the first centuries, they claim to live by the spirit of their fathers and the saints worshipped by their ancestors, and thus to unite the Christian past with the Christian present and the Christian future. When they speak of the first centuries, they speak especially of the first three, but in thought they include the next five also, because, in reality, the Church of the first eight centuries, in spite of its turmoils and its numerous dissensions, succeeded in remaining one in both East and West. It was not until the 9th cent. that Pope Nicholas I. fell away from the Eastern Church and caused schism. Although they are Westerners, the Old Catholics do not accept the inheritance of the faults of this pope, and they claim to go further, by extending the hand to Christians of the East and inviting them to labour with them for the restoration of union between the Christian Churches of the East and the West.

In this article we shall note (1) the occasion and origin of the Old Catholic movement; (2) its aims; (3) the results already attained; and (4) its present condition and expectations.

1. Occasion and origin.—Convinced long before the Vatican Council (1870) that the doctrines of papal infallibility and the universality of the jurisdiction of the bishop of Rome over the Church were absolutely erroneous, the Old Catholics did not allow that the simple fact of the dogmatization of these two errors by the pope and the majority of the Council was sufficient to transform them into truths—still less, divine truths; and after, as before, the 18th of July, 1870, they rejected these two dogmas. It is hardly necessary to recall the proofs established by the Old Catholics of the falsity of these new dogmas—a falsity clearly shown up by the Scriptures, by universal tradition, by the history of the seven Ecumenical Councils, and by several other undoubted facts. None of these proofs has been seriously refuted by Roman Catholic theologians. The Old Catholics, therefore, by rejecting these false dogmas, remained faithful to the Catholicism of the time before the Vatican Council; they did not leave the Catholic Church to form a new Church; they remained in the Catholic Church of which they had always formed a part, and they continued to set the 'universal, unvarying, and unanimous' testimony of the Church in opposition to Roman innovations.

This attitude and the theological works which they have had to produce to prove the truth of their cause have led them to discover a number of errors made by Roman theologians and transformed into dogmas in the course of the ages, so that the protest against the false dogmas of the 18th of July, 1870, has logically incurred on their part the protest against all the false dogmas previously promulgated by the papacy (see especially W. Guettée, *La Papauté schismatique*, Paris, 1863, and *La Papauté hérétique*, do. 1874, and E. Michaud, *La Papauté antichrétienne*, do. 1873). This discovery of the errors of the Roman papacy from the 9th cent. to the present day, and in all the individual Churches under the jurisdiction of Rome, has given fresh impetus and considerable

importance to the Old Catholic movement. It is a complete history of Roman theology, re-made in accordance with authentic sources and contrary to the thousands of Roman falsifications pointed out recently by the most eminent theologians of all the Churches, including even Roman theologians. We may say that these new publications—this veritable resurrection of ancient documents that were believed to be buried in darkness—have created a new situation and started a thorough reformation of so-called Catholic theology.

This is a part of the work of the Old Catholics, but it is only one of their proposed aims.

2. Aims.—The chief aims may be reduced to three: (a) theological reform; (b) ecclesiastical reform; and (c) union of the Christian Churches.

(a) *Theological reform.*—This reform was not undertaken arbitrarily; nor is it conducted by each theologian according to his personal opinions on each of the disputed questions. A strict method governs all their actions, a method which results especially in distinguishing dogma from theology—dogma, which is the word of Christ as it is recorded in the Gospels, from theology, which is the explanation given by the apostles and scholars to secure the acceptance and practice of the precepts of Jesus Christ. Christ, being 'the way, the truth, and the life,' is the only Scholar, the only Master; He has declared it Himself to His disciples. It is therefore He alone who, as the only Mediator and Saviour, possesses the words of eternal life; it is He alone who is the light of the world, and it is He alone who has the right to impose His doctrines, decrees, and dogmas on His disciples. On the other hand, every disciple is entitled, and even duty-bound, to try to understand the dogmas of Christ, to see their depth and beauty, and to derive profit from them for the sanctification of his soul. Dogma is the divine truth which is taught by Christ; theology is the explanation given by men—an explanation more or less luminous, which each one may judge according to the light of his reason, conscience, and knowledge: 'Prove all things; hold fast that which is good' (1 Th 5²).

The distinction between dogma and theology is made by the application of the Catholic test to every disputed point. The test is the one so well epitomized by Vincent of Lérins: 'What has been believed everywhere, always, and by all' the Christian Churches is Catholic (*Commonitory*, ii. [6]). The Catholic faith is the 'universal, unvarying, and unanimous' faith, because, even humanly speaking, all the Christian Churches cannot be making a mistake when they attest, as a fact, that they have always believed or not believed, from their very foundation, in the doctrine which the apostle-founders of their particular Church had taught them or not. It is not a question of settling an important discussion, but of making a simple statement of fact. As to the theological explanations which may be given of the established doctrine, they depend, like all the explanations in this world, on reason, science, history, and all the knowledge which humanity has at its disposal.

Thus faith and liberty are reconciled—the faith which depends not on any caprice or any school, but solely on the historical and objective testimony of the Churches; and liberty of criticism or of reason, which, conscientiously speaking, belongs to the religious truth transmitted to all the Churches, to the best of the religious interests of each Church. Thus the faith is a depository—a depository of all the precepts confided by Jesus Christ to His disciples, a depository which does not belong exclusively to any one person, but to everybody, to the preservation of which all faithful

Churches carefully attend, so that none of it may be suppressed, and also that no foreign doctrine may be surreptitiously introduced into it (*depositum custodi*). And theology is a science which, like all other sciences, belongs to reason, to history, to criticism, and which also obeys fixed rules.

It is therefore neither a bishop nor a priest nor a scholar that is entrusted with the preservation of dogma, but all bishops, all priests, all scholars—in a word, all the faithful, members of the Church. Christ being the only Master of His Church, there is no other rule than His; it is sufficient to guard His doctrine and precepts. The Church was not instituted to found a religion other than that of Christ, but merely to preserve it and spread it throughout the world ('Go ye therefore, and teach all nations' [Mt 28¹⁹]). Its mission is not to add to the dogmas of Christ, but only to preach them in order to sanctify the world by them ('Teaching them to observe all things whatsoever I have commanded you' [Mt 28²⁰]). The Church is therefore a guardian of the teachings and precepts of Jesus Christ; its title, the 'teaching' Church, means, not that it has the right to teach any doctrines that it pleases, but that it is its duty to preach openly what Christ taught His disciples in secret.

Real theological reform should consist in communicating to all men the teachings of Jesus Christ, as they are collected in the Scriptures and recorded in the universal tradition of the Church—a tradition which also belongs to all the members of the Church. It is the duty of pastors and scholars to explain them, and it is the duty of each member to study the explanations which appear to him wisest and most useful; the good sense and the Christian spirit that prevail in the Church are sufficient to ensure the final triumph of truth over error: 'Where two or three are gathered together in my name, there am I in the midst of them' (Mt 18²⁰).

Since the Church is not a chair to which might be addressed all the questions that arise in the minds of the inquisitive and the imaginative, it is not obliged to solve them or to prevent men from discussing among themselves matters which neither God nor Christ has thought fit to make clear. It is the work of scholars to elucidate the mysteries of science; the apostles have simply to preach the truths which Christ thought sufficient for the edification and sanctification of humanity. The fruitfulness of the faith does not consist in discovering new dogmas or in transforming the Church into a reveler, charged with completing the revelation made by Christ; the faith is fruitful, it increases, it grows by the closeness of its adherence to the word of Christ, and not by the proclamation of unknown dogmas. It is Christ alone who is the religious light and the religious life of the world; the Church must only be His humble servant.

(b) *Ecclesiastical reform.*—This reform should consist in reminding the Church what Christ wished it to be. Christ established a hierarchy for the service of the faithful. That hierarchy, therefore, ought to serve, and not to rule. Its office is a ministry, and not an authority. There is no *imperium* in the Church of Christ: 'neither as lording it over the charge allotted to you' (1 P 5³); and the obedience of the disciples must be reasonable, and not servile (Ro 12¹). If any member wanted to be first, he had to be the first to serve his brothers, and not to give them orders—to feed the flock, i.e. to lead it into good pastures, and not to enslave it by false dogmas or exploit it by superstitions. The main duties of pastors are to arouse the conscience of the faithful, to enlighten it, to act as if each of them were another Christ:

'Christ liveth in me' (Gal 2²⁰). Christ took a firm stand against the Pharisees of His day, but He did not charge any of His disciples to rebuke his brothers, still less to excommunicate them or curse them.

The mission of the Church also is essentially religious and spiritual. Christ did not give it any worldly and temporal authority; He chose apostles and disciples only to lay the most strict duties on them, and thus to make examples of them for the flock. The early bishops or superintendents were only overseers, and not masters: 'for one is your Master' (Mt 23⁸).

The primitive Church, then, was simply a gathering or reunion in which the first and only chief was, in the eyes of the faith, Christ Himself. Pastors and people simply formed a school, a body and a soul. This was the parish, and, if a dispute arose between any of the members, it was 'the Church' that restored peace: 'Die Ecclesiae.'

Gradually bonds of brotherhood and charity were formed between the various local churches, and in this way synods came into being—special and very limited synods, before the idea of general councils was heard of. It is not only the idea of the true bishop, therefore, that has to be restored, but also that of the synod and the council. Because the so-called ecumenical council was believed to be the representation of the whole Church, it was soon confused with the Church, and rights were assigned to it which the Church itself hardly possesses. Under the pretext that the council was, as it were, the supreme jurisdiction of the Church, this jurisdiction was made a universal and absolute jurisdiction, to which was soon joined the privilege of infallibility. The practical consequences resulting from this confusion and the numerous abuses arising from them to the detriment of the Church are well known.

The Old Catholics are also engaged in restoring the true conceptions of pastor, bishop, synod, council, ecclesiastical authority, and even infallibility, according to the precise meaning of the Scriptures and according to ancient traditions. The constitution of the Church, they hold, is monarchical only because Christ is its only monarch; but, inasmuch as it is a society composed of men, the Church has been called from its very beginning a simple 'church,' and it has been regarded in its universality, since the time when the question of universality arose, as a Christian 'republic.' It would give a wrong idea of the early bishops to represent their action as an aristocratic government; the words of St. Peter himself are opposed to that.
